Half the size, twice the convenience

NEW

AC/DC CURRENT PROBE

CT6833, CT6834

Current probes for automotive certification testing

With its compact design, these sensors easily connect to cables in tight motor compartments, significantly reducing setup-time and enhancing overall efficiency.

- Current rating: 200 A (CT6833), 500 A (CT6834)
- Frequency range: DC to 50 kHz
- Accuracy: $\pm 0.07\%$ of reading
- Operating Temperature: -40°C to $+85^{\circ}\text{C}$

Maximum conductor diameter $\Phi 20\text{ mm}$

Easy lock mechanism with a single finger

50% smaller than the previous model

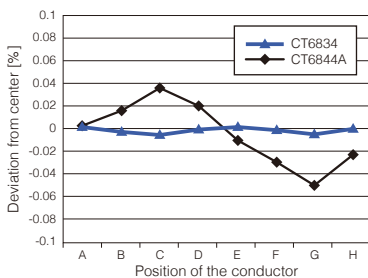

Advanced fluxgate technology that redefines measurement performance

Superior temperature stability

High reproducibility regardless of conductor position

Exceptional accuracy for WLTP across all current ranges

Low-drift, high-frequency AC/DC current probes

Stable current waveform observation for power electronics development.

NEW

CURRENT PROBE

CT6704, CT6705

Reliable current waveforms for confident design decisions in high-current, high-frequency applications

The CT6704 and CT6705 are next-generation current probes using fluxgate sensing technology. They reduce thermal drift and suppress heat in high-current, high-frequency measurements. This enables safer, more stable waveform observation and gives engineers confidence in critical design decisions.

CT6704: 200 A, DC to 30 MHz

CT6705: 500 A, DC to 15 MHz

Low drift with fluxgate sensing

Expanded range for high-current, high-frequency measurement

Compatible with most oscilloscopes via standard BNC

Maximum conductor diameter $\Phi 20$ mm

Inherited current sensing DNA, refined for next-generation waveform reliability

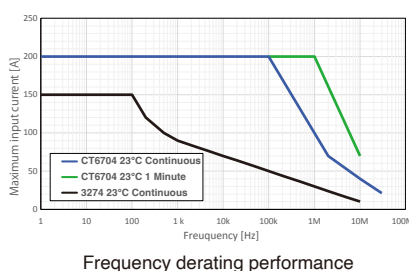

Hall-effect current probes drift from self-heating during long recordings, and heat under high-current, high-frequency conditions limits their range. The CT6704 and CT6705 use fluxgate sensing with a redesigned sensor core to improve waveform fidelity and stability in demanding conditions. This ensures reliable current waveform observation, giving engineers confidence in design decisions.

Features

Thermal Stability

Fluxgate sensing minimizes offset drift caused by self-heating, helping maintain stable waveform observation even as ambient temperature changes or measurement time increases.

Frequency derating performance

Expanded frequency derating

Suppresses inductive heating during high-current, high-frequency measurements, expanding the safe operating range under derating.

Rising waveform

High-speed response for accurate transient capture

Captures fast-rising current waveforms and ripple components with high fidelity, supporting confident design decisions in high-current, high-frequency applications.

Current Sensors Current Probes Lineup

Hioki's first current sensor was a magnetic current sensor developed in 1971. We've pursued sensing technologies over the past 50 years, providing a variety of current sensors for the full range of measurement applications.

High-accuracy measurement

For power electronics development requiring strict accuracy—such as inverter efficiency mapping and reactor loss analysis—these sensors deliver precise current measurement from DC to 10 MHz across a 20 A to 2000 A range, ensuring valid test results under diverse operating conditions.

Pass-through types

Pass-through sensors deliver the ultimate level of accuracy and stability. With a broadband measurement at up to 10 MHz and measurement of large currents of up to 2000 A, they're used in state-of-the-art research and development.

EV inverter system R&D

Evaluation of reactor and transformer losses

Clamp types

Clamp-type sensors are quick and easy to connect, and used for testing finished products, an application where it is difficult to cut wires. Capable of functioning at temperatures from -40°C to 85°C, they're used in high-temperature environments such as engine compartments.

WLTP-compliant fuel economy (electricity cost) performance testing

Measurement of current consumption of ECUs and electrical components

Direct-wired types

Achieve high accuracy and wideband response with our proprietary DCCT (Direct Connection Current Transducer) method. The direct-wired 50 A architecture maximizes signal fidelity and eliminates traditional sensor phase-shift errors.

Evaluation of reactor and transformer losses

Evaluation of inverters in energy-saving household appliances

Waveform observation

Designed for current waveform observation, these sensors cover ratings from 0.5 A to 500 A and support a wide frequency range from DC to 120 MHz. They help engineers analyze current fluctuations during equipment operation, including standby, inrush, load, and control currents.

