EQUIVALENT CIRCUIT ANALYSIS FIRMWARE

IM9000

Enabling Simple Circuit Analysis & Detailed Acceptance/Rejection Decision-Making

- The IM9000 can automatically select the equivalent circuit model from the five typical models to minimize the differences between the measured values and the ideal frequency characteristics derived from the analysis results.
- An acceptance/rejection decision can be made for the L, C, and R elements comprising a part and the resonance sharpness (mechanical quality coefficient).
- A detailed decision can be made on the elements using the resonance of a piezoelectric element or inductor.

Model No. (Order Cord) **IM9000** (factory option firmware for the IM3570)

Note: The IM9000 is not included in the standard package. To use the IM9000 function, specify the option upon purchase. Customers who have purchased the Impedance Analyzer IM3570 can add the Equivalent Circuit Analysis Firmware IM9000 function. Please contact your local HIOKI representative.

Impedance Analyzer IM3570 option

Impedance Analyzer IM3570

The Equivalent Circuit Analysis Firmware IM9000 Provides an Optional Function to Perform a Variety of Equivalent Circuit Analysis and Display Graphs

- Five equivalent circuit analysis (Auto/Fixed) patterns
- Acceptance/rejection decision for equivalent circuit elements

Display position of estimation results	Select the display position from upper, lower, left or right
X-Y display	Cole-Cole plot: Set Rs to the first measurement item, X to the third measurement item, reverse the polarity of the third measurement item, and set correction coefficient A = -1 for scaling correction Admittance circle display: Set G to the first measurement item and B to the third measurement item
