Contents

Preface **109**
Related documentation 109

Getting Started **110**
Overview of the Manual 110
Syntax and Commands 110
Status and Events 111
Setting up remote communications 111
Measurement support 115

Syntax and Commands **121**
Command syntax 121
Backus-Naur Form Definition 121
SCPI Commands and Queries 121
IEEE 488.2 Common Commands 126
Constructed Mnemonics 126
Command groups 127
Functional groups 127
Programming hints 128
IEEE common commands 128
Obsolete commands 129
Abort commands 130
Calculate commands 131
Marker mnemonics 162
Calibration commands 163
Display commands 164
Fetch commands 199
Initiate commands 233
Input commands 233
Mass memory commands 234
Specifying the File 244
Output commands 245
Read commands 247
Sense commands 280
Status commands 364
Source commands 369
System commands 369

Trace commands . . . 371
Trace mnemonics . . . 383
Trigger commands . . . 384
Unit commands . . . 388
Retrieving response message . . . 388

Command descriptions . . . 390
ABORt (No query form) . . . 390
*CAL (Query only) . . . 390
Calculate commands . . . 391
CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation . . . 391
CALCulate[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE: NAME:BASE . . . 391

Preface

The SignalVu-PC Vector Signal Analysis Software enables you to use your PC to analyze RF signal behavior with the same software used on the RSA6100B, RSA5100B, and RSA5100A Series Real-Time Analyzers. The SignalVu-PC software supports the use of the RSA6100B, RSA5100B, and RSA5100A Series commands with some limitations. For example, commands that control functions that are only available on RSA instruments.

When SignalVu-PC software is connected to an RSA306, RSA306B, RSA500A series, RSA600A series Spectrum Analyzer, the software supports commands that control the functions of those instruments.

This manual is composed of the following sections:

- *Getting Started* outlines how to use the GPIB interface.
- *Syntax and Commands* defines the syntax used in command descriptions, presents a list of all command subsystems, and presents detailed descriptions of all programming commands.
- *Status and Events* describes how the status and Events Reporting system operates and presents a list of all system errors.
- *Appendices* provides additional information including character charts, GPIB interface specification, and factory initialization settings.

Related documentation

- SignalVu-PC Vector Signal Analysis Software Help

  The help contains detailed information about how to operate the application and is found in the SignalVu-PC application. A PDF of the Help is also available at tek.com/manuals.

- *TekVISA Programmer Manual*

  (Tektronix part number 077-0140-XX)

  This manual is available as a printable PDF file on the Tektronix Web site (tek.com/manuals). The manual describes TekVISA, the Tektronix implementation of the VISA Application Programming Interface (API). TekVISA is industry-compliant software for writing interoperable instrument drivers in a variety of Application Development Environments (ADEs).

Getting Started

You can write computer programs that remotely take measurements and read those measurements for further analysis or storage. To help you get started with programming, this section includes the following subsections.

- Overview of the Manual

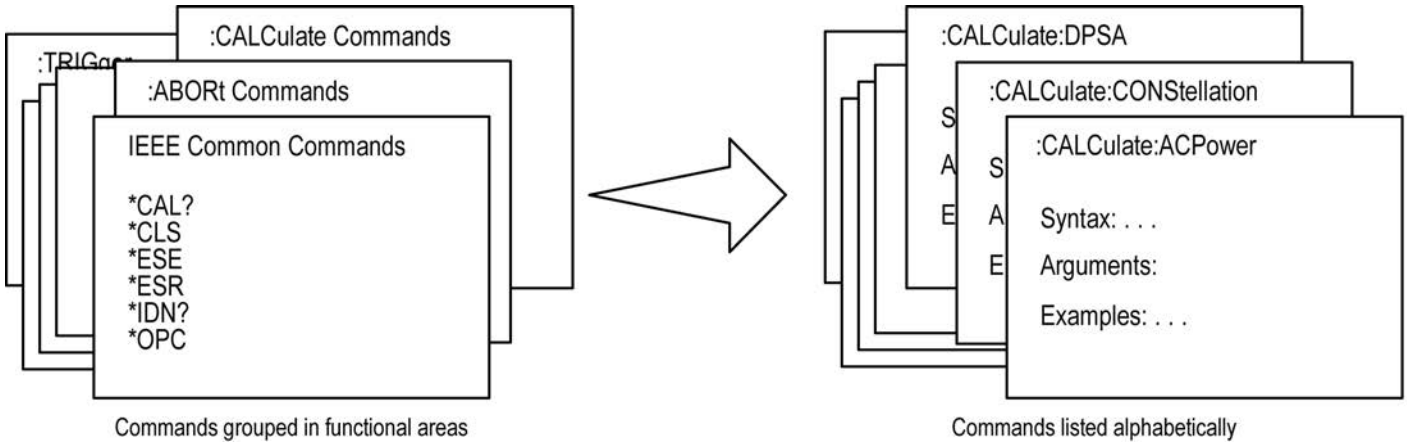
  Summarizes each major section of this manual.
- Measurement Support

  Describes which RSA measurement displays are available with the software.
- Setting Up Remote Communications

  Describes how to set up TekVISA, the programming interface, and enable control over the Ethernet.

Overview of the Manual

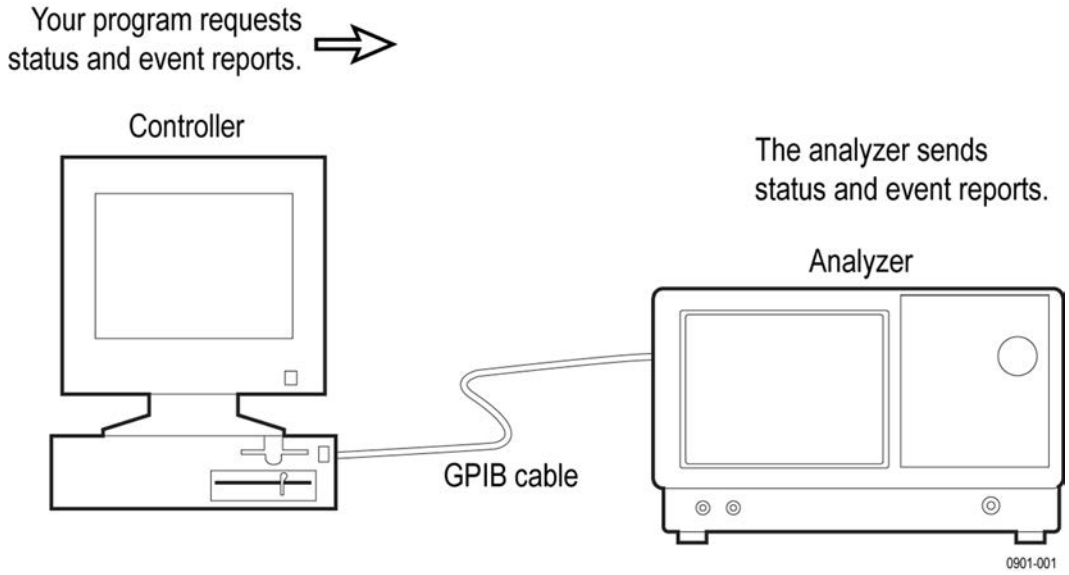
The information contained in each major section of this manual is described below.



Syntax and Commands

Syntax and Commands (on page 121) describes the structure and content of the messages your program sends to the analyzer. The following figure shows command parts as described in Command Syntax (on page 121).

Command parts



Command Descriptions (on page 391) also describes the effect of each command and provides examples of how you might use it. The Command Groups (on page 127) subsection provides lists by functional areas. The commands are listed alphabetically in the Command Descriptions (on page 391) section.

Functional groupings and an alphabetical list of commands

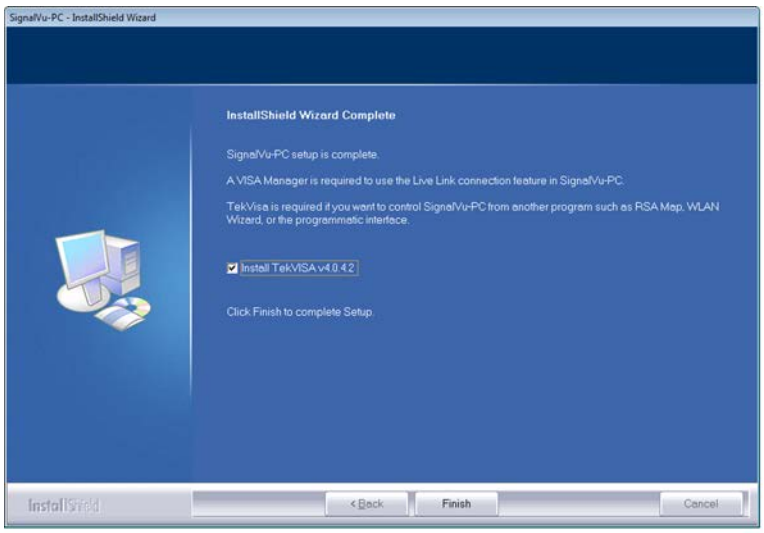
Status and Events

The program may request information from the instrument. The instrument provides information in the form of status and error messages. The following figure illustrates the basic operation of this system. Status and Events (on page 2796) describes how to get status or event information from the program and details the event and error messages.

Event-driven program

Setting up remote communications

To use the SignalVu-PC programmatic interface you must install the Tektronix Virtual Instrument Software Architecture (TekVISA) on your PC. TekVISA is a Tektronix VISA solution provided for customers. It is a collection of software and documentation that allows for remote control of instruments regardless of instrument brand and physical connection. It includes a VISA driver, VISA libraries, documentation, USB Device Driver, VXI-11 server, and connection management/debug software.



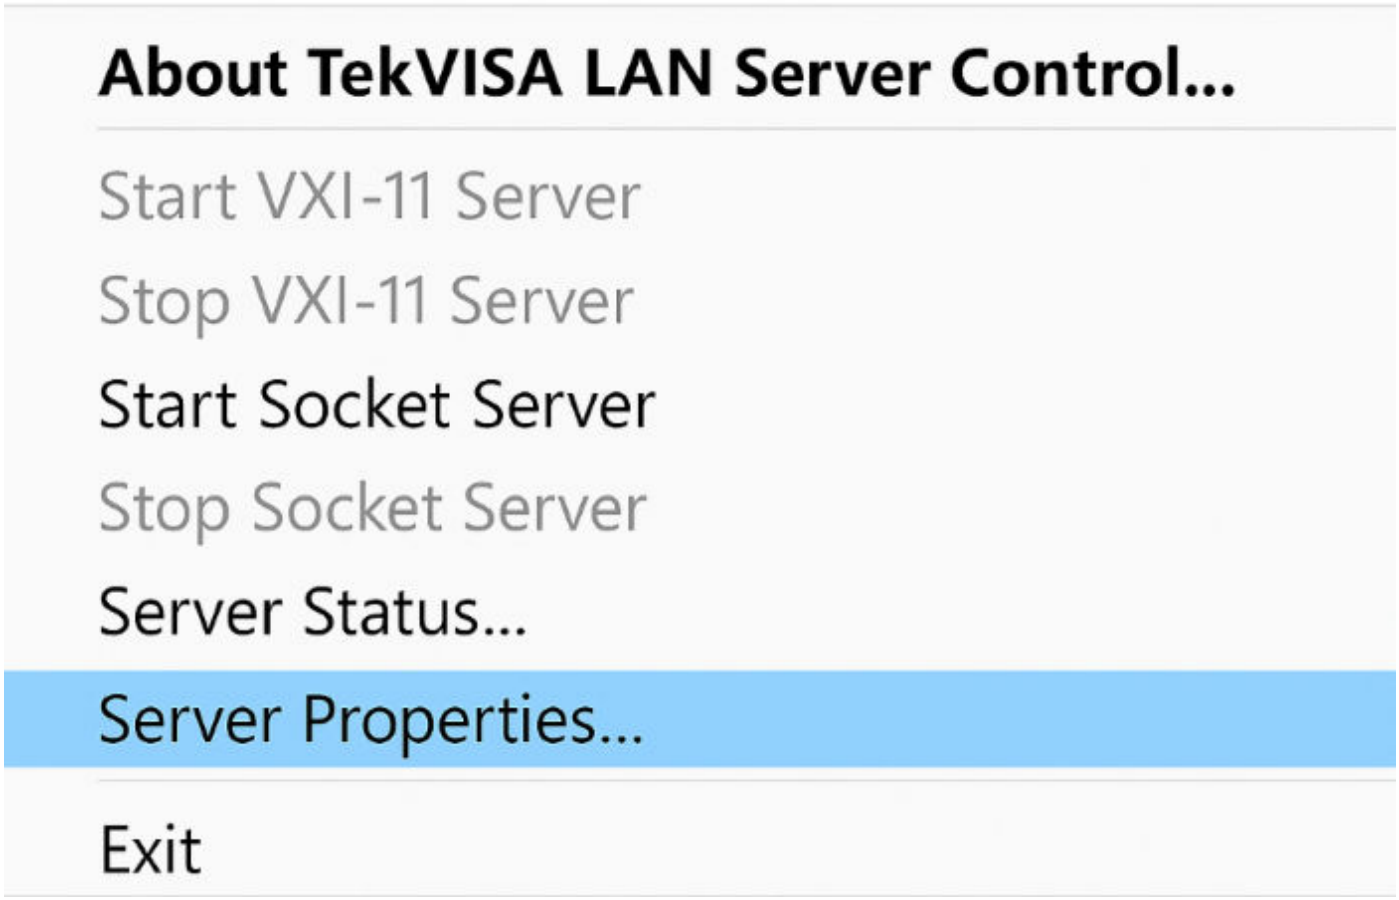
TekVISA is included as part of the SignalVu-PC application software package and you can select to automatically install it.

Setup for the programming interface

Enable the programming interface and install TekVISA. The programming interface is automatically enabled as part of the SignalVu-PC application software installation. However, in order to control SignalVu-PC using the programmatic interface, you must also install TekVISA, as follows.

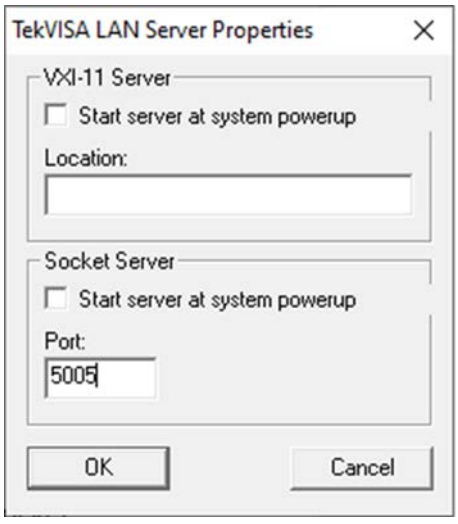
The programming interface is automatically enabled as part of the SignalVu-PC application software installation. However, in order to control SignalVu-PC using the programmatic interface, you must also install TekVISA as follows.

1. Install SignalVu-PC.
2. When the installation is almost complete, the following dialog box will appear. Verify that the Install TekVISA box is checked.



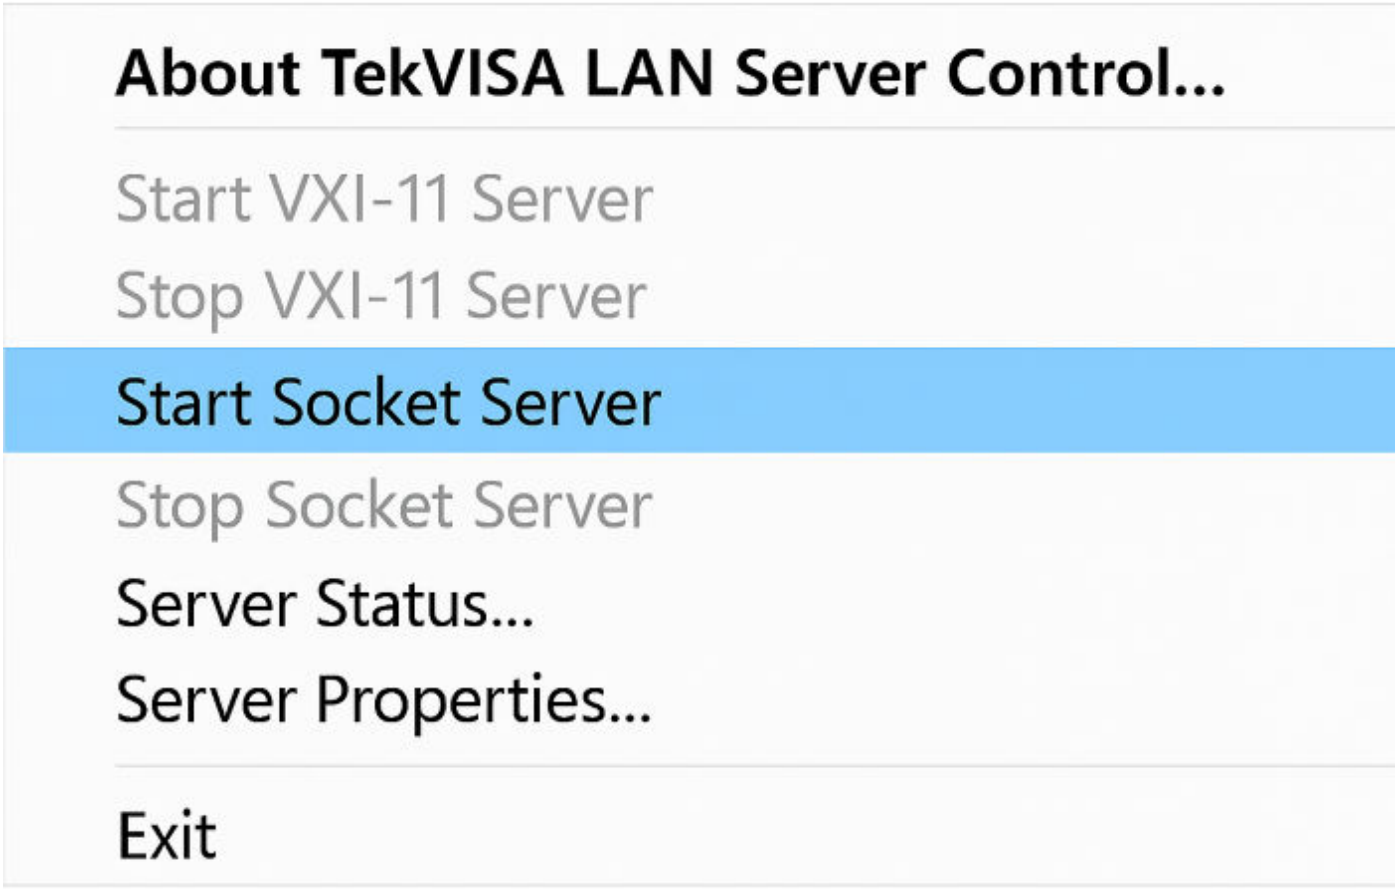
3. Click **Finish**.

Enable control over the Ethernet

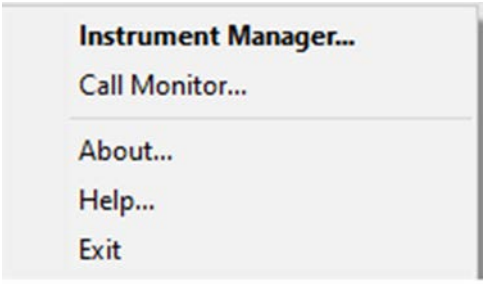


Communications with SignalVu-PC over an Ethernet LAN connection is supported with the VXI-11 protocal. The VXI-11 standard specifies an instrument protocol for TCP/IP computer networks, supporting writing and reading data to and from instruments.

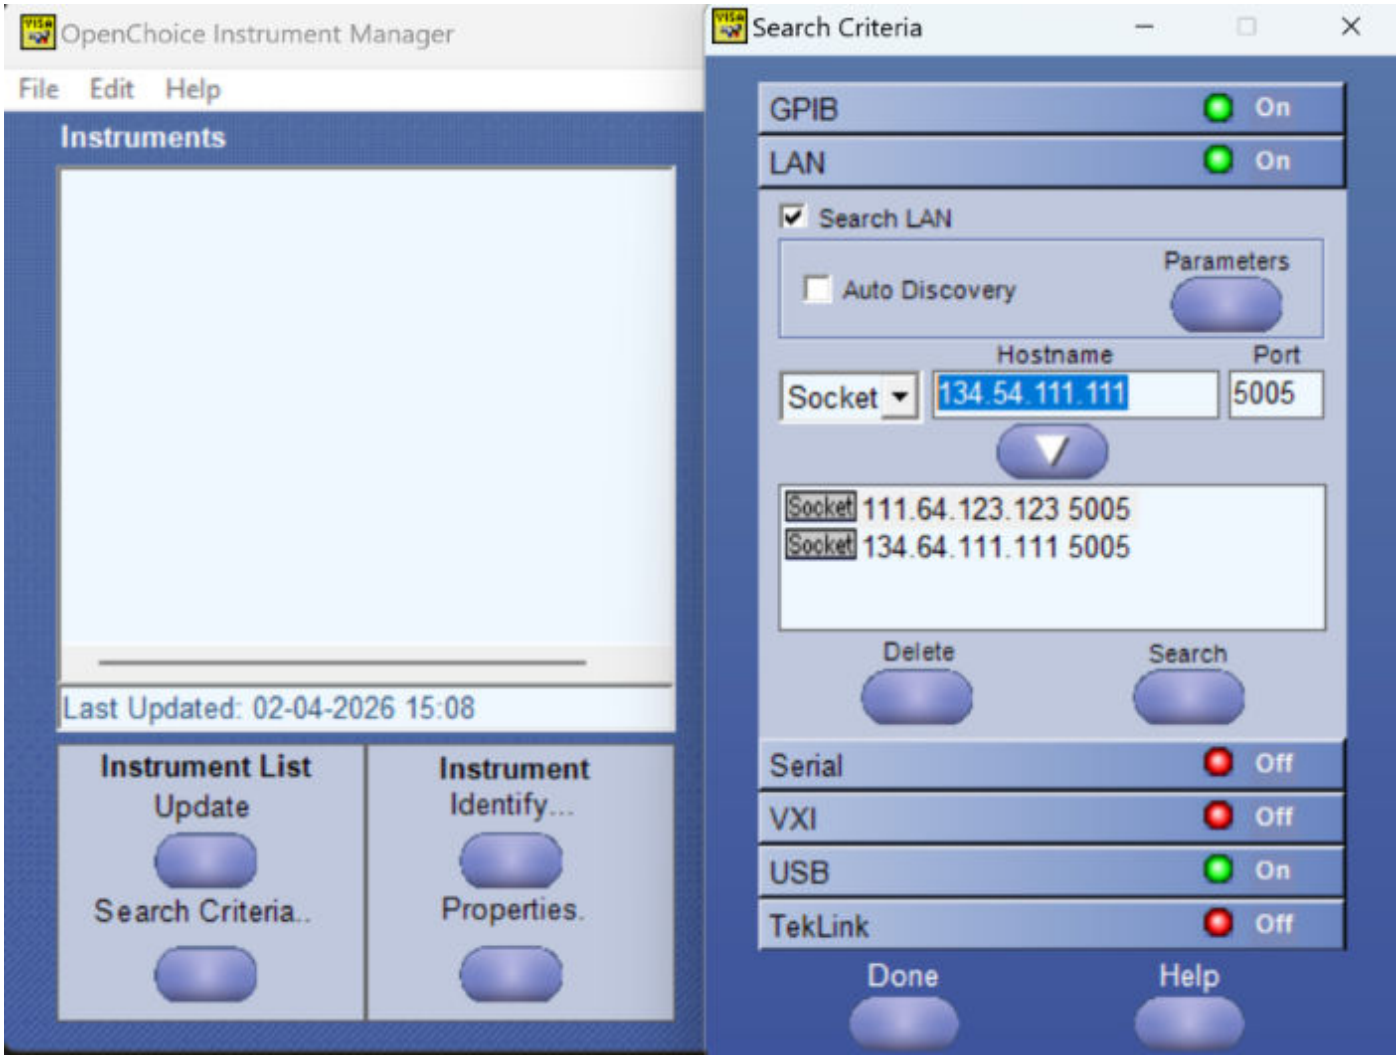
The VXI-11 server is automatically installed on the target PC as part of the SignalVu-PC application software installation process. This also creates a shortcut in the Startup folder. Do the following two procedures to establish communication between the instrument and the PC hosting SignalVu-PC.



1. Select the tray icon at the bottom right corner of the Windows Desktop to view hidden icons.
2. Right click the Server Control icon and select Server Properties.



3. When the TekVISA LAN Server Properties window opens, verify the Socket Server port is set to 5005. If it is not, change it to 5005.



4. Click OK.
5. Right click the Server Control icon again and select Start Socket Server. This will start the socket server to enable communication with the instrument and SignalVu-PC.

6. On the PC hosting SignalVu-PC, select the tray icon at the bottom right corner of the Windows Desktop to view hidden icons.
7. Click the VISAResourceManager icon and select Instrument Manager from the menu.

8. Click the Search Criteria button and select the LAN tab.

9. Enter the IP address of the instrument in the Hostname field. (Use the address of the instrument for which you started the socket server in the previous steps.)
10. Set to Socket and the Port to 5005.
11. Click the add icon arrow below it to add the address to the available sockets field and then click the Search button.
12. Select the added instrument from the Instruments list and click the Identify button. This will return the *IDN? response for SignalVu-PC.

Measurement support

Each command works in a particular measurement view(s). Views are specified under the Conditionsheading in the command description. The following table lists all available measurement displays supported by the SignalVu-PC software, which measurement view it is in, and if it requires an installed option.

NOTE: If you send a command for the measurement view that is not active on screen, an execution error will occur.

NOTE: Some measurement displays require installed options. See the Tektronix Web site product page for a list of available options.

Measurement support

Measurement group	Measurement

	Audio Summary

Syntax and Commands

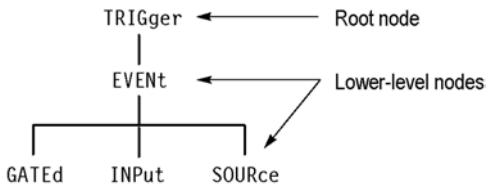
Command syntax

This section contains information on the Standard Commands for Programmable Instruments (SCPI) and IEEE 488.2 Common Commands you can use to program your RSA Series analyzer. The information is organized in the following subsections

- Backus-Naur Form Definition
- SCPI Commands and Queries
- IEEE 488.2 Common Commands
- Constructed Mnemonics

Backus-Naur Form Definition

This manual may describe commands and queries using the Backus-Naur Form (BNF) notation. The following table defines the standard BNF symbols.



BNF symbols and meanings

Symbol	Meaning
< >	Defined element
:=	Is defined as
|	Exclusive OR
{ }	Group; one element is required
[ ]	Optional; can be omitted
. . .	Previous element(s) may be repeated
( )	Comment

SCPI Commands and Queries

SCPI is a standard created by a consortium that provides guidelines for remote programming of instruments. These guidelines provide a consistent programming environment for instrument control and data transfer. This environment uses defined programming messages, instrument responses, and data format across all SCPI instruments, regardless of manufacturer. The analyzer uses a command language based on the SCPI standard.

The SCPI language is based on a hierarchical or tree structure as shown in the following figure that represents a subsystem. The top level of the tree is the root node; it is followed by one or more lower-level nodes.

Example of SCPI subsystem hierarchy tree

You can create commands and queries from these subsystem hierarchy trees.Commands specify actions for the instrument to perform. Queries return measurement data and information about parameter settings.

Creating Commands

SCPI commands are created by stringing together the nodes of a subsystem hierarchy and separating each node by a colon.

In the figure above, TRIGger is the root node and EVENt, GATed, INPut, and SOURce are lower-level nodes. To create a SCPI command, start with the root node TRIGger and move down the tree structure adding nodes until you reach the end of a branch. Most commands and some queries have parameters; you must include a value for these parameters. If you specify a parameter value that is out of range, the parameter will be set to a default value. The command descriptions,list the valid values for all parameters.

For example, TRIGgerEVENt:SOURce EXTRear is a valid SCPI command created from the hierarchy tree. (See Syntax and Commands (on page 110).)

Creating Queries

To create a query, start at the root node of a tree structure, move down to the end of a branch, and add a question mark. TRIGgerEVENt:SOURce? is an example of a valid SCPI query using the hierarchy tree in the figure. (See Syntax and Commands (on page 110).)

Query Responses

The query causes the analyzer to return information about its status or settings.When a query is sent to the analyzer, only the values are returned. When the returned value is a mnemonic, it is noted in abbreviated format, as shown in the following table.

Query response examples

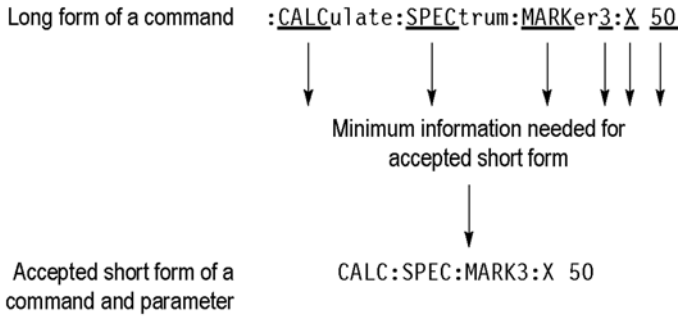
Query	Response
CALCulate:SPECtrum:MARKer:X?	7.50E+9
SENSe:SPECtrum:FFT:WINDow?	BH4B

A few queries also initiate an operation action before returning information. For example, the *CAL? query runs a calibration.

Parameter Types

Every parameter in the command and query descriptions is of a specified type.The parameters are enclosed in brackets, such as <value>. The parameter type is listed after the parameter and is enclosed in parentheses, for example, (Boolean).Some parameter types are defined specifically for the RSA Series command set and some are defined by ANSI/IEEE 488.2-1987 as shown in the following table.

Parameter types used in syntax descriptions



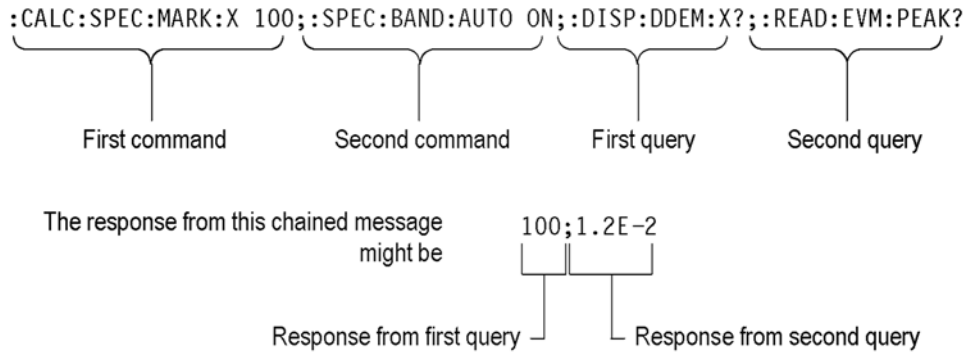
Parameter type	Description	Example
arbitrary block	A specified length of arbitrary data; defined in ANSI/IEEE 488.2 as "Definite Length Arbitrary Block Response Data"	#512234xxxxx . . . where 5 indicates that the following 5 digits (12234) specify the length of the data in bytes;xxxxx ... indicates the data
Boolean	Boolean numbers or values	ON or 1; OFF or 0
binary	Binary numbers	#B0110
octal	Octal numbers	#Q57, #Q3
hexadecimal	Hexadecimal numbers (0-9, A, B, C, D, E, F); an ANSI/IEEE 488.2-1992-defined parameter type	#HAA, #H1
NR1 numeric	Integers; an ANSI/IEEE 488.2-1992-defined parameter type	0, 1, 15, -1
NR2 numeric	Decimal numbers; an ANSI/IEEE 488.2-1992-defined parameter type; some commands and queries will accept an octal or hexadecimal value even though the parameter type is defined as NR2	1.2, 3.141516, -6.5
NR3	Floating point numbers; an ANSI/IEEE 488.2-1992-defined parameter type.	3.1415E-9, -16.1E5
NRf numeric	Flexible decimal number that may be type NR1, NR2 or NR3; anANSI/IEEE 488.2-1992-defined parameter type.	See NR1, NR2, and NR3 examples
string	Alphanumeric characters (must be within quotation marks); defined in ANSI/IEEE 488.2 as "String Response Data."	"Testing 1, 2, 3"

Special Characters

The Line Feed (LF) character (ASCII 10), and all characters in the range of ASCII 127-255 are defined as special characters. These characters are used in arbitrary block arguments only; using these characters in other parts of any command yields unpredictable results.

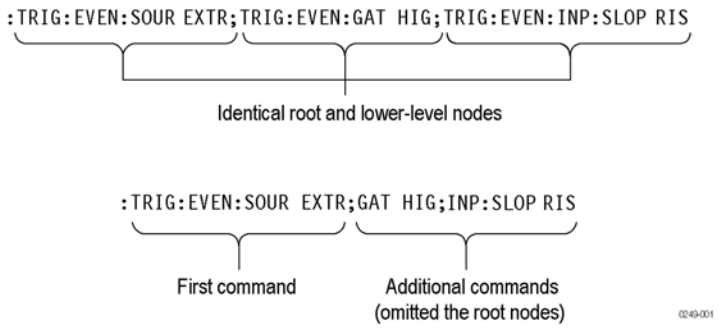
Abbreviating Commands, Queries, and Parameters

You can abbreviate most SCPI commands, queries, and parameters to an accepted short form. This manual shows these short forms as a combination of upper and lower case letters. The upper case letters indicate the accepted short form of a command. As shown in the following figure, you can create a short form by using only the upper case letters. The accepted short form and the long form are equivalent and request the same action of the instrument.



Example of abbreviating a command

NOTE: The numeric suffix of a command or query may be included in either the long form or short form; the analyzer will default to "1" if no suffix is used. In the above figure, the "3" of "MARKer3" indicates that the command is directed to Marker 3.



Chaining Commands and Queries

You can chain several commands or queries together into a single message. To create a chained message, first create a command or query, add a semicolon(;), and then add more commands or queries and semicolons until the message is complete. If the command following a semicolon is a root node, precede it with a colon (:). The following figure illustrates a chained message consisting of several commands and queries. The single chained message should end in a command or query, not a semicolon. Responses to any queries in your message are separated by semicolons.

Example of chaining commands and queries

If a command or query has the same root and lower-level nodes as the previous command or query, you can omit these nodes. In the following figure, the second command has the same root node (TRIGgerEVENt) as the first command, so these nodes can be omitted.

Example of omitting root and lower-level nodes in a chained message

Unit and SI Prefix

If the decimal numeric argument refers to amplitude, frequency, or time, you can express it using SI units instead of using the scaled explicit point input value format <NR3>. (SI units are units that conform to the Systeme International d'Unites standard.) For example, you can use the input format 200 mV or 1.0 MHz instead of 200.0E-3 or 1.0E+6, respectively, to specify voltage or frequency.

The following table lists the available units.

Available units

Symbol	Meaning
dB	decibel (relative amplitude)
dBm	decibel (absolute amplitude)
DEG	degree (phase)
Hz	hertz (frequency)
PCT	percent (%)
s	second (time)
V	volt

The available SI prefixes are shown in the following table.

Available SI prefixes

SI prefix	Z	A	F	P	N	U	M	K	MA*	G	T	PE	EX
Corresponding power	10^{-21}	10^{-18}	10^{-15}	10^{-12}	10^{-9}	10^{-6}	10^{-3}	10^{+3}	10^{+6}	10^{+9}	10^{+12}	10^{+15}	10^{+18}

* *When the unit is "Hz", "M" may be used instead of "MA" so that the frequency can be represented by "MHz"*

You can omit a unit in a command, but you must include the unit when using a SI prefix. For example, frequency of 15 MHz can be described as follows

15.0E6, 1.5E7Hz, 15000000, 15000000Hz, 15MHz, etc

("15M" is not allowed.)

Note that you can use either lower or upper case units and prefixes. The following examples have the same result, respectively.

170mHz, 170mHz, 170MHz, etc.

250mv, 250mV, 250MV, etc.