High-sensitivity observation

Minutes, high-speed current fluctuations are difficult to observe clearly with standard current sensors. High-sensitivity measurement helps capture these small waveform changes with greater clarity.

Evaluation of automotive accessory control

Evaluation of power devices in power supply circuits

Observation of minuscule currents

Small currents in control circuits and compact electronic devices can fluctuate in ways that are hard to detect. Accurate observation is needed to evaluate control behavior and low-current operation.

Evaluation of automotive accessory control

Development and evaluation of power-saving devices such as wearables

Observation of large currents

Large current fluctuations during equipment operation and inrush currents at power-on can place stress on systems. Waveform observation helps engineers verify behavior during these high-current events.

Fluctuations of load currents of large industrial equipment

Measurement of inrush currents flowing at engine start

Grid power quality control

For grid power quality control, these sensors are optimized for current measurement at commercial frequencies of 50/60 Hz. They support applications such as power quality checks and power consumption assessments, with models available for measurement points ranging from leakage current to large current.

Measurement of load current

Power quality problems and changes in power consumption can be difficult to understand from voltage measurement alone. Load-current measurement helps engineers monitor commercial power supplies and evaluate equipment operation more accurately.

Assessment of power consumption

Periodic inspection of power supply equipment and monitoring of power quality

Measurement of large currents

These sensors can measure large currents of up to 6000 A. Their slim, flexible form make them easy to insert into narrow gaps and between wires.

Assessment of power consumption

Periodic inspection of power supply equipment and monitoring of power quality

Measurement of leakage currents

Leakage currents are extremely small, but they may signal insulation degradation or grounding problems. Sensitive current measurement helps detect these minute currents and support safer equipment operation.

Detection of intermittent electrical leaks

Search for the locations of electrical leaks

Accurately evaluating power conversion efficiency

Improving power conversion efficiency is a key part of the effort to facilitate the effective use of energy. Devices that operate at high frequencies are increasingly being used to improve efficiency, and evaluation processes undertaken during the development of such devices requires accurate measurement of power at the low frequencies used by in previous devices as well as at high frequencies. Additionally, sensors that can resist noise are necessary since noise becomes stronger as the frequency increases. Hioki offers current sensors that can measure power accurately while providing robust noise resistance over a broad band of frequencies.

High-frequency currents are detected by a winding (CT), while DC to low-frequency currents are detected by a flux gate.

Zero-flux method: achieving stable, wide-band measurement from DC to high frequencies

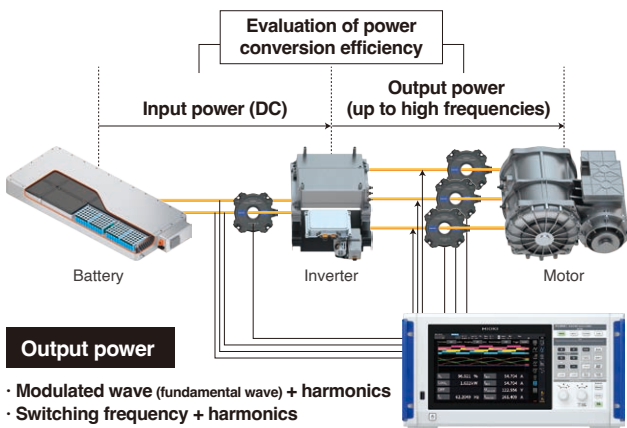

Zero-flux method (flux gate) current sensors

Application

Evaluating the power conversion efficiency of an inverter

When evaluating the power conversion efficiency of an inverter, the inverter's input and output power are measured and its efficiency is checked. PWM (pulse width modulated) inverter output, which has been widely used in recently years, contains a modulated wave (fundamental wave) and a switching frequency along with their respective harmonic components. Since switching frequencies tend to be high, the process requires wide frequency band current sensors.

Since the power factor decreases with harmonics, current sensors' phase measurement accuracy becomes key (see right).

Phase measurement accuracy and correction: accurately measuring power at low power factors

For typical current sensors, phase measurement accuracy is not defined. However, phase measurement precision is important in applications where power must be measured with a high degree of accuracy. Power can be measured more accurately by selecting a current sensor for which phase measurement accuracy is defined in the measurement band.

At low power factors, phase error has a significant effect on power error.

Access the QR Code to view the technical documentation on phase correction.

PW8001: Automatic Phase Correction function

Automatic acquisition of phase correction values

Information stored in the current sensors' internal memory

Phase shift	Rated current
Sensor model	Serial number

Example of the Automatic Phase Correction for the CT6904A AC/DC current sensor

The power factor decreases in the high-frequency range of the switching frequencies and other frequency components. At low power factors, phase error has a significant effect on power measured values.

