Product Improvement for 2U Devices of the EA-10000 Series

Dear customer,

We would like to inform you about a recent improvement to our EA-10000 series 2U devices, implemented based on valuable customer feedback.

What has changed?

The AC socket has been upgraded to a **Wago plug connection**, providing a secure and reliable interface.

Impact on dimensions:

Due to this enhancement, the device is now slightly longer. However, this should not cause any issues, as a minimum clearance of **30 cm behind each unit** is required for proper airflow, as stated in the user manual.

Availability:

This improvement is now implemented and available immediately. For new orders from customers who have previously purchased 2U devices, we recommend proactively mentioning this change during the quotation process. Please find the corresponding notice attached.

Datasheets:

The images in the datasheets have been updated accordingly.

Thank you for your continued trust in EA Elektro-Automatik. Should you have any questions, please do not hesitate to contact us.