General Rules

Here are three general rules for using SCPI commands, queries, and parameters:

- You can use single (`' '`) or double (`" "`) quotation marks for quoted strings, but you cannot use both types of quotation marks for the same string.

  correct `"This string uses quotation marks correctly."`

  correct `'This string also uses quotation marks correctly.'`

  incorrect `"This string does not use quotation marks correctly.'`
- You can use upper case, lower case, or a mixture of both cases for all commands, queries, and parameters.

  `SENSE:SPECTRUM:FFT:LENGTH 1024`

is the same as

```
sense:spectrum:fft:length 1024
```

and

```
SENSE:spectrum:FFT:length 1024
```

NOTE: Literal strings (quoted) are case sensitive, for example, file names.

- No embedded spaces are allowed between or within nodes.

  correct `SENSE:SPECTRUM:FFT:LENGTH 1024`

  incorrect `SENSE: SPECTRUM: FFT: LEN GTH 1024`

IEEE 488.2 Common Commands

ANSI/IEEE Standard 488.2 defines the codes, formats, protocols, and usage of common commands and queries used on the interface between the controller and the instruments.The analyzer complies with this standard.

Command and Query Structure

The syntax for an IEEE 488.2 common command is an asterisk (*) followed by a command and, optionally, a space and parameter value. The syntax for an IEEE 488.2 common query is an asterisk (*) followed by a query and a question mark. All of the common commands and queries are listed in the last part of the **Syntax and Commands** section. The following are examples of common commands:

- *ESE 16
- *CLS

The following are examples of common queries

- *ESR
- *IDN

Constructed Mnemonics

Some header mnemonics specify one of a range of mnemonics. For example, a trace mnemonic can be either TRACe1, TRACe2, TRACe3, or TRACe4. You use these mnemonics in the command just as you do any other mnemonic. For example, there is a TRACe1:SPECtrum:FUNCtion command, and there is also a TRACe2:SPECtrum:FUNCtion command. In the command descriptions, this list of choices is abbreviated as TRACe<x>. The value of <x> is the upper range of valid suffixes. If the numeric suffix is omitted, the analyzer uses the default value of "1".

Constructed mnemonics

Symbol	Meaning
MARKer<x>	A marker specifier where <x> = 0, 1, 2, 3, or 4. Refer to Marker Mnemonics (on page 162)
RANGe<x>	A range specifier where <x> = 1 to 20. Refer to [SENSe]:SPURious Subgroup for details.
SPUR<x>	A spurious specifier where <x> = 1 to the number of spurious signals. Refer to FETCh|:READ:SPURious Subgroup for details, respectively.

Symbol	Meaning
TRACe<x>	A trace specifier where <x> = 0, 1, 2, 3, 4, or 5. Refer to TRACe Commands (on page 372) for details.

Command groups

This section lists the analyzer commands in two ways. It first presents them by functional groups. It then lists them alphabetically.The functional group list starts below.The alphabetical list provides more detail on each command. For the complete list of commands, see Command Descriptions (on page 391).

The analyzers conform to the Standard Commands for Programmable Instruments (SCPI) 1999.0 and IEEE Std 488.2-1987, except where noted.

Items followed by question marks are queries; items without question marks are commands. Some items in this section have a question mark in parentheses () in the command header section; this indicates that the item can be both a command and a query.

For the conventions of notation in this manual, refer to Command Syntax (on page 121) and following pages.

Functional groups

All commands are divided into groups as shown in the following table.

List of command group

Command group	Function
IEEE common	Conforms to the IEEE Std 488.2.
ABORt	Resets the trigger system and stops measurements.
CALCulate	Controls the markers and the search operations.
DISPlay	Controls the display of measurement results and waveforms.
FETCh	Retrieves the measurements from the last acquired data.
INITiate	Controls data acquisition.
INPut	Controls the characteristics of the signal input.
MMEMory	Provides mass storage capabilities for the analyzer.
OUTPut	Controls the characteristics of the signal output.
READ	Obtains the measurement results with acquiring data.
SENSe	Sets up detailed conditions for each measurement.
STATus	Controls the status and event registers.
SYSTem	Sets or queries system parameters for operation.

Command group	Function
TRACe	Controls trace activation and math operations.
UNIT	Specifies fundamental units for measurement.

Programming hints

Here are some basic tips for using commands:

- *Selecting a measurement item*

  Use Display commands to select or display the measurement view. [Example] `DISPlay:GENeral:MEASview:NEW SPECtrum` Displays the spectrum view on the screen.
- *Setting measurement parameters*

  Use Sense commands to set conditions for the measurement session. [Example] `SENSe:SPECtrum:FREQuency:CENTer 1.5GHz` Sets the center frequency to 1.5 GHz in the spectrum view.
- *Processing waveforms arithmetically*

  Use Trace commands for math operation on waveforms. [Example] `TRACe1:SPECtrum:FUNCtion AVERage` Averages the spectrum waveform.
- *Measuring with the markers*

  Use Calculate commands to measure some quantity using the markers. [Example] `CALCulate:SPECtrum:MARKer1:MAXimum` Positions the marker at the highest peak signal on the spectrum.
- *Scaling the waveform*

  Use Display commands to change the waveform portion on screen. [Example] `DISPlay:IQVTime:Y:SCALe 1.5` Sets the vertical range to 1.5 V in the IQ versus Time graph.

The following sections list the commands by group.

IEEE common commands

The IEEE 488.2 common commands have a "*" prefix.

Status and error commands

Command	Description
*CLS (on page 713)	Clears status.
*ESE (on page 1109)	Sets or queries the bits in the ESER register.
*ESR? (on page 1109)	Returns the contents of the SESR register.
*IDN? (on page 1530)	Returns the instrument identification code.
*OPC (on page 1594)	Synchronizes commands.
*OPT? (on page 1595)	Returns a list of options installed in your analyzer.
*RST	Returns the instrument settings to the factory defaults.
*SRE (on page 2531)	Sets or queries the bits in the SRER register.

Command	Description
*STB? (on page 2532)	Returns the contents of the SBR using the MSS bit.
*WAI (on page 2795)	Prevents the analyzer from executing further commands.

Obsolete commands

The following table lists obsolete commands and their replacements.

Obsolete and replacement commands

Obsolete commands	Replacement commands
[SENSe:]PULSe:ANALyze:MEASurement:TIME:AUTO	SENSe:PULSe:MEASview<y>:ANALyze:FDOMain:MEASurement:TIME:ALENgth
[SENSe:]PULSe:ANALyze:MEASurement:TIME:STARt	SENSe:PULSe:MEASview<y>:ANALyze:FDOMain:MEASurement:TIME:METHod

Obsolete commands	Replacement commands
[SENSe:]PULSe:ANALyze:MEASurement:TIME:STOP	SENSe:PULSe:MEASview<y>:ANALyze:FDOMain:MEASurement:TIME:RLENgth
	SENSe:PULSe:MEASview<y>:ANALyze:FDOMain:MEASurement:TIME:RLEVel
	SENSe:PULSe:MEASview<y>:ANALyze:FDOMain:MEASurement:TIME:STARt
	SENSe:PULSe:MEASview<y>:ANALyze:IRESponse:MEASurement:TIME:ALENgth
	SENSe:PULSe:MEASview<y>:ANALyze:IRESponse:MEASurement:TIME:METHod
	SENSe:PULSe:MEASview<y>:ANALyze:IRESponse:MEASurement:TIME:RLENgth
	SENSe:PULSe:MEASview<y>:ANALyze:IRESponse:MEASurement:TIME:RLEVel
	SENSe:PULSe:MEASview<y>:ANALyze:IRESponse:MEASurement:TIME:STARt
	SENSe:PULSe:MEASview<y>:ANALyze:OVERshoot:MEASurement:TIME:ALENgth
	SENSe:PULSe:MEASview<y>:ANALyze:OVERshoot:MEASurement:TIME:METHod
	SENSe:PULSe:MEASview<y>:ANALyze:OVERshoot:MEASurement:TIME:RLENgth
	SENSe:PULSe:MEASview<y>:ANALyze:OVERshoot:MEASurement:TIME:RLEVel
	SENSe:PULSe:MEASview<y>:ANALyze:OVERshoot:MEASurement:TIME:STARt
[SENSe]:PULSe:FREFerence:CHIRpbw(?)	SENSe:PULSe:MEASview<y>:FREFerence:CSLope

NOTE: <y> is the Measurement Index. Range: 1–8 (based on number of sources of connected instrument), where MEASview<y> keyword is optional and by default y is 1

Abort commands

Use the Abort commands to reset the trigger system and to stop measurements.

Abort commands

Command	Description
ABORt (on page 391)	Resets the trigger system and stops measurements.

Calculate commands

Use the Calculate commands to control the markers and the search operations.See the Index for commands not listed in the following table.

Calculate commands

Command	Description
CALCulate:MARKer:ADD (on page 507)	Adds a marker.
CALCulate:SYNC:MARKer<x>:MEASurement (on page 644)	Sets or queries the selected measurement to which the specified marker will be snapped to the peak of the measurement trace.
CALCulate:TXGain subcommand group	**Transmission Gain measurements**
CALculate:TXGain:MARKer<x>:DELTa:X? (on page 655)	Returns the delta marker frequency for the specified marker on the trace.
CALculate:TXGain:MARKer<x>:DELTa:Y? (on page 655)	Returns the delta marker amplitude for the specified marker on the trace.
CALculate:TXGain:MARKer<x>:MAXimum (on page 655)	Moves the specified marker to the highest peak on the trace.
CALculate:TXGain:MARKer<x>:PEAK:HIGHer (on page 656)	Moves the specified marker to the next peak higher in amplitude on the trace.
CALculate:TXGain:MARKer<x>:PEAK:LEFT (on page 656)	Moves the specified marker to the next peak to the left on the trace.
CALculate:TXGain:MARKer<x>:PEAK:LOWer (on page 657)	Moves the specified marker to the next peak lower in amplitude on the trace.
CALculate:TXGain:MARKer<x>:PEAK:RIGHt (on page 657)	Moves the specified marker to the next peak to the right on the trace.
CALculate:TXGain:MARKer<x>:TRACe (on page 658)	Sets or queries the trace on which the specified marker is placed in the Transmission Gain display.
CALculate:TXGain:MARKer<x>:X (on page 658)	Sets or queries the horizontal position for the specified marker on the trace.
CALculate:TXGain:MARKer<x>:Y? (on page 659)	Queries the marker amplitude of the specified marker on the trace.
CALCulate:BLUEtooth subcommand group	**Bluetooth measurements**
CALCulate:BLUEtooth:CONSte:MARKer<x>:DELTa:X[:TIME]? (on page 413)	Queries the delta marker time for the selected marker.
CALCulate:BLUEtooth:CONSte:MARKer<x>:FDEViation? (on page 413)	Queries the frequency deviation for the selected marker.

Command	Description
CALCulate:BLUETooth:CONSte:MARKer<x>:MAGNitude? (on page 414)	Queries the magnitude readout of the selected marker.
CALCulate:BLUEtooth:CONSte:MARKer<x>:MAXimum (on page 414)	Positions the selected marker at the symbol in the center of the analyzed time record.
CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:LEFT (on page 415)	Moves the selected marker in the time domain to the next symbol number to the left, relative to the previous marker position.
CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:RIGHt (on page 415)	Moves the selected marker in the time domain to the next symbol number to the right, relative to the previous marker position.
CALCulate:BLUETooth:CONSte:MARKer<x>:PHASe? (on page 416)	Queries the phase readout of the selected marker
CALCulate:BLUEtooth:CONSte:MARKer<x>:SYMBol? (on page 416)	Queries the symbol readout value for the selected marker.
CALCulate:BLUEtooth:CONSte:MARKer<x>:Trace (on page 417)	Sets or queries the Trace for the selected marker.
CALCulate:BLUETooth:CONSte:MARKer<x>:VALue? (on page 417)	Queries the value readout of the selected marker.
CALCulate:BLUEtooth:CONSte:MARKer<x>:X (on page 418)	Sets or queries the time position of the selected marker.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:X[:TIME]? (on page 418)	Returns the delta marker time for the selected marker.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:Y? (on page 419)	Returns the delta marker time for the selected marker.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:MAXimum (on page 419)	Returns the delta marker amplitude for the selected markers.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:HIGHer (on page 420)	Moves the selected marker to the highest peak.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LEFT (on page 420)	Moves the selected marker to the next peak to the left.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LOWer (on page 421)	Moves the selected marker to the next peak lower in amplitude.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:RIGHt (on page 421)	Moves the selected marker to the next peak to the right.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:TRACe (on page 422)	The command places the selected marker on the I or Q trace in the Bluetooth eye diagram display. The query returns the name of the trace where the current marker resides.

Command	Description
CALCulate:BLUEtooth:EDIagram:MARKer<x>:X[:TIME] (on page 422)	Sets or queries the horizontal position (time) of the selected marker.
CALCulate:BLUEtooth:EDIagram:MARKer<x>:Y? (on page 423)	Returns the vertical position of the selected marker.
CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:X[:TIME]? (on page 423)	Queries the delta marker time for the selected marker.
CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:Y? (on page 424)	Returns the delta marker amplitude for the selected marker .
CALCulate:BLUEtooth:FDVTime:MARKer<x>:MAXimum (on page 425)	Moves the selected marker to the highest peak on the trace.
CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:HIGHer (on page 425)	Moves the selected marker to the next peak higher in amplitude.
CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LEFT (on page 426)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LOWer (on page 426)	Moves the selected marker to the next peak lower in amplitude.
CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:RIGHT (on page 427)	Moves the selected marker to the next peak to the right on the trace.
CALCulate:BLUEtooth:FDVTIME:MARKer<x>:X[:TIME] (on page 427)	Sets or queries the marker time.
CALCulate:BLUEtooth:FDVTIME:MARKer<x>:Y (on page 428)	Sets or queries the marker amplitude.
CALCulate:BOBW:MARKer<x>:DELTa:X? (on page 428)	Returns the delta marker frequency for the selected marker.
CALCulate:BOBW:MARKer<x>:DELTa:Y? (on page 429)	Returns the delta marker frequency for the selected marker on the Bluetooth 20 dB bandwidth measurement.
CALCulate:BOBW:MARKer<x>:MAXimum (on page 429)	Positions the selected marker at the maximum value of the display.
CALCulate:BOBW:MARKer<x>:PEAK:HIGHer (on page 430)	Moves the selected marker to the next peak higher in amplitude.
CALCulate:BOBW:MARKer<x>:PEAK:LEFT (on page 430)	Moves the selected marker in the time domain to the left, relative to the previous marker position on the trace.
CALCulate:BOBW:MARKer<x>:PEAK:LOWer (on page 430)	Moves the selected marker to the next peak lower in amplitude.
CALCulate:BOBW:MARKer<x>:PEAK:RIGHt (on page 431)	Moves the selected marker in the time domain to the right, relative to the previous marker position on the trace.

Command	Description
CALCulate:BOBW:MARKer<x>[:SET]:CENTer (on page 431)	Sets the center frequency to the value at the marker position.
CALCulate:BOBW:MARKer<x>:X (on page 432)	Sets or queries the time position of the selected marker.
CALCulate:BOBW:MARKer<x>:Y? (on page 432)	Returns the amplitude position of the selected marker.
CALCulate:DPX:MARKer subcommand group	**DPX power density readings**
CALCulate:DPX:MARKer<x>:POWer:DENSity? (on page 449)	Returns the power density of the specified marker.
CALCulate:DPX:MARKer<x>:POWer:IDensity? (on page 450)	Returns the integrated power density reading between the MR (reference marker) and the selected marker.
CALCulate:DPX:MARKer<x>:POWer:INTEgrated? (on page 450)	Returns the integrated power reading between the MR (reference marker) and the selected marker.
CALCulate:MARKer:MODE (on page 521)	Sets or queries the marker mode.
CALCulate:NOISe subcommand group	**Noise and Gain measurements**
CALCulate:NOISe:FIGure:MARKer<x>:DELTa:X? (on page 521)	Queries the frequency difference between MR (reference marker) and the selected marker
CALCulate:NOISe:FIGure:MARKer<x>:DELTa:Y? (on page 522)	Queries the power difference value between MR (reference marker) and the selected marker.
CALCulate:NOISe:FIGure:MARKer<x>:MAXimum (on page 522)	Places the selected marker at the maximum value on the peak of the trace.
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer (on page 523)	Places the selected marker at the next highest peak on the trace.
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT (on page 523)	Places the selected marker at the next peak on the trace to the left of the selected marker
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer (on page 524)	Places the selected marker at the next lowest peak on the trace.
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt (on page 524)	Places the selected marker at the next peak on the trace to the right of the selected marker.
CALCulate:NOISe:FIGure:MARKer<x>:TRACe (on page 525)	Sets or queries which trace the specified marker is attached to.
CALCulate:NOISe:FIGure:MARKer<x>:X? (on page 526)	Queries the frequency of the specified marker.
CALCulate:NOISe:FIGure:MARKer<x>:Y? (on page 526)	Queries the vertical position (dB) of the specified marker.

Command	Description
CALCulate:NOISe:GAIN:MARKer<x>:DELTa:X? (on page 527)	Query returns the frequency difference between MR (reference marker) and the selected marker.
CALCulate:NOISe:GAIN:MARKer<x>:DELTa:Y? (on page 527)	Query returns the power difference value between MR (reference marker) and the selected marker.
CALCulate:NOISe:GAIN:MARKer<x>:MAXimum? (on page 528)	Places the selected marker at the maximum value on the peak of the trace.
CALCulate:NOISe:GAIN:MARKer<x>:PEAK:HIGHer? (on page 528)	Places the selected marker at the next highest peak on the trace.
CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LEFT? (on page 529)	Places the selected marker at the next peak on the trace to the left of the selected marker.
CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LOWer? (on page 529)	Places the selected marker at the next lowest peak on the trace.
CALCulate:NOISe:GAIN:MARKer<x>:PEAK:RIGHt? (on page 530)	Places the specified marker on a specified trace. The query form returns the trace on which the marker resides.
CALCulate:NOISe:GAIN:MARKer<x>:TRACe (on page 530)	Sets or queries which trace the specified marker is attached to.
CALCulate:NOISe:GAIN:MARKer<x>:X? (on page 531)	Queries the horizontal position of the specified marker.
CALCulate:NOISe:GAIN:MARKer<x>:Y? (on page 531)	Queries the vertical position of the specified marker.
CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:X? (on page 532)	Returns the frequency difference between MR (reference marker) and the selected marker.
CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:Y? (on page 532)	Returns the temperature difference between MR (reference marker) and the selected marker.
CALCulate:NOISe:TEMPerature:MARKer<x>:MAXimum? (on page 533)	Places the selected marker at the maximum value on the peak of the trace.
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:HIGHer? (on page 534)	Places the selected marker at the highest peak on the trace.
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LEFT? (on page 534)	Places the selected marker at the next peak on the trace to the left of the selected marker.
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LOWer? (on page 535)	Places the selected marker at the next lowest peak on the trace.
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:RIGHt? (on page 535)	This command places the specified marker on a specified trace. The query form returns the trace on which the marker resides.
CALCulate:NOISe:TEMPerature:MARKer<x>:TRACe (on page 536)	Sets or queries which trace the specified marker is attached to.

Command	Description
CALCulate:NOISe:TEMPerature:MARKer<x>:X? (on page 536)	Queries the frequency of the specified marker.
CALCulate:NOISe:TEMPerature:MARKer<x>:Y? (on page 537)	Queries the temperature (Kelvin) at the specified marker.
CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:X? (on page 537)	Queries the frequency difference between MR (reference marker) and the selected marker.
CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:Y? (on page 538)	Queries the power difference value between MR (reference marker) and the selected marker.
CALCulate:NOISe:YFACtor:MARKer<x>:MAXimum (on page 538)	Places the selected marker at the maximum value on the peak of the trace.
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LEFT? (on page 539)	Places the selected marker at the next peak to the left on the trace.
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LOWer? (on page 540)	Places the selected marker at the next lowest peak on the trace.
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:RIGHt? (on page 541)	Places the specified marker on a specified trace. The query form returns the trace on which the marker resides.
CALCulate:NOISe:YFACtor:MARKer<x>:TRACe (on page 541)	Sets or queries which trace the specified marker is attached to.
CALCulate:NOISe:YFACtor:MARKer<x>:X? (on page 542)	Queries the frequency of the specified marker.
CALCulate:NOISe:YFACtor:MARKer<x>:Y? (on page 542)	This command queries the vertical position (dB) of the specified marker.
CALCulate:P25 subcommand group	**P25 analysis**
CALCulate:P25:CONSte:MARKer<x>:DELTa:X[:TIME]? (on page 558)	Returns the delta marker time for the selected marker.
CALCulate:P25:CONSte:MARKer<x>:FDEViation? (on page 559)	Queries the frequency deviation of the selected marker.
CALCulate:P25:CONSte:MARKer<x>:MAGNitude? (on page 559)	Queries the frequency deviation (for Freq Dev trace types) or magnitude (for IQ trace types) of the selected marker.
CALCulate:P25:CONSte:MARKer<x>:MAXimum (on page 560)	Moves the selected marker to the highest peak on the trace.
CALCulate:P25:CONSte:MARKer<x>:PEAK:LEFT (on page 560)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:P25:CONSte:MARKer<x>:PEAK:RIGHt (on page 560)	Moves the selected marker to the next peak to the right on the trace.

Command	Description
CALCulate:P25:CONSte:MARKer<x>:PHASe? (on page 561)	Queries the phase of the selected marker.
CALCulate:P25:CONSte:MARKer<x>:SYMBol? (on page 561)	Queries the readout symbol of the selected marker.
CALCulate:P25:CONSte:MARKer<x>:Trace (on page 562)	Places the selected marker on the Demodulated I and Q versus Time trace. The query returns the name of the trace on which the marker resides.
CALCulate:P25:CONSte:MARKer<x>:VALue? (on page 562)	Queries the readout value of the specified marker.
CALCulate:P25:CONSte:MARKer<x>:X (on page 563)	Sets or queries the horizontal position of the selected marker.
CALCulate:P25:EDIagram:MARKer<x>:DELTa:X [:TIME]? (Query Only)	Returns the delta marker time for the selected marker.
CALCulate:P25:EDIagram:MARKer<x>:DELTa:Y? (on page 564)	Returns the delta marker time for the selected marker.
CALCulate:P25:EDIagram:MARKer<x>:MAXimum (on page 564)	Moves the selected marker to the highest peak.
CALCulate:P25:EDIagram:MARKer<x>:PEAK:HIGHer (on page 565)	Moves the selected marker to the next highest peak.
CALCulate:P25:EDIagram:MARKer<x>:PEAK:LEFT (on page 566)	Moves the selected marker to the next peak to the left .
CALCulate:P25:EDIagram:MARKer<x>:PEAK:LOWer (on page 566)	Moves the selected marker to the next lowest peak.
CALCulate:P25:EDIagram:MARKer<x>:PEAK:RIGHt (on page 567)	Moves the selected marker to the next peak to the right .
CALCulate:P25:EDIagram:MARKer<x>:TRACe (on page 567)	Sets the selected marker on the I or Q trace, or queries the trace that the specified marker is on.
CALCulate:P25:EDIagram:MARKer<x>:X (on page 568)	Sets or queries the horizontal position of the selected marker.
CALCulate:P25:EDIagram:MARKer<x>:Y (on page 569)	Sets or queries the vertical position of the selected marker.
CALCulate:P25:PVTime:MARKer<x>:DELTa:X[:TIME]? (on page 569)	Returns the delta marker time (seconds) for the selected marker.
CALCulate:P25:PVTime:MARKer<x>:DELTa:Y[:TIME]? (on page 570)	Returns the Delta marker amplitude (dB) for the selected marker.
CALCulate:P25:PVTime:MARKer<x>:Maximum (on page 570)	Moves the selected marker to the highest peak on the trace.

Command	Description
CALCulate:P25:PVTime:MARKer<x>:PEAK:HIGHer (on page 571)	Moves the selected marker to the next peak higher in amplitude on the trace.
CALCulate:P25:PVTime:MARKer<x>:PEAK:LEFT (on page 572)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:P25:PVTime:MARKer<x>:PEAK:LOWer (on page 572)	Moves the selected marker to the next peak lower in amplitude on the trace.
CALCulate:P25:PVTime:MARKer<x>:PEAK:RIGHt (on page 573)	Moves the selected marker to the next peak to the right on the trace.
CALCulate:P25:PVTime:MARKer<x>:X (on page 573)	Sets or queries the horizontal position of the selected marker.
CALCulate:P25:PVTime:MARKer<x>:Y (on page 574)	Sets or queries the vertical position of the selected marker.
CALCulate: Marker subgroup	**Marker position and values**
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:DENSity? (on page 635)	Returns the power density of the specified marker.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:IDENSity (on page 636)	Returns the integrated power density reading between the MR (reference marker) and the selected marker.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:INTEgrated? (on page 637)	Returns the integrated power reading between the MR (reference marker) and the selected marker.
CALCulate:MARKer:AOFF (on page 508)	Turns off all markers.
CALCulate:MARKer:DELete (on page 508)	Deletes the last marker added.
CALCulate:MARKer:DENSity:EXCursion (on page 509)	Sets or queries the minimum excursion of DPX signal density.
CALCulate:MARKer:DENSity:SMOothing (on page 509)	Sets or queries the number of pixels squared for smoothing the density.
CALCulate:MARKer:DENSity:THReshold (on page 510)	Sets or queries the threshold of DPX signal density to detect peaks.
CALCulate:MARKer:DRAG:SEARch:STATe (on page 510)	Enables or disables peak searching when dragging a marker in a plot.
CALCulate:MARKer:MODE (on page 510)	Sets or queries the marker mode.
CALCulate:MARKer:NOISe:MODE (on page 511)	Sets or queries the marker noise mode.
CALCulate:MARKer:PEAK:EXCursion (on page 511)	Sets or queries the minimum excursion level.

Command	Description
CALCulate:MARKer:PEAK:THReshold (on page 512)	Sets or queries the threshold level to detect peaks.
CALCulate:SEARch subgroup	**Calculate search commands**
CALCulate:SEARch:LIMit:FAIL? (on page 604)	Queries whether the waveform cuts across the limit or not.
CALCulate:SEARch:LIMit:MATCh:BEEP[:STATe] (on page 604)	Sets or queries whether to beep when a match occurs.
CALCulate:SEARch:LIMit:MATCh:SACQuire[:STATe] (on page 604)	Sets or queries whether to stop acquiring data on match.
CALCulate:SEARch:LIMit:MATCh:SDATa[:STATe] (on page 605)	Sets or queries whether to save the acquisition data automatically.
CALCulate:SEARch:LIMit:MATCh:SPICture[:STATe] (on page 605)	Sets or queries whether to save the whole screen automatically.
CALCulate:SEARch:LIMit:MATCh:STRace[:STATe] (on page 606)	Sets or queries whether to save the spectrum trace automatically.
CALCulate:SEARch:LIMit:OPERation (on page 607)	Sets or queries the limit operation in the search function.
CALCulate:SEARch:LIMit:OPERation:FEED (on page 608)	Sets or queries the data flow to be fed in the search operation.
CALCulate:SEARch:LIMit:OPERation:MASK:LOAD (on page 608)	Loads the limit mask from a specified file for the search operation.
CALCulate:SEARch:LIMit:OPERation:MASK:STORE (on page 609)	Stores the limit mask to a specified file for the search operation.
CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation (on page 392)	Sets or queries the limit value in the search operation.
CALCulate:SEARch:LIMit:REPort:DATA? (on page 610)	Returns the frequency range(s) that satisfy the search condition.
CALCulate:SEARch:LIMit:REPort:POINts? (on page 610)	Returns the number of range(s) that satisfy the search condition.
CALCulate:SEARch:LIMit:STATe (on page 611)	Sets or queries whether to enable or disable the search function.
CALCulate:ACPower subgroup	**Channel power and ACPR measurement**
CALCulate:ACPower:MARKer<x>:DELTa:X? (on page 393)	Returns the delta marker frequency for the selected marker.
CALCulate:ACPower:MARKer<x>:DELTa:Y? (on page 393)	Returns the delta marker amplitude for the selected marker.

Command	Description
CALCulate:ACPower:MARKer<x>:MAXimum (on page 394)	Moves the marker to the highest peak on the trace.
CALCulate:ACPower:MARKer<x>:PEAK:LEFT (on page 394)	Moves the marker to the next peak to the left on the trace.
CALCulate:ACPower:MARKer<x>:PEAK:RIGHt (on page 394)	Moves the marker to the next peak to the right on the trace.
CALCulate:ACPower:MARKer<x>:X (on page 395)	Sets or queries the horizontal position of the marker.
CALCulate:ACPower:MARKer<x>:Y? (on page 395)	Queries the marker amplitude of the selected marker.
CALCulate:{AM|FM|PM} subgroup (Option 21 only)	**AM/FM/PM measurement**
CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:X? (on page 396)	Returns the delta marker time for the selected marker.
CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:Y? (on page 396)	Returns the delta marker amplitude for the selected marker.
CALCulate:{AM|FM|PM}:MARKer<x>:MAXimum (on page 397)	Moves the marker to the highest peak on the trace.
CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:HIGHer (on page 397)	Moves the marker to the next peak higher in amplitude.
CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LEFT (on page 398)	Moves the marker to the next peak to the left on the trace.
CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LOWer (on page 398)	Moves the marker to the next peak lower in amplitude.
CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:RIGHt (on page 399)	Moves the marker to the next peak to the right on the trace.
CALCulate:{AM|FM|PM}:MARKer<x>:X (on page 399)	Sets or queries the horizontal position (time) of the marker.
CALCulate:{AM|FM|PM}:MARKer<x>:Y? (on page 400)	Queries the marker amplitude of the selected marker.
CALCulate:AUDio subgroup	**Audio measurements**
CALCulate:AUDio:HARMonic:HNUMber (on page 400)	Sets or queries the number of harmonics.
CALCulate:AUDio:HARMonic:NHNumber (on page 401)	Sets or queries the number of non-harmonics.
CALCulate:AUDio:NHARmonic:EXCursion (on page 401)	Sets or queries the non-harmonic excursion value.

Command	Description
CALCulate:AUDio:NHARmonic:IGNore (on page 401)	Sets or queries the ignore region of the non-harmonics.
CALCulate:AUDio:NHARmonic:THReshold (on page 402)	Sets or queries the non-harmonic threshold value.
CALCulate:AUDio:SPECtrum:MARKer<x>:DELTa:X? (on page 402)	Returns the delta marker frequency for the selected marker on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:DELTa:Y? (on page 403)	Returns the delta marker amplitude for the selected marker on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:MAXimum (on page 403)	Moves the selected marker to the highest peak on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:HIGHer (on page 404)	Moves the selected marker to the next peak higher in amplitude on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LEFT (on page 404)	Moves the selected marker to the next peak to the left on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LOWer (on page 405)	Moves the selected marker to the next peak lower in amplitude on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:RIGHt (on page 405)	Moves the selected marker to the next peak to the right on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:TRACe (on page 405)	Sets or queries the trace on which the specified marker is placed in the spectrum measurement.
CALCulate:AUDio:SPECtrum:MARKer<x>:X (on page 406)	Sets or queries the horizontal position of the selected marker on the spectrum trace.
CALCulate:AUDio:SPECtrum:MARKer<x>:Y? (on page 406)	Queries the marker amplitude of the selected marker on the spectrum trace.
CALCulate:AVTime subgroup	**Frequency versus Time measurement**
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 407)	Returns the delta marker time for the selected marker.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 408)	Returns the delta marker amplitude for the selected marker.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:MAXimum (on page 408)	Moves the marker to the highest peak on the trace.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 409)	Moves the marker to the next peak higher in amplitude.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 409)	Moves the marker to the next peak to the left on the trace.

Command	Description
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 410)	Moves the marker to the next peak lower in amplitude.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 410)	Moves the marker to the next peak to the right on the trace.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:TRACe (on page 411)	Sets or queries the trace on which the marker is placed.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:X (on page 411)	Sets or queries the horizontal position of the marker.
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:Y? (on page 412)	Queries the marker amplitude of the selected marker.
CALCulate:CONSte subgroup (Option 21 only)	**Constellation measurement**
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 433)	Returns the delta marker time for the selected marker on the Constellation trace.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:FDEViation? (on page 433)	Queries the frequency deviation of the selected marker in the Constellation measurement for an FSK modulated signal.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAGNitude? (on page 434)	Queries the magnitude readout of the selected marker in the Constellation measurement.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAXimum (on page 435)	Positions the selected marker at the symbol in the center of the time record.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 435)	Moves the selected marker in the time domain to the next lower symbol number, relative to the previous marker position.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 436)	Moves the selected marker in the time domain to the next higher symbol number, relative to the previous marker position.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PHASe? (on page 436)	Queries the phase readout of the selected marker in the Constellation measurement.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:SYMBol? (on page 437)	Queries the symbol readout of the selected marker in the Constellation measurement.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:VALue? (on page 438)	Queries the value readout of the selected marker in the Constellation measurement.
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X (on page 438)	Sets or queries the time position of the selected marker on the Constellation trace.
CALCulate:DIQVtime subgroup (Option 21 only)	**Demodulated I&Q versus Time measurement**
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 439)	Returns the delta marker time for the selected marker.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 440)	Returns the delta marker amplitude for the selected marker.

Command	Description
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:MAXimum (on page 440)	Moves the selected marker to the highest peak on the trace.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 441)	Moves the selected marker to the next peak higher in amplitude.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 442)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 442)	Moves the selected marker to the next peak lower in amplitude.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 443)	Moves the selected marker to the next peak to the right on the trace.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:TRACe (on page 443)	Places the selected marker on the Demodulated I&Q versus Time trace.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 445)	Sets or queries the horizontal position (time) of the selected marker.
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:Y? (on page 444)	Queries the marker amplitude of the selected marker.
CALCulate:DPX subgroup	**DPX spectrum measurement**
CALCulate:DPX:MARKer<x>:DELTa:Y? (on page 446)	Returns the delta marker amplitude for the selected marker.
CALCulate:DPX:MARKer<x>:MAXimum (on page 447)	Moves the marker to the highest peak on the trace.
CALCulate:DPX:MARKer<x>:PEAK:HIGHer (on page 447)	Moves the marker to the next peak higher in amplitude.
CALCulate:DPX:MARKer<x>:PEAK:LEFT (on page 448)	Moves the marker to the next peak to the left on the trace.
CALCulate:DPX:MARKer<x>:PEAK:LOWer (on page 448)	Moves the marker to the next peak lower in amplitude.
CALCulate:DPX:MARKer<x>:PEAK:RIGHt (on page 449)	Moves the marker to the next peak to the right on the trace.
CALCulate:DPX:MARKer<x>[:SET]:CENTer (on page 451)	Sets the center frequency to the marker frequency.
CALCulate:DPX:MARKer<x>:TRACe (on page 451)	Sets or queries the trace to attach the marker to.
CALCulate:DPX:MARKer<x>:X:AMPLitude (on page 452)	Sets or queries the amplitude position of the marker.

Command	Description
CALCulate:DPX:MARKer<x>:X[:FREQuency] (on page 452)	Sets or queries the frequency position of the marker.
CALCulate:DPX:MARKer<x>:X:PHASe (on page 453)	Sets or queries the phase position of the selected marker.
CALCulate:DPX:MARKer<x>:X:TIME (on page 453)	Sets or queries the time position of the selected marker.
CALCulate:DPX:MARKer<x>:Y? (on page 454)	Queries the marker amplitude of the selected marker.
CALCulate:EDIagram subgroup (Option 21 only)	**Eye diagram**
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]?	Returns the delta marker time for the selected marker on the eye diagram trace.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 455)	Returns the delta marker amplitude for the selected marker on the eye diagram trace.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:MAXimum	Moves the selected marker to the highest peak on the eye diagram trace.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 456)	Moves the selected marker to the next peak higher in amplitude on the eye diagram trace.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 457)	Moves the selected marker to the next peak to the left on the eye diagram trace.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 457)	Moves the selected marker to the next peak lower in amplitude on the eye diagram trace.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 458)	Moves the selected marker to the next peak to the right on the eye diagram trace.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:TRACe (on page 459)	Places the selected marker on the I or Q trace in the eye diagram display.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 459)	Sets or queries the horizontal position (time) of the selected marker in the eye diagram measurement.
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:Y? (on page 460)	Queries the vertical position of the selected marker in the eye diagram measurement.
CALCulate:EVM subgroup (Option 21 only)	**EVM versus Time measurement**
CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 465)	Returns the delta marker amplitude for the selected marker in the EVM versus Time measurement.
CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 466)	Returns the delta marker amplitude for the selected marker in the EVM versus Time measurement.
CALCulate:EVM[:MEASview<y>]:MARKer<x>:MAXimum (on page 467)	Moves the selected marker to the highest peak on the trace in the EVM versus Time measurement.