For typical sensors, phase error increases with frequency. Since Hioki has developed both current sensors and the measuring instruments, current sensors' phase characteristics can be corrected by the instruments, allowing accurate power values to be calculated.

Common-mode voltage rejection ratio: measuring current values accurately in noisy environments

In high-frequency measurement, sensors' resistance to noise is critical. A sensor's ability to remove noise is expressed by its common-mode rejection ratio (CMRR). Sensors with a high CMRR reject more noise and therefore can make more accurate measurements.

For reactors, higher frequencies mean lower current values. The image to the right shows a waveform obtained by measuring reactor current at high frequency along with variations in current values that accompany variations in the frequency.

Top: CT6904A CMRR 120 dB or greater (100 Hz); bottom: sensor with a low CMRR

Effects of conductor position: stable, highly reproducible sensing

In general, speaking, the effects of conductor position increase with frequency. Since the position of the conductor inside the clamp core affects the measurement accuracy, resulting the reproducibility of measurement reduces. Sensors are designed the effects of conductor position, highly reproducible measurements are possible since conductor position does not affect measured values.

When using sensors designed to take into account the effects of conductor position, changes in conductor position have only a small effect on the measured value.

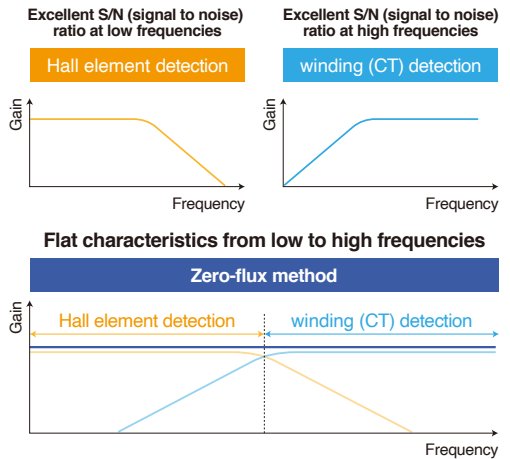

Clearly observing current waveforms

The magnitude of the currents that flow in power-saving devices during operation and control currents that flow in automotive accessory components have reduced to 1 mA or less. At the same time, reliance on high-speed switching operation for device control is resulting in increased noise. Wideband current probes that are highly resistant to noise are essential in order to clearly observe low-current waveforms without losing them in noise. Hioki offers current probes that enable clear waveform observation while providing robust noise resistance over a broad band of frequencies.

High-frequency currents are detected by the winding (CT), while DC to low-frequency currents are detected by the Hall element.

Zero-flux method: realizing stable, wide-band measurement from DC to high frequencies

Zero-flux method (hall element) current probes

Zero-flux method (flux gate) current sensors

Combines high-speed response and low drift

Application

Evaluating the response performance of switching devices

Switching devices control equipment by turning the power on and off. The response performance of switching devices is evaluated by observing fluctuations of current and voltage when the device cycles the power on and off. Capturing current fluctuations caused by high-speed switching operation requires current probes with a broad frequency band. Additionally, noise resistance is important since switching operation generates noise.

Observing waveforms from minuscule currents to large currents: evaluating the control design of ECUs and accessory components

The control systems used in ECUs and accessory components carry currents of a variety of magnitudes according to the vehicle's operation, from control currents to inrush currents. Using a current probe that can switch current ranges makes it possible to observe current waveforms associated with an array of operating conditions with a single probe.

