Open an Excel® file and select a cell. The measured value being held on the instrument's display will be transferred to the computer and entered into the selected cell.

Transport to GENNECT Cross

GENNECT Cross, a free app designed specifically for use with Hioki measuring instruments, lets you check and manage measurement results and create reports. The software provides a range of functionality that helps manage data in the field, including photographing measurement sites, placing measurement results on photographs, and saving handwritten memos.

Significantly improve testing speed using test lead with remote switch

- 1 LED light shines a spotlight on the target
- 2 Red light warns of live voltage detection
- 3 Measurement start switch
- 4 Identify pass/fail decisions with red or green light

TEST LEAD SET WITH REMOTE SWITCH L9788-11 (Option)
*Standard with the IR4056-21, Not CE Marked

Identify PASS / FAIL using light and sound

Compare measured values to pre-set reference values to generate a pass or fail decision with the Comparator function.

Convenient for inspections

Low resistance measurement¹

Perform EV and HEV continuity checks as well as resistance measurement of protective conductors in facility electrical equipment as defined by IEC 60364.

AC/DC voltage measurement

Automatically detect AC or DC for testing. Use as a tester thanks to DC voltage measurement functionality.

PV Ω dedicated function²

Measurement is not affected even when the PV system is online.

1. Excludes IR4053 2. IR4053 Only

One-touch Start and Stop

Measurement voltage is applied while MEASURE key is pressed

Continuous test

Lift and lock the MEASURE key to apply a continuous stream of voltage

Prevent Accidental High Voltage Generation

Under [500V], [1000V], or [PVΩ] settings, the RELEASE button will blink. Press to unlock the release of high voltages as an extra safety measure.

Release lock

Accurate, easy-to-use insulation resistance meter

CAT III 2000 V
CAT IV 1000 V

Start:
Press and hold for 1 sec.

Complete:
Auto-discharge

Never miss a change in measurement.

During measurement:
Simultaneous display of test voltage, insulation resistance and leakage current

After measurement:
Insulation indexes (PI, DAR, DD) and capacitance can be displayed.

Failures caused by the application of a high voltage can be prevented.

Keep the applied voltage as low as possible

Precision stability in high voltage insulation testing

Shielded wire minimizes measurement variability.

GUARD terminal minimizes the effects of leakage current flowing through the insulation's surface.

- **Filter function**
- **Inductive noise rejection function** (up to 3 mA)
- **Minuscule current measurement technology**

Wireless communication for even greater convenience

(The optional Wireless Adapter Z3210 is required.)

Measure insulation resistance while the solar PV system continues to generate

IR5051
Up to 2000V

IR4053
Up to 600V

PV insulation resistance measurement function

In the past, it was impossible to measure a PV system's insulation resistance while the system was operating because the measurement current and generated current would mix together. Consequently, it was necessary to make such measurements at night, when the system being measured was not generating electricity. The PV insulation resistance measurement function can measure PV systems while they're operating during daylight hours, without being affected by the generated current.

- Illuminate the test location with a bright white LED
- Work safely knowing that when the RED is lit, live wires, high voltage or electrical discharge is present

Check for Live Circuits

The LIVE CIRCUIT LED will light up in red whenever the voltage exceeds 20 V AC between the LINE and EARTH terminals, and when at least 20 V DC is still remaining during the auto discharge.