Command	Description
CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 467)	Moves the selected marker to the next peak higher in amplitude on the EVM versus Time trace.
CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 468)	Moves the selected marker to the next peak to the left on the trace in the EVM versus Time measurement.
CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 468)	Moves the selected marker to the next peak lower in amplitude on the EVM versus Time trace.
CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 469)	Moves the selected marker to the next peak to the right on the trace in the EVM versus Time measurement.
CALCulate:EVM[:MEASview<y>]:MARKer<x>:X (on page 470)	Sets or queries the horizontal position of the selected marker in the EVM versus Time measurement.
CALCulate:EVM[:MEASview<y>]:MARKer<x>:Y? (on page 470)	Queries the marker amplitude of the selected marker in the EVM versus Time measurement.
CALCulate:FDVTime subgroup (Option 21 only)	**Frequency deviation versus Time measurement**
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 471)	Returns the delta marker time for the selected marker on the Frequency deviation versus Time trace.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 471)	Returns the delta marker amplitude for the selected marker in the Frequency deviation versus Time measurement.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:MAXimum (on page 472)	Moves the selected marker to the highest peak on the trace in the Frequency deviation versus Time measurement.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 473)	Moves the marker to the next peak higher in amplitude.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 473)	Moves the marker to the next peak to the left on the trace.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 474)	Moves the selected marker to the next peak lower in amplitude on the Frequency deviation versus Time trace.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 474)	Moves the selected marker to the next peak to the right on the trace in the Frequency deviation versus Time measurement.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 475)	Sets or queries the horizontal position of the selected marker in the Frequency deviation versus Time measurement.
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:Y? (on page 476)	Queries the marker amplitude of the selected marker in the Frequency deviation versus Time measurement.
CALCulate:{FSETtling|PSETtling} subgroup	**Frequency and Phase Settling measurements**
CALCulate:{FSETtling|PSETtling}:MARKer<x>:DELTa:X? (on page 476)	Returns the delta marker time for the selected marker in the Frequency and Phase Settling displays.
CALCulate:{FSETtling|PSETtling}:MARKer<x>:DELTa:Y? (on page 477)	Returns the delta marker frequency for the selected marker in the Frequency and Phase Settling displays.

Command	Description
CALCulate:{FSETtling|PSETtling}:MARKer<x>:MAXimum (on page 477)	Moves the selected marker to the highest peak on the trace in the Frequency or Phase Settling display.
CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:HIGHer (on page 478)	Moves the selected marker to the next peak higher in amplitude on the Frequency or Phase Settling trace.
CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:LEFT (on page 478)	Moves the selected marker to the next peak to the left on the trace in the Frequency or Phase Settling display.
CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:LOWer (on page 479)	Moves the selected marker to the next peak lower in amplitude on the Frequency or Phase Settling trace.
CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:RIGHt (on page 479)	Moves the selected marker to the next peak to the right on the trace in the Frequency or Phase Settling display.
CALCulate:{FSETtling|PSETtling}:MARKer<x>:TRACe (on page 480)	Sets or queries the trace on which the specified marker is placed in the spectrum measurement
CALCulate:{FSETtling|PSETtling}:MARKer<x>:X (on page 480)	Sets or queries the horizontal position of the selected marker in the Frequency and Phase Settling display.
CALCulate:{FSETtling|PSETtling}:MARKer<x>:Y? (on page 481)	Queries the marker amplitude of the selected marker in the Frequency and Phase Settling display.
CALCulate:FVTime subgroup	**Frequency versus Time measurement**
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 481)	Returns the delta marker time for the selected marker.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 482)	Returns the delta marker frequency for the selected marker.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:MAXimum (on page 482)	Moves the marker to the highest peak on the trace.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 483)	Moves the marker to the next peak higher in amplitude.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 483)	Moves the marker to the next peak to the left on the trace.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 484)	Moves the marker to the next peak lower in amplitude.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 484)	Moves the marker to the next peak to the right on the trace.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:TRACe (on page 485)	Sets or queries the trace on which the specified marker is placed in the Frequency versus Time measurement.
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:X (on page 485)	Sets or queries the horizontal position of the marker.

Command	Description
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:Y? (on page 486)	Queries the marker amplitude of the selected marker.
CALCulate:IQVTime subgroup	**RF I&Q versus Time measurement**
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 488)	Returns the delta marker time for the selected marker.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 488)	Returns the delta marker amplitude for the selected marker.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:MAXimum (on page 489)	Moves the marker to the highest peak on the trace.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 490)	Moves the marker to the next peak higher in amplitude.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 490)	Moves the marker to the next peak to the left on the trace.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 491)	Moves the marker to the next peak lower in amplitude.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 491)	Moves the marker to the next peak to the right on the trace.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:TRACe (on page 492)	Sets or queries the trace (I or Q) to place the marker.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:X (on page 492)	Sets or queries the horizontal position of the marker.
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:Y? (on page 493)	Queries the marker amplitude of the selected marker.
CALCulate:MCPower subgroup	**MCPR measurement**
CALCulate:MCPower:MARKer<x>:DELTa:X? (on page 512)	Returns the delta marker frequency for the selected marker.
CALCulate:MCPower:MARKer<x>:DELTa:Y? (on page 513)	Returns the delta marker amplitude for the selected marker.
CALCulate:MCPower:MARKer<x>:MAXimum (on page 513)	Moves the marker to the highest peak on the trace.
CALCulate:MCPower:MARKer<x>:PEAK:LEFT (on page 514)	Moves the marker to the next peak to the left on the trace.
CALCulate:MCPower:MARKer<x>:PEAK:RIGHt (on page 514)	Moves the marker to the next peak to the right on the trace.
CALCulate:MCPower:MARKer<x>:X (on page 514)	Sets or queries the horizontal position of the marker.

Command	Description
CALCulate:MCPower:MARKer<x>:Y? (on page 515)	Queries the marker amplitude of the selected marker.
CALCulate:MERRor:Subgroup	**Magnitude error versus Time measurement**
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 515)	Returns the delta marker amplitude for the selected marker.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 516)	Returns the delta marker amplitude for the selected marker.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:MAXimum (on page 517)	Moves the marker to the highest peak on the trace.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 517)	Moves the marker to the next peak higher in amplitude.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 518)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 518)	Moves the selected marker to the next peak lower in amplitude.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 519)	Moves the selected marker to the next peak to the right on the trace.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:X (on page 520)	Sets or queries the horizontal position of the marker.
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:Y? (on page 520)	Queries the marker amplitude of the selected marker.
CALCulate:OBWidth subgroup	**Occupied Bandwidth measurement**
CALCulate:OBWidth:MARKer<x>:DELTa:X? (on page 543)	Returns the delta marker frequency for the selected marker.
CALCulate:OBWidth:MARKer<x>:DELTa:Y? (on page 543)	Returns the delta marker amplitude for the selected marker.
CALCulate:OBWidth:MARKer<x>:MAXimum (on page 544)	Moves the marker to the highest peak on the trace.
CALCulate:OBWidth:MARKer<x>:PEAK:HIGHer (on page 544)	Moves the marker to the next peak higher in amplitude.
CALCulate:OBWidth:MARKer<x>:PEAK:LEFT (on page 545)	Moves the marker to the next peak to the left on the trace.
CALCulate:OBWidth:MARKer<x>:PEAK:LOWer (on page 545)	Moves the marker to the next peak lower in amplitude.
CALCulate:OBWidth:MARKer<x>:PEAK:RIGHt (on page 545)	Moves the marker to the next peak to the right on the trace.

Command	Description
CALCulate:OBWidth:MARKer<x>[:SET]:CENTer (on page 546)	Sets the center frequency to the value at the marker position.
CALCulate:OBWidth:MARKer<x>:X (on page 546)	Sets or queries the horizontal position of the marker.
CALCulate:OBWidth:MARKer<x>:Y? (on page 547)	Queries the marker amplitude of the selected marker.
CALCulate:OFDM subgroup	**Orthogonal frequency division multiplexing measurement**
CALCulate:OFDM:CONSte:MARKer<x>:FREQuency (on page 547)	Sets or queries the frequency position of the selected marker.
CALCulate:OFDM:CONSte:MARKer<x>:MAGNitude? (on page 548)	Queries the marker magnitude of the selected marker.
CALCulate:OFDM:CONSte:MARKer<x>:PHASe? (on page 548)	Queries the phase readout of the selected marker.
CALCulate:OFDM:CONSte:MARKer<x>:TIME (on page 549)	Sets or queries the X position of the selected marker.
CALCulate:OFDM:CONSte:MARKer<x>:TYPE? (on page 549)	Queries the data type of the selected marker.
CALCulate:OFDM:CONSte:MARKer<x>:VALue? (on page 549)	Queries the value of the specified marker.
CALCulate:OFDM:CRESponse:MARKer<x>:DELTa:X? (on page 550)	Returns the delta marker frequency for the selected marker.
CALCulate:OFDM:CRESponse:MARKer<x>:DELTa:Y? (on page 550)	Returns the delta marker frequency for the selected marker.
CALCulate:OFDM:CRESponse:MARKer<x>:MAXimum (on page 551)	Moves the selected marker to the highest peak.
CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:HIGHer (on page 551)	Moves the selected marker to the next peak higher in amplitude.
CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:LEFT (on page 552)	Moves the selected marker to the next peak to the left.
CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:LOWer (on page 552)	Moves the selected marker to the next peak lower in amplitude.
CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:RIGHt (on page 553)	Moves the selected marker to the next peak to the right.
CALCulate:OFDM:CRESponse:MARKer<x>:X (on page 553)	Sets or queries the horizontal position of the selected marker.
CALCulate:OFDM:CRESponse:MARKer<x>:Y? (on page 553)	Returns the amplitude of the selected marker.

Command	Description
CALCulate:OFDM:FLATness:MARKer<x>:MAXimum (on page 554)	Positions the specified marker at the maximum point on the trace.
CALCulate:OFDM:FLATness:MARKer<x>:PEAK:HIGHer (on page 554)	Moves the specified marker to the next peak higher in amplitude on the trace.
CALCulate:OFDM:FLATness:MARKer<x>:PEAK:LEFT (on page 555)	Moves the specified marker to the next peak to the left on the trace.
CALCulate:OFDM:FLATness:MARKer<x>:PEAK:LOWer (on page 555)	Moves the marker to the next peak lower in amplitude on the trace.
CALCulate:OFDM:FLATness:MARKer<x>:PEAK:RIGHt (on page 556)	Moves the marker to the next peak to the right on the trace.
CALCulate:OFDM:FLATness:MARKer<x>:X (on page 556)	Sets or queries the horizontal value at the selected marker position on the points trace.
CALCulate:OFDM:FLATness:MARKer<x>:Y? (on page 557)	Returns the value of the amplitude (vertical position) at the selected marker position.
CALCulate:OFDM:TABLe:MARKer<x>:FREQuency (on page 557)	Sets or queries the frequency position of the selected marker.
CALCulate:OFDM:TABLe:MARKer<x>:TIMe (on page 557)	Sets or queries the marker time.
CALCulate:OFDM:TABLe:MARKer<x>:VALue? (on page 558)	Queries the value readout of the selected marker.
CALCulate:PERRor subgroup (Option 21 only)	**Phase error versus Time measurement**
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 574)	Returns the delta marker amplitude for the selected marker in the Phase error versus Time measurement.
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 575)	Returns the delta marker phase for the selected marker.
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:MAXimum (on page 576)	Moves the marker to the highest peak on the trace.
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 576)	Moves the marker to the next peak higher in amplitude.
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 577)	Moves the marker to the next peak to the left on the trace.
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 577)	Moves the marker to the next peak lower in amplitude.
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 578)	Moves the marker to the next peak to the right on the trace.

Command	Description
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:X (on page 579)	Sets or queries the horizontal position of the marker.
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:Y? (on page 579)	Queries the marker amplitude of the selected marker.
CALCulate:PHVTime subgroup	**Phase versus Time measurement**
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 580)	Returns the delta marker time for the selected marker.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 580)	Returns the delta marker phase for the selected marker.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:MAXimum (on page 581)	Moves the marker to the highest peak on the trace.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 581)	Moves the marker to the next peak higher in amplitude.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 582)	Moves the marker to the next peak to the left on the trace.
CALCulate:PHVTime[:MEASview<y>:MARKer<x>:PEAK:LOWer (on page 582)	Moves the marker to the next peak lower in amplitude.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 583)	Moves the marker to the next peak to the right on the trace.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x> :TRACe (on page 584)	Sets or queries the trace on which the specified marker is placed in the Phase versus Time measurement.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:X (on page 584)	Sets or queries the horizontal position of the marker.
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:Y? (on page 585)	Queries the marker amplitude of the selected marker.
CALCulate:PULSe subgroup	**Pulsed RF measurements**
CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:X (on page 592)	Sets or queries the frequency in Hz for the X cursor.
CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:Y? (on page 592)	Returns the frequency level in dB for the Y cursor.
CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:X (on page 593)	Sets or queries the histogram indicator X value.
CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:Y? (on page 593)	Queries the histogram indicator Yvalue.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 594)	Returns the delta marker frequency for the specified marker.

Command	Description
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 594)	Returns the delta marker amplitude for the specified marker.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:MAXimum (on page 595)	Moves the marker to the highest peak on the trace.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 595)	Moves the marker to the next peak higher in amplitude.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 596)	Moves the marker to the next peak to the left on the statistics trace.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 597)	Moves the marker to the next peak lower in amplitude.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 597)	Moves the marker to the next peak to the right on the statistics trace.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:X (on page 598)	Sets or queries the horizontal position of the marker.
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:Y? (on page 598)	Queries the marker amplitude of the selected marker.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 599)	Returns the delta marker time for the selected marker.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 599)	Returns the delta marker amplitude for the selected marker.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:MAXimum (on page 600)	Moves the marker to the highest peak on the pulse trace.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 600)	Moves the marker to the next peak higher in amplitude.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 601)	Moves the marker to the next peak to the left on the pulse trace.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 601)	Moves the marker to the next peak lower in amplitude.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 602)	Moves the marker to the next peak to the right on the pulse trace.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:X (on page 602)	Sets or queries the horizontal position of the marker.
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:Y? (on page 603)	Queries the marker amplitude of the selected marker.
CALCulate:SEARch subgroup	**Spectrogram measurement**

Command	Description
CALCulate:SEARch:LIMit:FAIL? (on page 604)	Queries whether the waveform cuts across the limit in the search operation.
CALCulate:SEARch:LIMit:MATCh:BEEP[:STATe] (on page 604)	Sets or queries whether or not to emit a beep on match during run or replay in the search operation.
CALCulate:SEARch:LIMit:MATCh:SACQuire[:STATe] (on page 604)	Sets or queries whether or not to stop acquiring data on match during run or replay in the search operation.
CALCulate:SEARch:LIMit:MATCh:SDATa[:STATe] (on page 605)	Sets or queries whether or not to save automatically (AutoSave) acquisition data on match during run in the search operation.
CALCulate:SEARch:LIMit:MATCh:SPICture[:STATe] (on page 605)	Sets or queries whether or not to save automatically (AutoSave) the whole screen on match during run in the search operation.
CALCulate:SEARch:LIMit:MATCh:STRace[:STATe] (on page 606)	Sets or queries whether or not to save automatically (AutoSave) the spectrum trace on match during run in the search operation.
CALCulate:SEARch:LIMit:OPERation (on page 607)	Sets or queries the search condition parameter.
CALCulate:SEARch:LIMit:OPERation:FEED (on page 608)	Sets or queries the data flow to be fed in the search operation.
CALCulate:SEARch:LIMit:OPERation:MASK:LOAD (on page 608)	Loads the specified limit mask file for the search operation.
CALCulate:SEARch:LIMit:OPERation:MASK:STORE (on page 609)	Saves the limit mask to a specified file.
CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation (on page 613)	Sets or queries the limit value (in dB) in the search operation.
CALCulate:SEARch:LIMit:REPort:DATA? (on page 610)	Queries the frequency range(s) that satisfy the search condition.
CALCulate:SEARch:LIMit:REPort:POINts? (on page 610)	Queries the number of frequency range(s) that satisfy the search condition.
CALCulate:SEARch:LIMit:STATe (on page 611)	Sets or queries the search function (enabled or disabled).
CALCulate:SEM subgroup	**Spectral Emissions Mask measurement**
CALCulate:SEM:MARKer<x>:DELTa:X? (on page 621)	Returns the delta marker frequency for the selected marker.
CALCulate:SEM:MARKer<x>:DELTa:Y? (on page 622)	Returns the delta marker amplitude for the selected marker.
CALCulate:SEM:MARKer<x>:MAXimum (on page 622)	Moves the selected marker to the highest peak.
CALCulate:SEM:MARKer<x>:PEAK:HIGHer (on page 622)	Moves the selected marker to the next peak higher in amplitude.

Command	Description
CALCulate:SEM:MARKer<x>:PEAK:LEFT (on page 623)	Moves the selected marker to the next peak to the left.
CALCulate:SEM:MARKer<x>:PEAK:LOWer (on page 623)	Moves the selected marker to the next peak lower in amplitude.
CALCulate:SEM:MARKer<x>:PEAK:RIGHt (on page 624)	Moves the selected marker to the next peak to the right.
CALCulate:SEM:MARKer<x>[:SET]:CENTer (on page 624)	Moves the specified marker to the center frequency.
CALCulate:SEM:MARKer<x>:X (on page 624)	Sets or queries the horizontal position of the selected marker.
CALCulate:SEM:MARKer<x>:Y? (on page 625)	Queries the marker amplitude of the selected marker.
[CALCulate]:SGRam subgroup	**Spectrogram measurements**
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:X:FREQuency? (on page 625)	Returns the delta marker frequency for the selected marker.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 626)	Returns the delta marker time for the selected marker.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 626)	Returns the delta marker amplitude for the selected marker.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:MAXimum (on page 627)	Moves the marker to the highest peak on the trace.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 627)	Moves the marker to the next peak higher in amplitude.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 628)	Moves the marker to the next peak to the left on the trace.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 628)	Moves the marker to the next peak lower in amplitude.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 629)	Moves the marker to the next peak to the right on the trace.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>[:SET]:CENTer (on page 630)	Sets the center frequency to the marker frequency.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X:FREQuency (on page 630)	Sets or queries the marker frequency.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 631)	Sets or queries the marker time.
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:Y? (on page 631)	Queries the marker amplitude of the selected marker.

Command	Description
CALCulate:SPECtrum subgroup	**Spectrogram measurement**
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 632)	Returns the delta marker frequency for the selected marker.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 632)	Returns the delta marker amplitude for the selected marker.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:MAXimum (on page 633)	Moves the marker to the highest peak on the trace.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 633)	Moves the marker to the next peak higher in amplitude.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 634)	Moves the marker to the next peak to the left on the trace.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 634)	Moves the marker to the next peak lower in amplitude.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 635)	Moves the marker to the next peak to the right on the trace.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>[: SET]:CENTer (on page 637)	Sets the center frequency to the marker frequency.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:TRACe (on page 638)	Sets or queries the trace on which the marker is placed.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:X (on page 638)	Sets or queries the horizontal position of the marker.
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:Y? (on page 639)	Queries the marker amplitude of the selected marker.
CALCulate:SPURious subgroup	**Spurious measurement**
CALCulate:SPURious:MARKer<x>:DELTa:X? (on page 640)	Returns the delta marker frequency for the selected marker.
CALCulate:SPURious:MARKer<x>:DELTa:Y? (on page 640)	Returns the delta marker amplitude for the selected marker.
CALCulate:SPURious:MARKer<x>:MAXimum (on page 641)	Moves the marker to the highest peak on the trace.
CALCulate:SPURious:MARKer<x>:PEAK:HIGHer (on page 641)	Moves the marker to the next peak higher in amplitude.
CALCulate:SPURious:MARKer<x>:PEAK:LEFT (on page 641)	Moves the marker to the next peak to the left on the trace.
CALCulate:SPURious:MARKer<x>:PEAK:LOWer (on page 642)	Moves the marker to the next peak lower in amplitude.

Command	Description
CALCulate:SPURious:MARKer<x>:PEAK:RIGHt (on page 642)	Moves the marker to the next peak to the right on the trace.
CALCulate:SPURious:MARKer<x>[:SET]:CENTer (on page 642)	Sets the center frequency to the marker frequency.
CALCulate:SPURious:MARKer<x>:X (on page 643)	Sets or queries the horizontal position of the marker.
CALCulate:SPURious:MARKer<x>:Y? (on page 643)	Queries the marker amplitude of the selected marker.
CALCulate:TDIagram subgroup (Option 21 only)	**Trellis diagram**
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 644)	Returns the delta marker time for the selected marker.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 645)	Returns the delta marker amplitude for the selected marker.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:MAXimum (on page 646)	Moves the marker to the highest peak on the trace.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 646)	Moves the marker to the next peak higher in amplitude on the Trellis diagram trace.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 647)	Moves the marker to the next peak to the left on the trace.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 647)	Moves the marker to the next peak lower in amplitude.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 648)	Moves the marker to the next peak to the right on the trace.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 648)	Sets or queries the horizontal position (time) of the marker.
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:Y? (on page 649)	Queries the vertical position of the selected marker in the Trellis diagram measurement.
CALCulate:TOVerview subgroup	**Time overview**
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 650)	Returns the delta marker time for the selected marker.
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 650)	Returns the delta marker amplitude for the selected marker.
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:MAXimum (on page 651)	Moves the marker to the highest peak on the trace.
CALCulate:TOVerview[:MEASview<y>[:MARKer<x>:PEAK:HIGHer (on page 651)	Moves the marker to the next peak higher in amplitude.

Command	Description
CALCulate:TOVerview[:MEASview<y>[:MARKer<x>:PEAK:LEFT (on page 652)	Moves the marker to the next peak to the left on the trace.
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 652)	Moves the marker to the next peak lower in amplitude.
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 653)	Moves the marker to the next peak to the right on the trace.
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:X (on page 653)	Sets or queries the horizontal position of the marker
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:Y? (on page 654)	Queries the marker amplitude of the selected marker.
CALCulate:WLAN subgroup	**Wireless LAN measurement**
CALCulate:WLAN:CONSte:MARKer<x>:FREQuency (on page 675)	Sets or queries the frequency value of the marker.
CALCulate:WLAN:CONSte:MARKer<x>:MAGNitude? (on page 676)	Returns the magnitude value at the indicated marker position.
CALCulate:WLAN:CONSte:MARKer<x>:PHASe? (on page 676)	Returns the phase value at the indicated marker position.
CALCulate:WLAN:CONSte:MARKer<x>:TIME (on page 677)	Sets the time offset value at the selected marker position on the points trace.
CALCulate:WLAN:CONSte:MARKer<x>:TYPE? (on page 677)	Returns the data type of the subcarrier for data at the indicated marker position.
CALCulate:WLAN:CONSte:MARKer<x>:VALue? (on page 678)	Queries the value readout at the selected marker position on the points trace.
CALCulate:WLAN:CRESponse:MARKer<x>:DELTa:X? (on page 678)	Queries the delta Subcarrier or frequency value at the selected marker position.
CALCulate:WLAN:CRESponse:MARKer<x>:DELTa:Y? (on page 679)	Queries the vertical delta value for the points trace at the selected marker position.
CALCulate:WLAN:CRESponse:MARKer<x>:MAXimum (on page 679)	Moves the marker to the highest peak on the trace.
CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:HIGHer (on page 680)	Moves the marker to the next peak higher in amplitude.
CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:LEFT (on page 680)	Moves the marker to the next peak on the left on the trace.
CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:LOWer (on page 681)	Moves the marker to the next peak lower in amplitude.

Command	Description
CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:RIGHt (on page 681)	Moves the marker to the next peak to the right on the trace.
CALCulate:WLAN:CRESponse:MARKer<x>:X (on page 682)	Sets or queries the value of the horizontal position for the selected marker.
CALCulate:WLAN:CRESponse:MARKer<x>:Y? (on page 682)	Returns the value of the amplitude at the selected marker position.
CALCulate:WLAN:EVM:MARKer<x>:AVERage:SUBCarrier? (on page 683)	Queries the EVM value at the selected marker position on the average trace.
CALCulate:WLAN:EVM:MARKer<x>:AVERage:SYMBol? (on page 683)	Queries the EVM value at the selected marker position on the average trace.
CALCulate:WLAN:EVM:MARKer<x>:DELTa:SUBCarrier? (on page 684)	Queries the delta Subcarrier or frequency value at the selected marker position.
CALCulate:WLAN:EVM:MARKer<x>:DELTa:SYMBol? (on page 684)	Queries the delta time value in seconds or symbols at the selected marker position.
CALCulate:WLAN:EVM:MARKer<x>:DELTa:Y? (on page 685)	Queries the vertical delta value for the points trace at the selected marker position.
CALCulate:WLAN:EVM:MARKer<x>:FREQuency (on page 685)	Sets or queries the frequency value of the marker.
CALCulate:WLAN:EVM:MARKer<x>:TIME (on page 686)	Sets the vertical marker value of the points trace.
CALCulate:WLAN:EVM:MARKer<x>:VALue? (on page 687)	Queries the EVM value at the selected marker position.
CALCulate:WLAN:FLATness:MARKer<x>:MAXimum (on page 687)	Positions the specified marker at the maximum point on the trace.
CALCulate:WLAN:FLATness:MARKer<x>:PEAK:HIGHer (on page 688)	Moves the specified marker to the next peak higher in amplitude.
CALCulate:WLAN:FLATness:MARKer<x>:PEAK:LEFT (on page 688)	Moves the specified marker to the next peak to the left.
CALCulate:WLAN:FLATness:MARKer<x>:PEAK:LOWer (on page 689)	Moves the marker to the next peak lower in amplitude.
CALCulate:WLAN:FLATness:MARKer<x>:PEAK:RIGHt (on page 689)	Moves the marker to the next peak to the right.
CALCulate:WLAN:FLATness:MARKer<x>:X (on page 690)	Sets or queries the horizontal position for the selected marker.
CALCulate:WLAN:FLATness:MARKer<x>:Y? (on page 690)	Returns the value of the amplitude (vertical position) at the selected marker position.

Command	Description
CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SUBCarrier? (on page 691)	Queries the value readout at the selected marker position on the average trace.
CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SYMBol? (on page 691)	Queries the value readout at the selected marker position on the average trace.
CALCulate:WLAN:MERRor:MARKer<x>:DELTa:SUBCarrier? (on page 692)	Queries the delta Subcarrier or frequency value at the selected marker position.
CALCulate:WLAN:MERRor:MARKer<x>:DELTa:SYMBol? (on page 692)	Queries the delta time value in seconds or symbols at the selected marker position.
CALCulate:WLAN:MERRor:MARKer<x>:DELTa:Y? (on page 693)	Queries the vertical delta value for the points trace at the selected marker position.
CALCulate:WLAN:MERRor:MARKer<x>:FREQuency (on page 694)	Sets or queries the frequency value of the marker.
CALCulate:WLAN:MERRor:MARKer<x>:TIME (on page 694)	Sets the time offset value at the selected marker position.
CALCulate:WLAN:MERRor:MARKer<x>:VALue? (on page 695)	Queries the value readout at the selected marker position.
CALCulate:WLAN:PERRor:MARKer<x>:AVERage:SUBCarrier? (on page 696)	Queries the Phase Error value at the selected marker position on the average trace.
CALCulate:WLAN:PERRor:MARKer<x>:AVERage:SYMBol? (on page 696)	Queries the Phase Error value at the selected marker position on the average trace.
CALCulate:WLAN:PERRor:MARKer<x>:DELTa:SUBCarrier? (on page 697)	Queries the delta Subcarrier or frequency value at the selected marker position.
CALCulate:WLAN:PERRor:MARKer<x>:DELTa:SYMBol? (on page 697)	Queries the delta time value in seconds or symbols at the selected marker position.
CALCulate:WLAN:PERRor:MARKer<x>:DELTa:Y? (on page 698)	Queries the vertical delta value for the points trace at the selected marker position.
CALCulate:WLAN:PERRor:MARKer<x>:FREQuency (on page 698)	Sets or queries the frequency value at the selected marker position.
CALCulate:WLAN:PERRor:MARKer<x>:TIME (on page 699)	Sets the time value (offset) at the selected marker position.
CALCulate:WLAN:PERRor:MARKer<x>:VALue? (on page 700)	Queries the Phase Error value at the selected marker position.
CALCulate:WLAN:PVTime:MARKer<x>:DELTa:X? (on page 700)	Returns the delta time value at the selected marker position.
CALCulate:WLAN:PVTime:MARKer<x>:DELTa:Y? (on page 701)	Queries the vertical delta value for the points trace at the selected marker position.

Command	Description
CALCulate:WLAN:PVTime:MARKer<x>:MAXimum (on page 701)	Positions the specified marker at the maximum point.
CALCulate:WLAN:PVTime:MARKer<x>:PEAK:HIGHer (on page 702)	Moves the specified marker to the next peak higher in amplitude.
CALCulate:WLAN:PVTime:MARKer<x>:PEAK:LEFT (on page 702)	Moves the specified marker to the next peak on the left.
CALCulate:WLAN:PVTime:MARKer<x>:PEAK:LOWer (on page 703)	Moves the marker to the next peak lower in amplitude.
CALCulate:WLAN:PVTime:MARKer<x>:PEAK:RIGHt (on page 703)	Moves the marker to the next peak to the right.
CALCulate:WLAN:PVTime:MARKer<x>:X (on page 703)	Sets or queries the value of the horizontal position for the selected marker
CALCulate:WLAN:PVTime:MARKer<x>:Y? (on page 704)	Returns the amplitude at the selected marker position.
CALCulate:WLAN:TABLe:MARKer<x>:FREQuency (on page 704)	Assigns or queries the frequency value of the marker.
CALCulate:WLAN:TABLe:MARKer<x>:TIME (on page 705)	Sets or queries the vertical value at the selected marker position.
CALCulate:WLAN:TABLe:MARKer<x>:VALue? (on page 706)	Queries the decoded symbol value at the selected marker position.
CALCulate:LTE subgroup	
CALCulate:LTE:ACLR:MARKer:<x>PEAK:HIGHer (on page 493)	Moves the specified marker to the next peak higher in amplitude on the trace.
CALCulate:LTE:ACLR:MARKer<x>:DELTa:X? (on page 494)	Returns the frequency of the specified delta marker on the trace.
CALCulate:LTE:ACLR:MARKer<x>:DELTa:Y? (on page 494)	Returns the amplitude for the specified delta marker on the trace.
CALCulate:LTE:ACLR:MARKer<x>:MAXimum (on page 495)	Positions the specified marker at the highest peak on the trace.
CALCulate:LTE:ACLR:MARKer<x>:PEAK:LEFT (on page 495)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:LTE:ACLR:MARKer<x>:PEAK:LOWer (on page 495)	Moves the selected marker to the next peak lower in amplitude on the trace.
CALCulate:LTE:ACLR:MARKer<x>:PEAK:RIGHt (on page 496)	Moves the selected marker to the next peak to the right on the trace.

Command	Description
CALCulate:LTE:ACLR:MARKer<x>:SET:CENTer (on page 496)	Moves the specified marker to the center frequency.
CALCulate:LTE:ACLR:MARKer<x>:X (on page 497)	Sets or queries the horizontal position of the selected marker on the trace.
CALCulate:LTE:ACLR:MARKer<x>:Y? (on page 497)	Queries the amplitude of the selected marker on the trace.
CALCulate:LTE:CHSPectrum:MARKer<x>:DELTa:X? (on page 498)	Returns the frequency of the specified delta marker on the trace.
CALCulate:LTE:CHSPectrum:MARKer<x>:DELTa:Y? (on page 498)	Returns the amplitude for the specified delta marker on the trace.
CALCulate:LTE:CHSPectrum:MARKer<x>:MAXimum (on page 498)	Positions the marker at the highest peak on the trace.
CALCulate:LTE:CHSPectrum:MARKer<x>:PEAK:LEFT (on page 499)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:LTE:CHSPectrum:MARKer<x>:PEAK:RIGHt (on page 499)	Moves the selected marker to the next peak to the right on the trace.
CALCulate:LTE:CHSPectrum:MARKer<x>:X (on page 500)	Sets or queries the horizontal position of the selected marker on the trace.
CALCulate:LTE:CHSPectrum:MARKer<x>:Y? (on page 500)	Queries the amplitude of the selected marker on the trace.
CALCulate:LTE:CONSte:MARKer<x>:FREQuency (on page 501)	Sets or returns the subcarrier number of the LTE symbol.
CALCulate:LTE:CONSte:MARKer<x>:MAGNitude? (on page 501)	Queries the marker magnitude of the selected marker.
CALCulate:LTE:CONSte:MARKer<x>:PHASe? (on page 502)	Queries the phase readout of the selected marker.
CALCulate:LTE:CONSte:MARKer<x>:TIME (on page 502)	Sets or queries the X position (Symbol Value) of the selected marker.
CALCulate:LTE:CONSte:MARKer<x>:TYPE? (on page 503)	Queries the data type of the selected marker as PSS or SSS.
CALCulate:LTE:PVTime:MARKer:<x>PEAK:HIGHer (on page 503)	Moves the specified marker to the next peak higher in amplitude on the trace.
CALCulate:LTE:PVTime:MARKer<x>:DELTa:X? (on page 503)	Returns the frequency of the specified delta marker on the trace.
CALCulate:LTE:PVTime:MARKer<x>:DELTa:Y? (on page 504)	Returns the amplitude for the specified delta marker on the trace.

Command	Description
CALCulate:LTE:PVTime:MARKer<x>:MAXimum (on page 504)	Positions the specified marker at the highest peak on the trace.
CALCulate:LTE:PVTime:MARKer<x>:PEAK:LEFT (on page 505)	Moves the selected marker to the next peak to the left on the trace.
CALCulate:LTE:PVTime:MARKer<x>:PEAK:LOWer (on page 505)	Moves the selected marker to the next peak lower in amplitude on the trace.
CALCulate:LTE:PVTime:MARKer<x>:PEAK:RIGHt (on page 506)	Moves the selected marker to the next peak to the right on the trace.
CALCulate:LTE:PVTime:MARKer<x>:X (on page 506)	Sets or queries the horizontal position of the selected marker on the trace.
CALCulate:LTE:PVTime:MARKer<x>:Y? (on page 507)	Queries the amplitude of the selected marker on the trace.
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:HIGHer? (on page 539)	Places the selected marker at the next highest peak on the trace.
CALCulate:PULSe:CUMulative:HISTogram[:MEASview<y>]:INDicator:X (on page 585)	Sets or queries the horizontal position of the indicator on the trace.
CALCulate:PULSe:CUMulative:HISTogram[:MEASview<y>]:INDicator:Y? (on page 586)	Queries the vertical position value of the indicator on the trace.
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:DELTa:X? (on page 586)	Returns the delta marker time for the selected marker.
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:DELTa:Y? (on page 587)	Returns the delta marker amplitude for the selected marker.
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:MAXimum (on page 587)	Moves the selected marker to the highest peak on the trace.
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:X (on page 588)	Sets or queries the horizontal position of the selected marker.
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:Y (on page 588)	Sets or queries the marker amplitude of the selected marker.
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:DELTa:X? (on page 586)	Returns the delta marker time for the selected marker.

Marker mnemonics

Up to five markers can be used. In commands, these are named MARKer<x>,where <x> can be 0, 1, 2, 3, or 4 as shown in the following table.

Marker mnemonics

Mnemonic	Description
MARKer0	Reference marker (MR)
MARKer1	Marker 1 (M1)
MARKer2	Marker 2 (M2)
MARKer3	Marker 3 (M3)
MARKer4	Marker 4 (M4)

NOTE: *If you omit the numeric suffix, the marker control defaults to Marker 1.*

Before operating the marker, you have to enable it using the CALCulate basic commands.