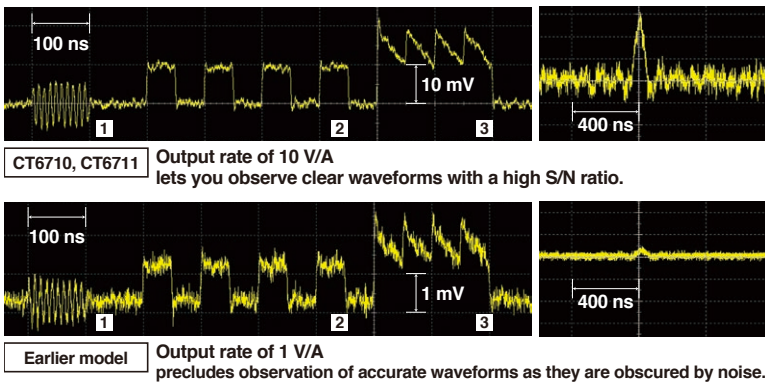

CT6710/CT6711
0.5 A, 5 A, 30 A range switching

Model	Freq. band	measurement range	output rate
CT6710	DC to 50 MHz	0.5 A	10 V/A
		5 A	1 V/A
		30 A	0.1 V/A
CT6711	DC to 120 MHz	0.5 A	10 V/A
		5 A	1 V/A
		30 A	0.1 V/A
CT6700	DC to 50 MHz	5 A	1 V/A
CT6701	DC to 120 MHz	5 A	1 V/A
3273-50	DC to 50 MHz	30 A	0.1 V/A
3276	DC to 100 MHz	30 A	0.1 V/A
3274	DC to 10 MHz	150 A	0.01 V/A
3275	DC to 2 MHz	500 A	0.01 V/A
CT6704	DC to 30 MHz	200A	0.01 V/A
CT6705	DC to 15 MHz	500A	0.01 V/A

Observing currents of a variety of magnitudes, from minuscule currents to large currents, with a single probe

Clearly observing minuscule currents: operating currents of power-saving devices and control currents flowing to accessory components

The magnitude of the currents that flow during operation of power-saving devices like wearables and control currents that flow in automotive accessory components tend to decrease in to 1 mA or less. Using a current probe with a high output rate make you possible for clearly observing minuscule current waveforms.

- 1 Sine wave: f = 100 MHz, 1 mA peak-peak
- 2 Square wave: f = 10 MHz, 1 mA peak-peak
- 3 Sawtooth wave: f = 20 MHz, 1 mA peak-peak (offset +1 mA)

Noise resistance design: key to increasing output rate

Hioki uses a proprietary thin-film Hall element to reduce the amount of noise generated inside the probe. Electromagnetic shielding in the sensor improves resistance to environmental noise.

Observing waveforms across a broad band of frequencies: capturing waveforms and pulse waveforms that fluctuate at high speeds

Currents from switching operation of devices such as SiC and GaN inverters and currents that flow momentarily when a power supply is activated fluctuate at high speeds. Using a current probe with a wide frequency band allows you observe current waveforms that fluctuate at high speed. Additionally, such devices allow you observe current waveforms such as pulse waveforms that contain a variety of frequency components.

Current probes with a wide frequency band can capture high-speed current fluctuations with a rising time of 10 ns.

Failure to capture accurate waveforms due to insufficient frequency band

Example of measuring a pulse with a cyclic frequency of 1 MHz using different frequency bands

Current probes with a wide frequency band can accurately capture pulse waveforms.

CT6862-05

Product warranty period: 3 years
Guaranteed accuracy period: 1 year

Rated current	50 A AC/DC
Frequency band	DC to 1 MHz (-3 dB)
Diameter of measurable conductors	Max. φ 24 mm (0.94 in.)

300 kHz < f ≤ 1 MHz	±5% ±0.063%	±(0.08 × f kHz)°

Combined accuracy with HIOKI power analyzer PW8001 and PW6001 is specified (DC, 45 Hz ≤ f ≤ 65 Hz). For details of combined accuracy, refer to the instruction manual.
Amplitude accuracy and phase accuracy are specified by the following conditions:
· Rated value or less
· At 100Hz or more and within the range of "Continuous input at an ambient temperature of 50°C (122°F)" described in the frequency derating graph below
· For the CT6904A-3, add the following for frequencies of 50 kHz < f ≤ 1 MHz (frequency band is 2 MHz ±3):
Amplitude accuracy: ±(0.015 × f)% of reading

Temperature and humidity range for guaranteed accuracy	23°C ±5°C (73°F ±9°F), 80% RH or less
Effect of temperature	In ranges from -10°C to 18°C (14°F to 64.4°F) or 28°C to 50°C (82.4°F to 122°F) Amplitude sensitivity: ± 50 ppm of reading / °C Offset voltage: ±5 ppm of full scale / °C Phase: ±0.01° / °C
Common-Mode Rejection Ratio (CMRR)	(effect on output voltage and common mode voltage) 140 dB or greater (50/60 Hz) 120 dB or greater (100 kHz)
Linearity error	±12.5 ppm
Offset error	±10 ppm

Output voltage	2 mV/A (= 2 V / 1000 A)
Operating temperature and humidity range	-10°C to 50°C (-14°F to 122°F), 80% RH or less (no condensation)
Storage temperature and humidity range	-20°C to 60°C (-4°F to 140°F), 80% RH or less (no condensation)
Maximum rated voltage to ground	1000 V CAT III Anticipated transient overvoltage: 8000 V
Standards	Safety: EN61010, EMC: EN61326
Cable length	CT6904A-2: 3 m (9.84 ft.) (including relay box) CT6904A-3: 10 m (32.81 ft.) (including relay box)
Dimensions	139 mm (5.47 in.) W × 120 mm (4.72 in.) H × 52 mm (2.05 in.) D (excluding protrusions and cables)
Weight	CT6904A-2: approx. 1.15 kg (40.6 oz.) CT6904A-3: approx. 1.45 kg (51.1 oz.)

CT6876A CT6876A-1

Product warranty period: 3 years
Guaranteed accuracy period: 1 year

Rated current	1000 A AC/DC
Frequency band	CT6876A: DC to 1.5 MHz (±3 dB) CT6876A-1: DC to 1.2 MHz (±3 dB)
Diameter of measurable conductors	Max. φ 36 mm (1.41 in.)

Accuracy

Frequency	Amplitude ±(% of reading + % of full scale)	Phase
DC	±0.04% ±0.008%	-

Combined accuracy with HIOKI power analyzer PW8001, PW6001, PW4001 and PW3390 is specified (DC, 45 Hz ≤ f ≤ 66 Hz). For details of combined accuracy, refer to the instruction manual.
*DC accuracy after adjusting the offset voltage to ±0.5 mV or less.
• The values above are when the input is a sine wave or DC, the measurement instrument's input resistance is 1 MΩ ± 10%, voltage to ground 0 V, no external magnetic fields and the conductor is in the center of the sensor opening.
• Amplitude accuracy and phase accuracy are defined 110% of full scale or less and within the derating curve. DC < f < 10 Hz is a design value. Add ±0.01% of reading to the amplitude accuracy for input from 100% of full scale to 110% of full scale. (CT6833, CT6833-01 only)
• Amplitude accuracy and phase accuracy are rated current value or less and within the derating curve. DC < f < 10 Hz is a design value. (CT6834, CT6834-01 only)

Temperature and humidity range for guaranteed accuracy	23°C ±5°C (73.4°F ±41°F), 80% RH or less
Effect of temperature	In ranges from -40°C to 18°C (-40°F to 64°F) and 28°C to 85°C (82°F to 185°F) Amplitude sensitivity: ±4 ppm of reading /°C Offset voltage: ±3 ppmof full scale / °C
Effect of conductor position	DC: ±0.03% of reading or less 50 Hz, 60Hz: ±0.04% of reading or less 1 kHz: ±0.1% of reading or less 10 kHz: ±1% of reading or less
Linearity error	± 10 ppm typical
Amplitude error	10 Hz - 100 Hz : ± 50 ppm typical 100 Hz - 500 Hz : ± 0.04% typical 500 Hz - 1 kHz : ± 0.08% typical 1 kHz - 20 kHz : ± (0.1 × f)% typical

Frequency derating

Frequency characteristics (example of typical characteristics)

Output voltage	CT6833, CT6833-01: 10 mV/A CT6834, CT6834-01: 4 mV/A
Measurable conductors	Insulated conductor
Operating temperature and humidity range	Sensor, cable: -40°C to 85°C (-40°F to 185°F), 80% RH or less (no condensation) Relay box: -25°C to 50°C (-13°F to 122°F), 80% RH or less (no condensation)
Storage temperature and humidity range	-25°C to 50°C (-13°F to 122°F), 80% RH or less (no condensation) (sensor and relay box)
Standards	Safety: EN 61010, EMC: EN 61326
Cable length	CT6833: approx. 5 m (16.40 ft.) including relay box CT6833-01: approx 10 m (32.81 ft.) including relay box
Dimensions	Sensor: approx. 149W × 46H × 16.5D mm (approx. 5.87W × 1.81H × 0.65D in.) Relay box: approx. 126W × 57H × 20.5D mm (approx. 4.96W × 2.24H × 0.81D in.)
Weight	CT6833, CT6834: approx. 500 g (17.64 oz.) CT6833-01, CT6834-01: approx. 710 g (25.05 oz.)

9272-05

Product warranty period: 3 years
Guaranteed accuracy period: 1 year

Rated current	20 A AC, 200 A AC (2 ranges)
Frequency band	1 Hz to 100 kHz
Diameter of measurable conductors	φ 46 mm or less

Accuracy

Frequency	Amplitude ±(% of reading + % of full scale)	Phase
1 Hz ≤ f < 5 Hz	±2.0% ±0.10%	-
5 Hz ≤ f < 10 Hz	±1.0% ±0.05%	±1.0°
10 Hz ≤ f < 45 Hz	±0.5% ±0.02%	±0.5°
45 Hz ≤ f ≤ 66 Hz	±0.3% ±0.01%	±0.2°
66 Hz < f ≤ 500 Hz	±0.5% ±0.02%	±0.5°
500 Hz < f ≤ 1 kHz	±0.5% ±0.02%	±1.0°
1 kHz < f ≤ 5 kHz	±1.0% ±0.05%	±2.0°
5 kHz < f ≤ 10 kHz	±2.5% ±0.10%	±3.0°
10 kHz < f ≤ 20 kHz	±5% ±0.1%	±5.0°
20 kHz < f ≤ 50 kHz	±5% ±0.1%	±15.0°
50 kHz < f ≤ 100 kHz	±30% ±0.1%	-