If you attempt to use a marker other than above in a CALCulate command, the suffix error (error code -130) will occur.

Calibration commands

Use the CALibration commands to control the external correction. See the Index for commands not listed in the following table.

Not all of these commands apply to SignalVu-PC and connected instruments. See the individual command descriptions for details.

Calibration commands

Command	Description
CALibration:ABORt (on page 706)	Aborts any actions related to the alignments in progress.
CALibration:TXGain:ABORt (on page 712)	Cancels a calibration for the Transmission Gain measurement.
CALibration:TXGain[:ALL] (on page 712)	Performs a calibration using the current settings for the Transmission Gain measurement.
CALibration:TXGain:FINish? (on page 712)	Queries whether or not the calibration is completed for the Transmission Gain measurement.
CALibration:TXGain:STATe? (on page 713)	Queries the calibration state for the Transmission Gain measurement.
CALibration:AUTO (on page 707)	Sets or queries whether or not to run alignments automatically.
INPut:CORRection:EXTernal:EDIT<x>:LABel (on page 1533)	Sets or queries the name of the external loss table.
CALibration:CORRection:EXTernal:EDIT<x>:NEW (on page 707)	Creates a new external loss table.
INPut:CORRection:EXTernal:EDIT<x>:STATe (on page 1534)	Sets or queries whether to enable or disable the external loss table.
INPut:CORRection:EXTernal:GAIN[:MAGNitude] (on page 1535)	Sets or queries the external gain value.

Command	Description
CALibration:CORRection:EXTernal:PROBe:CONNect? (on page 710)	Sets or queries whether to enable or disable the external gain value.
CALibration:CORRection:EXTernal:PROBe:CONNect? (on page 710)	Queries whether the external probe is connected to the analyzer or not.
CALibration:CORRection:EXTernal:PROBe[:MAGNitude]? (on page 710)	Queries the external probe attenuation.
CALibration:CORRection:EXTernal:PROBe:STATe (on page 711)	Determines whether to correct data for the external probe attenuation.
CALibration:CORRection:EXTernal:TYPE (on page 711)	Selects data type to use when applying the external loss table.

Display commands

Use the DISPlay commands to control the display of measurement waveforms and results on the screen. See the Index for commands not listed in the following table.

Not all of these commands apply to SignalVu-PC and connected instruments. See the individual command descriptions for details.

Display commands

Command	Description
DISPlay TXGain subgroup	**Transmission Gain measurements**
DISPlay:TG:MEASview:DELete TXGain (on page 1028)	Removes the Transmission Gain display icon from the Selected displays filed of the Selected Displays window.
DISPlay:TG:MEASview<y>:NEW TXGain (on page 1028)	Opens a new Transmission Gain measurement display window.
DISPlay:TG:MEASview<y>:SELect TXGain (on page 1028)	Selects the Transmission Gain display icon in the Select Display window and queries if the display is selected or not.
DISPlay:TXGain:MARKer:SHOW:STATe (on page 1035)	Displays or hides the marker readout, but not the marker itself, on the graph area.
DISPlay:TXGain[:SCALe]:AUTO (on page 1035)	Automatically rescales the horizontal and vertical scale.
DISPlay:TXGain:WINDow:TRACe:GRATicule:GRID:STATe (on page 1035)	Displays or hides the graticule grid in the display. Queries whether the graticule grid is hidden or showing.
DISPlay:TXGain:WINDow:TRACe:POINts:SHOW:STATe (on page 1036)	Sets to mark each measurement point on the trace.
DISPlay:TXGain:X[:SCALe]:LOG:STATe (on page 1037)	Sets or queries the display to show the frequency axis in a logarithmic scale.
DISPlay:TXGain:X[:SCALe]:STARt (on page 1037)	Sets the Zoom Start frequency.

Command	Description
DISPlay:TXGain:X[:SCALe]:AUTO (on page 1036)	Resets the scale of the horizontal axis to contain the complete trace.
DISPlay:TXGain:X[:SCALe]:STOP (on page 1038)	Sets the Zoom Stop frequency.
DISPlay:TXGain:Y[:SCALe]:BOTTom (on page 1039)	Sets or queries the bottom of the vertical position of the display.
DISPlay:TXGain:Y[:SCALe]:PDIVision (on page 1040)	Sets or queries the vertical scale (per division) of the graph.
DISPlay:TXGain:Y[:SCALe]:POSition (on page 1040)	Sets or queries the vertical position of the trace.
DISPlay:TXGain:Y[:SCALe]:TOP (on page 1040)	Sets or queries the top of the vertical scale.
DISPlay:TXGain:Y[:SCALe]:AUTO (on page 1039)	Automatically scales the plot vertically.
DISPlay:TXGain:Y[:SCALe] (on page 1038)	Sets or queries the vertical scale value in dB.
DISPlay Noise subgroup	**Noise Figure and Gain measurements**
DISPlay:WINDow:ACTive:MEASurement? (on page 1041)	Queries the active measurement views.
DISPlay Bluetooth subgroup	**Bluetooth measurements**
DISPlay:BIBEmissions:MARKer<x>:SHOW:STATe (on page 744)	Sets or queries to show or hide the readout for the selected marker.
DISPlay:BIBEmissions:PLEVel:SHOW:STATe (on page 744)	Sets or queries to show or hide the power levels
DISPlay:BIBEmissions:RESet:SCALe (on page 745)	Resets the horizontal and vertical scale to the default values.
DISPlay:BIBEmissions:WINDow:TRACe:GRATicule:GRID:STATe (on page 745)	Sets or queries the graticule hidden or showing state.
DISPlay:BIBEmissions:X[:SCALe] (on page 746)	Sets or queries the horizontal range of the graph.
DISPlay:BIBEmissions:X[:SCALe]:AUTO (on page 746)	Rescales the horizontal axis automatically to fit the waveform to the screen in the Bluetooth InBand Emission view.
DISPlay:BIBEmissions:X[:SCALe]:OFFSet (on page 747)	Sets or queries the center frequency.
DISPlay:BIBEmissions:Y[:SCALe] (on page 747)	Sets or queries the vertical range of the graph.
DISPlay:BIBEmissions:Y[:SCALe]:AUTO (on page 748)	Rescales the vertical axis automatically to fit the waveform to the screen in the Bluetooth InBand Emission view.
DISPlay:BIBEmissions:Y[:SCALe]:OFFSet (on page 748)	Sets or queries the vertical offset.
DISPlay:BLUEtooth:CONSte:TRACe:GRATicule:GRID:STATe (on page 749)	Sets or queries the display state of graticule grid.

Command	Description
DISPlay:BLUEtooth:CONSte:WINDow:TRACe:GRATicule:GRID:STATe (on page 749)	Sets or queries whether to show or hide the graticule grid on the screen in the display.
DISPlay:BLUEtooth:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe (on page 750)	Sets or queries graticule grid hidden or showing state in the Bluetooth eye diagram display.
DISPlay:BLUEtooth:EDIagram:Y[:SCALe] (on page 750)	Sets or queries the vertical range.
DISPlay:BLUEtooth:EDIagram:Y[:SCALe]:AUTO (on page 751)	Sets the vertical scale automatically to fit the waveform in the Bluetooth eye diagram.
DISPlay:BLUEtooth:EDIagram:Y[:SCALe]:OFFSet (on page 751)	Sets or queries the vertical offset (center point of the vertical axis).
DISPlay:BLUEtooth:FDVTime:WINDow:TRACe:GRATicule:GRID:STATe (on page 751)	Sets or queries graticule grid hidden or showing state in the Freq Dev vs Time display.
DISPlay:BLUEtooth:FDVTime:Y[:SCALe]:AUTO (on page 752)	Rescales the vertical scale automatically to fit the waveform to the screen.
DISPlay:BLUEtooth:FDVTime:Y[:SCALe]:OFFSet (on page 752)	Sets or queries the vertical offset (center point of the vertical axis).
DISPlay:BLUEtooth:MEASview<y>:DELete (on page 753)	Deletes the specified Bluetooth analysis view.
DISPlay:BLUEtooth:MEASview<y>:NEW (on page 753)	Displays a new measurement view for Bluetooth measurements.
DISPlay:BLUEtooth:MEASview<y>:SELect (on page 754)	Selects a measurement view on the screen in the Bluetooth measurements.The query command returns the currently selected view.
DISPlay:BOBW:SELected:BANDwidth (on page 755)	Sets or queries the bandwidth to measure in the Bluetooth 20 dB BW view.
DISPlay:DPX:WINDow:TRACe:GRATicule:GRID:STATe (on page 772)	Determines whether to show or hide the graticule grid on the DPX Spectrum display..
DISPlay:NOISe:FIGure[:SCALe]:AUTO (on page 840)	Automatically scales the graph.
DISPlay:NOISe:FIGure:WINDow:TRACe:GRATicule:GRID:STATe (on page 841)	Sets or queries the graticule state to on (showing) or off (hidden).
DISPlay:NOISe:FIGure:WINDow:TRACe:LEGend:STATe (on page 841)	Sets or queries the trace legend state to on (showing) or off (hidden).
DISPlay:NOISe:FIGure:WINDow:TRACe:MEASpoints:STATe (on page 842)	Sets or queries the measurement points state to on (showing) or off (hidden).
DISPlay:NOISe:FIGure:X:AUTO (on page 842)	Automatically sets the horizontal scale of the graph.
DISPlay:NOISe:FIGure:X:OFFSet (on page 843)	Sets or queries the center frequency (offset).

Command	Description
DISPlay:NOISe:FIGure:X[:SCALe] (on page 843)	Sets or queries the horizontal scale of the display.
DISPlay:NOISe:FIGure:Y:AUTO (on page 844)	Automatically sets the vertical scale of the graph.
DISPlay:NOISe:FIGure:Y:AUTO:STATe (on page 844)	Sets the state of the automatic vertical scale and position of the graph to on or off. The query form of the command returns the current state.
DISPlay:NOISe:FIGure:Y:PDIVision (on page 845)	Sets or queries the distance between graticule lines on the display.
DISPlay:NOISe:FIGure:Y:POSition (on page 845)	Sets or queries the vertical position of the display.
DISPlay:NOISe:FIGure:Y:SCALe (on page 846)	Sets or queries the vertical scale of the display.
DISPlay:NOISe:FIGure:Y:SCALe:LINear:STATe (on page 846)	Sets or queries whether the linear units are shown (on) or not shown (off) on the display.
DISPlay:NOISe:GAIN[:SCALe]:AUTO (on page 847)	Automatically scales the graph.
DISPlay:NOISe:GAIN:WINDow:TRACe:GRATicule:GRID:STATe (on page 847)	Sets or queries the graticule state to on (showing) or off (hidden).
DISPlay:NOISe:GAIN:WINDow:TRACe:LEGend: STATe (on page 848)	Sets or queries the trace legend state to on (showing) or off (hidden).
DISPlay:NOISe:GAIN:WINDow:TRACe:MEASPoints:STATe (on page 848)	Sets or queries the measurement points state to on (showing) or off (hidden).
DISPlay:NOISe:GAIN:X:AUTO (on page 849)	Automatically sets the horizontal scale of the display.
DISPlay:NOISe:GAIN:X:OFFSet (on page 849)	Sets or queries the center frequency (offset).
DISPlay:NOISe:GAIN:X:SCALe (on page 849)	Sets or queries the horizontal scale of the display.
DISPlay:NOISe:GAIN:Y:AUTO (on page 850)	Automatically sets the vertical scale of the graph.
DISPlay:NOISe:GAIN:Y:AUTO:STATe (on page 850)	Sets or queries the state of the automatic vertical scale and position of the graph to on or off.
DISPlay:NOISe:GAIN:Y:PDIVision (on page 851)	Sets or queries the distance between graticule lines on the display.
DISPlay:NOISe:GAIN:Y:POSition (on page 852)	Sets or queries the vertical position of the display.
DISPlay:NOISe:GAIN:Y:SCALe (on page 852)	Sets or queries the vertical scale of the display.
DISPlay:NOISe:MEASview<y>:DELete (on page 853)	Deletes the selected Noise and Gain measurement view.
DISPlay:NOISe:MEASview<y>:NEW (on page 853)	Displays a new Noise and Gain measurement view.
DISPlay:NOISe:MEASview<y>:SELect (on page 854)	Selects a noise measurement view. The query command returns the currently selected view.

Command	Description
DISPlay:NOISe:POWer:LINear:STATe (on page 855)	Sets or queries whether the linear units are shown (on) or not shown (off) on the Noise Table display.
DISPlay:NOISe:TEMPerature[:SCALe]:AUTO (on page 855)	Automatically scales the graph.
DISPlay:NOISe:TEMPerature:WINDow:TRACe:GRATicule:GRID:STATe (on page 855)	Sets or queries the graticule state to on (showing) or off (hidden).
DISPlay:NOISe:TEMPerature:WINDow:TRACe:LEGend:STATe (on page 856)	Sets or queries the trace legend state to on (showing) or off (hidden).
DISPlay:NOISe:TEMPerature:WINDow:TRACe:MEASPoints:STATe (on page 857)	Sets or queries the measurement points state to on (showing) or off (hidden).
DISPlay:NOISe:TEMPerature:X:AUTO (on page 857)	Automatically sets the horizontal scale of the graph.
DISPlay:NOISe:TEMPerature:X:OFFSet (on page 858)	Sets or queries the center frequency (offset) value.
DISPlay:NOISe:TEMPerature:X[:SCALe] (on page 858)	Sets or queries the horizontal scale of the graph.
DISPlay:NOISe:TEMPerature:X:STARt (on page 859)	Sets or queries the Start Frequency value.
DISPlay:NOISe:TEMPerature:X:STOP (on page 859)	Sets or queries the Stop Frequency value.
DISPlay:NOISe:TEMPerature:Y:AUTO (on page 860)	Automatically sets the vertical scale of the graph.
DISPlay:NOISe:TEMPerature:Y:AUTO:STATe (on page 860)	Sets or queries the state of the automatic vertical scale and position of the graph to on or off.
DISPlay:NOISe:TEMPerature:Y:PDIVision (on page 860)	Sets or queries the distance between graticule lines on the display.
DISPlay:NOISe:TEMPerature:Y:POSition (on page 861)	Sets or queries the vertical position of the graph.
DISPlay:NOISe:TEMPerature:Y:SCALe (on page 862)	Sets or queries the vertical scale of the graph.
DISPlay:NOISe:UNCERTainty:RESult:GAIN? (on page 862)	Queries the gain computed uncertainty value.
DISPlay:NOISe:UNCERTainty:RESult:NFIGure? (on page 862)	Queries the noise figure computed uncertainty value.
DISPlay:NOISe:YFACtor[:SCALe]:AUTO (on page 863)	Automatically scales the Y Factor graph.
DISPlay:NOISe:YFACtor:WINDow:TRACe:GRATicule:GRID:STATe (on page 863)	Sets or queries the graticule state to on (showing) or off (hidden).
DISPlay:NOISe:YFACtor:WINDow:TRACe:LEGend:STATe (on page 864)	Sets or queries the trace legend state to on (showing) or off (hidden).

Command	Description
DISPlay:NOISe:YFACtor:WINDow:TRACe:MEASPoints:STATe (on page 864)	Sets or queries the measurement points state to on (showing) or off (hidden).
DISPlay:NOISe:YFACtor:X:AUTO (on page 865)	Automatically sets the horizontal scale.
DISPlay:NOISe:YFACtor:X:OFFSet (on page 865)	Sets or queries the center frequency (offset).
DISPlay:NOISe:YFACtor:X[:SCALe] (on page 866)	Sets or queries the horizontal scale.
DISPlay:NOISe:YFACtor:X:STARt (on page 866)	Sets or queries the Start Frequency value.
DISPlay:NOISe:YFACtor:X:STOP (on page 867)	Sets or queries the Stop Frequency value.
DISPlay:NOISe:YFACtor:Y:AUTO (on page 867)	Automatically sets the vertical scale of the graph.
DISPlay:NOISe:YFACtor:Y:AUTO:STATe (on page 868)	Sets or queries the automatic vertical scale and position of the graph setting to on or off.
DISPlay:NOISe:YFACtor:Y:PDIVision (on page 868)	Sets or queries the distance between graticule lines on the display in dB.
DISPlay:NOISe:YFACtor:Y:POSition (on page 869)	Sets or queries the vertical position.
DISPlay:NOISe:YFACtor:Y:SCALe (on page 869)	Sets or queries the vertical scale.
DISPlay:P25:CONSte:WINDow:TRACe:GRATicule:GRID:STATe (on page 904)	Sets or queries to show or hide the graticule grid on the screen.
DISPlay:P25:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe (on page 904)	Sets or queries to show or hide the graticule grid on the screen.
DISPlay:P25:EDIagram:Y[:SCALe] (on page 905)	Sets or queries the vertical scale.
DISPlay:P25:EDIagram:Y[:SCALe]:AUTO (on page 906)	Sets the vertical scale automatically to fit the waveform to the screen.
DISPlay:P25:EDIagram:Y[:SCALe]:OFFSet (on page 906)	Sets or queries the vertical offset (center point of the vertical axis).
DISPlay:P25:MEASview:DELete (on page 906)	Deletes the specified P25 measurement display.
DISPlay:P25:MEASview:NEW (on page 907)	Displays a new P25 measurement view.
DISPlay:P25:MEASview:SELect (on page 908)	Selects a P25 measurement display. The query form returns the currently selected display.
DISPlay:P25:PVTime:BURSt:X[:SCALe] (on page 908)	Sets or queries the value of the scale (width) value, in seconds, when using horizontal Full Burst view.
DISPlay:P25:PVTime:BURSt:X[:SCALe]:AUTO (on page 909)	Automatically sets the starting time (position) and scale (width) values for the best display in the horizontal Full Burst view.

Command	Description
DISPlay:P25:PVTime:BURSt:X[:SCALe]:OFFSet (on page 909)	Sets or queries the starting time (position) value, in seconds, when using the horizontal Full Burst view.
DISPlay:P25:PVTime:BURSt:X[:SCALe]:RESet (on page 910)	Resets the starting time (position) and scale (width) values for the horizontal Full Burst view.
DISPlay:P25:PVTime:FALL:X[:SCALe] (on page 910)	Sets or queries the scale (width) value, in seconds, when using the horizontal Falling Edge view.
DISPlay:P25:PVTime:FALL:X[:SCALe]:AUTO (on page 911)	Automatically sets the starting time (position) and scale (width) values for the best display in the horizontal Falling Edge view.
DISPlay:P25:PVTime:FALL:X[:SCALe]:OFFSet (on page 911)	Sets or queries the value for the starting time (offset) of the graph, in seconds, when using the horizontal Falling Edge view.
DISPlay:P25:PVTime:FALL:X[:SCALe]:RESet (on page 912)	Resets the starting time (position) and scale (width) values for the horizontal Falling Edge view.
DISPlay:P25:PVTime:MARKer:SHOW:STATe (on page 912)	Shows or hides the marker readout.
DISPlay:P25:PVTime:RISE:X[:SCALe] (on page 913)	Sets or queries the scale (width) value, in seconds, for the P25 Power vs. Time display when using the horizontal Rising Edge view.
DISPlay:P25:PVTime:RISE:X[:SCALe]:AUTO (on page 913)	Sets the scale (width) value, in seconds, to automatic.
DISPlay:P25:PVTime:RISE:X[:SCALe]:OFFSet (on page 914)	Sets or queries the starting time value (offset), in seconds, for the P25 Power vs. Time display when using the horizontal Rising Edge view.
DISPlay:P25:PVTime:RISE:X[:SCALe]:RESet (on page 914)	Resets the starting time (position) and scale (width) values for the horizontal Rising Edge view.
DISPlay:P25:PVTime:WINDow:SELect:PLOT (on page 915)	Sets or queries which view to use: Full Burst, Rising Edge, or Falling Edge.
DISPlay:P25:PVTime:WINDow:TRACe:GRATicule:GRID:STATe (on page 915)	Sets or queries the graticule state to on (showing) or off (hidden).
DISPlay:P25:PVTime:Y[:SCALe] (on page 916)	Sets or queries the vertical scale value.
DISPlay:P25:PVTime:Y[:SCALe]:AUTO (on page 916)	Automatically selects the vertical scale and position values.
DISPlay:P25:PVTime:Y[:SCALe]:OFFSet (on page 917)	Sets or queries the value of the vertical offset (top edge of the vertical axis).
DISPlay:P25:PVTime:Y[:SCALe]:PDIVision (on page 917)	Sets or queries the value of the vertical scale for the P25 Power vs. Time display.
DISPlay:P25:RADix (on page 918)	Set or queries the symbol radix for the P25 Symbol Table display.
DISPlay:TOVerview[:MEASview<y>]:WINDow:NAVigator:STATe (on page 1029)	Sets or queries whether the navigator view of the Time Overview display is on or off.

Command	Description
DISPlay:TOVerview[:MEASview<y>]:WINDow:TIME:MODE (on page 1029)	Sets or queries the type of time analysis to be performed.
DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:LEGend:STATe (on page 1030)	Sets or queries the trace legend state to on (showing) or off (hidden).
DISPlay basic command subgroup	**General window control**
DISPlay:WINDow:COLor:SCHeme (on page 1044)	Sets or queries the color scheme for traces and background.
DISPlay:WINDow:OPTimized:MEASurement? (on page 1044)	Queries the measurement views that are optimized.
DISPlay:ACPower subgroup	**Channel power and ACPR measurement**
DISPlay:ACPower:MARKer:SHOW:STATe (on page 714)	Determines whether to show the readout for the selected marker.
DISPlay:ACPower:PLEVel:SHOW:STATe (on page 715)	Determines whether to show the power levels.
DISPlay:ACPower:RESet:SCALe (on page 715)	Resets the horizontal and vertical scale to the default values.
DISPlay:ACPower:WINDow:TRACe:GRATicule:GRID:STATe (on page 715)	Determines whether to show the graticule grid on screen.
DISPlay:ACPower:X[:SCALe] (on page 716)	Sets or queries the horizontal range.
DISPlay:ACPower:X[:SCALe]:AUTO (on page 716)	Rescales the horizontal axis automatically.
DISPlay:ACPower:X[:SCALe]:OFFSet (on page 717)	Sets or queries the minimum horizontal value (left edge).
DISPlay:ACPower:Y[:SCALe] (on page 717)	Sets or queries the vertical range.
DISPlay:ACPower:Y[:SCALe]:AUTO (on page 718)	Rescales the vertical axis automatically.
DISPlay:ACPower:Y[:SCALe]:OFFSet (on page 718)	Sets or queries the vertical offset.
DISPlay:ADEMod subgroup (Option 21 only)	**General purpose analog demodulation measurements**
DISPlay:ADEMod:MEASview:DELete (on page 719)	Deletes the measurement view.
DISPlay:ADEMod:MEASview:NEW (on page 719)	Displays a new measurement view.
DISPlay:ADEMod:MEASview:SELect (on page 720)	Sets or queries the measurement view.
DISPlay:{AM|FM|PM} subgroup (Option 21 only)	**AM/FM/PM measurement**
DISPlay:{AM|FM|PM}:MARKer:SHOW:STATe (on page 720)	Determines whether to show the readout for the selected marker.
DISPlay:{AM|FM|PM}:WINDow:TRACe:GRATicule:GRID:STATe (on page 721)	Determines whether to show the graticule grid on screen.

Command	Description
DISPlay:{AM|FM|PM}:X:RSCale (on page 721)	Rescales the horizontal axis automatically.
DISPlay:{AM|FM|PM}:X[:SCALe]:AUTO (on page 722)	Sets the horizontal scale automatically.
DISPlay:{AM|FM|PM}:X[:SCALe]:FULL (on page 722)	Sets or queries the horizontal scale.
DISPlay:{AM|FM|PM}:X[:SCALe]:OFFSet (on page 722)	Sets or queries the minimum horizontal value (left edge).
DISPlay:{AM|FM|PM}:Y:RSCale (on page 723)	Rescales the vertical axis automatically.
DISPlay:{AM|FM|PM}:Y[:SCALe] (on page 723)	Sets or queries the vertical scale.
DISPlay:{AM|FM|PM}:Y[:SCALe]:OFFSet (on page 724)	Sets or queries the vertical offset.
DISPlay:AUDio subgroup	**Audio measurements**
DISPlay:AUDio:MEASview<y>:DELete (on page 725)	Deletes the specified audio analysis view.
DISPlay:AUDio:MEASview<y>:NEW (on page 725)	Displays a new audio analysis view.
DISPlay:AUDio:MEASview<y>:SELect (on page 726)	Selects an audio analysis view on the screen.
DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STARt (on page 727)	Sets or queries the start frequency (left edge) of the audio spectrum graph.
DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]: STOP (on page 727)	Sets or queries the stop frequency (right edge) of the audio spectrum graph.
DISPlay:AUDio:SPECtrum:FREQuency:AUTO (on page 726)	Rescales the horizontal axis automatically to fit the waveform to the screen in the audio spectrum view.
DISPlay:AUDio:SPECtrum:MARKer:SHOW:STATe (on page 728)	Determines whether to show or hide the readouts for the selected marker in the audio spectrum view.
DISPlay:AUDio:SPECtrum:RESet:SCALe (on page 728)	Resets the horizontal and vertical scales in the audio spectrum view.
DISPlay:AUDio:SPECtrum:SCALe:LOG:STATe (on page 728)	Determines whether or not to set the horizontal axis logarithmic in the audio spectrum view.
DISPlay:AUDio:SPECtrum:SHOW:NHARmonic:THReshold (on page 729)	Sets or queries the appearance of the non-harmonic threshold in the audio spectrum view.
DISPlay:AUDio:SPECtrum:TABLe:SHOW:STATe (on page 729)	Determines whether to show or hide the results table in the audio spectrum view.
DISPlay:AUDio:SPECtrum:WINDow:TRACe:GRATicule:GRID:STATe (on page 730)	Determines whether to show or hide the graticule grid on the screen.
DISPlay:AUDio:SPECtrum:Y:[SCALe] (on page 730)	Sets or queries the vertical scale in the audio spectrum view.

Command	Description
DISPlay:AUDio:SPECtrum:Y:[SCALe]:AUTO (on page 731)	Rescales the vertical axis automatically in the audio spectrum view.
DISPlay:AUDio:SPECtrum:Y:[SCALe]:OFFSet (on page 731)	Sets or queries the vertical position (offset) in the audio spectrum view.
DISPlay:AVTime subgroup	**Amplitude versus Time measurement**
DISPlay:AVTime[:MEASview<y>]:LEGend:STATe (on page 731)	Shows or hides the trace legend in the amplitude versus time view.
DISPlay:AVTime[:MEASview<y>]:MARKer (on page 735):SHOW: STATe (on page 732)	Determines whether to show the readout for the selected marker.
DISPlay:AVTime[:MEASview<y>]:SELect:FIRSt (on page 732)	Queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.
DISPlay:AVTime[:MEASview<y>]:SELect:SECond (on page 733)	Sets or queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.
DISPlay:AVTime[:MEASview<y>]:SELect:THIRd (on page 733)	Queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.
DISPlay:AVTime[:MEASview<y>]:SELect:FOURth (on page 734)	Queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.
DISPlay:AVTime[:MEASview<y>]:SELect: TIMestamp (on page 735)	Sets or queries the display of the time stamp in the ogram plot.
DISPlay:AVTime[:MEASview<y>]:READout[:STATe] (on page 735)	Determines whether to show or hide the measurement parameter readouts in the Amplitude versus Time view.
DISPlay:AVTime[:MEASview<y>]:RESet (on page 736)	Resets the horizontal and vertical scale to the default values.
DISPlay:AVTime[:MEASview<y>]:TRIGger:LEVel: STATe (on page 736)	Determines whether to show the power trigger level line on screen.
DISPlay:AVTime[:MEASview<y>]:WINDow:TRACe: GRATicule:GRID:STATe (on page 737)	Determines whether to show the graticule grid on screen.
DISPlay:AVTime[:MEASview<y>]:X:RSCale (on page 737)	Rescales the horizontal axis automatically.
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO (on page 738)	Sets the horizontal scale automatically.
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO: STATe (on page 738)	Determines whether to set the horizontal scale automatically or manually.
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:FULL (on page 739)	Sets or queries the horizontal scale.

Command	Description
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 739)	Queries the upper limit of the horizontal scale setting range.
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MINimum? (on page 740)	Queries the lower limit of the horizontal scale setting range.
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 740)	Sets or queries the minimum horizontal value (left edge).
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 741)	Queries the upper limit of the horizontal offset setting range.
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 742)	Queries the lower limit of the horizontal offset setting range.
DISPlay:AVTime[:MEASview<y>]:Y:RSCale (on page 742)	Rescales the vertical axis automatically.
DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:FULL (on page 743)	Sets or queries the vertical scale.
DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 743)	Sets or queries the vertical offset.
DISPlay:CONSte subgroup (Option 21 only)	**Constellation measurement**
DISPlay:CONSte[:MEASview<x>]:MPHase (on page 756)	Sets or queries the multiplication constant of the phase multiplication constellation display for a CPM signal. This command is valid when `[SENSe]:DDEMod:MODulation:TYPE` is set to CPM.
DISPlay:CONSte[:MEASview<x>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 757)	Determines whether to show or hide the graticule grid on the screen.
DISPlay:DDEMod subgroup (Option 21 only)	**General purpose digital modulation measurements**
DISPlay:DDEMod[:MEASview<y>]:DELete (on page 758)	Deletes the measurement view in the general purpose digital modulation measurements.
DISPlay:DDEMod[:MEASview<y>][:SOURce<x>]: NEW (on page 759)	Displays a new measurement view.
DISPlay:DDEMod[:MEASview<y>]:SELect (on page 759)	Selects a measurement view in the general purpose digital modulation measurements on the screen.
DISPlay:DDEMod[:SOURce<x>]:RADix (on page 760)	Sets or queries the base of symbols of the measurement source.
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe] (on page 760)	Sets or queries the horizontal scale.
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO (on page 761)	Sets the horizontal scale automatically.
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe (on page 761)	Determines whether to set the horizontal scale automatically or manually.

Command	Description
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:MAXimum? (on page 762)	Queries the upper limit of the horizontal scale setting range.
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]: MINimum? (on page 762)	Queries the lower limit of the horizontal scale setting range.
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet (on page 763)	Sets or queries the minimum horizontal value (left edge).
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet:MAXimum? (on page 764)	Queries the upper limit of the horizontal offset setting range.
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet:MINimum? (on page 764)	Queries the lower limit of the horizontal offset setting range.
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:RESet (on page 764)	Presets the horizontal scale to the default value.
DISPlay:DIAGram subgroup (Option 21 only)	**Eye/Trellis diagram**
DISPlay:DIAGram:X[:SCALe] (on page 765)	Sets or queries the horizontal range.
DISPlay:DIAGram:X[:SCALe]:RESet (on page 765)	Presets the horizontal scale to the default value.
DISPlay:DIQVtime subgroup (Option 21 only)	**Demodulated I&Q versus Time measurement**
DISPlay:DIQVtime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 766)	Sets or queries whether to show the graticule grid on the screen.
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe] (on page 766)	Sets or queries the vertical scale.
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]:AUTO (on page 767)	Sets the vertical scale automatically.
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 767)	Sets or queries the vertical offset (center point of the vertical axis).
DISPlay:DPX subgroup	**DPXogram measurement**
DISPlay:DPX:DGRam:TIME[:SCALe]:OFFSet:DIVision (on page 768)	Sets or queries the DPXogram vertical time offset in divisions.
DISPlay:DPX:DGRam:TIME[:SCALe]:PDIVision (on page 768)	Sets or queries the DPXogram vertical time scale per division.
DISPlay:DPX:DGRam:TIME[:SCALe]:RESet (on page 769)	Presets the time scale to the default value for the DPXogram measurement.
DISPlay:DPX:DGRam:TSTamp:STATe (on page 769)	Determines whether to display the time stamp readout in the DPXogram display.
DISPlay:DPX:DGRam:Y[:SCALe]:AUTO (on page 770)	Rescales the height axis automatically to fit the waveform to the screen in the DPXogram display.

Command	Description
DISPlay:DPX:DGRam:Y[:SCALe]:RESet (on page 770)	Resets the height scale of the DPXogram display.
DISPlay:DPX:LEGend:STATe (on page 771)	Determines whether to show or hide the trace legend on the display.
DISPlay:DPX:PHASe:Y[:SCALe]:AXIS (on page 771)	Sets or queries the vertical axis representation.
DISPlay:DPX:PHASe:Y[:SCALe]:AXIS:OFFSet (on page 772)	Sets or queries the vertical offset in the DPX Phase view.
DISPlay:DPX:Y[:SCALe]:OFFSet (on page 773)	Sets or queries the vertical offset.
DISPlay:DPX:Y[:SCALe]:PDIVision (on page 773)	Sets or queries the vertical scale (per division).
DISPlay:DPX:WINDow:TRACe:GRATicule:GRID:STATe (on page 772)	Shows or hides the graticule grid on the screen
DISPlay:EDIagram subgroup (Option 21 only)	**Eye diagram**
DISPlay:EDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 774)	Determines whether to show or hide the graticule grid on the screen in the eye diagram.
DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe] (on page 774)	Sets or queries the vertical range of the eye diagram.
DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]: AUTO (on page 775)	Sets the vertical scale automatically to fit the waveform to the screen in the eye diagram.
DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 775)	Sets or queries the vertical offset (center point of the vertical axis) of the eye diagram.
DISPlay:EVM subgroup (Option 21 only)	**EVM versus Time measurement**
DISPlay:EVM[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 784)	Sets or queries the graticule grid view state for the EVM view.
DISPlay:EVM[:MEASview<y>]:Y[:SCALe] (on page 785)	Sets or queries the vertical range of the EVM versus Time graph.
DISPlay:EVM[:MEASview<y>]:Y[:SCALe]:AUTO (on page 786)	Sets the vertical scale automatically to fit the waveform to the screen in the EVM versus Time display.
DISPlay:EVM[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 786)	Sets or queries the minimum vertical value (bottom edge) of the EVM versus Time graph.
DISPlay:FDVTime subgroup (Option 21 only)	**Frequency deviation versus Time measurement**
DISPlay:FDVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 787)	Sets or queries the graticule grid view state for the FDV view.
DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe] (on page 787)	Sets or queries the vertical range of the Frequency deviation versus Time graph.

Command	Description
DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]:AUTO (on page 788)	Sets the vertical scale automatically to fit the waveform to the screen in the Frequency deviation versus Time display.
DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 789)	Sets or queries the minimum vertical value (bottom edge) of the Frequency deviation versus Time graph.
DISPlay:{FSETtling|PSETtling} subgroup	**Frequency and Phase Settling measurements**
DISPlay:{FSETtling|PSETtling}:MARKer:SHOW: STATe (on page 789)	Determines whether to show or hide the readout for the selected marker in the Frequency or Phase Settling views.
DISPlay:{FSETtling|PSETtling}:TIME:DECimal (on page 790)	Sets or queries the number of values to the right of the decimal point.
DISPlay:{FSETtling|PSETtling}:WINDow:TRACe:GRATicule:GRID:STATe (on page 790)	Determines whether to show or hide the graticule grid on the screen.
DISPlay:{FSETtling|PSETtling}:X[:SCALe] (on page 791)	Sets or queries the horizontal scale (full-scale time) of the Settling Time graph.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO (on page 791)	Sets the horizontal scale automatically to fit the waveform to the screen in the Frequency and Phase Settling views.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe (on page 792)	Determines whether to set the horizontal scale automatically or manually.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]: MAXimum? (on page 792)	Queries the upper limit of the horizontal scale setting range.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:MINimum? (on page 793)	Queries the lower limit of the horizontal scale setting range.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MINimum? (on page 794)	Queries the lower limit of the horizontal offset setting range.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet (on page 793)	Sets or queries the minimum horizontal value (left edge) of the Frequency versus Time graph.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MAXimum? (on page 794)	Queries the upper limit of the horizontal offset setting range.
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MINimum? (on page 794)	Queries the lower limit of the horizontal offset setting range.
DISPlay:{FSETtling|PSETtling}:Y[:SCALe] (on page 795)	Sets or queries the vertical range of the Frequency versus Time graph.
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:AUTO (on page 795)	Sets the vertical scale automatically to fit the waveform to the screen in the Frequency and Phase Settling views.
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:OFFSet (on page 796)	Sets or queries the vertical offset (the value at the center of the vertical axis) in the Frequency and Phase Settling graphs.