Accuracy is specified by the following conditions:
• Less than or equal to the rated current of each current range
• Within derating range of each current range
The accuracy values above are for within the rated current for each range and inside of derating range. (The values are the values by design: amplitude at under 5 Hz and phase at under 10 Hz)

Temperature and humidity range for guaranteed accuracy	23°C ±5°C (73°F ±9°F), 80% RH or less
Effect of temperature	Amplitude sensitivity: ±0.03% of reading /°C

Frequency derating

Frequency characteristics (example of typical characteristics)

Output voltage	20 A range: 100 mV/A (= 2 V / 20 A) 200 A range: 10 mV/A (= 2 V / 200 A)
Operating temperature and humidity range	0°C to 50°C (32°F to 122°F), 80% RH or less (no condensation)
Storage temperature and humidity range	-10°C to 60°C (14°F to 140°F), 80% RH or less (no condensation)
Maximum rated voltage to ground	600 V AC CAT III (50/60 Hz) Anticipated transient overvoltage: 6000 V
Standards	Safety: EN 61010, EMC: EN 61326 Class A
Cable length	3 m (9.84 ft.)
Dimensions	78 mm (3.07 in.) W × 188 mm (7.40 in.) H × 35 mm (1.38 in.) D (excluding protruding parts and cables)
Weight	Approx. 450 g (15.9 oz.)

CT6841A

Product warranty period: 3 years
Guaranteed accuracy period: 1 year

Rated current	20 A AC/DC
Frequency band	DC to 2 MHz
Diameter of measurable conductors	Max. φ 20 mm (0.79 in.)

Accuracy

Frequency	Amplitude ±(% of reading + % of full scale)	Phase

Standards	Safety: EN 61010, EMC: EN 61326
Cable length	3 m (9.84 ft.)
Dimensions	238 mm (9.37 in.) W × 116 mm (4.57 in.) H × 35 mm (1.38 in.) D (excluding protruding parts and cables)
Weight	Approx. 1040 g (36.7 oz.)

CT6710

Product warranty period: 1 year
Guaranteed accuracy period: 1 year

Rated current* (3 ranges)	30 A rms, 5 A rms, 0.5 A rms AC/DC
Frequency band	DC to 50 MHz (-3dB)
Diameter of measurable conductors	Max. ϕ 5 mm (0.20 in.) (insulated conductors)

*DC or sine wave signals of 45 to 66 Hz, within maximum peak current for each range

Rise time	7.0 ns or less (10% to 90%)
Output voltage	0.1 V/A (30 A range) 1 V/A (5 A range) 10 V/A (0.5 A range)
Maximum peak current	± 50 A peak**1 (30 A range) ± 7.5 A peak (5 A range) ± 0.75 A peak (0.5 A range, ≥ 10 MHz) ± 0.3 A peak (0.5 A range, < 10 MHz)
Noise	75 μ A rms or less**2 (typical: 60 μ A rms)

*1: Maximum 2 sec input; requires cooling time of at least 10 times longer than the time current has been input
*2: Does not apply to devices to which the probe is connected; applicable in the 0.5 A range and when used with 20 MHz bandwidth instrument devices

Accuracy (amplitude)

Range	Accuracy	typical
30 A	$\pm 3.0\%$ of reading ± 1 mV	$\pm 1.0\%$ of reading ± 1 mV (≤ 10 A)
5 A	$\pm 3.0\%$ of reading ± 1 mV	$\pm 1.0\%$ of reading ± 1 mV
0.5 A	$\pm 3.0\%$ of reading ± 10 mV	$\pm 1.0\%$ of reading ± 10 mV

The accuracy above is valid within the following conditions:
Warm-up time: 30 minutes, operating environment of 23°C \pm 5°C (73°F \pm 9°F) at 80% RH or less, DC or sine wave signals of 45 to 66 Hz, within maximum peak current for each range

Operating temperature and humidity range	0°C to 40°C (32°F to 104°F), 80% RH or less (no condensation)
Storage temperature and humidity range	-10°C to 50°C (14°F to 122°F), 80% RH or less (no condensation)
Standards	Safety: EN 61010, EMC: EN 61326
Maximum rated power	7.8 VA (continuous maximum input)
Cable length	Sensor/junction box: 1500 mm (59.06 in.) Junction box/termination unit: 150 mm (5.91 in.) Power cord: 1000 mm (39.37 in.)
Dimensions	Sensor: 155 mm (6.10 in.) W \times 18 mm (0.71 in.) H \times 26 mm (1.02 in.) D Junction box: 45 mm (1.77 in.) W \times 120 mm (4.72 in.) H \times 25 mm (0.98 in.) D Termination unit: 29 mm (1.14 in.) W \times 83 mm (3.27 in.) H \times 40 mm (1.57 in.) D (excluding BNC connector or protrusions)
Weight	Approx. 370 g (13.1 oz.)

CT6711

Product warranty period: 1 year
Guaranteed accuracy period: 1 year

Rated current* (3 ranges)	30 A rms, 5 A rms, 0.5 A rms AC/DC
Frequency band	DC to 120 MHz (-3dB)
Diameter of measurable conductors	Max. ϕ 5 mm (0.20 in.) (insulated conductors)

*DC or sine wave signals of 45 to 66 Hz, within maximum peak current for each range

Rise time	2.9 ns or less (10% to 90%)
Output voltage	0.1 V/A (30 A range) 1 V/A (5 A range) 10 V/A (0.5 A range)
Maximum peak current	± 50 A peak**1 (30 A range) ± 7.5 A peak (5 A range) ± 0.75 A peak (0.5 A range, ≥ 10 MHz) ± 0.3 A peak (0.5 A range, < 10 MHz)
Noise	75 μ A rms or less**2 (typical: 60 μ A rms)

*1: Maximum 2 sec input; requires cooling time at least 10 times longer than the time current has been input

Standards	Safety: EN 61010, EMC: EN 61326
Maximum rated power	5.5 VA (continuous maximum input)
Cable length	Sensor cable: 2000 mm (78.74 in.) Power cord: 1000 mm (39.37 in.)
Dimensions	Sensor: 176 mm (6.93 in.) W \times 69 mm (2.72 in.) H \times 27 mm (1.06 in.) D Termination unit: 27 mm (1.06 in.) W \times 55 mm (2.17 in.) H \times 18 mm (0.71 in.) D (excluding BNC connector or protrusions)
Weight	Approx. 500 g (17.6 oz.)

3275

Product warranty period: 1 year
Guaranteed accuracy period: 1 year

Rated current*	500 A rms
Frequency band	DC to 2 MHz (-3dB)
Diameter of measurable conductors	Max. ϕ 20 mm (0.79 in.)(insulated conductors)

*The accuracy above is valid within the following conditions:
DC or sine wave signals of 45 to 66 Hz, within maximum peak current for each range

Rise time	175 ns or less
Output voltage	0.01 V/A
Maximum peak current	700 A peak (non-continuous)
Noise	25 mA rms or less*

*Does not apply to devices to which the probe is connected;
when used with a 20 MHz bandwidth instrument devices

Accuracy (amplitude)

to 500 A	to 700 A peak
$\pm 1.0\%$ of reading ± 5 mV	$\pm 2.0\%$ of reading

The accuracy above is valid within the following conditions:
Warm-up time: 30 minutes, operating environment of 23°C \pm 5°C (73°F \pm 9°F) at 80% RH or less, DC or sine wave signals of 45 to 66 Hz

Operating temperature and humidity range	0°C to 40°C (32°F to 104°F), 80% RH or less (no condensation)
Storage temperature and humidity range	-10°C to 50°C (14°F to 122°F), 80% RH or less (no condensation)
Standards	Safety: EN 61010, EMC: EN 61326
Maximum rated power	7.2 VA (continuous maximum input)
Cable length	Sensor cable: 2000 mm (78.74 in.) Power cord: 1000 mm (39.37 in.)
Dimensions	Sensor: 176 mm (6.93 in.) W \times 69 mm (2.72 in.) H \times 27 mm (1.06 in.) D Termination unit: 27 mm (1.06 in.) W \times 55 mm (2.17 in.) H \times 18 mm (0.71 in.) D (excluding BNC connector or protrusions)
Weight	Approx. 520 g (18.3 oz.)

CT6704

NEW

Product warranty period: 3 year
Guaranteed accuracy period: 1 year

Rated current*	200 A rms
Frequency band	DC to 30 MHz (-3dB)
Diameter of measurable conductors	Max. Φ 20 mm (0.79 in.)(insulated conductors)

*DC or sine wave signals within frequency derating

Rise time	11.6 ns or less
Output voltage	0.01 V/A
Maximum peak current	± 400 A peak (within 2 s.)
Noise	25 mA rms or less*1

*1: Does not apply to devices to which the probe is connected; applicable when used with 20 MHz bandwidth instrument devices

Accuracy (amplitude)

to 200 A rms	to 400 A peak
± 0.5 %rdg. ± 0.5 mV	± 1 %rdg.