Command	Description
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:PDIVision (on page 796)	Sets or queries the vertical scale (per division) of the Frequency and Phase Settling graphs.
DISPlay:FVTime subgroup	**Frequency versus Time measurement**
DISPlay:FVTime[:MEASview<y>]:READout[:STATe] (on page 797)	Determines whether to show or hide the measurement parameter readouts in the Frequency versus Time view.
DISPlay:FVTime[:MEASview<y>]:SELected:TIMestamp (on page 797)	Sets or queries the display of the time stamp in the ogram plot.
DISPlay:FVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 798)	Sets or queries whether to show the graticule grid on the Frequency versus Time view.
DISPlay:FVTime[:MEASview<y>]:X[:SCALe] (on page 798)	Sets or queries the horizontal scale.
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO (on page 799)	Sets the horizontal scale automatically.
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 800)	Determines whether to set the horizontal scale automatically or manually.
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 800)	Queries the upper limit of the horizontal scale setting range.
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MINimum? (on page 801)	Queries the lower limit of the horizontal scale setting range.
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 801)	Sets or queries the minimum horizontal value (left edge).
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 802)	Queries the upper limit of the horizontal offset setting range.
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 803)	Queries the lower limit of the horizontal offset setting range.
DISPlay:FVTime[:MEASview<y>]:Y[:SCALe] (on page 803)	Sets or queries the vertical scale.
DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:AUTO (on page 804)	Sets the vertical scale automatically.
DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 804)	Sets or queries the vertical offset.
DISPlay:GENeral subgroup	**General signal viewing**
DISPlay:GENeral:MEASview<y>:DELete (on page 805)	Deletes the measurement view.
DISPlay:GENeral:MEASview<y>[:SOURce<x>]: NEW (on page 806)	Displays a new measurement view.

Command	Description
DISPlay:GENeral:MEASview<y>:SELect (on page 806)	Sets or queries the measurement view.
DISPlay:GPRF subgroup	**General purpose RF measurements**
DISPlay:GPRF:MEASview:DELete (on page 807)	Deletes the measurement view.
DISPlay:GPRF:MEASview[:SOURce<x>]:NEW (on page 808)	Displays a new measurement view.
DISPlay:GPRF:MEASview:SELect (on page 809)	Sets or queries the measurement view.
DISPlay:IQVTime subgroup	**RF I&Q versus Time measurement**
DISPlay:IQVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 810)	Sets or queries whether to show the graticule grid on the screen.
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] (on page 810)	Sets or queries the horizontal scale.
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO (on page 811)	Sets the horizontal scale automatically.
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 812)	Determines whether to set the horizontal scale automatically or manually.
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 812)	Queries the upper limit of the horizontal scale setting range.
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MINimum? (on page 813)	Queries the lower limit of the horizontal scale setting range.
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]: OFFSet (on page 813)	Sets or queries the minimum horizontal value (left edge).
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 814)	Queries the upper limit of the horizontal offset setting range.
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 815)	Queries the lower limit of the horizontal offset setting range.
DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe] (on page 815)	Sets or queries the vertical scale.
DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:AUTO (on page 816)	Sets the vertical scale automatically.
DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 816)	Sets or queries the vertical offset.
DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]: RESCale (on page 817)	Rescales the vertical scale.
DISPlay:MCPower subgroup	**MCPR measurement**

Command	Description
DISPlay:MCPower:MARKer:SHOW:STATe (on page 834)	Determines whether to show the readout for the selected marker.
DISPlay:MCPower:PLEVel:SHOW:STATe (on page 834)	Determines whether to show the power levels.
DISPlay:MCPower:RESet:SCALe (on page 834)	Resets the horizontal and vertical scale to the default values.
DISPlay:MCPower:WINDow:TRACe:GRATicule:GRID:STATe (on page 835)	Determines whether to show the graticule grid on screen.
DISPlay:MCPower:X[:SCALe] (on page 835)	Sets or queries the horizontal range.
DISPlay:MCPower:X[:SCALe]:AUTO (on page 836)	Rescales the horizontal axis automatically.
DISPlay:MCPower:X[:SCALe]:OFFSet (on page 836)	Sets or queries the minimum horizontal value (left edge).
DISPlay:MCPower:Y[:SCALe] (on page 837)	Sets or queries the vertical range.
DISPlay:MCPower:Y[:SCALe]:AUTO (on page 837)	Rescales the vertical axis automatically.
DISPlay:MCPower:Y[:SCALe]:OFFSet (on page 838)	Sets or queries the vertical offset.
DISPlay:MERRor subgroup (Option 21 only)	**Magnitude error versus Time measurement**
DISPlay:MERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 838)	Sets or queries the graticule grid view state for the Magnitude error versus Time view.
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe] (on page 839)	Sets or queries the vertical range of the Magnitude error versus Time graph.
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]:AUTO (on page 839)	Sets the vertical scale automatically to fit the waveform to the screen in the Magnitude error versus Time display.
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 840)	Sets or queries the minimum vertical value (bottom edge) of the Magnitude error versus Time graph.
DISPlay:OBWidth subgroup	**Occupied Bandwidth measurement**
DISPlay:OBWidth:MARKer:SHOW:STATe (on page 870)	Determines whether to show the readout for the selected marker.
DISPlay:OBWidth:RESet:SCALe (on page 870)	Resets the horizontal and vertical scale to the default values.
DISPlay:OBWidth:SELected:BANDwidth (on page 871)	Sets or queries the bandwidth (OBW or x dB BW) to measure.
DISPlay:OBWidth:WINDow:TRACe:GRATicule:GRID:STATe (on page 871)	Determines whether to show the graticule grid on screen.
DISPlay:OBWidth:X[:SCALe] (on page 871)	Sets or queries the horizontal range.
DISPlay:OBWidth:X[:SCALe]:AUTO (on page 872)	Rescales the horizontal axis automatically.

Command	Description
DISPlay:OBWidth:X[:SCALe]:OFFSet (on page 872)	Sets or queries the minimum horizontal value (left edge).
DISPlay:OBWidth:Y[:SCALe] (on page 873)	Sets or queries the vertical range
DISPlay:OBWidth:Y[:SCALe]:AUTO (on page 873)	Rescales the vertical axis automatically.
DISPlay:OBWidth:Y[:SCALe]:OFFSet (on page 874)	Sets or queries the vertical offset.
DISPlay:OFDM subgroup	**OFDM measurements**
DISPlay:OFDM:CONSte[:SCALe] (on page 874)	Sets or queries the horizontal offset.
DISPlay:OFDM:CONSte:X:OFFSet (on page 875)	Sets or queries the vertical offset.
DISPlay:OFDM:CONSte:Y:OFFSet (on page 875)	Sets or queries the scale.
DISPlay:OFDM:CRESponse:FREQuency:AUTO (on page 875)	Rescales the horizontal axis automatically.
DISPlay:OFDM:CRESponse:FREQuency:OFFSet (on page 876)	Sets or queries the frequency offset.
DISPlay:OFDM:CRESponse:MAGNitude:AUTO (on page 877)	Sets or queries the horizontal range.
DISPlay:OFDM:CRESponse:MAGNitude:OFFSet (on page 877)	Rescales the magnitude automatically.
DISPlay:OFDM:CRESponse:MAGNitude:PDIVision (on page 877)	Sets or queries the magnitude offset.
DISPlay:OFDM:CRESponse:PHASe:AUTO (on page 878)	Sets or queries the scale (per division) of the magnitude.
DISPlay:OFDM:CRESponse:PHASe:OFFSet (on page 878)	Rescales the vertical axis automatically.
DISPlay:OFDM:CRESponse:PHASe[:SCALe] (on page 879)	Sets or queries the phase offset.
DISPlay:OFDM:CRESponse:WINDow:SELect:PLOT (on page 879)	Sets the vertical scale automatically.
DISPlay:OFDM:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe (on page 879)	Sets or queries the plot
DISPlay:OFDM:EVM:FREQuency[:SCALe] (on page 881)	Determines whether to show or hide the graticule.
DISPlay:OFDM:EVM:FREQuency:AUTO (on page 880)	Sets or queries the horizontal range.

Command	Description
DISPlay:OFDM:EVM:FREQuency:OFFSet (on page 880)	Rescales the frequency automatically to fit the waveform to the screen.
DISPlay:OFDM:EVM:MARKer:SHOW:STATe (on page 881)	Sets or queries the frequency offset.
DISPlay:OFDM:EVM:TIME[:SCALe] (on page 882)	Determines whether to show or hide the readout.
DISPlay:OFDM:EVM:TIME:AUTO (on page 881)	Rescales the time automatically to fit the waveform to the screen..
DISPlay:OFDM:EVM:TIME:OFFSet (on page 882)	Sets or queries the time offset.
DISPlay:OFDM:EVM:WINDow:SELect:PLOT (on page 883)	Sets or queries the plot.
DISPlay:OFDM:EVM:WINDow:TRACe:GRATicule:GRID:STATe (on page 883)	Determines whether to show or hide the graticule.
DISPlay:OFDM:EVM:Y[:SCALe] (on page 884)	Sets or queries the vertical range.
DISPlay:OFDM:EVM:Y:AUTO (on page 883)	Rescales the vertical scale automatically.
DISPlay:OFDM:EVM:Y:OFFSet (on page 884)	Sets or queries the vertical offset.
DISPlay:OFDM:FLATness:AUTO (on page 885)	Automatically rescales the horizontal and vertical axes for the best display.
DISPlay:OFDM:FLATness:X:AUTO (on page 885)	Rescales the horizontal axis automatically in the OFDM Spectral Flatness display.
DISPlay:OFDM:FLATness:X:OFFSet (on page 885)	Sets or queries the value of the offset of the horizontal axis.
DISPlay:OFDM:FLATness:X[:SCALe] (on page 886)	Sets or queries the value of the horizontal scale.
DISPlay:OFDM:FLATness:Y:AUTO (on page 886)	Rescales the vertical axis scale and position values automatically.
DISPlay:OFDM:FLATness:Y:OFFSet (on page 887)	Sets or queries the value of the offset from the center (vertical position).
DISPlay:OFDM:FLATness:Y[:SCALe] (on page 887)	Sets or queries the vertical scale value.
DISPlay:OFDM:MEASview:DELete (on page 888)	Deletes the specified OFDM measurement view.
DISPlay:OFDM:MEASview:NEW (on page 888)	Creates a new OFDM measurement view.
DISPlay:OFDM:MEASview:SELect (on page 889)	Sets or queries the OFDM measurement view.
DISPlay:OFDM:MERRor:FREQuency[:SCALe] (on page 890)	Sets or queries the horizontal range.
DISPlay:OFDM:MERRor:FREQuency[:SCALe]: AUTO (on page 890)	Rescales the frequency automatically to fit the waveform to the screen.

Command	Description
DISPlay:OFDM:MERRor:FREQuency[:SCALe]: OFFSet (on page 890)	Sets or queries the frequency offset.
DISPlay:OFDM:MERRor:MARKer:SHOW:STATe (on page 891)	Determines whether to show or hide the readout for the selected marker.
DISPlay:OFDM:MERRor:TIME[:SCALe] (on page 891)	Sets or queries the time scale.
DISPlay:OFDM:MERRor:TIME[:SCALe]:AUTO (on page 892)	Rescales the time automatically to fit the waveform to the screen.
DISPlay:OFDM:MERRor:TIME[:SCALe]:OFFSet (on page 892)	Sets or queries the time offset.
DISPlay:OFDM:MERRor:WINDow:SELect:PLOT (on page 892)	Sets or queries the plot.
DISPlay:OFDM:MERRor:WINDow:TRACe:GRATicule:GRID:STATe (on page 893)	Determines whether to show or hide the graticule.
DISPlay:OFDM:MERRor:Y[:SCALe] (on page 894)	Sets or queries the vertical range.
DISPlay:OFDM:MERRor:Y:AUTO (on page 893)	Rescales the vertical scale automatically to fit the waveform.
DISPlay:OFDM:MERRor:Y:OFFSet (on page 894)	Sets or queries the vertical offset.
DISPlay:OFDM:PERRor:FREQuency[:SCALe] (on page 894)	Sets or queries the horizontal range.
DISPlay:OFDM:PERRor:FREQuency[:SCALe]:AUTO (on page 895)	Rescales the frequency automatically to fit the waveform to the screen.
DISPlay:OFDM:PERRor:FREQuency[:SCALe]: OFFSet (on page 895)	Sets or queries the frequency offset.
DISPlay:OFDM:PERRor:MARKer:SHOW:STATe (on page 896)	Determines whether to show or hide the readout for the selected marker.
DISPlay:OFDM:PERRor:TIME[:SCALe] (on page 896)	Sets or queries the time scale.
DISPlay:OFDM:PERRor:TIME[:SCALe]:AUTO (on page 896)	Rescales the time automatically to fit the waveform to the screen.
DISPlay:OFDM:PERRor:TIME[:SCALe]:OFFSet (on page 897)	Sets or queries the time offset.
DISPlay:OFDM:PERRor:WINDow:SELect:PLOT (on page 897)	Sets or queries the plot.
DISPlay:OFDM:PERRor:WINDow:TRACe:GRATicule:GRID:STATe (on page 898)	Determines whether to show or hide the graticule.

Command	Description
DISPlay:OFDM:PERRor:Y[:SCALe] (on page 899)	Sets or queries the vertical range.
DISPlay:OFDM:PERRor:Y:AUTO (on page 898)	Rescales the vertical scale automatically to fit the waveform.
DISPlay:OFDM:PERRor:Y:OFFSet (on page 898)	Sets or queries the vertical offset.
DISPlay:OFDM:POWer:FREQuency[:AUTO] (on page 899)	Rescales the frequency automatically to fit the waveform to the screen.
DISPlay:OFDM:POWer:FREQuency[:OFFSet] (on page 900)	Sets or queries the frequency offset.
DISPlay:OFDM:POWer:FREQuency[:SCALe] (on page 900)	Sets or queries the horizontal range.
DISPlay:OFDM:POWer:MARKer:SHOW:STATe (on page 900)	Determines whether to show or hide the readout for the selected marker.
DISPlay:OFDM:POWer:TIME[:AUTO] (on page 901)	Rescales the time automatically to fit the waveform to the screen.
DISPlay:OFDM:POWer:TIME:OFFSet (on page 901)	Sets or queries the time offset.
DISPlay:OFDM:POWer:TIME[:SCALe] (on page 902)	Sets or queries the time scale.
DISPlay:OFDM:POWer:WINDow:SELect:PLOT (on page 902)	Sets or queries the plot.
DISPlay:OFDM:POWer:WINDow:TRACe:GRATicule:GRID:STATe (on page 902)	Determines whether to show or hide the graticule.
DISPlay:OFDM:POWer:Y:AUTO (on page 903)	Rescales the vertical scale automatically to fit the waveform.
DISPlay:OFDM:POWer:Y:OFFSet (on page 903)	Sets or queries the vertical offset.
DISPlay:OFDM:POWer:Y[:SCALe] (on page 904)	Sets or queries the vertical range.
DISPlay:PERRor subgroup (Option 21 only)	**Phase error versus Time measurement**
DISPlay:PERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 918)	Sets or queries the graticule grid view state for the Phase error versus Time view.
DISPlay:PERRor[:MEASview<y>]:Y[:SCALe] (on page 919)	Sets or queries the vertical scale.
DISPlay:PERRor:[:MEASview<y>]Y[:SCALe]:AUTO (on page 920)	Sets the vertical scale automatically.
DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 920)	Sets or queries the minimum vertical value (bottom edge).
DISPlay:PHVTime subgroup	**Phase versus Time measurement**

Command	Description
DISPlay:PHVTime[:MEASview<y>]:SELected:TIMestamp (on page 921)	Sets or queries the display of the time stamp in the ogram plot.
DISPlay:PHVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 921)	Sets or queries whether to show the graticule grid on the screen.
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe] (on page 922)	Sets or queries the horizontal scale.
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO (on page 922)	Sets the horizontal scale automatically.
DISPlay:PHVTime[:MEASview<y>]:READout[:STATe] (on page 923)	Determines whether to show or hide the measurement parameter readouts in the Phase versus Time view.
DISPlay:PHVTime[:MEASview?]:Y[:SCALe]:AXIS:ENABle:REFerence (on page 923)	Sets or queries the state of **Y Reference** checkbox.
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 924)	Determines whether to set the horizontal scale automatically or manually.
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 924)	Queries the upper limit of the horizontal scale setting range.
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:MINimum? (on page 925)	Queries the lower limit of the horizontal scale setting range.
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]: OFFSet (on page 926)	Sets or queries the minimum horizontal value (left edge).
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 926)	Queries the upper limit of the horizontal offset setting range.
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 927)	Queries the lower limit of the horizontal offset setting range.
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe] (on page 927)	Sets or queries the vertical scale.
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AUTO (on page 928)	Sets the vertical scale automatically.
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS (on page 928)	Sets or queries the vertical axis representation.
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS:REFerence (on page 929)	Sets or queries the reference time for phase.
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 929)	Sets or queries the vertical offset.
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:RESCale (on page 930)	Rescales the vertical scale.

Command	Description
DISPlay:PNOise subgroup (Option 11 only)	**Phase noise measurements**
DISPlay:PNOise:LEGend:STATe (on page 930)	Sets or queries showing the trace legend on the display.
DISPlay:PNOise:MARKer:SHOW:STATe (on page 931)	Determines whether to show the readout for the selected marker.
DISPlay:PNOise:RESet:SCALe (on page 931)	Resets the horizontal and vertical scale to the default values.
DISPlay:PNOise:WINDow:TRACe:GRATicule:GRID:STATe (on page 931)	Sets or queries whether to show the graticule grid on the screen.
DISPlay:PNOise:X[:SCALe]:AUTO (on page 932)	Rescales the horizontal axis automatically.
DISPlay:PNOise:X[:SCALe]:STARt (on page 932)	Sets or queries the start frequency of the graph.
DISPlay:PNOise:X[:SCALe]:STOP (on page 933)	Sets or queries the stop frequency of the graph.
DISPlay:PNOise:Y[:SCALe] (on page 933)	Sets or queries the stop frequency of the graph.
DISPlay:PNOise:Y[:SCALe]:AUTO (on page 933)	Rescales the vertical axis automatically.
DISPlay:PNOise:Y[:SCALe]:OFFSet (on page 934)	Sets or queries the vertical offset.
DISPlay:PNOise:Y[:SCALe]:PDIVision (on page 934)	Sets or queries the vertical scale (per division).
DISPlay:PULSe subgroup	**Pulsed RF measurements**
DISPlay:PULSe:MEASview<y>:DELete (on page 958)	Deletes the measurement view.
DISPlay:PULSe:MEASview<y>[:SOURce<x>]:NEW (on page 958)	Displays a new measurement view.
DISPlay:PULSe:MEASview<y>:SELect (on page 959)	Selects the specifies Measurement view.
DISPlay:PULSe:RESult[:MEASview<y>]:ATX (on page 969)	Sets or queries whether to show the average transmitted power result.
DISPlay:PULSe:RESult[:MEASview<y>]:AVERage (on page 970)	Sets or queries whether to show the average on power result.
DISPlay:PULSe:RESult[:MEASview<y>]:AVERage (on page 970)	Sets or queries whether to show the average on power result.
DISPlay:PULSe:RESult[:MEASview<y>]:DRODb (on page 970)	Sets or queries whether to show the droop in the results table.
DISPlay:PULSe:RESult[:MEASview<y>]:DROop (on page 971)	Sets or queries showing the droop measurement result in the pulse table
DISPlay:PULSe:RESult[:MEASview<y>]:DUTPct (on page 971)	Sets or queries whether to show the duty factor (%) result.

Command	Description
DISPlay:PULSe:RESult[:MEASview<y>]:DUTRatio (on page 972)	Sets or queries whether to show the duty factor (ratio) result.
DISPlay:PULSe:RESult[:MEASview<y>]:FALL (on page 973)	Sets or queries whether to show the fall time in the results table.
DISPlay:PULSe:RESult[:MEASview<y>]:FDELta (on page 973)	Sets or queries whether to show the delta frequency result.
DISPlay:PULSe:RESult[:MEASview<y>]:FRDeviation (on page 974)	Sets or queries whether to show the frequency deviation result.
DISPlay:PULSe:RESult[:MEASview<y>]:IRAMplitude (on page 974)	Sets or queries showing the Impulse Response Amplitude measurement result in the pulse table.
DISPlay:PULSe:RESult[:MEASview<y>]:IRTime (on page 975)	Sets or queries showing the Impulse Response Time measurement result in the pulse table.
DISPlay:PULSe:RESult[:MEASview<y>]:MFReqerror (on page 975)	Sets or queries whether to show the maximum frequency error result.
DISPlay:PULSe:RESult[:MEASview<y>]:MPHerror (on page 976)	Sets or queries whether to show the maximum phase error result.
DISPlay:PULSe:RESult[:MEASview<y>]:OVEDb (on page 976)	Sets or queries whether to show the Overshoot measurement result in dB in the pulse table.
DISPlay:PULSe:RESult[:MEASview<y>]:OVERshoot (on page 977)	Sets or queries whether to show the Overshoot measurement result in the pulse table.
DISPlay:PULSe:RESult[:MEASview<y>]:PHDeviation (on page 977)	Sets or queries whether to show the phase deviation result.
DISPlay:PULSe:RESult[:MEASview<y>]: PPFRequency (on page 979)	Sets or queries whether to show the pulse-pulse frequency result.
DISPlay:PULSe:RESult[:MEASview<y>]:PPOWer (on page 979)	Sets or queries whether to show the peak power in the results table.
DISPlay:PULSe:RESult[:MEASview<y>]:PPPHase (on page 980)	Sets or queries whether to show the pulse-pulse carrier phase result.
DISPlay:PULSe:RESult[:MEASview<y>]:RINTerval (on page 980)	Sets or queries whether to show the repetition interval result.
DISPlay:PULSe:RESult[:MEASview<y>]:RIPDb (on page 981)	Sets or queries showing the ripple measurement result in dB in the pulse table.
DISPlay:PULSe:RESult[:MEASview<y>]:RIPPle (on page 981)	Sets or queries showing the ripple measurement result in dB in the pulse table.
DISPlay:PULSe:RESult[:MEASview<y>]:RISE (on page 982)	Sets or queries whether to show the rise time in the results table.

Command	Description
DISPlay:PULSe:RESult[:MEASview<y>]: RMSFreqerror (on page 982)	Sets or queries whether to show the RMS frequency error result.
DISPlay:PULSe:RESult[:MEASview<y>]:RMSPherror (on page 983)	Sets or queries whether to show the RMS phase error result.
DISPlay:PULSe:RESult[:MEASview<y>]:RRATe (on page 983)	Sets or queries whether to show the repetition rate result.
DISPlay:PULSe:RESult[:MEASview<y>]:TIME (on page 984)	Sets or queries whether to show the time in the results table.
DISPlay:PULSe:RESult[:MEASview<y>]:WIDTh (on page 984)	Sets or queries whether to show the pulse width in the results table.
DISPlay:PULSe:SELect[:MEASview<y>]:NUMBer (on page 985)	Sets or queries the pulse to measure.
DISPlay:PULSe:SELect[:MEASview<y>]:RESult (on page 985)	Sets or queries which result is shown in the trace and statistics views.
DISPlay:PULSe:STATistics[:MEASview<y>]: MARKer<x>:SHOW:STATe (on page 988)	Sets or queries whether to show the marker readout in the graph.
DISPlay:PULSe:STATistics[:MEASview<y>]:PLOT (on page 989)	Sets or queries how to show the statistics graph.
DISPlay:PULSe:STATistics[:MEASview<y>]: WINDow:TRACe:GRATicule:GRID:STATe (on page 989)	Sets or queries whether to show the graticule grid in the statistics view.
DISPlay:PULSe:STATistics[:MEASview<y>]:X: RSCale (on page 990)	Rescales the horizontal axis of the statistics graph.
DISPlay:PULSe:STATistics[:MEASview<y>]: X[:SCALe]:NUMBer (on page 990)	Sets or queries the horizontal scale (the number of pulses per division).
DISPlay:PULSe:STATistics[:MEASview<y>]: X[:SCALe]:OFFSet (on page 991)	Sets or queries the minimum horizontal value in the statistics view.
DISPlay:PULSe:STATistics[:MEASview<y>]:Y: RSCale (on page 992)	Rescales the vertical axis of the statistics graph.
DISPlay:PULSe:STATistics[:MEASview<y>]: Y[:SCALe]:FULL (on page 992)	Sets or queries the vertical full-scale in the statistics view.
DISPlay:PULSe:STATistics[:MEASview<y>]: Y[:SCALe]:OFFSet (on page 993)	Sets or queries the vertical offset in the statistics view.
DISPlay:PULSe:STATistics[:MEASview<y>]: Y[:SCALe]:STOP? (on page 994)	Queries the minimum vertical value in the statistics view.

Command	Description
DISPlay:PULSe:TRACe[:MEASview<y>]:MARKer<x>:SHOW:STATe (on page 995)	Sets or queries whether to show the marker readout in the trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:POINt: SHOW (on page 995)	Sets or queries whether to show the measurement points and lines.
DISPlay:PULSe:TRACe[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 996)	Sets or queries whether to show the graticule grid in the trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:X:RSCale (on page 996)	Rescales the horizontal axis of the pulse trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe] (on page 997)	Sets or queries the horizontal full scale in the pulse trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:FULL (on page 997)	Sets or queries the full-scale reference for the horizontal rescale.
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:OFFSet (on page 998)	Sets or queries the minimum horizontal value in the pulse trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:PDIVision (on page 998)	Sets or queries the horizontal full scale in the pulse trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:Y:RSCale (on page 999)	Rescales the vertical axis of the pulse trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:FULL (on page 999)	Sets or queries the vertical full scale in the pulse trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 1000)	Sets or queries the vertical offset in the pulse trace view.
DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:STOP? (on page 1000)	Queries the minimum vertical value in the pulse trace view.
DISPlay:SEM subgroup	**Spectral Emissions Mask measurements**
DISPlay:SEM:MARKer:SHOW:STATe (on page 1001)	Determines whether to show or hide the readout for the selected marker.
DISPlay:SEM:RESet:SCALe (on page 1001)	Resets the scale.
DISPlay:SEM:SHOW:LIMit (on page 1002)	Sets or queries the appearance of the limits.
DISPlay:SEM:WINDow:TRACe:GRATicule:GRID:STATe (on page 1002)	Determines whether to show or hide the graticule.
DISPlay:SEM:X[:SCALe]:AUTO (on page 1003)	Rescales the horizontal scale automatically to fit the waveform.
DISPlay:SEM:X[:SCALe]:START (on page 1003)	Sets or queries the start frequency.
DISPlay:SEM:X[:SCALe]:STOP (on page 1003)	Sets or queries the stop frequency.

Command	Description
DISPlay:SEM:Y[:SCALe] (on page 1004)	Sets or queries the vertical range.
DISPlay:SEM:Y[:SCALe]:AUTO (on page 1004)	Rescales the vertical scale automatically to fit the waveform.
DISPlay:SEM:Y[:SCALe]:OFFSet (on page 1005)	Sets or queries the vertical offset.
DISPlay:SGRam subgroup	**Spectrogram measurement**
DISPlay:SGRam[:MEASview<y>]:FREQuency:AUTO (on page 1005)	Rescales the horizontal (frequency) axis automatically.
DISPlay:SGRam[:MEASview<y>]:FREQuency: OFFSet (on page 1005)	Sets or queries the horizontal (frequency) offset.
DISPlay:SGRam[:MEASview<y>]:FREQuency: SCAle (on page 1006)	Sets or queries the horizontal (frequency) range.
DISPlay:SGRAM[:MEASview<y>]:MARKer:SHOW: STATe (on page 1007)	Sets or queries the marker readout.
DISPlay:SGRAM[:MEASview<y>]:SELected: TIMestamp (on page 1007)	Sets or queries the time stamp readout.
DISPlay:SGRam[:MEASview<y>]:TIME:AUTO (on page 1008)	Rescales the vertical axis automatically.
DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet (on page 1008)	Sets or queries the vertical axis (time) offset (bottom line number).
DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet: DIVisions (on page 1009)	Sets or queries the Vertical offset or Position in divisions.
DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap: PERCent (on page 1010)	Sets or queries the Overlap in percent.
DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle] (on page 1010)	Sets or queries the vertical scale (the amount of time in each line).
DISPlay:SGRam[:MEASview<y>]:TIME:SCALe:PER: DIVision (on page 1011)	Sets or queries the vertical Time/division value.
DISPlay:SGRam[:MEASview<y>]:TIME:SPECtrums: PERLine? (on page 1012)	Queries the Spectrums/Line value.
DISPlay:SIGClass subgroup	**Signal classification measurement**
DISPlay:SIGClass:REGion:ADD (on page 1012)	Adds a frequency region for signal classification in the spectrum or DPX measurement.
DISPlay:SIGClass:REGion? (on page 1012)	Queries the number of frequency regions for the signal classification present in the Spectrum or DPX measurements.
DISPlay:SPECtrum subgroup	**Spectrum measurements**

Command	Description
DISPlay:SPECtrum[:MEASview<y>]:FREQuency:AUTO (on page 1013)	Rescales the horizontal axis automatically to fit the waveform to the screen in the spectrum view.
DISPlay:SPECtrum[:MEASview<y>]:FREQuency:OFFSet (on page 1013)	Sets or queries the frequency offset (the value at the center of the horizontal axis) in the spectrum graph.
DISPlay:SPECtrum[:MEASview<y>]:FREQuency[:SCALe] (on page 1014)	Sets or queries the horizontal range of the spectrum graph.
DISPlay:SPECtrum[:MEASview<y>]:MARKer:NOISe:MODE (on page 1015)	Determines whether to enable or disable the marker noise mode in the spectrum view.
DISPlay:SPECtrum[:MEASview<y>]:READout[:STATe] (on page 1015)	Determines whether to enable or disable the marker noise mode in the spectrum view.
DISPlay:SPECtrum[:MEASview<y>][:SCALe]:LOG:STATe (on page 1016)	Determines whether or not to set the horizontal axis logarithmic in the Spectrum view.
DISPlay:SPECtrum[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 1016)	Determines whether to show or hide the graticule grid on the screen.
DISPlay:SPECtrum[:MEASview<y>]:WINDow :TRACe:LEGend:STATe (on page 1017)	Determines whether to show or hide the trace legend in the Spectrum view.
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCALe]:AUTO (on page 1018)	Rescales the vertical axis automatically to fit the waveform to the screen in the Spectrum view.
DISPlay:SPECtrum[:MEASview<y>]:X:LABel (on page 1017)	Sets or queries the labels for the horizontal (X) axis in the Spectrum view.
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCALe] (on page 1018)	Sets or queries the vertical range of the spectrum graph.
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCALe]:OFFSET (on page 1019)	Sets or queries the vertical offset (the value at the top edge of the vertical axis) of the spectrum graph.
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCALe]:PDIVision (on page 1019)	Sets or queries the vertical scale (per division) of the spectrum graph.
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCALe]:RESet (on page 1020)	Resets the vertical scale of the spectrum graph to the default values
DISPLay:SPURious subgroups	**Spurious measurement**
DISPlay:SPURious:MARKer:SHOW:STATe (on page 1020)	Sets or queries whether to show the readout for the selected marker.
DISPlay:SPURious:RESet:SCALe (on page 1021)	Resets the horizontal and vertical scale to the default values.
DISPlay:SPURious:SCALe:LOG:STATe (on page 1021)	Sets or queries whether to set the horizontal axis logarithmic.
DISPlay:SPURious:SELect:NUMBer (on page 1021)	Sets or queries the spurious number.

Command	Description
DISPlay:SPURious:SHOW:LIMit (on page 1022)	Sets or queries how to display the limits.
DISPlay:SPURious:WINDow:TRACe:GRATicule:GRID:STATe (on page 1022)	Determines whether to show the graticule grid on screen.
DISPlay:SPURious:X[:SCALe]:AUTO (on page 1023)	Rescales the horizontal axis automatically.
DISPlay:SPURious:X[:SCALe]:STARt (on page 1023)	Sets or queries the minimum horizontal value of the spectrum graph.
DISPlay:SPURious:X[:SCALe]:STOP (on page 1024)	Sets or queries the maximum horizontal value of the spectrum graph.
DISPlay:SPURious:Y[:SCALe] (on page 1024)	Sets or queries the vertical range of the spectrum graph.
DISPlay:SPURious:Y[:SCALe]:AUTO (on page 1025)	Rescales the vertical axis automatically.
DISPlay:SPURious:Y[:SCALe]:OFFSet (on page 1025)	Sets or queries the vertical offset of the spectrum graph.
DISPlay:TDIagram subgroup (Option 21 only)	**Trellis diagram**
DISPlay:TDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 1025)	Sets or queries whether to show or hide the graticule grid on the screen in the Trellis diagram.
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe] (on page 1026)	Sets or queries the vertical scale of the Trellis diagram.
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]:AUTO (on page 1027)	Sets the vertical scale automatically.
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]: OFFSet (on page 1027)	Sets or queries the vertical offset (center point of the vertical axis).
DISPlay:TOVerview subgroup	**Time overview**
DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe (on page 1030)	Sets or queries whether to show the graticule grid in the time overview.
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe] (on page 1031)	Sets or queries the horizontal scale.
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]: AUTO (on page 1032)	Sets the horizontal scale and offset automatically.
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]:OFFSet (on page 1032)	Sets or queries the minimum horizontal value (left edge).
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe] (on page 1033)	Sets or queries the vertical scale.
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]: AUTO (on page 1033)	Sets the vertical scale and offset automatically.
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 1034)	Sets or queries the vertical offset.

Command	Description
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:RESCale (on page 1034)	Rescales the vertical scale.
DISPlay:WINDow subgroup	**Window display**
DISPlay:WINDow:ACQuisition:BANdwidth:SHOw:STAte (on page 1041)	Sets or queries the state of **Show Acq Bandwidth** checkbox.
DISPlay:WINDow:ACTive:MEASurement? (on page 1041)	Queries the active measurement views
DISPlay:WINDow:APPLy:SOURce:COLOr (on page 1043)	Sets or queries the state of **Apply Source Color to Trace** checkbox.
DISPlay:WINDow:COLor:SCHeme (on page 1044)	Sets or queries the color scheme for displaying traces and background on the screen.
DISPlay:WINDow:OPTimized:MEASurement? (on page 1044)	Queries the measurement views that are optimized.
DISPlay:WLAN subgroup	**Wireless LAN measurements**
DISPlay:WLAN:CONSte[:SCALe] (on page 1063)	Sets the magnification value (zoom factor).
DISPlay:WLAN:CONSte:X:OFFSet (on page 1064)	Sets or queries the value of the offset of the horizontal axis.
DISPlay:WLAN:CONSte:Y:OFFSet (on page 1064)	Sets or queries the value of the offset of the vertical axis.
DISPlay:WLAN:CRESponse:AUTO (on page 1065)	Automatically rescales the horizontal and vertical values.
DISPlay:WLAN:CRESponse:FREQuency:AUTO (on page 1065)	Automatically rescales the horizontal subcarrier (frequency) start and stop values.
DISPlay:WLAN:CRESponse:FREQuency:STARt (on page 1066)	Specifies or queries the horizontal start value.
DISPlay:WLAN:CRESponse:FREQuency:STOP (on page 1066)	Specifies or queries the horizontal stop value.
DISPlay:WLAN:CRESponse:MAGNitude:AUTO (on page 1067)	Rescales the vertical magnitude offset (position) and scale values.
DISPlay:WLAN:CRESponse:MAGNitude:OFFSet (on page 1067)	Sets or queries the vertical offset.
DISPlay:WLAN:CRESponse:MAGNitude[:SCALe] (on page 1067)	Sets or queries the value of the vertical scale.
DISPlay:WLAN:CRESponse:MARKer:SHOW:STATe (on page 1068)	Shows or hides the marker readout.
DISPlay:WLAN:CRESponse:PHASe:AUTO (on page 1068)	Rescales the vertical phase value automatically to fit the waveform to the screen.

Command	Description
DISPlay:WLAN:CRESponse:PHASe:OFFSet (on page 1069)	Sets or queries the vertical offset.
DISPlay:WLAN:CRESponse:PHASe[:SCALe] (on page 1069)	Sets or queries the phase value.
DISPlay:WLAN:CRESponse:WINDow:SELect:PLOT (on page 1070)	Specifies or queries which graphs are displayed.
DISPlay:WLAN:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe (on page 1070)	Sets or queries whether to show the graticule grid.
DISPlay:WLAN:EVM:FREQuency:AUTO (on page 1071)	Automatically rescales the horizontal subcarrier (frequency) start and stop values.
DISPlay:WLAN:EVM:FREQuency:RESet (on page 1071)	Automatically resets the horizontal subcarrier (frequency) start and stop values.
DISPlay:WLAN:EVM:FREQuency:STARt (on page 1071)	Specifies or queries the horizontal start value.
DISPlay:WLAN:EVM:FREQuency:STOP (on page 1072)	Specifies or queries the horizontal stop value.
DISPlay:WLAN:EVM:MARKer:SHOW:STATe (on page 1072)	Shows or hides the Marker readout.
DISPlay:WLAN:EVM[:SCALe]:AUTO (on page 1073)	Automatically adjusts all vertical and horizontal values.
DISPlay:WLAN:EVM:TIME:AUTO (on page 1073)	Sets the horizontal start and stop values to fit the waveform.
DISPlay:WLAN:EVM:TIME:AUTO:STATe (on page 1074)	Automatically sets the horizontal symbol scale value.
DISPlay:WLAN:EVM:TIME:RESet (on page 1074)	Resets the horizontal symbol start and stop values.
DISPlay:WLAN:EVM:TIME:STARt (on page 1075)	Sets or queries the horizontal symbol start value.
DISPlay:WLAN:EVM:TIME:STOP (on page 1075)	Sets or queries the horizontal symbol stop value
DISPlay:WLAN:EVM:WINDow:SELect:PLOT (on page 1075)	Specifies or queries which graphs are displayed in the WLAN EVM display.
DISPlay:WLAN:EVM:WINDow:TRACe:GRATicule:GRID:STATe (on page 1076)	Shows or hides the graticule grid on the screen.
DISPlay:WLAN:EVM:Y:AUTO (on page 1076)	Automatically sets the vertical scale and position values.
DISPlay:WLAN:EVM:Y:OFFSet (on page 1077)	Sets or queries the value of the offset from the center.
DISPlay:WLAN:EVM:Y:RESet (on page 1077)	Resets the vertical scale and position (offset) values.

Command	Description
DISPlay:WLAN:EVM:Y[:SCALe] (on page 1078)	Sets or queries the vertical scale value.
DISPlay:WLAN:FLATness:AUTO (on page 1078)	Automatically rescales the horizontal and vertical axes.
DISPlay:WLAN:FLATness:X:AUTO (on page 1079)	Automatically rescales the horizontal axis.
DISPlay:WLAN:FLATness:X:OFFSet (on page 1079)	Sets or queries the value of the offset of the horizontal axis from the center.
DISPlay:WLAN:FLATness:X[:SCALe] (on page 1080)	Sets or queries the horizontal scale value.
DISPlay:WLAN:FLATness:Y:AUTO (on page 1080)	Automatically rescales the vertical axis scale and position values.
DISPlay:WLAN:FLATness:Y:OFFSet (on page 1081)	Sets or queries the value of the offset from the center.
DISPlay:WLAN:FLATness:Y[:SCALe] (on page 1081)	Sets or queries the vertical scale value.
DISPlay:WLAN:MEASview:DELete (on page 1082)	Deletes the selected measurement view.
DISPlay:WLAN:MEASview:NEW (on page 1082)	Displays a new measurement view.
DISPlay:WLAN:MEASview:SELect (on page 1083)	Selects a WLAN measurement view.
DISPlay:WLAN:MERRor:FREQuency:AUTO (on page 1084)	Automatically rescales the horizontal subcarrier (frequency) start and stop values.
DISPlay:WLAN:MERRor:FREQuency:RESet (on page 1084)	Automatically resets the horizontal subcarrier (frequency) start and stop values.
DISPlay:WLAN:MERRor:FREQuency:STARt (on page 1085)	Specifies or queries the horizontal start value.
DISPlay:WLAN:MERRor:FREQuency:STOP (on page 1085)	Specifies or queries the horizontal stop value.
DISPlay:WLAN:MERRor:MARKer:SHOW:STATe (on page 1086)	Shows or hides the marker readout.
DISPlay:WLAN:MERRor[:SCALe]:AUTO (on page 1086)	Automatically adjusts all vertical and horizontal values.
DISPlay:WLAN:MERRor:TIME:AUTO (on page 1087)	Sets the horizontal start and stop values.
DISPlay:WLAN:MERRor:TIME:AUTO:STATe (on page 1087)	Automatically sets the horizontal symbol scale value.
DISPlay:WLAN:MERRor:TIME:RESet (on page 1087)	Resets the horizontal symbol start and stop values.
DISPlay:WLAN:MERRor:TIME:STARt (on page 1088)	Sets or queries the horizontal symbol start value.
DISPlay:WLAN:MERRor:TIME:STOP (on page 1088)	Sets or queries the horizontal symbol stop value.

Command	Description
DISPlay:WLAN:MERRor:WINDow:SELect:PLOT (on page 1089)	Specifies or queries which graphs are displayed.
DISPlay:WLAN:MERRor:WINDow:TRACe:GRATicule:GRID:STATe (on page 1089)	Shows or hides the graticule grid on the display.
DISPlay:WLAN:MERRor:Y:AUTO (on page 1090)	Automatically sets the vertical scale and position values.
DISPlay:WLAN:MERRor:Y:OFFSet (on page 1090)	Sets or queries the offset from the center (vertical position).
DISPlay:WLAN:MERRor:Y:RESet (on page 1091)	Resets the vertical scale and position (offset).
DISPlay:WLAN:MERRor:Y[:SCALe] (on page 1091)	Sets or queries the vertical scale value.
DISPlay:WLAN:PERRor:FREQuency:AUTO (on page 1092)	Automatically rescales the horizontal subcarrier (frequency) start and stop values.
DISPlay:WLAN:PERRor:FREQuency:RESet (on page 1092)	Automatically resets the horizontal subcarrier (frequency) start and stop values.
DISPlay:WLAN:PERRor:FREQuency:STARt (on page 1092)	Specifies or queries the horizontal start value.
DISPlay:WLAN:PERRor:FREQuency:STOP (on page 1093)	Specifies or queries the horizontal stop value.
DISPlay:WLAN:PERRor:MARKer:SHOW:STATe (on page 1093)	Show or hides the Marker readout.
DISPlay:WLAN:PERRor[:SCALe]:AUTO (on page 1094)	Automatically adjusts all vertical and horizontal settings.
DISPlay:WLAN:PERRor:TIME:AUTO (on page 1094)	Automatically sets the horizontal symbol start and stop values.
DISPlay:WLAN:PERRor:TIME:AUTO:STATe (on page 1095)	Automatically sets the horizontal symbol scale value.
DISPlay:WLAN:PERRor:TIME:RESet (on page 1095)	Resets the horizontal symbol start and stop values.
DISPlay:WLAN:PERRor:TIME:STARt (on page 1096)	Sets or queries the horizontal symbol start value.
DISPlay:WLAN:PERRor:TIME:STOP (on page 1096)	Sets or queries the horizontal symbol stop value.
DISPlay:WLAN:PERRor:WINDow:SELect:PLOT (on page 1097)	Specifies or queries which displays are displayed.
DISPlay:WLAN:PERRor:WINDow:TRACe:GRATicule:GRID:STATe (on page 1097)	Shows or hides the graticule grid on the screen.
DISPlay:WLAN:PERRor:Y:AUTO (on page 1098)	Automatically selects the vertical scale and position values.
DISPlay:WLAN:PERRor:Y:OFFSet (on page 1098)	Sets or queries the value of the offset from the center (vertical position).

Command	Description
DISPlay:WLAN:PERRor:Y:RESet (on page 1099)	Resets the vertical scale and position (offset) values.
DISPlay:WLAN:PERRor:Y[:SCALe] (on page 1099)	Sets or queries the vertical scale value.
DISPlay:WLAN:PVTime:BURSt:X[:SCALe] (on page 1099)	Sets or queries the value of the scale (width).
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:AUTO (on page 1100)	Automatically sets the starting time (position) and scale (width) values
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:OFFSet (on page 1100)	Sets or queries the starting time (position) value.
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:RESet (on page 1101)	Resets the starting time (position) and scale (width) values.
DISPlay:WLAN:PVTime:FALL:X[:SCALe] (on page 1101)	Sets or queries the scale (width) value.
DISPlay:WLAN:PVTime:FALL:X[:SCALe]:AUTO (on page 1102)	Automatically sets the starting time (position) and scale (width) values.
DISPlay:WLAN:PVTime:FALL:X[:SCALe]:OFFSet (on page 1102)	Sets or queries the value for the starting time (offset).
DISPlay:WLAN:PVTime:FALL:X[:SCALe]:RESet (on page 1103)	Resets the starting time (position) and scale (width) values.
DISPlay:WLAN:PVTime:MARKer:SHOW:STATe (on page 1103)	Shows or hides the marker readout.
DISPlay:WLAN:PVTime:RISE:X[:SCALe] (on page 1103)	Sets or queries the scale (width) value.
DISPlay:WLAN:PVTime:RISE:X[:SCALe]:AUTO (on page 1104)	Automatically sets the starting time (position) and scale (width) values.
DISPlay:WLAN:PVTime:RISE:X[:SCALe]:OFFSet (on page 1104)	Sets or queries the starting time value (offset).
DISPlay:WLAN:PVTime:RISE:X[:SCALe]:RESet (on page 1105)	Resets the starting time (position) and scale (width) values.
DISPlay:WLAN:PVTime:WINDow:SELect:PLOT (on page 1105)	Specifies or queries which view to use.
DISPlay:WLAN:PVTime:WINDow:TRACe:GRATicule:GRID:STATe (on page 1106)	Shows or hides the graticule grid on the screen.
DISPlay:WLAN:PVTime:Y[:SCALe] (on page 1106)	Sets or queries the vertical scale value.
DISPlay:WLAN:PVTime:Y[:SCALe]:AUTO (on page 1107)	Automatically selects the vertical scale and position values.

Command	Description
DISPlay:WLAN:PVTime:Y[:SCALe]:OFFSet (on page 1107)	Sets or queries the value of the vertical offset.
DISPlay:WLAN:PVTime:Y[:SCALe]:PDIVision (on page 1108)	Sets or queries the value of the vertical scale.
DISPlay:WLAN:PVTime:Y[:SCALe]:RESet (on page 1108)	Resets the vertical scale and position (offset) values.
DISPlay:WLAN:SUMMary:EVMUnits (on page 1108)	Sets or queries the EVM Units setting.
DISPlay:LTE subgroup	
DISPlay:LTE:ACLR:MARKer:SHOW:STATe (on page 817)	Determines whether to show or hide the readout for the selected marker.
DISPlay:LTE:ACLR:RESet:SCALe (on page 818)	Resets the horizontal and vertical scale to default values.
DISPlay:LTE:ACLR:SHOW:LIMit (on page 818)	Sets or queries the appearance of the limits.
DISPlay:LTE:ACLR:WINDow:TRACe:GRATicule:GRID:STATe (on page 819)	Determines whether to show or hide the graticules.
DISPlay:LTE:ACLR:WINDow:TRACe:POWer:LEVEl:STATe (on page 819)	Determines whether to show or hide the power readout.
DISPlay:LTE:ACLR:X:SCALe (on page 820)	Sets or queries the horizontal range.
DISPLay:LTE:ACLR:X:SCALe:AUTO (on page 820)	Rescales the horizontal axis automatically to fit the waveform to the screen.
DISPlay:LTE:ACLR:X:SCALe:OFFSet (on page 820)	Sets or queries the center frequency of the trace.
DISPlay:LTE:ACLR:Y:SCALe:AUTO (on page 821)	Rescales the vertical scale automatically to fit the waveform on the screen.
DISPlay:LTE:ACLR:Y:SCALe:OFFSet (on page 821)	Sets or queries the vertical offset of the trace.
DISPlay:LTE:ACLR:Y:SCALe (on page 822)	Sets or queries the vertical range of the graph.
DISPlay:LTE:CHSPectrum:MARKer:SHOW:STATe (on page 822)	Determines whether to show or hide the readout for the selected marker.
DISPlay:LTE:CHSPectrum:RESet:SCALe (on page 823)	Resets the horizontal and vertical scale to default values.
DISPlay:LTE:CHSPectrum:WINDow:TRACe:GRATicule:GRID:STATe (on page 823)	Determines whether to show or hide the graticule.
DISPlay:LTE:CHSPectrum:X:SCALe (on page 824)	Sets or queries the horizontal range.
DISPLay:LTE:CHSpectrum:X:SCALe:AUTO (on page 824)	Rescales the horizontal axis automatically to fit the waveform to the screen.

Command	Description
DISPlay:LTE:CHSPectrum:X:SCALe:OFFSet (on page 825)	Sets or queries the center frequency of the trace.
DISPlay:LTE:CHSPectrum:Y:SCALe (on page 825)	Sets or queries the vertical range of the graph.
DISPlay:LTE:CHSPectrum:Y:SCALe:AUTO (on page 825)	Rescales the vertical scale automatically to fit the waveform on the screen.
DISPlay:LTE:CHSPectrum:Y:SCALe:OFFSet (on page 826)	Sets or queries the vertical offset of the trace.
DISPlay:LTE:CONSte:SCALe (on page 826)	Sets or queries the scale (zoom).
DISPlay:LTE:CONSte:X:OFFSet (on page 827)	Sets or queries the horizontal offset.
DISPlay:LTE:CONSte:Y:OFFSet (on page 827)	Sets or queries the vertical offset.
DISPlay:LTE:MEASview:DELete (on page 828)	Deletes the selected LTE measurement display in the application.
DISPlay:LTE:MEASview:NEW (on page 828)	Opens a new LTE measurement display.
DISPlay:LTE:MEASview:SELect (on page 829)	Selects an LTE measurement display in the application. The query returns the currently selected display.
DISPlay:LTE:PVTime:MARKer:SHOW:STATe (on page 829)	Shows or hides the marker readout.
DISPlay:LTE:PVTime:WINDow:TRACe:GRATicule:GRID:STATe (on page 830)	Determines whether to show or hide the graticule.
DISPlay:LTE:PVTime:X:SCALe (on page 830)	Sets or queries the vertical range.
DISPLay:LTE:PVTime:X:SCALe:AUTO (on page 831)	Rescales the horizontal axis automatically to fit the waveform to the screen.
DISPlay:LTE:PVTime:X:SCALe:RESet (on page 831)	Resets the horizontal scale to the default value for the time measurements.
DISPlay:LTE:PVTime:Y:SCALe (on page 831)	Sets or queries the horizontal range.
DISPlay:LTE:PVTime:Y:SCALe:AUTO (on page 832)	Rescales the vertical scale automatically to fit the waveform on the screen.
DISPlay:LTE:PVTime:Y:SCALe:OFFSet (on page 832)	Sets or queries the vertical offset (top edge of the vertical axis) of the trace.
DISPlay:LTE:PVTime:Y:SCALe:PDIVision (on page 833)	Sets or queries the value of the vertical scale in dB/division.
DISPlay:LTE:PVTime:Y:SCALe:RESet (on page 833)	Resets the vertical scale and position (offset) to the default value for the time measurements.

Fetch commands

The FETCh commands retrieve the measurements from the data taken by the latest INITiate command. See the Index for commands not listed in the following table.

To perform a FETCh operation on fresh data, use the READ commands, which acquire a new input signal and fetch the measurement results from that data.

Not all of these commands apply to SignalVu-PC and connected instruments. See the individual command descriptions for details.

Fetch commands

Command	Description
FETCh TXGain command subgroup	**Transmission Gain measurements**
FETCh:TXGain:AVERage? (on page 1449)	Returns the mean value of the trace.
FETCh:TXGain:MAX? (on page 1449)	Returns the maximum trace value.
FETCh:TXGain:MAXLocation? (on page 1450)	Returns the frequency of the maximum trace value.
FETCh:TXGain:MIN? (on page 1450)	Returns the minimum trace value.
FETCh:TXGain:MINLocation? (on page 1450)	Returns the frequency of the minimum trace value.
FETCh:TXGain:TRACe<x>? (on page 1451)	Returns the trace data of the selected trace.
FETCh basic command subgroup	**General fetch control**
FETCh:RFIN:IQ? (on page 1406)	Returns time-domain IQ data for a specific acquisition data record.
FETCh: BLuetooth subgroup	**Bluetooth measurements**
FETCh:BIBEmissions:FTX? (on page 1135)	Returns the band number corresponding to the transmitted FTX detected in the display.
FETCh:BIBEmissions:POWer? (on page 1136)	Returns all channel power results.
FETCh:BIBEmissions:RESUlts:STATus? (on page 1136)	Returns the Pass/Fail result status.
FETCh:BLUEtooth:CONSte:FERRor? (on page 1137)	Returns the frequency error.
FETCh:BLUEtooth:CONSte:TRACe? (on page 1137)	Queries the trace data.
FETCh:BLUEtooth:EDIagram:FDEViation? (on page 1138)	Returns the frequency deviation versus time trace data with the X values.
FETCh:BLUEtooth:EDIagram:FERRor? (on page 1138)	Returns the frequency error.
FETCh:BLUEtooth:EDIagram:HORiz:SCALe? (on page 1139)	Returns the value of the horizontal scale.

Command	Description
FETCh:BLUEtooth:EDIagram:I? (on page 1139)	Returns the I versus time trace.
FETCh:BLUEtooth:EDIagram:Q? (on page 1140)	Returns the Q versus time trace.
FETCh:BLUEtooth:FDVTime:TRACe? (on page 1140)	Returns the trace data.
FETCh:BLUEtooth:FREQuency:ERROr? (on page 1141)	Returns the frequency error from the Bluetooth Constellation diagram.
FETCh:BLUEtooth:FREQuency:ERROr:TYPE? (on page 1141)	Returns the frequency error type in the Bluetooth Constellation display.
FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:F1FZero? (on page 1142)	Returns the drift in frequency offset (f1–f0—the frequency offset calculated in the first interval in the payload — the frequency offset calculated in the preamble) in the Bluetooth Frequency Deviation vs. Time display.
FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5? (on page 1142)	Returns the maximum drift of the frequency offset in payload intervals spaced 50 µs away in the Bluetooth Frequency Deviation vs. Time display.
FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5:INTErval? (on page 1143)	Returns the interval at which the maximum drift of frequency offset in a duration of 50 µs occurred.
FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO? (on page 1143)	Returns the maximum drift of the frequency offset of the intervals in the payload from the preamble packet in the Bluetooth Frequency Deviation vs. Time display.
FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO:INTErval? (on page 1144)	Returns the interval (n) at which the maximum drift fn-f0 occurred in the Bluetooth Frequency Deviation vs. Time display.
FETCh:BLUEtooth:FREQuency:OFFSet:MAX? (on page 1144)	Returns the maximum frequency offset in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.
FETCh:BLUEtooth:FREQuency:OFFSet:MAX:INTErval? (on page 1145)	Returns the maximum frequency offset interval in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.
FETCh:BLUEtooth:FREQuency:OFFSet:PREAmble? (on page 1145)	Returns the offset calculated in the preamble region in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.
FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F? (on page 1146)	Returns the average frequency value when the selected test pattern is Other in the Bluetooth Frequency Deviation vs. Time display.
FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F2F1ratio? (on page 1146)	Returns the average ratio value for the high and low frequency deviation in the Bluetooth Frequency deviation versus Time display.
FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FONE? (on page 1147)	Returns the average frequency deviation for the low deviation pattern in the Bluetooth Frequency deviation versus Time display.
FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FTWO? (on page 1147)	Returns the average frequency deviation for the high deviation pattern in the Bluetooth Frequency Deviation versus. Time display.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:COUNt? (on page 1148)	Returns the number of packets analyzed to obtain average drift results.

Command	Description
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero? (on page 1148)	Returns the drift f1–f0.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero:STATus? (on page 1149)	Returns the Pass/Fail drift f1–f0 result status in the packet.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5? (on page 1149)	Returns the maximum drift of the fn–fn-5 value.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5:STATus? (on page 1150)	Returns the Pass/Fail status of the maximum fn–fn-5 drift in the packet.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero? (on page 1150)	Returns the maximum drift fn–f0.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero:STATus? (on page 1151)	Returns the Pass/Fail result status of the fn–f0 maximum drift in the packet.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX? (on page 1155)	Returns the maximum frequency offset present in the packet.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX:STATus? (on page 1155)	Returns the Pass or Fail result status of the frequency offset maximum in the packet.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble? (on page 1156)	Returns the frequency offset value in the preamble region.
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble:STATus? (on page 1156)	Returns the Pass or Fail result status of the frequency offset in the preamble region.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:F:MAX:PERCentage:COUNt? (on page 1157)	Returns the number of packets analyzed out of 10 packets for ΔF average.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FONE:MAX:PERCentage:COUNt? (on page 1157)	Returns the number of packets analyzed out of 10 packets for the ΔF1avg.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FTWO:MAX:PERCentage? (on page 1158)	Returns the percentage of the ΔF2Max values that are above the specified limit.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FTWO:MAX:PERCentage:COUNt? (on page 1158)	Returns the number of packets analyzed out of 10 packets for the ΔF2Max%.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FTWO:MAX:PERCentage:STATus? (on page 1159)	Returns the Pass/Fail result status of the ΔF2Max% field.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F? (on page 1159)	Returns the ΔFavg value.

Command	Description
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F2F1ratio? (on page 1160)	Returns the ratio of the ΔF2avg to ΔF1avg.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F2F1ratio:STATus? (on page 1160)	Returns the Pass/Fail results status of the ΔF2avg/ΔF1avg field.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FONE? (on page 1161)	Returns the ΔF1avg value.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FONE:STATus? (on page 1161)	Returns the Pass/Fail results status of the ΔF1avg.
FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FTWO? (on page 1162)	Returns the ΔF2avg value.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:AVErage? (on page 1163)	Returns the average output power.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:AVErage:STATus? (on page 1163)	Returns the Pass/Fail results status of the average output power.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:COUNt? (on page 1164)	Returns the number of packets analyzed out of 10 packets for thecalculation of the output power.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:COUNt? (on page 1164)	Returns the number of packets analyzed out of 10 packets for calculation of the output power for EDR.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:DPSK? (on page 1165)	Returns the power in the DPSK portion of the EDR burst.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:GPSK? (on page 1165)	Returns the power in the GFSK portion of the EDR burst.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK? (on page 1166)	Returns the peak output power.
FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK:STATus? (on page 1166)	Returns the Pass/Fail results status of the peak output power.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:CRC? (on page 1166)	Returns the Basic Rate value of the CRC field.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:ARQN? (on page 1167)	Returns the value of ARQN field.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:FLOW? (on page 1167)	Returns the value of Flow field.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:HEC? (on page 1168)	Returns the value of HEC field.

Command	Description
FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:LT:ADDRess? (on page 1168)	Returns the LT address.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:SEQN? (on page 1169)	Returns the value of SEQN field.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:TYPE? (on page 1169)	Returns the value of Type field.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:PAYLoad:LENgth? (on page 1170)	Returns the Basic Rate payload length.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:PREAmble? (on page 1170)	Returns the preamble of the Basic Rate packet.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:SYNC:WORD? (on page 1171)	Returns the sync word.
FETCh:BLUEtooth:SUMMary:PACKet:BDR:TYPE? (on page 1171)	Returns the packet type of the Basic Rate signal.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:ACCEss:ADDRess? (on page 1172)	Returns the 32-bit Access Address.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:CRC? (on page 1172)	Returns the value of the CRC field.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:LENGth? (on page 1173)	Returns the value of the length field.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:RX:ADDRess? (on page 1175)	Returns the Rx address.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TX:ADDRess? (on page 1176)	Returns the Tx address.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TYPE? (on page 1177)	Returns the PDU type.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:PREAmble? (on page 1177)	Returns the preamble of the BLE packet.
FETCh:BLUEtooth:SUMMary:PACKet:BLE:TYPE? (on page 1178)	Returns the packet type.
FETCH:NOISe subgroup	**Noise Figure and Gain measurements**
FETCh:NOISe:GAIN:TRACe<x>:RESult? (on page 1243)	This query returns the gain value in mdB of the specified trace in the Gain display.
FETCh:NOISe:TABLe:VALue? (on page 1243)	Returns Noise Table data. A total of 7 values per frequency (28 bytes per frequency) is returned.
FETCH:OBWidth subgroup	**Bluetooth 20dB BW measurements**

Command	Description
FETCh:OBWidth:BOBW:XDBBandwidth? (on page 1270)	Returns the difference between the higher and lower frequency pointscorresponding to the value where it is X dB less from the value at the center frequency.
FETCh:OBWidth:BOBW:XDBMbandwidth:IN:BANDwidth? (on page 1270)	Returns the difference between the higher and lower frequency points corresponding to the value which it is the X dBm value measured inwards(coming from the ends to the center frequency).
FETCh:OBWidth:BOBW:XDBMbandwidth:IN:LEFT:FREQuency? (on page 1271)	Returns the frequency corresponding to the X dBm value to the left of the center frequency measured in the inward direction.
FETCh:OBWidth:BOBW:XDBMbandwidth:IN:RIGHt:FREQuency? (on page 1271)	Returns the frequency corresponding to the X dBm value to the right of the center frequency measured in the inward direction.
FETCh:OBWidth:BOBW:XDBMbandwidth:OUT:BANDwidth? (on page 1272)	Returns the difference between the higher and lower frequency points corresponding to the value which it is the X dBm value measured outwards(from the center frequency to the ends).
FETCh:OBWidth:BOBW:XDBMbandwidth:OUT:LEFT:FREQuency? (on page 1273)	Returns the frequency corresponding to the X dBm value to the left of the center frequency measured in the outward direction.
FETCh:OBWidth:BOBW:XDBMbandwidth:OUT:RIGHt:FREQuency? (on page 1273)	Returns the frequency corresponding to the X dBm value to the right of the center frequency measured in the outward direction.
FETCH:P25 subgroup	**P25 measurements**
FETCh:P25:CONSte:FERRor? (on page 1303)	Returns the frequency error.
FETCh:P25:CONSte:TRACe? (on page 1303)	Returns the display trace data.
FETCh:P25:EDIagram:FDEViation? (on page 1304)	Returns the Frequency Deviation versus Time trace data with the X value.
FETCh:P25:EDIagram:FERRor? (on page 1304)	Returns the frequency error.
FETCh:P25:EDIagram:I? (on page 1305)	Returns the I versus time trace data.
FETCh:P25:EDIagram:Q? (on page 1305)	Returns the Q versus time trace data.
FETCh:P25:PVTime:BURSt:WIDTh? (on page 1306)	Returns the value of the measured time width of the burst packet from poweron to powerdown (or the end of waveform, if that occurs before powerdown), in seconds.
FETCH:P25:SUMMary:MODUlation:MEASurement:FREQuency:ACCUracy (on page 1313)	Returns the Operational Frequency Accuracy measurement results.
FETCh:P25:SUMMary:MODUlation:MEASurement:FREQuency:ACCUracy:STATus (on page 1313)	Returns the Operational Frequency Accuracy measurement status.
FETCH:P25:SUMMary:MODUlation:MEASurement:FREQuency:DEVIation:NEGPeak (on page 1314)	Returns the Frequency Deviation, negative peak, measurement results.

Command	Description
FETCh:P25:SUMMary:MODUlation:MEASurement:FREQuency:DEVIation:NEGPeak:STATus (on page 1314)	Returns the Status of Frequency Deviation, negative peak measurement status.
FETCH:P25:SUMMary:MODUlation:MEASurement:FREQuency:DEVIation:POSPeak (on page 1315)	Returns the status of Frequency Deviation, positive peak resutls.
FETCh:P25:SUMMary:MODUlation:MEASurement:FREQuency:.DEVIation:POSPeak:STATus (on page 1315)	Returns the status of Frequency Deviation, positive peak status.
FETCH:P25:SUMMary:MODUlation:MEASurement:FREQuency:ERRor (on page 1316)	Returns the Frequency Error measurement results.
FETCH:P25:SUMMary:MODUlation:MEASurement:SRA? (on page 1316)	Returns the Symbol Rate Accuracy measurement results.
FETCh:P25:SUMMary:MODUlation:MEASurement:SRA:STATus (on page 1317)	Returns the Symbol Rate Accuracy measurement status.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:MAXOFF:STATus? (on page 1317)	Returns HCPM Pmax-off measurement status.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:MAXON:STATus? (on page 1318)	Returns Status of HCPM Pmax-on measurement status.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:MAXSs:STATus (on page 1319)	Returns HCPM Pss-max measurement status.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:MINImum:STATus? (on page 1320)	Returns status of HCPM Pss-min measurement status based on the limit.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:OFFSlot:STATus? (on page 1321)	Returns status of HCPM Offslot measurement based on the limit.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:HI (on page 1321)	Returns P_ACP_HI value.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:LOW (on page 1322)	Returns P_ACP_LOW value.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:MIN (on page 1322)	Returns Min Pk ACPR value.
FETCh:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:MIN:STATus (on page 1323)	Returns status of Min Pk ACPR value based on the limit.
FETCh:P25:SUMMary:POWEr:MEASurement:RF (on page 1323)	Returns RF measurement results.
FETCh:P25:SUMMary:POWEr:MEASurement:RF:STATus (on page 1323)	Returns Status of RF measurement status.

Command	Description
FETCH:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE:ACQ:COUNT? (on page 1324)	Returns the HCPM Time alignment's t_error_1 acquisition count over which the t_error_1 average is computed.
FETCh:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE:STATus (on page 1325)	Returns status of HCPM Time alignment's t_error_1 measurement results based on the limit.
FETCh:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO:STATus? (on page 1325)	Returns status of HCPM Time alignment's t_error_0 measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:BI:STATus? (on page 1332)	Returns status of Average Transmitter Power Encoder Attack Time,busy/idle, measurement status.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:STATus? (on page 1330), FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:STATus? (on page 1333)	Returns status of Average Transmitter Encoder Attack Time measurement results based on the limit.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder? (on page 1333)	Returns the Average Transmitter Encoder Attack Time measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:BI:STATus (on page 1335)	Returns status of Average Transmitter Power Attack Time, busy/idle,measurement results based on the limit.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:BI? (on page 1331), FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:BI? (on page 1334)	Returns the Average Transmitter Power Attack Time, busy/idle,measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:STATus (on page 1336)	Returns status of Average Transmitter Power Attack Time measurement results.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr? (on page 1336)	Returns the Average Transmitter Power Attack Time measurement results.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy:ACQ:COUNT? (on page 1337)	Returns the Throughput delay acquisition counts over which the Throughput delay average is computed.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy:STATus (on page 1338)	Returns status of Throughput delay measurement results based on the limit.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy? (on page 1338)	Returns the Throughput delay measurement results.
FETCH:P25:SUMMary:POWEr:MEASurement:HCPM:MAXOFF? (on page 1317)	Returns the HCPM Pmax-off measurement results.

Command	Description
FETCH:P25:SUMMary:POWEr:MEASurement:HCPM:MAXON? (on page 1318)	Returns the HCPM Pmax-on measurement results.
FETCH:P25:SUMMary:POWEr:MEASurement:HCPM:MAXSS? (on page 1319)	Returns the HCPM Pss-max measurement results.
FETCH:P25:SUMMary:POWEr:MEASurement:HCPM:MINImum? (on page 1320)	Returns the HCPM Pss-min measurement results.
FETCH:P25:SUMMary:POWEr:MEASurement:HCPM:OFFSlot? (on page 1320)	Returns the HCPM Offslot power results.
FETCH:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE? (on page 1327)	Returns the HCPM Time alignment's t_error_1 measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE:.ACQ:COUNT? (on page 1327)	Returns the HCPM Time alignment's t_error_1 acquisition count over which the t_error_1 average is computed.
FETCH:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO? (on page 1328)	Returns the HCPM Time alignment's t_error_0 measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO:ACQ:COUNT (on page 1326)	Returns the HCPM Time alignment's t_error_0 acquisition count over which the t_error_0 average is done.
FETCH:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TOBSync? (on page 1328)	Returns the HCPM Time alignment's t_obsync measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TOBSync:ACQ:COUNT (on page 1329)	Returns the HCPM Time alignment's t_obsync acquisition counts over which the t_obsync average is computed.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT (on page 1331)	Returns the Average Transmitter Power Attack acquisition count over which the t_obsync average is computed.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT:BI? (on page 1331)	Returns the Average Transmitter Power Attack, busy/idle, acquisition count over which the Busy/Idle Attack time average is computed.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder? (on page 1333)	Returns the Average Transmitter Encoder Attack Time measurement results.
FETCH:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:BI? (on page 1334)	Returns the Average Transmitter Encoder Attack Time, busy/idle,measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr (on page 1334)	Returns the Average Transmitter Power Attack Time measurement results.

Command	Description
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:BI (on page 1335)	Returns the Average Transmitter Power Attack Time, busy or idle,measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy (on page 1338)	Returns the Throughput delay measurement results.
FETCh:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy:ACQ:COUNT (on page 1337)	Returns the Throughput delay acquisition counts over which the Throughput delay average is computed.
FETCh:RFIN subgroup	**RF acquisition data**
FETCh:RFIN:IQ:HEADer? (on page 1407)	Returns the header information for a specific acquisition data record.
FETCh:RFIN:IQ:SCALe? (on page 1407)	Returns the scaling factor contained in the .tiq file header.
FETCh:RFIN:RECord:IDS? (on page 1409)	Returns the beginning and end ID numbers of acquisition data.
FETCh:ACPower subgroup	**Channel power and ACPR measurement**
FETCh:ACPower? (on page 1110)	Returns the ACPR measurement results.
FETCh:ACPower:CHANnel:POWer? (on page 1111)	Returns the average power of the main channel.
FETCh:ACPower:SPECtrum? (on page 1111)	Returns spectrum trace data of the ACPR measurement.
FETCh:FM:PNEGative? (on page 1209)	Returns the negative peak frequency deviation (–Pk).
FETCh:FM:PPOSitive? (on page 1210)	Returns the positive peak frequency deviation (+Pk).
FETCh:FM:PTPeak? (on page 1210)	Returns the peak-peak frequency deviation (Pk-Pk).
FETCh:FM:RESult? (on page 1211)	Returns the FM measurement results.
FETCh:FM:RMS? (on page 1211)	Returns the RMS frequency deviation.
FETCh:PM:PNEGative? (on page 1346)	Returns the negative peak phase deviation (–Pk).
FETCh:PM:PPOSitive? (on page 1347)	Returns the negative peak phase deviation (–Pk).
FETCh:PM:PTPeak? (on page 1347)	Returns the peak-peak phase deviation (Pk-Pk).
FETCh:PM:RESult? (on page 1347)	Returns the PM measurement results.
FETCh:PM:RMS? (on page 1348)	Returns the PM measurement results.
FETCh:AUDio subgroup	**Audio measurement**
FETCh:AUDio:FERRor? (on page 1114)	Returns the carrier frequency error in the audio measurement.
FETCh:AUDio:FREQuency? (on page 1115)	Returns the audio frequency.