The accuracy above is valid within the following conditions:
Warm-up time: 15 minutes, operating environment of $23^{\circ}\text{C} \pm 5^{\circ}\text{C}$ ($73^{\circ}\text{F} \pm 9^{\circ}\text{F}$) at 80% RH or less, DC or sine wave signals of 45 to 66 Hz, within maximum peak current for each range

Operating temperature and humidity range	Sensor, cable: -10°C to 50°C (14°F to 122°F), 80% RH or less (no condensation) Relay box: -10°C to 40°C (14°F to 104°F), 80% RH or less (no condensation) *When placing relay boxes next to each other, keep a distance of 10 mm between them.
Storage temperature and humidity range	-20°C to 50°C , 80% RH Low (no condensation)
Standards	Safety: EN 61010, EMC: EN 61326
Maximum rated power	7.2 VA (continuous maximum input)
Cable length	Sensor/junction box: 1700 mm (66.93 in.) Junction box/BNC terminal: 300 mm (11.81 in.) Power cord: 1000 mm (39.37 in.)
Simensions	Sensor: 163 mm (6.42 in.) W \times 67 mm (2.64 in.) H \times 23 mm (0.91 in.) D Junction box: 45 mm (1.77 in.) W \times 120 mm (4.72 in.) H \times 26 mm (1.02 in.) D
Weight	Approx. 425 g (15.0 oz.)

CT6705

NEW

Product warranty period: 3 year
Guaranteed accuracy period: 1 year

Rated current*	500 A rms
Frequency band	DC to 15 MHz (-3dB)
Diameter of measurable conductors	Max. Φ 20 mm (0.79 in.)(insulated conductors)

*DC or sine wave signals within frequency derating

Rise time	23.3 ns or less
Output voltage	0.01 V/A
Maximum peak current	± 800 A peak (within 2 s.)
Noise	25 mA rms or less*1

CT7742	2000 A	DC to 5 kHz
CT7642	2000 A	DC to 10 kHz

Measurement of large currents	Rated current	Frequency range
CT7044	6000 A	10 Hz to 50 kHz
CT7045	6000 A	10 Hz to 50 kHz
CT7046	6000 A	10 Hz to 50 kHz

Measurement of leakage current	Rated current	Frequency range
CT7116	6 A	40 Hz to 5 kHz

Connection options

CT9920	Converts PL14 terminal to ME15W terminal
L9095	Connects CM7290, CM7291 and instrument
L0220-01	Extends a cable with a PL14 terminal, 2 m (6.56 ft.)
L0220-02	Extends a cable with a PL14 terminal, 5 m (16.40 ft.)
L0220-03	Extends a cable with a PL14 terminal, 10 m (32.81 ft.)
L0220-04	Extends a cable with a PL14 terminal, 20 m (65.62 ft.)
L0220-05	Extends a cable with a PL14 terminal, 30 m (98.43 ft.)
L0220-06	Extends a cable with a PL14 terminal, 50 m (164.04 ft.)
L0220-07	Extends a cable with a PL14 terminal, 100 m (328.08 ft.)

*1: Can be connected to LR8536, U8556 only

Grid power quality control (BNC)		
Measurement of load current	Rated current	Frequency range
9694	5 A	40 Hz to 5 kHz
9695-02	50 A	40 Hz to 5 kHz
9660	100 A	40 Hz to 5 kHz
9695-03	100 A	40 Hz to 5 kHz
9010-50	10 A - 500 A*2	40 Hz to 1 kHz
9018-50	10 A - 500 A*2	40 Hz to 3 kHz
9132-50	20 A - 1000 A*3	40 Hz to 1 kHz
CT6500	500 A	40 Hz to 1 kHz
9661	500 A	40 Hz to 5 kHz
9669	1000 A	40 Hz to 5 kHz

Measurement of large currents	Rated current	Frequency range
CT9667-01	500 A, 5000 A	10 Hz to 20 kHz
CT9667-02	500 A, 5000 A	10 Hz to 20 kHz
CT9667-03	500 A, 5000 A	10 Hz to 20 kHz

Measurement of leakage current	Rated current	Frequency range
9657-10	10 A	40 Hz to 5 kHz
9675	10 A	40 Hz to 5 kHz

Connection options

9219	Converts crimped terminal to BNC terminal
L9910	Converts BNC terminal to PL14 terminal
9704	Converts BNC terminal to banana terminal

*2: Can switch between ranges (10, 20, 50, 100, 200, 500 AAC)

*3: Can switch between ranges (20, 50, 100, 200, 500, 1000 AAC)