Command	Description
FETCh:AUDio:HARMonic:COUNt? (on page 1115)	Returns the number of harmonics in the audio spectrum measurement.
FETCh:AUDio:HARMonic<x>:AMPLitude? (on page 1116)	Returns the amplitude of the specified harmonic in the audio spectrum measurement.
FETCh:AUDio:HARMonic<x>:FREQuency? (on page 1116)	Returns the frequency of the specified harmonic in the audio spectrum measurement.
FETCh:AUDio:HNOise? (on page 1117)	Returns the difference between the current RMS modulation value and the reference value.
FETCh:AUDio:HNREFerence? (on page 1117)	Returns the Hum and Noise RMS modulation reference value.
FETCh:AUDio:HPTPeak? (on page 1118)	Returns the half peak-to-peak modulation excursion.
FETCh:AUDio:MODDist? (on page 1119)	Returns the modulation distortion for the audio measurement.
FETCh:AUDio:NHARmonic:COUNt? (on page 1119)	Returns the number of non-harmonics in the audio spectrum measurement.
FETCh:AUDio:NHARmonic<x>:AMPLitude? (on page 1120)	Returns the amplitude of the specified non-harmonic in the audio spectrum measurement.
FETCh:AUDio:NHARmonic<x>:FREQuency? (on page 1120)	Returns the frequency of the specified non-harmonic in the audio spectrum measurement.
FETCh:AUDio:PNEGative? (on page 1121)	Returns the minus peak modulation excursion.
FETCh:AUDio:POWer? (on page 1121)	Returns the carrier power or signal power depending the signal type.
FETCh:AUDio:PPOSitive? (on page 1122)	Returns the positive peak modulation excursion.
FETCh:AUDio:RMS? (on page 1122)	Returns the RMS modulation excursion for the audio measurement.
FETCh:AUDio:SINad? (on page 1123)	Returns the signal-to-noise and distortion for the audio measurement.
FETCh:AUDio:SNOise? (on page 1123)	Returns the signal level to noise level with the harmonic distortion and non-harmonic distortion components removed.
FETCh:AUDio:SPECtrum:TRACe<x>? (on page 1124)	Returns the audio spectrum trace data for the audio measurement.
FETCh:AUDio:THDist? (on page 1124)	Returns the percentage of the total harmonic distortion.
FETCh:AUDio:THDist:DB? (on page 1125)	Returns the total harmonic distortion in dB in the audio measurement.
FETCh:AUDio:TNHDist? (on page 1125)	Returns the percentage of the total harmonic distortion in the audio measurement.
FETCh:AUDio:TNHDist:DB? (on page 1126)	Returns the total non-harmonic distortion in dB in the audio measurement.

Command	Description
FETCh:AUDio:TNHDist? (on page 1125)	Returns the percentage of the total non-harmonic distortion in the audio measurement.
FETCh:AVTime subgroup	**Amplitude versus Time measurement**
FETCh:AVTime[:MEASview<y>]:AVERage? (on page 1126)	Returns the RMS value.
FETCh:AVTime[:MEASview<y>]: {FIRSt|SECond|THIRd|FOURth}? (on page 1127)	Returns the trace data.
FETCh:AVTime[:MEASview<y>]:MAXimum? (on page 1132)	Returns the maximum value.
FETCh:AVTime[:MEASview<y>]:MAXLocation? (on page 1132)	Returns the time at the maximum.
FETCh:AVTime[:MEASview<y>]:MINimum? (on page 1133)	Returns the minimum value.
FETCh:AVTime[:MEASview<y>]:MINLocation? (on page 1133)	Returns the time at the minimum.
FETCh:AVTime[:MEASview<y>]:OGRAm? (Query only) (on page 1134)	Returns trace data of a line in the ogram.
FETCh:AVTime[:MEASview<y>]:RESult? (on page 1135)	Returns the measurement results.
FETCh:AVTime[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1130)	Returns trace waveform data of the bitmap trace in the Amplitude versus Time measurement.
FETCh:CCDF subgroup	**CCDF measurement**
FETCh:CCDF? (on page 1178)	Returns the CCDF measurement results.
FETCh:CCDF:{FIRSt|SECond|THIRd}:X? (on page 1179)	Returns the horizontal values of the specified trace.
FETCh:CCDF:{FIRSt|SECond|THIRd}:XY? (on page 1179)	Returns the horizontal and vertical value pairs of the specified trace.
FETCh:CCDF:{FIRSt|SECond|THIRd}[:Y]? (on page 1180)	Returns the vertical values of the specified trace.
FETCh:CONSte subgroup (Option 21 only)	**Constellation measurement**
FETCh:CONSte[:MEASview<x>]:FERRor? (on page 1181)	Returns the frequency error in Hz. The frequency error is the difference between the measured carrier frequency of the signal and the user-selected center frequency of the analyzer.
FETCh:CONSte[:MEASview<x>]:RESults? (on page 1181)	Returns the constellation measurement results of EVM RMS, peak and location displayed on the bottom of the screen.

Command	Description
FETCh:CONSte[:MEASview<x>]:TRACe? (on page 1182)	Returns the constellation trace data.
FETCh:DDEMod subgroup (Option 21 only)	**General purpose digital modulation measurements**
FETCh:DDEMod[:MEASview<y>]:STABle? (on page 1183)	Returns the symbol table data.
FETCh:DDEMod:SYNCh:WORD:LENGth? (on page 1183)	Returns the length of the synch word in the symbol table.
FETCh:DDEMod:SYNCh:WORD:POSition? (on page 1184)	Returns the position of the synch word in the symbol table.
FETCh:DIQVtime subgroup (Option 21 only)	**Demodulated I&Q versus Time measurement**
FETCh:DIQVtime[:MEASview<y>]:FERRor? (on page 1184)	Returns the frequency error.
FETCh:DIQVtime[:MEASview<y>]:I? (on page 1185)	Returns the I versus Time trace data.
FETCh:DIQVtime[:MEASview<y>]:Q? (on page 1186)	Returns the Q versus Time trace data.
FETCh:DPX subgroup	**DPX spectrum measurement**
FETCh:DPX:DDENsity? (on page 1186)	Returns the calculated density for the selected region in the DPXogram measurement.
FETCh:DPX:DGRam:LINE:COUNt? (on page 1187)	Returns the number of lines in the DPXogram measurement.
FETCh:DPX:DGRam:TIME[:SCALe]:OFFSet? (on page 1187)	Returns the time scale offset in the DPXogram measurement.
FETCh:DPX:RESults:TRACe<x>? (on page 1188)	Returns waveform data in the DPX spectrum measurement.
FETCh:DPX:TDM:FREQuency:TXBer:BER? (on page 1188)	Returns the Tx BER measurement BER results.
FETCh:DPX:TDM:FREQuency:TXBer:BITS? (on page 1189)	Returns the number of bits counted in the active Tx BER measurement session.
FETCh:DPX:TDM:FREQuency:TXBer:ERRors? (on page 1189)	Returns the number of errors counted in the active Tx BER measurement session.
FETCh:DPX:TDM:FREQuency:TXBer:STATe? (on page 1190)	Returns the state of the Tx BER measurement.
FETCh:DPX:TRACe:AVERage? (on page 1190)	Returns waveform data of the average trace in the DPX spectrum measurement.
FETCh:DPX:TRACe:BITMap? (on page 1191)	Returns trace waveform data of the bitmap trace.

Command	Description
FETCh:DPX:TRACe:MATH? (on page 1191)	Returns waveform data of the math trace.
FETCh:DPX:TRACe:MAXimum? (on page 1192)	Returns waveform data of the maximum trace.
FETCh:DPX:TRACe:MINimum? (on page 1192)	Returns waveform data of the minimum trace.
FETCh:EDIagram subgroup (Option 21 only)	**Eye diagram**
FETCh:EDIagram[:MEASview<y>]:FDEViation? (on page 1193)	Returns the frequency deviation versus Time trace data with the X values.
FETCh:EDIagram[:MEASview<y>]:FERRor? (on page 1194)	Returns the frequency error in the eye diagram measurement.
FETCh:EDIagram[:MEASview<y>]:I? (on page 1194)	Returns the I versus Time trace data in the eye diagram measurement.
FETCh:EDIagram[:MEASview<y>]:Q? (on page 1195)	Returns the Q versus Time trace data in the eye diagram measurement.
FETCh:EVM subgroup (Option 21 only)	**EVM versus Time measurement**
FETCh:EVM[:MEASview<y>]:FERRor? (on page 1204)	Returns the frequency error in the EVM versus Time measurement.
FETCh:EVM[:MEASview<y>]:PEAK? (on page 1205)	Returns the peak value in the EVM versus Time measurement.
FETCh:EVM[:MEASview<y>]:PINDex? (on page 1205)	Returns the time at the EVM peak.
FETCh:EVM[:MEASview<y>]:RMS? (on page 1206)	Returns the RMS (Root-Mean-Square) value in the EVM versus Time measurement.
FETCh:EVM[:MEASview<y>]:TRACe? (on page 1208)	Returns the EVM versus Time trace data.
FETCh:FDVTime subgroup (Option 21 only)	**Frequency deviation versus Time measurement**
FETCh:FDVTime[:MEASview<y>]:FERRor? (on page 1207)	Returns the frequency error in the Frequency deviation versus Time measurement.
FETCh:FDVTime[:MEASview<y>]:TRACe? (on page 1208)	Returns the Frequency deviation versus Time trace data.
FETCh:{FSETtling|PSETtling} subgroup (Option 12 only)	**Frequency and Phase Settling measurements**
FETCh:FSETtling:ERRor? (on page 1218)	Returns the settled error in Hz in Frequency Settling.
FETCh:{FSETtling|PSETtling}:FTTime? (on page 1212)	Returns the settling time from the trigger position in seconds.

Command	Description
FETCh:{FSETtling|PSETtling}:MASK[:PASS]? (on page 1212)	Returns whether the input signal passes the mask test.
FETCh:{FSETtling|PSETtling}:SETTled:FREQuency? (on page 1213)	Returns the frequency at which the signal is considered settled.
FETCh:{FSETtling|PSETtling}:SETTled[:PASS]? (on page 1213)	Returns whether the input signal is settled with the tolerance range.
FETCh:{FSETtling|PSETtling}:SETTled:TIME? (on page 1213)	Returns the settled time in seconds.
FETCh:{FSETtling|PSETtling}:SLMSd[:PASS]? (on page 1214)	Returns whether the input signal is settled within the specified tolerance and the signal is settled longer than the Minimum Settled Duration.
FETCh:{FSETtling|PSETtling}:STARt:TIME? (on page 1214)	Returns the start time for the measurement in seconds.
FETCh:{FSETtling|PSETtling}:TIME? (on page 1215)	Returns the settling time in seconds. The settling time is measured from the start time.
FETCh:{FSETtling|PSETtling}:TRACe<x>:X? (on page 1215)	Returns the settling time in seconds. The settling time is measured from the start time.
FETCh:{FSETtling|PSETtling}:TRACe<x>:XY? (on page 1216)	Returns the time and frequency or phase value pairs of the specified trace.
FETCh:{FSETtling|PSETtling}:TRACe<x>[:Y]? (on page 1217)	Returns the frequency or phase values of the specified trace.
FETCh:{FSETtling|PSETtling}:TRIGger:TIME? (on page 1217)	Returns the time when the trigger occurred in seconds.
FETCh:{FSETtling|PSETtling}:VALue? (on page 1218)	Returns the settled value in Hz for Frequency Settling and in degrees for Phase Settling.
FETCh:FVTime subgroup	**Frequency versus Time measurement**
FETCh:FVTime[:MEASview<y>]? (on page 1219)	Returns the Frequency versus Time trace data.
FETCh:FVTime[:MEASview<y>]:MAXimum? (on page 1219)	Returns the maximum value.
FETCh:FVTime[:MEASview<y>]:MAXLocation? (on page 1220)	Returns the time at which the frequency drift is maximum.
FETCh:FVTime[:MEASview<y>]:MINimum? (on page 1220)	Returns the minimum value.
FETCh:FVTime[:MEASview<y>]:MINLocation? (on page 1221)	Returns the time at which the frequency drift is minimum.

Command	Description
FETCh:FVTime[:MEASview<y>]:RESult? (on page 1222)	Returns the measurement results.
FETCh:FVTime[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1223)	Returns trace waveform data of the bitmap trace in the Frequency versus Time measurement.
FETCh:IQVTime subgroup	**RF I&Q versus Time measurement**
FETCh:IQVTime[:MEASview<y>]:I? (on page 1223)	Returns the I versus Time trace data.
FETCh:IQVTime[:MEASview<y>]:MAXimum? (on page 1224)	Returns the maximum value.
FETCh:IQVTime[:MEASview<y>]:MAXLocation? (on page 1224)	Returns the time at which the I or Q level is maximum.
FETCh:IQVTime[:MEASview<y>]:MINimum? (on page 1225)	Returns the minimum value.
FETCh:IQVTime[:MEASview<y>]:MINLocation? (on page 1225)	Returns the time at which the I or Q level is minimum.
FETCh:IQVTime[:MEASview<y>]:Q? (on page 1226)	Returns the Q versus Time trace data.
FETCh:IQVTime[:MEASview<y>]:RESult? (on page 1226)	Returns the measurement results.
FETCh:MCPower subgroup	**MCPR measurement**
FETCh:MCPower:ADJacent:CHANnels? (on page 1238)	Returns the power of adjacent channels.
FETCh:MCPower:CHANnel:POWer? (on page 1238)	Returns the reference power.
FETCh:MCPower:MAIN:CHANnels? (on page 1239)	Returns the power of main channels.
FETCh:MCPower:SPECtrum? (on page 1240)	Returns spectrum trace data.
FETCh:MERRor subgroup (Option 21 only)	**Magnitude error versus Time measurement**
FETCh:MERRor[:MEASview<y>]:FERRor? (on page 1240)	Returns the frequency error in the Magnitude error versus Time measurement.
FETCh:MERRor[:MEASview<y>]:PEAK? (on page 1241)	Returns the peak value in the Magnitude error versus Time measurement.
FETCh:MERRor[:MEASview<y>]:PINDex? (on page 1241)	Returns the time at the Magnitude error peak.
FETCh:MERRor[:MEASview<y>]:RMS? (on page 1242)	Returns the RMS value in the Magnitude error versus Time measurement.

Command	Description
FETCh:MERRor[:MEASview<y>]:TRACe? (on page 1242)	Returns the Magnitude error versus Time trace data.
FETCh:OBWidth subgroup	**Occupied Bandwidth measurement**
FETCh:OBWidth:BOBW:FREQuency:ERRor (on page 1268)	Returns the frequency error.
FETCh:OBWidth:BOBW:RESUlts:STATus (on page 1269)	Returns the test result as Pass or Fail.
FETCh:OBWidth:BOBW:XDBB:POWer (on page 1269)	Returns the dB BW reference power.
FETCh:OBWidth:FREQuency:ERRor? (on page 1274)	Returns the frequency error.
FETCh:OBWidth:OBWidth:BANDwidth? (on page 1274)	Returns the occupied bandwidth.
FETCh:OBWidth:OBWidth:LEFT:FREQuency? (on page 1275)	Returns the left (lower) frequency of the occupied bandwidth.
FETCh:OBWidth:OBWidth:LEFT:LEVel? (on page 1275)	Returns the level at the left frequency of the occupied bandwidth.
FETCh:OBWidth:OBWidth:POWer? (on page 1276)	Returns the reference power in the Occupied Bandwidth measurement.
FETCh:OBWidth:OBWidth:RIGHt:FREQuency? (on page 1276)	Returns the right (higher) frequency of the occupied bandwidth.
FETCh:OBWidth:OBWidth:RIGHt:LEVel? (on page 1277)	Returns the level at the right frequency of the occupied bandwidth.
FETCh:OBWidth:SPECtrum? (on page 1277)	Returns spectrum trace data of the Occupied Bandwidth measurement.
FETCh:OBWidth:XDBBandwidth:BANDwidth? (on page 1278)	Returns the x dB bandwidth.
FETCh:OBWidth:XDBBandwidth:LEFT:FREQuency? (on page 1278)	Returns the left (lower) frequency of the x dB bandwidth.
FETCh:OBWidth:XDBBandwidth:LEFT:LEVel? (on page 1279)	Returns the level at the left frequency of the x dB bandwidth.
FETCh:OBWidth:XDBBandwidth:POWer? (on page 1279)	Returns the reference power in the x dB bandwidth measurement.
FETCh:OBWidth:XDBBandwidth:RIGHt:FREQuency? (on page 1280)	Returns the right (higher) frequency of the x dB bandwidth.
FETCh:OBWidth:XDBBandwidth:RIGHt:LEVel? (on page 1280)	Returns the level at the right frequency of the x dB bandwidth.

Command	Description
FETCh:OFDM subgroup	**Orthogonal Frequency Division Multiplexing measurement**
FETCh:OFDM:APOWer? (on page 1281)	Returns the average power.
FETCh:OFDM:APOWer:PEAK? (on page 1281)	Returns the peak-to-average power.
FETCh:OFDM:CONSte:MAGNitude? (on page 1282)	Returns the constellation magnitude data.
FETCh:OFDM:CONSte:PHASe? (on page 1282)	Returns the constellation phase values.
FETCh:OFDM:CONSte:TYPE? (on page 1283)	Returns the constellation context value.
FETCh:OFDM:CONSte:VALue? (on page 1284)	Returns the constellation value.
FETCh:OFDM:CPE? (on page 1284)	Returns the Common Pilot Error magnitude.
FETCh:OFDM:CRESponse:MAGNitude? (on page 1285)	Returns the channel response magnitude data.
FETCh:OFDM:CRESponse:PHASe? (on page 1285)	Returns the channel response phase data.
FETCh:OFDM:EVM:PEAK:DECibel:ALL? (on page 1286)	Returns the peak EVM data for all subcarriers.
FETCh:OFDM:EVM:PEAK:DECibel:DATA? (on page 1286)	Returns the peak EVM data for the data subcarriers.
FETCh:OFDM:EVM:PEAK:DECibel:PILots? (on page 1287)	Returns the peak EVM data for the pilot subcarriers.
FETCh:OFDM:EVM:PEAK:PERCent:ALL? (on page 1287)	Returns the peak EVM data for all subcarriers.
FETCh:OFDM:EVM:PEAK:PERCent:DATA? (on page 1288)	Returns the peak EVM data for the data subcarriers.
FETCh:OFDM:EVM:PEAK:PERCent:PILots? (on page 1288)	Returns the peak EVM data for the pilot subcarriers.
FETCh:OFDM:EVM:PEAK:SCARrier:ALL? (on page 1289)	Returns the peak EVM data for all subcarriers.
FETCh:OFDM:EVM:PEAK:SCARrier:DATA? (on page 1289)	Returns the peak EVM data for all data subcarriers.
FETCh:OFDM:EVM:PEAK:SCARrier:PILots? (on page 1290)	Returns the peak EVM data for the pilot subcarriers.
FETCh:OFDM:EVM:PEAK:SYMBol:ALL? (on page 1290)	Returns the peak EVM data for all subcarriers.

Command	Description
FETCh:OFDM:EVM:PEAK:SYMBol:DATA? (on page 1290)	Returns the peak EVM data for the data subcarriers.
FETCh:OFDM:EVM:PEAK:SYMBol:PILots? (on page 1291)	Returns the peak EVM data for the pilot subcarriers.
FETCh:OFDM:EVM:RMS:DECibel:ALL? (on page 1291)	Returns the RMS EVM data for all subcarriers
FETCh:OFDM:EVM:RMS:DECibel:DATA? (on page 1292)	Returns the RMS EVM data for the data subcarriers.
FETCh:OFDM:EVM:RMS:DECibel:PILots? (on page 1292)	Returns the RMS EVM data for the pilot subcarriers.
FETCh:OFDM:EVM:RMS:PERCent:ALL? (on page 1293)	Returns the peak RMS data for all subcarriers
FETCh:OFDM:EVM:RMS:PERCent:DATA? (on page 1293)	Returns the peak RMS data for the data subcarriers.
FETCh:OFDM:EVM:RMS:PERCent:PILots? (on page 1294)	Returns the peak RMS data for the pilot subcarriers.
FETCh:OFDM:EVM:TRACe<x>? (on page 1294)	Returns the EVM trace data.
FETCh:OFDM:FERRor? (on page 1295)	Returns the Frequency error reading.
FETCh:OFDM:FLATness:PASS? (on page 1295)	Verifies the average power levels of the subcarriers remain within the limits defined for a particular standard.
FETCh:OFDM:FLATness:RESult? (on page 1296)	Returns the summary results of each segment.
FETCh:OFDM:FLATness:TRACe<x>? (on page 1296)	Returns the OFDM Spectral Flatness trace data.
FETCh:OFDM:GAIN:IMBalance? (on page 1297)	Returns the gain imbalance.
FETCh:OFDM:IQ:ORIGin:OFFSet? (on page 1297)	Returns the IQ origin offset.
FETCh:OFDM:MERRor:TRACe<x>? (on page 1298)	Returns the magnitude error trace data.
FETCh:OFDM:PACKet:DIRection? (on page 1298)	Returns the direction of the packet.
FETCh:OFDM:PERRor:TRACe<x>? (on page 1299)	Returns the phase error trace data.
FETCh:OFDM:POWer:TRACe<x>? (on page 1300)	Returns the power trace data.
FETCh:OFDM:QUADrature:OFFSet? (on page 1300)	Returns the quadrature offset.

Command	Description
FETCh:OFDM:SCARriers? (on page 1301)	Returns the number of subcarriers.
FETCh:OFDM:SCARriers:SPACing? (on page 1301)	Returns the subcarrier spacing.
FETCh:OFDM:STABle:VALUe? (on page 1302)	Returns the number of bytes in the symbol table.
FETCh:OFDM:SYMBol:CERRor? (on page 1302)	Returns the symbol clock error.
FETCh:OFDM:SYMBol:COUNt? (on page 1303)	Returns the number of symbols.
FETCh:PERRor subgroup (Option 21 only)	**Phase error versus Time measurement**
FETCh:PERRor[:MEASview<y>]:FERRor? (on page 1339)	Returns the frequency error in the Phase error versus Time measurement.
FETCh:PERRor[:MEASview<y>]:PEAK? (on page 1339)	Returns the peak value in the Phase error versus Time measurement.
FETCh:PERRor[:MEASview<y>]:PINDex? (on page 1340)	Returns the time at the phase error peak.
FETCh:PERRor[:MEASview<y>]:RMS? (on page 1340)	Returns the RMS (Root-Mean-Square) value in the Phase error versus Time measurement.
FETCh:PERRor[:MEASview<y>]:TRACe? (on page 1341)	Returns the Phase error versus Time trace data.
FETCh:PHVTime subgroup	**Phase versus Time measurement**
FETCh:PHVTime[:MEASview<y>]? (on page 1342)	Returns the Phase versus Time trace data.
FETCh:PHVTime[:MEASview<y>]:MAXimum? (on page 1342)	Returns the maximum value.
FETCh:PHVTime[:MEASview<y>]:MAXLocation? (on page 1343)	Returns the time at which the phase is maximum.
FETCh:PHVTime[:MEASview<y>]:MINimum? (on page 1343)	Returns the minimum value.
FETCh:PHVTime[:MEASview<y>]:MINLocation? (on page 1344)	Returns the time at which the phase is minimum.
FETCh:PHVTime[:MEASview<y>]:OGRAm? (Query only) (on page 1344)	Returns trace data of a line in the ogram.
FETCh:PHVTime[:MEASview<y>]:RESult? (on page 1345)	Returns the results.
FETCh:PHVTime[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1346)	Returns trace waveform data of the bitmap trace in the Phase versus Time measurement.
FETCh:PNOise subgroup (Option 11 only)	**Phase noise measurements**

Command	Description
FETCh:PNOise:ALL? (on page 1348)	Returns all the measurement results.
FETCh:PNOise:CARRier:FERRor? (on page 1349)	Returns the carrier frequency error.
FETCh:PNOise:CARRier:POWer? (on page 1350)	Returns the carrier power.
FETCh:PNOise:RESidual:FM? (on page 1350)	Returns the residual FM.
FETCh:PNOise:RMS:PNOise? (on page 1351)	Returns the RMS phase noise.
FETCh:PNOise:SPECtrum<x>:X? (on page 1351)	Returns the frequencies of the specified trace.
FETCh:PNOise:SPECtrum<x>:XY? (on page 1352)	Returns the frequency and phase noise pairs of the specified trace.
FETCh:PNOise:SPECtrum<x>[:Y]? (on page 1353)	Returns the phase noise values of the specified trace.
FETCh:PNOise:JITTer? (on page 1350)	Returns the jitter.
FETCh:PULSe subgroup	**Pulsed RF measurements**
FETCh:PULSe[:RESult][:MEASview<y>]:ATX? (on page 1363)	Returns the average transmitted power in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:AVERage? (on page 1363)	Returns the average on power in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:DRODb? (on page 1364)	Returns the droop in dB in the pulse table.
FETCh:PULSe[:RESult][:MEASview<y>]:DROop? (on page 1364)	Returns the droop in the pulse table
FETCh:PULSe[:RESult][:MEASview<y>]:DUTPct? (on page 1365)	Returns the duty factor (%) in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:DUTRatio? (on page 1366)	Returns the duty factor (ratio) in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:FALL? (on page 1367)	Returns the fall time in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:FDELta? (on page 1367)	Returns the delta frequency in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:FRDeviation? (on page 1368)	Returns the frequency deviation in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:IRAMplitude? (on page 1368)	Returns the pulse impulse response amplitude measurement in the pulse table.
FETCh:PULSe[:RESult][:MEASview<y>]:IRTime? (on page 1369)	Returns the impulse response time in the pulse table.

Command	Description
FETCh:PULSe[:RESult][:MEASview<y>]:MFReqerror? (on page 1370)	Returns the maximum frequency error in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:MPHerror? (on page 1370)	Returns the maximum phase error in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:OVEDb? (on page 1371)	Returns the overshoot in dB in the pulse table.
FETCh:PULSe[:RESult][:MEASview<y>]:OVERshoot? (on page 1371)	Returns the overshoot in the pulse table.
FETCh:PULSe[:RESult][:MEASview<y>]:PHDeviation? (on page 1372)	Returns the phase deviation in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:PPFRequency? (on page 1373)	Returns the pulse-pulse carrier frequency in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:PPOWer? (on page 1374)	Returns the peak power in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:PPPHase? (on page 1375)	Returns the pulse-pulse carrier phase in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:RINTerval? (on page 1375)	Returns the repetition interval in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:RIPDb? (on page 1376)	Returns the ripple in dB in the pulse table.
FETCh:PULSe[:RESult][:MEASview<y>]:RIPPle? (on page 1377)	Returns the ripple in the pulse table.
FETCh:PULSe[:RESult][:MEASview<y>]:RISE? (on page 1377)	Returns the rise time in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:RMSFreqerror? (on page 1378)	Returns the RMS frequency error in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:RMSPherror? (on page 1378)	Returns the RMS phase error in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:RRATe? (on page 1379)	Returns the repetition rate in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:TIME? (on page 1379)	Returns the time in the results table.
FETCh:PULSe[:RESult][:MEASview<y>]:WIDTh? (on page 1380)	Returns the pulse width in the results table.
FETCh:PULSe:STATistics[:MEASview<y>]:ATX? (on page 1382)	Returns the average transmitted power of the statistics.

Command	Description
FETCh:PULSe:STATistics[:MEASview<y>]:AVERage? (on page 1383)	Returns the average on power of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:DRODb? (on page 1383)	Returns the droop in dB of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:DROop? (on page 1384)	Returns the droop of the statistics
FETCh:PULSe:STATistics[:MEASview<y>]:DUTPct? (on page 1385)	Returns the duty factor (%) of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:DUTRatio? (on page 1385)	Returns the duty factor (ratio) of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:FALL? (on page 1386)	Returns the fall time of the statistics.
FETCh:PULSe:STATistics:[:MEASview<y>]FDELta? (on page 1387)	Returns the delta frequency measurement statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:FRDeviation? (on page 1388)	Returns the frequency deviation of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:IRAMplitude? (on page 1388)	Returns the Pulse Impulse Response amplitude measurement in the pulse statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:IRTime? (on page 1389)	Returns the impulse response time in the pulse statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:MFReqerror? (on page 1391)	Returns the maximum frequency error of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:MPHerror? (on page 1391)	Returns the maximum phase error of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:OVEDb? (on page 1392)	Returns the overshoot measurement result in dB in the pulse statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:OVERshoot? (on page 1392)	Returns the overshoot measurement result in the pulse statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:PHDeviation? (on page 1393)	Returns the phase deviation of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:PPFRequency? (on page 1394)	Returns the pulse-pulse carrier frequency of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:PPOWer? (on page 1395)	Returns the peak power of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:PPPHase? (on page 1396)	Returns the pulse-pulse carrier phase of the statistics.

Command	Description
FETCh:PULSe:STATistics[:MEASview<y>]:RINTerval? (on page 1396)	Returns the repetition interval of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:RIPDb? (on page 1397)	Returns the ripple in dB of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:RIPPle? (on page 1398)	Returns the ripple of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:RISE? (on page 1398)	Returns the rise time of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:RMSFreqerror? (on page 1399)	Returns the RMS frequency error of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:RMSPherror? (on page 1400)	Returns the RMS phase error of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:RRATe? (on page 1400)	Returns the repetition rate of the statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:WIDTh? (on page 1401)	Returns the pulse width in the pulse statistics.
FETCh:PULSe:STATistics[:MEASview<y>]:X? (on page 1401)	Returns the horizontal values of the trace data.
FETCh:PULSe:STATistics[:MEASview<y>]:XY? (on page 1402)	Returns the horizontal and vertical values of the trace data.
FETCh:PULSe:STATistics[:MEASview<y>][:Y]? (on page 1403)	Returns the vertical values of the trace data.
FETCh:PULSe:TRACe[:MEASview<y>]:X? (on page 1404)	Returns the time values of the pulse trace.
FETCh:PULSe:TRACe[:MEASview<y>]:XY? (on page 1404)	Returns the horizontal (time) and vertical value pairs of the pulse trace.
FETCh:PULSe:TRACe[:MEASview<y>][:Y]? (on page 1405)	Returns the vertical values of the pulse trace.
FETCh:PULSe:CUMulative:HISTogram[:MEASview<y>]:OUTLier: HIGHer? (on page 1353)	Returns the outliers value exceeding the upper limit.
FETCh:PULSe:CUMulative:HISTogram[:MEASview<y>]:OUTLier: LOWer? (on page 1354)	Returns the outliers value below the lower limit.
FETCh:PULSe:CUMulative:HISTogram[:MEASview<y>]:PULse: COUNt? (on page 1354)	Returns the number of pulses in the bin.
FETCh:PULSe:CUMulative:HISTogram[:MEASview<y>]:PULse:TOTal? (on page 1355)	Returns the total number of pulses.

Command	Description
FETCh:PULSe:CUMulative:STATistics[:MEASview<y>] (on page 1355)	Returns the PulseCount, Max, Max TimeStamp, Min, Min TimeStamp, Peak to Peak, Average and Standard Deviation values for the chosen measurement.
FETCh:PULSe:OGRAm[:MEASview<y>]:MAX:FRAMe:COUNt (on page 1358)	Returns the frame count value.
FETCh:PULSe:OGRAm[:MEASview<y>]:RBW (on page 1359)	Returns the resolution bandwidth value only when Frequency vs Time display is opened in the Pulse-Ogram display.
FETCh:PULSe[:RESult][:MEASview<y>]:ADVanced (on page 1359)	Returns the Pulse Count, Max, Max at Pulse number, Min, Min at Pulse number, Peak to Peak, Average and Standard Deviation values for the chosen measurement.
FETCh:PULSe[:RESult][:MEASview<y>]:ADVanced:RANGe (on page 1361)	Queries the Pulse count, Max, Max Time Stamp, Min, Min Time Stamp, Peak to Peak, Average, and Standard Deviation values for the chosen measurement in the Pulse Table display.
FETCh:PULSe[:RESult][:MEASview<y>]:FABS? (on page 1366)	Returns the computed absolute frequency from the carrier.
FETCh:PULSe[:RESult][:MEASview<y>]:PPFD? (on page 1372)	Returns the computed pulse to pulse frequency difference from the carrier.
FETCh:PULSe[:RESult][:MEASview<y>]:PPPD? (on page 1374)	Returns the computed pulse to pulse phase difference from the carrier.
FETCh:PULSe:STATistics[:MEASview<y>]:ADVanced (on page 1381)	Returns the Pulse Count, Max, Max at Pulse number, Min, Min at Pulse number, Peak to Peak, Average and Standard Deviation values for the chosen measurement.
FETCh:PULSe:STATistics[:MEASview<y>]:FABS (on page 1386)	Returns the absolute frequency.
FETCh:PULSe:STATistics[:MEASview<y>]:MAX:PULSe:NUMber (on page 1389)	Returns the maximum value at a certain pulse number.
FETCh:PULSe:STATistics[:MEASview<y>]:MIN:PULSe:NUMber? (on page 1390)	Returns the minimum value at a certain pulse number.
FETCh:PULSe:STATistics[:MEASview<y>]:PPFD (on page 1394)	Returns the pulse-pulse frequency difference.
FETCh:PULSe:STATistics[:MEASview<y>]:PPPD (on page 1395)	Returns the pulse-pulse phase difference.
FETCh:RFIN subgroup	**All measurements**
FETCh:RFIN:IQ? (on page 1406)	Returns time-domain IQ data for a specific acquisition data record.
FETCh:RFIN:IQ:HEADer? (on page 1407)	Returns the header information for a specific acquisition data record.
FETCh:RFIN:IQ:SCALe? (on page 1407)	Returns the internal RF linear data scaling factor contained in the .tiq file header

Command	Description
FETCh:RFIN:IQ:VHEader? (on page 1408)	Returns the verbose header information for a specific acquisition data record.
FETCh:RFIN:RECord:IDS? (on page 1409)	Returns the beginning and end ID numbers of acquisition data.
FETCh:SEM subgroup	**Spectral Emissions Mask measurements**
FETCh:SEM:MHITs:COUNt? (on page 1409)	Returns the number of rows in the results table
FETCh:SEM:MHITs<x>:AMPLitude:ABSolute? (on page 1410)	Returns the absolute amplitude of the specified mask hit signal.
FETCh:SEM:MHITs<x>:AMPLitude:RELative? (on page 1410)	Returns the relative amplitude of the specified mask hit signal.
FETCh:SEM:MHITs<x>:FREQuency? (on page 1411)	Returns the frequency of the specified mask hit signal.
FETCh:SEM:MHITs<x>:INTeg:ABSolute? (on page 1411)	Returns the absolute integration amplitude of the specified mask hit signal.
FETCh:SEM:MHITs<x>:INTeg:RELative? (on page 1412)	Returns the relative integration amplitude of the specified mask hit signal.
FETCh:SEM:MHITs<x>:MARGin:ABSolute? (on page 1412)	Returns the absolute margin for the specified mask hit signal.
FETCh:SEM:MHITs<x>:MARGin:RELative? (on page 1413)	Returns the relative margin for the specified mask hit signal.
FETCh:SEM:MHITs<x>:OFFSet? (on page 1413)	Returns the offset for the specified mask hit signal.
FETCh:SEM:PASS? (on page 1414)	Returns the pass/fail limit test result.
FETCh:SEM:REF:POWer? (on page 1414)	Returns the reference power level.
FETCh:SEM:SPECtrum:X? (on page 1415)	Returns the frequencies of the spectrum trace.
FETCh:SEM:SPECtrum:XY? (on page 1415)	Returns the frequency and amplitude pairs of the spectrum trace.
FETCh:SEM:SPECtrum[:Y]? (on page 1416)	Returns the amplitude of the spectrum trace.
FETCh:SGRam subgroup	**Spectrogram measurement**
FETCh:SGRam? (on page 1416)	Returns the spectrogram trace data.
FETCh:SIGNalvu subgroup	**Signal measurement**
FETCh:SIGNalvu:ACQuisition:COUPling (on page 1417)	Returns the coupling value of the acquisition.
FETCh:SIGNalvu:ACQuisition:MAX:RT:BW (on page 1417)	Returns the maximum real time bandwidth value of the instrument.

Command	Description
FETCH:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:INJEction:HIGHSide:MAXFreq? (on page 1418)	Returns the maximum range of input center frequency in case of high injection side.
FETCH:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:INJEction:HIGHSide:MINFreq? (on page 1418)	Returns the minimum range of input center frequency in case of high injection side.
FETCH:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:INJEction:LOWSide:MAXFreq? (on page 1419)	Returns the maximum range of input center frequency in case of low injection side.
FETCH:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:INJEction:LOWSide:MINFreq? (on page 1420)	Returns the minimum range of input center frequency in case of low injection side.
FETCh:SIGNalvu:ACQuisition:TERMination? (on page 1420)	Returns the termination value of the acquisition.
FETCh:SPECtrum subgroup	**Spectrum measurement**
FETCh:SPECtrum[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1421)	Returns trace waveform data of the bitmap trace in the Spectrum measurement.
FETCh:SPECtrum:TRACe<x>? (on page 1422)	Returns the trace data in the Spectrum Analyzer measurement.
FETCh:SPURious subgroup	**Spurious measurement**
FETCh:SPURious:CARRier:POWer? (on page 1422)	Returns the carrier power.
FETCh:SPURious:COUNt? (on page 1423)	Returns the number of spurious signals.
FETCh:SPURious:PASS? (on page 1423)	Returns the pass/fail limit test result.
FETCh:SPURious:SPECtrum:X? (on page 1424)	Returns the frequencies of the spectrum trace.
FETCh:SPURious:SPECtrum:XY? (on page 1424)	Returns the frequency and amplitude pairs of the spectrum trace.
FETCh:SPURious:SPECtrum[:Y]? (on page 1425)	Returns the amplitudes of the spectrum trace.
FETCh:SPURious:SPUR<x>:AMPLitude:ABSolute? (on page 1425)	Returns the absolute amplitude of the specified spurious signal.
FETCh:SPURious:SPUR<x>:AMPLitude:RELative? (on page 1426)	Returns the relative amplitude of the specified spurious signal.
FETCh:SPURious:SPUR<x>:FREQuency:ABSolute? (on page 1426)	Returns the absolute frequency of the specified spurious signal.
FETCh:SPURious:SPUR<x>:FREQuency:RELative? (on page 1427)	Returns the relative frequency of the specified spurious signal.

Command	Description
FETCh:SPURious:SPUR<x>:LIMit:ABSolute? (on page 1427)	Returns the absolute amplitude of the limit for a spurious signal.
FETCh:SPURious:SPUR<x>:LIMit:RELative? (on page 1428)	Returns the relative amplitude of the limit for a spurious signal.
FETCh:SPURious:SPUR<x>:LIMit:VIOLation? (on page 1428)	Returns whether the specified spurious signal exceeds the limit or not.
FETCh:SPURious:SPUR<x>:RANGe? (on page 1429)	Returns the frequency range in which the spurious signal occurred.
FETCh:SQUality subgroup (Option 21 only)	**Signal quality measurement**
FETCh:SQUality[:MEASview<y>]:FREQuency:DEViation? (on page 1429)	Returns the frequency deviation in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:FREQuency:DEViation:TABLe? (on page 1430)	Returns the number of columns and the values in the frequency deviation table for a signal quality measurement.
FETCh:SQUality[:MEASview<y>]:FREQuency:ERRor? (on page 1431)	Returns the frequency error in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:GAIN:IMBalance? (on page 1431)	Returns the gain imbalance in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:ORIGin:OFFSet? (on page 1432)	Returns the origin offset in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:EVM? (on page 1432)	Returns the peak EVM (%) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:EVM:DB? (on page 1433)	Returns the peak EVM (dB)) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:EVM:DB:OFFSet? (on page 1434)	Returns the peak offset EVM (dB) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:EVM:LOCation? (on page 1434)	Returns the time at which the EVM is peak.
FETCh:SQUality[:MEASview<y>]:PEAK:EVM:LOCation:OFFSet? (on page 1435)	Returns the time at which the offset EVM is peak.
FETCh:SQUality[:MEASview<y>]:PEAK:EVM:OFFSet? (on page 1435)	Returns the peak offset EVM (%) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:FERRor? (on page 1436)	Returns the peak FSK error in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:MERRor? (on page 1438)	Returns the peak magnitude error (%) in the signal quality measurement.

Command	Description
FETCh:SQUality[:MEASview<y>]:PEAK:MERRor:DB? (on page 1436)	Returns the peak magnitude error (dB) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:MERRor:LOCation? (on page 1437)	Returns the time at which the magnitude error is peak.
FETCh:SQUality[:MEASview<y>]:PEAK:PERRor? (on page 1439)	Returns the peak phase error in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:PEAK:PERRor:LOCation? (on page 1438)	Returns the time at which the phase error is peak.
FETCh:SQUality[:MEASview<y>]:QUADrature:ERRor? (on page 1439)	Returns the quadrature error in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RHO? (on page 1440)	Returns the ρ (waveform quality) value in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:EVM? (on page 1440)	Returns the RMS EVM (%) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:EVM:DB? (on page 1441)	Returns the RMS EVM (dB) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:EVM:DB:OFFSet? (on page 1442)	Returns the RMS offset EVM (dB) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:EVM:OFFSet? (on page 1442)	Returns the RMS offset EVM (%) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:FERRor? (on page 1443)	Returns the RMS FSK error percent in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:MER:DB? (on page 1443)	Returns the RMS MER (Modulation Error Ratio) in dB in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:MERRor? (on page 1444)	Returns the RMS magnitude error (%) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:MERRor:DB? (on page 1444)	Returns the RMS magnitude error (dB) in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:RMS:PERRor? (on page 1445)	Returns the RMS phase error in the signal quality measurement.
FETCh:SQUality[:MEASview<y>]:SYMBol:LENGth? (on page 1445)	Returns the number of analyzed symbols.
FETCh:SQUality[:MEASview<y>]:SYMBol:RATE? (on page 1446)	Returns the value of the calculated symbol rate in Hz.
FETCh:SQUality[:MEASview<y>]:SYMBol:RATE:ERRor? (on page 1447)	Returns the value of the symbol rate error in percent (%).

Command	Description
FETCh:TDIagram subgroup (Option 21 only)	**Trellis diagram**
FETCh:TDIagram[:MEASview<y>]:FERRor? (on page 1447)	Returns the frequency error.
FETCh:TDIagram[:MEASview<y>]:TRACe? (on page 1448)	Returns the Trellis diagram trace data.
FETCh:TOVerview subgroup	**Time overview**
FETCh:TOVerview:MEASview<y>? (on page 1448)	Returns the trace data.
FETCh:WLAN subgroup	**Wireless LAN measurements**
FETCh:WLAN:CONSte:MAGNitude? (on page 1502)	Returns the magnitude data for the WLAN Constellation measurement.
FETCh:WLAN:CONSte:PHASe? (on page 1503)	Returns the phase values for the WLAN Constellation measurement.
FETCh:WLAN:CONSte:TYPE? (on page 1503)	Returns the type (context) for the WLAN Constellation measurement.
FETCh:WLAN:CONSte:VALue? (on page 1504)	Returns the value (decoded symbol) for the WLAN Constellation measurement.
FETCh:WLAN:CRESponse:MAGNitude? (on page 1505)	Returns the magnitude data of the WLAN Channel Response measurement.
FETCh:WLAN:CRESponse:PHASe? (on page 1505)	Returns the phase data of the WLAN Channel Response measurement.
FETCh:WLAN:EVM:TRACe<x>? (on page 1506)	Returns the trace data for the selected WLAN EVM trace.
FETCh:WLAN:FLATness:PASS? (on page 1506)	Verifies the average power level values of the subcarriers remain within the limits defined for a particular standard.
FETCh:WLAN:FLATness:RESult? (on page 1507)	Returns the summary results of each segment of the WLAN Spectral Flatness display.
FETCh:WLAN:FLATness:TRACe<x>? (on page 1507)	Returns the WLAN Spectral Flatness trace data.
FETCh:WLAN:MERRor:TRACe<x>? (on page 1508)	Returns the trace data for the selected WLAN Magnitude Error trace.
FETCh:WLAN:PERRor:TRACe<x>? (on page 1509)	Returns the trace data for the selected WLAN Phase Error trace.
FETCh:WLAN:PVTime:BURSt:POWer? (on page 1509)	Returns the average power of the burst packet.
FETCh:WLAN:PVTime:BURSt:WIDTh? (on page 1510)	Returns the value of the measured time width of the burst packet from Power-On to Power-Down.
FETCh:WLAN:PVTime:FALL:TIME? (on page 1510)	Returns the width of the falling edge.
FETCh:WLAN:PVTime:FALL:TIME:STARt? (on page 1510)	Returns the start time of the falling edge.

Command	Description
FETCh:WLAN:PVTime:FALL:TIME:STOP? (on page 1511)	Returns the stop time of the falling edge.
FETCh:WLAN:PVTime:FTIMe? (on page 1511)	Returns the width of the falling edge.
FETCh:WLAN:PVTime:RISE:TIME? (on page 1512)	Returns the width of the rising edge.
FETCh:WLAN:PVTime:RISE:TIME:STARt? (on page 1512)	Returns the start time of the rising edge.
FETCh:WLAN:PVTime:RISE:TIME:STOP? (on page 1513)	Returns the stop time of the rising edge.
FETCh:WLAN:PVTime:RTIMe? (on page 1513)	Returns the width of the rising edge.
FETCh:WLAN:PVTime:TRACe:X? (on page 1513)	Returns the horizontal values.
FETCh:WLAN:PVTime:TRACe:XY? (on page 1514)	Returns the horizontal value (time in seconds) and vertical value (power).
FETCh:WLAN:PVTime:TRACe[:Y]? (on page 1514)	Returns the vertical values (power).
FETCh:WLAN:STABle:VALUe? (on page 1515)	Returns the number of bytes in the symbol table.
FETCh:WLAN:SUMMary:BURSt:INDex? (on page 1515)	Returns the index of the analyzed packet.
FETCh:WLAN:SUMMary:BURSt:POWer? (on page 1516)	Returns the average power of all symbols in the packet.
FETCh:WLAN:SUMMary:BURSt:POWer:CFACtor? (on page 1516)	Returns the peak-to-average burst power factor.
FETCh:WLAN:SUMMary:CERRor? (on page 1517)	Returns the symbol clock error.
FETCh:WLAN:SUMMary:CPE? (on page 1517)	Returns the RMS magnitude error of the pilots.
FETCh:WLAN:SUMMary:EVM:PEAK:ALL? (on page 1518)	Returns the peak EVM value for all subcarriers or all chips.
FETCh:WLAN:SUMMary:EVM:PEAK:CHIP:ALL? (on page 1518)	Returns the chip at which the reported peak EVM value occurred.
FETCh:WLAN:SUMMary:EVM:PEAK:CHIP:ONEKchips? (on page 1518)	Returns the chip at which the reported peak EVM value over the first 1000 chips occurred.
FETCh:WLAN:SUMMary:EVM:PEAK:DATA? (on page 1518)	Returns the peak EVM value for the data subcarriers.
FETCh:WLAN:SUMMary:EVM:PEAK:ONEKchips? (on page 1519)	Returns the peak EVM value measured over the first 1000 chips.

Command	Description
FETCh:WLAN:SUMMary:EVM:PEAK:PILots? (on page 1520)	Returns the peak EVM value for the pilots in the WLAN measurement.
FETCh:WLAN:SUMMary:EVM:PEAK:SCARrier:ALL? (on page 1520)	Returns the subcarrier on which the ALL peak EVM value occurred.
FETCh:WLAN:SUMMary:EVM:PEAK:SCARrier:DATA? (on page 1520)	Returns the subcarrier on which the DATA peak EVM value occurred.
FETCh:WLAN:SUMMary:EVM:PEAK:SCARrier:PILots? (on page 1521)	Returns the subcarrier on which the PILOT peak EVM value occurred.
FETCh:WLAN:SUMMary:EVM:PEAK:SYMBol:ALL? (on page 1521)	Returns the symbol on which the reported EVM value occurred.
FETCh:WLAN:SUMMary:EVM:PEAK:SYMBol:DATA? (on page 1522)	Returns the symbol on which the DATA peak EVM value occurred.
FETCh:WLAN:SUMMary:EVM:PEAK:SYMBol:PILots? (on page 1522)	Returns the symbol on which the PILOT peak EVM value occurred.
FETCh:WLAN:SUMMary:EVM:RMS:ALL? (on page 1522)	Returns the RMS EVM data for all subcarriers.
FETCh:WLAN:SUMMary:EVM:RMS:AVERage? (on page 1523)	Returns the average RMS EVM value.
FETCh:WLAN:SUMMary:EVM:RMS:DATA? (on page 1523)	Returns the RMS EVM data for the data subcarriers.
FETCh:WLAN:SUMMary:EVM:RMS:MAXimum? (on page 1524)	Returns the maximum RMS EVM value.
FETCh:WLAN:SUMMary:EVM:RMS:ONEKchips? (on page 1524)	Returns the RMS EVM data for the 1k chips in the WLAN measurement measured over the first 1000 chips.
FETCh:WLAN:SUMMary:EVM:RMS:PILots? (on page 1524)	Returns the RMS EVM data for the pilot subcarriers.
FETCh:WLAN:SUMMary:FERRor? (on page 1525)	Returns the difference between the measured carrier frequency of the signal and the measurement frequency setting.
FETCh:WLAN:SUMMary:HEADer? (on page 1525)	Returns the received packet header information.
FETCh:WLAN:SUMMary:HTSig? (on page 1526)	Returns the decimal values of the received packet HT-SIGNAL
FETCh:WLAN:SUMMary:IQOFfset? (on page 1526)	Returns the average magnitude of the DC subcarrier level relative to total signal power.
FETCh:WLAN:SUMMary:LSIG? (on page 1526)	Returns the decimal values of the received packet (legacy) SIGNAL symbols fields.

Command	Description
FETCh:WLAN:SUMMary:PACKet? (on page 1527)	Returns the type and number of symbols in the Preamble and Data portions of the packet.
FETCh:WLAN:SUMMary:PACKet:DMODulation? (on page 1527)	Returns the modulation used in the Data symbols.
FETCh:WLAN:SUMMary:PACKet:FORMat? (on page 1528)	Returns the packet format setting.
FETCh:WLAN:SUMMary:PACKet:GUARd? (on page 1528)	Returns the packet guard interval used by the DATA symbols.
FETCh:WLAN:SUMMary:SIG? (on page 1528)	Returns the decimal values of the received packet SIGNAL symbols fields.
FETCh:WLAN:SUMMary:VHTSig:A? (on page 1529)	Returns the decimal values of the received packet VHT-SIGNAL(A) symbols fields.
FETCh:WLAN:SUMMary:VHTSig:B? (on page 1529)	Returns the decimal values of the received packet VHT-SIGNAL(B) symbols fields.
FETCh:LTE subgroup	
FETCh:LTE:ACLR:MHITs:COUNt? (on page 1227)	Returns the number of rows in the results table.
FETCh:LTE:ACLR:MHITs<x>:BANDwidth? (on page 1227)	Returns the bandwidth value of the channel (row).
FETCh:LTE:ACLR:MHITs<x>:CHANnel:NAME? (on page 1228)	Returns the channel name (row) of the specified index in the results table.
FETCh:LTE:ACLR:MHITs<x>:FREQuency:OFFSet? (on page 1228)	Returns the frequency offset of the specified channel (row).
FETCh:LTE:ACLR:MHITs<x>:INTeg:LOWEr:ABSolute? (on page 1229)	Returns the lower absolute value of the channel (row).
FETCh:LTE:ACLR:MHITs<x>:INTeg:LOWEr:RELative? (on page 1229)	Returns the lower relative value of the channel (row).
FETCh:LTE:ACLR:MHITs<x>:INTeg:UPPEr:ABSolute? (on page 1230)	Returns the upper absolute value of the channel (row).
FETCh:LTE:ACLR:MHITs<x>:INTeg:UPPEr:RELative? (on page 1230)	Returns the upper relative value of the channel (row).
FETCh:LTE:ACLR:REFerence:POWer? (on page 1230)	Returns the reference power level.
FETCh:LTE:ACLR:RESUlts:STATus? (on page 1231)	Returns the pass or fail status.
FETCh:LTE:ACLR:SPECtrum:X? (on page 1231)	Returns the frequencies of the spectrum trace.

Command	Description
FETCh:LTE:ACLR:SPECtrum:XY? (on page 1232)	Returns the frequency and amplitude pairs of the spectrum trace.
FETCh:LTE:ACLR:SPECtrum:Y? (on page 1232)	Returns the amplitude of the spectrum trace.
FETCh:LTE:CHSPectrum:OBW? (on page 1233)	Returns the Occupied Bandwidth (OBW) in Hz.
FETCh:LTE:CHSPectrum:POWer:CHANnel? (on page 1233)	Returns the Channel Power value.
FETCh:LTE:CHSPectrum:SPECtrum? (on page 1234)	Returns spectrum trace data.
FETCh:LTE:CONSte:CELL:ID? (on page 1234)	Queries the Cell ID value.
FETCh:LTE:CONSte:FREQuency:ERRor? (on page 1234)	Queries Frequency Error value in Hz.
FETCh:LTE:CONSte:GROUp:ID? (on page 1235)	Queries the Group ID value.
FETCh:LTE:CONSte:SECTor:ID? (on page 1235)	Queries the Sector ID value.
FETCh:LTE:PVTime:OFFSlot:POWer? (on page 1236)	Returns the TOff power measurement value in dBm/MHz.
FETCh:LTE:PVTime:RESUlts:STATus (on page 1236)	Returns the pass or fail status.
FETCh:LTE:PVTime:TRACe:X? (on page 1236)	Returns the horizontal values (time in seconds).
FETCh:LTE:PVTime:TRACe:XY? (on page 1237)	Returns the horizontal value (time in seconds) and vertical value (power).
FETCh:LTE:PVTime:TRACe:Y? (on page 1237)	Returns the vertical values (power).
FETCh:SIGNalvu:ACQuisition:MATHchannels	Fetches Math inputs available on the oscilloscope.

Initiate commands

Use the INITiate commands to control the acquisition of data.

Initiate commands

Command	Description
INITiate:CONTinuous (on page 1530)	Sets or queries whether to acquire data continuously.
INITiate[:IMMediate] (on page 1531)	Starts input signal acquisition.
INITiate:RESume (on page 1531)	Starts data acquisition.

Input commands

Use the INPut commands to control the characteristics of the signal input. These commands are only available when an RSA306, RSA306B, RSA500A series,RSA600A series, MDO4000B series, or an MDO4000C series instrument is connected.

Input commands

Command	Description
INPut:CORRection:EXTernal:EDIT<x>:INTerpolation (on page 1532)	Sets or queries the interpolation setting to use with the indicated external gain table.
INPut:CORRection:EXTernal:EDIT<x>:NEW (on page 1533)	Creates the indicated external loss table.
INPut:CORRection:EXTernal:TYPE (on page 1536)	Sets or queries the data type to use when applying the external loss table corrections.
INPut:{MLEVel|RLEVel} (on page 1536)	Sets or queries the reference level.
INPut[:RF]:ATTenuation (on page 1536)	Sets or queries the input attenuation.
NPut[:RF]:ATTenuation:AUTO (on page 1537)	Sets or queries whether to set the attenuation automatically.
INPut[:RF]:ATTenuation:MONitor:STATe (on page 1537)	Sets or queries whether to enable to monitor attenuator use.
INPut[:RF]:GAIN:STATe (on page 1538) (Option 50 or 51 only)	Sets or queries whether to enable the internal preamplifier.
INPut:TYPE (on page 1538)	Sets or queries the source type.

Input commands

Command	Description
INPut:CORRection:EXTernal:EDIT<x>:INTerpolation (on page 1532)	Sets or queries the interpolation setting to use with the indicated external gain table.
INPut:CORRection:EXTernal:EDIT<x>:NEW (on page 1533)	Creates the indicated external loss table.
INPut:CORRection:EXTernal:TYPE (on page 1536)	Sets or queries the data type to use when applying the external loss table corrections.
INPut:{MLEVel|RLEVel} (on page 1536)	Sets or queries the reference level.

Mass memory commands

Use the MMEMory commands to manipulate files on the mass memory devices.See the Index for commands not listed in the following table.

For the trace specifier TRACe<x>, refer to Trace Mnemonics (on page 384).

If the file extension is not included, it is assumed to be .tiq.

Not all of these commands apply to SignalVu-PC and connected instruments. See the individual command descriptions for details.

Mass memory (MMEMory) commands

Command	Description
MMEMory:{AM|FM|PM} subgroup	**AM/FM/PM measurement**
MMEMory:{AM|FM|PM}:LOAD:TRACe (on page 1539)	Loads trace data from the specified file.
MMEMory:TXGain subgroup	**Transmission Gain measurements**
MMEMory:TXGain:LOAD:TRACe<x> (on page 1589)	Loads the specified saved trace from a file.
MMEMory:TXGain:SHOW:TRACe<x> (on page 1590)	Displays a saved trace instead of a live trace.
MMEMory:TXGain:STORe:TRACe<x> (on page 1590)	Saves the selected trace to a file for later recall and analysis.
MMEMory:Noise subgroup	**Noise Figure and Gain measurements**
MMEMory:NOISe:GAIN:LOAD:TRACe (on page 1568)	Loads the Noise Gain trace data from the specified file.
MMEMory:NOISe:GAIN:SHOW:TRACe (on page 1569)	Show or hide the Noise Gain trace from the specified file.
MMEMory:NOISe:GAIN:STORe:TRACe (on page 1569)	Stores the Noise Gain trace data in the specified file.
MMEMory:Noise:LOAD:ENRCALibration (on page 1569)	Loads the specified Noise Figure ENR table.
MMEMory:Noise:LOAD:FREQTABle (on page 1570)	Loads the specified Noise Figure Frequency table.
MMEMory:Noise:STORe:ENRCALibration (on page 1570)	Saves the Noise Figure ENR table to the specified location.
MMEMory:Noise:STORe:FREQTABle (on page 1571)	Saves the Noise Figure Frequency table to the specified location.
MMEMory:{AM|FM|PM}:SHOW:TRACe<x> (on page 1539)	Enables display of a recalled trace file.
MMEMory:{AM|FM|PM}:STORe:TRACe (on page 1540)	Stores trace data in the specified file.
MMEMory:AUDio subgroup	**Audio measurements**
MMEMory:AUDio:LOAD:FILTer (on page 1540)	Loads a user-defined audio filter from the specified file.
MMEMory:AVTime subgroup	**Amplitude versus Time measurement**

Command	Description
MMEMory:AVTime[:MEASview<y>]:LOAD:TRACe<x> (on page 1540)	Loads trace data from the specified file.
MMEMory:AVTime[:MEASview<y>]:SHOW:TRACe<x> (on page 1541)	Enables display of a recalled trace file.
MMEMory:AVTime[:MEASview<y>]:STORe:TRACe<x> (on page 1542)	Stores trace data in the specified file.
MMEMory:CALibration subgroup	**Measurement calibration**
MMEMory:CALibration:LOAD:CORRection:EXTernal:EDIT<x> (on page 1543)	Loads the external loss table data from a specified file.
MMEMory:CALibration:STORe:CORRection:EXTernal:EDIT<x> (on page 1543)	Stores an external loss table to a specified file.
MMEMory:CCDF subgroup	**CCDF measurement**
MMEMory:CCDF:LOAD:TRACe<x> (on page 1544)	Loads trace data from the specified file.
MMEMory:CCDF:SHOW:TRACe<x> (on page 1544)	Enables display of a recalled trace file.
MMEMory:CCDF:STORe:TRACe<x> (on page 1545)	Stores trace data in the specified file.
MMEMory:DDEMod subgroup	**DPX spectrum measurement**
MMEMory:DDEMod[:SOURce<x>]:LOAD:FILTer:MEASurement:USER<y> (on page 1546)	Loads a user-defined measurement filter from the specified file.
MMEMory:DDEMod[:SOURce<x>]:LOAD:FILTer:MEASurement:UOTHer (on page 1545)	Loads a user-defined measurement filter from the specified file.
MMEMory:DDEMod[:SOURce<x>]:LOAD:FILTer:REFerence:USER<y> (on page 1546)	Loads the specified user-defined reference filter.
MMEMory:DDEMod[:SOURce<x>]:LOAD:FILTer:REFerence:UOTHer (on page 1546)	Loads the specified user-defined reference filter
MMEMory:DDEMod[:SOURce<x>]:LOAD:SYMBol:MAP (on page 1547)	Loads the specified symbol map filename.
MMEMory:DPX subgroup	**DPX spectrum measurement**
MMEMory:DPX:TDM:FREQuency:TXBer:LOAD:PATTern (on page 1549)	Loads the Tx BER User data pattern from the specified file.
MMEMory:DPX:LOAD:TRACe<x> (on page 1548)	Loads trace data from the specified file.
MMEMory:DPX:SHOW:TRACe<x> (on page 1548)	Enables display of a recalled trace file.
MMEMory:DPX:STORe:TRACe<x> (on page 1548)	Stores trace data in the specified file.

Command	Description
MMEMory:{FSETtling|PSETtling} subgroup	**Frequency and Phase Settling time measurements**
[MMEMory:{FSETtling|PSETtling}:LOAD:TRACe<x>](#) (on page 1557)	Loads the Frequency or Phase Settling Time trace data from the specified file.
[MMEMory:{FSETtling|PSETtling}:SHOW:TRACe<x>](#) (on page 1558)	Enables display of a recalled Frequency or Phase Settling trace file in Trace<x>.
[MMEMory:{FSETtling|PSETtling}:STORe:TRACe<x>](#) (on page 1558)	Stores the Frequency or Phase Settling trace data in the specified file.
MMEMory:FVTime subgroup	**Frequency versus Time measurement**
MMEMory:FVTime[:MEASview<y>]:LOAD:TRACe (on page 1559)	Loads trace data from the specified file.
MMEMory:FVTime[:MEASview<y>[:SHOW:TRACe<x>](#) (on page 1559)	Enables display of a recalled trace file.
MMEMory:FVTime[:MEASview<y>]:STORe:TRACe (on page 1560)	Stores trace data in the specified file.
MMEMory:IQVTime subgroup	**RF I&Q versus Time measurement**
MMEMory:IQVTime[:MEASview<y>]:LOAD:TRACe:I (on page 1560)	Loads I trace data from the specified file.
MMEMory:IQVTime[:MEASview<y>]:LOAD:TRACe:Q (on page 1561)	Loads Q trace data from the specified file.
MMEMory:IQVTime[:MEASview<y>]:SHOW:TRACe:I (on page 1561)	Loads trace data from the specified file.
MMEMory:IQVTime[:MEASview<y>]:SHOW:TRACe<x>:Q (on page 1562)	Enables display of a recalled trace file.
MMEMory:IQVTime[:MEASview<y>]:STORe:TRACe:I (on page 1562)	Stores I trace data in the specified file.
MMEMory:IQVTime[:MEASview<y>]:STORe:TRACe:Q (on page 1563)	Stores Q trace data in the specified file.
MMEMory:LTE subgroup	
MMEMory:LTE:ACLR:LOAD:TABLe (on page 1566)	Loads the LTE ACLR table containing the limits for enabled ranges from the specified .cvs file.
MMEMory:LTE:ACLR:STORe:TABLe (on page 1566)	Stores the LTE ACLR table containing the limits for enabled ranges in a specified .cvs file, allowing you to export the file into Microsoft Excel or other database system.
MMEMory:LOAD subgroup	**Load commands**
MMEMory:LOAD:IQ (on page 1563)	Loads time-domain IQ waveform from a specified file.

Command	Description
MMEMory:LOAD:STATe (on page 1563)	Loads the instrument setup from a specified file.
MMEMory:LOAD:TRACe (on page 1564)	Loads the trace data from a specified file.
MMEMory:OFDM CONSTe subgroup	**OFDM Constellation commands**
MMEMory:OFDM:CONSte:LOAD:TRACe (on page 1571)	Loads trace data from the specified file.
MMEMory:OFDM:CONSTe:SHOW:TRACe (on page 1571)	Enables the display of a recalled trace file.
MMEMory:OFDM:CONSte:STORe:TRACe (on page 1572)	Stores trace data in the specified file.
MMEMory:PHVTime subgroup	**Phase versus Time measurement**
MMEMory:PHVTime[:MEASview<y>]:LOAD:TRACe (on page 1572)	Loads trace data from the specified file.
MMEMory:PHVTime[:MEASview<y>]:SHOW:TRACe (on page 1573)	Enables display of a recalled trace file.
MMEMory:PHVTime[:MEASview<y>]:STORe:TRACe (on page 1573)	Stores trace data in the specified file.
MMEMory:PNOise subgroup	**Phase noise measurement**
MMEMory:PNOise:LOAD:TRACe<x> (on page 1574)	Loads the Phase Noise trace data from the specified file.
MMEMory:PNOise:SHOW:TRACe<x> (on page 1574)	Enables display of a recalled Phase Noise trace file.
MMEMory:PNOise:STORe:TRACe<x> (on page 1575)	Stores the Phase Noise trace data in the specified file.
MMEMory:SEM subgroup	**Spectral Emissions Mask measurement**
MMEMory:SEM:LOAD:TABLe (on page 1575)	Loads the SEM table from the specified file.
MMEMory:SEM:STORe:TABLe (on page 1575)	Stores the SEM table in the specified file.
MMEMory:SGRam subgroup	**Spurious measurement**
MMEMory:SGRam[:MEASview<y>]:LOAD:TRACe (on page 1576)	Loads the trace data from a specified file.
MMEMory:SGRam[:MEASview<y>]:SHOW:TRACe (on page 1576)	Enables display of a recalled trace file.
MMEMory:SGRam[:MEASview<y>]:STORe:TRACe (on page 1576)	Stores the Spectrogram trace data in the specified file.

Command	Description
MMEMory:SPECtrum subgroup	**Spectrum measurement**
MMEMory:SPECtrum[:MEASview<y>]:LOAD:TRACe (on page 1578)	Loads the trace data from a specified file.
MMEMory:SPECtrum[:MEASview<y>]:SHOW:TRACe<x> (on page 1579)	Enables display of a recalled trace file.
MMEMory:SPECtrum[:MEASview<y>]:STORe:TRACe<x>	Stores the spectrum trace data in the specified file.
MMEMory:SPURious subgroup	**Spurious measurement**
MMEMory:SPURious:LOAD:TABLe (on page 1581)	Loads the spurious table from the specified file.
MMEMory:SPURious:STORe:TABLe (on page 1582)	Stores the spurious table in the specified file.
MMEMory:STORe subgroup	**Store commands**
MMEMory:STORe:IQ (on page 1583)	Saves time-domain IQ waveform in the acquisition memory to a specified file.
MMEMory:STORe:IQ:CSV (on page 1584)	Saves time-domain IQ waveform in the acquisition memory to a specified file in the CSV (Comma Separated Values) format.
MMEMory:STORe:IQ:MAT (on page 1584)	Saves time-domain IQ waveform in the acquisition memory to a specified file in the MATLAB format.
MMEMory:STORe:IQ:SELEct:DATA (on page 1584)	Sets or queries the type of data stored in an acquisition data file.
MMEMory:STORe:IQ:SELEct:FRAMes (on page 1585)	Sets or queries which frames to save when saving TIQ acquisition data files.
MMEMory:STORe:IQ:SELEct:LENGth (on page 1585)	Sets or queries what portion of each record is saved when saving acquisition data.
MMEMory:STORe:MSTate (on page 1586)	Stores the measurement parameters in a specified file.
MMEMory:STORe:RESults (on page 1586)	Stores the measurement results including measurement parameters and trace data to a specified file.
MMEMory:STORe:SCReen (on page 1587)	Stores the measurement results in a specified file.
MMEMory:STORe:STATe (on page 1587)	Stores the instrument setup in a specified file.
MMEMory:STORe:TRACe (on page 1587)	Stores trace data in a specified file.
MMEMory:TOVerview subgroup	**Spurious measurement**
MMEMory:TOVerview[:MEASview<y>]:LOAD:TRACe1 (on page 1588)	Loads the trace data from a specified file.

Command	Description
MMEMory:TOVerview[:MEASview<y>]:SHOW:TRACe1 (on page 1588)	Enables display of a recalled trace file.
MMEMory:TOVerview[:MEASview<y>]:STORe:TRACe1 (on page 1589)	Stores the selected trace data into the specified file.
MMEMory:WLAN subgroup	**Wireless LAN measurements**
MMEMory:WLAN:CRESponse:LOAD:TRACe<x> (on page 1592)	Loads the selected WLAN Channel Response trace data from the specified file.
MMEMory:WLAN:CRESponse:SHOW:TRACe<x> (on page 1593)	Enables the display of a recalled WLAN Channel Response trace.
MMEMory:WLAN:CRESponse:STORe:TRACe<x> (on page 1593)	Stores the WLAN Channel Response measurement trace data in the specified file.

Mass memory (MMEMory) commands

Command	Description
MMEMory:{AM|FM|PM} subgroup	**AM/FM/PM measurement**
MMEMory:{AM|FM|PM}:LOAD:TRACe (on page 1539)	Loads trace data from the specified file.
MMEMory:MAPIt subgroup	**MapIt feature**
MMEMory:MAPit:LOAD (on page 1567)	Loads the MapIt measurement results from the specified file.
MMEMory:MAPit:STORe (on page 1567)	Save the selected MapIt measurement results to a file.
MMEMory:MAPit:STORe:ALL (on page 1568)	Saves all of the MapIt measurement results from memory to the specified file.
MMEMory:Noise subgroup	**Noise Figure and Gain measurements**
MMEMory:NOISe:GAIN:LOAD:TRACe (on page 1568)	Loads the Noise Gain trace data from the specified file.
MMEMory:NOISe:GAIN:SHOW:TRACe (on page 1569)	Show or hide the Noise Gain trace from the specified file.
MMEMory:NOISe:GAIN:STORe:TRACe (on page 1569)	Stores the Noise Gain trace data in the specified file.
MMEMory:Noise:LOAD:ENRCALibration (on page 1569)	Loads the specified Noise Figure ENR table.
MMEMory:Noise:LOAD:FREQTABle (on page 1570)	Loads the specified Noise Figure Frequency table.

MMEMory:Noise:STORe:ENRCALibration (on page 1570)	Saves the Noise Figure ENR table to the specified location.
MMEMory:Noise:STORe:FREQTABle (on page 1571)	Saves the Noise Figure Frequency table to the specified location.
MMEMory:{AM|FM|PM}:SHOW:TRACe<x> (on page 1539)	Enables display of a recalled trace file.
MMEMory:{AM|FM|PM}:STORe:TRACe (on page 1540)	Stores trace data in the specified file.
MMEMory:AUDio subgroup	**Audio measurements**
MMEMory:AUDio:LOAD:FILTer (on page 1540)	Loads a user-defined audio filter from the specified file.
MMEMory:AVTime subgroup	**Amplitude versus Time measurement**
MMEMory:AVTime[:MEASview<y>]:LOAD:TRACe<x> (on page 1540)	Loads trace data from the specified file.
MMEMory:AVTime[:MEASview<y>]:SHOW:TRACe<x> (on page 1541)	Enables display of a recalled trace file.
MMEMory:AVTime[:MEASview<y>]:STORe:TRACe<x> (on page 1542)	Stores trace data in the specified file.
MMEMory:CALibration subgroup (Requires an RSA306, RSA306B, RSA500A series, RSA600A series, MDO4000B series, or MDO4000C series instrument be connected.)	**Measurement calibration**
MMEMory:CALibration:LOAD:CORRection:EXTernal:EDIT<x> (on page 1543)	Loads the external loss table data from a specified file.
MMEMory:CALibration:STORe:CORRection:EXTernal:EDIT<x> (on page 1543)	Stores an external loss table to a specified file.
MMEMory:DDEMod subgroup	**DPX spectrum measurement**
MMEMory:DDEMod:LOAD:FILTer:MEASurement:USER<x>	Loads a user-defined measurement filter from the specified file.
MMEMory:DDEMod:LOAD:FILTer:MEASurement:UOTHer (on page 1545)	Loads a user-defined measurement filter from the specified file.
MMEMory:DDEMod:LOAD:FILTer:REFerence:USER<x>	Loads the specified user-defined reference filter.
MMEMory:DDEMod:LOAD:FILTer:REFerence:UOTHer (on page 1546)	Loads the specified user-defined reference filter
MMEMory:DDEMod:LOAD:SYMBol:MAP (on page 1547)	Loads the specified symbol map filename.

MMEMory:DPX subgroup	**DPX spectrum measurement**
MMEMory:DPX:TDM:FREQuency:TXBer:LOAD:PATTern (on page 1549)	Loads the Tx BER User data pattern from the specified file.
MMEMory:DPX:LOAD:TRACe<x> (on page 1548)	Loads trace data from the specified file.
MMEMory:DPX:SHOW:TRACe<x> (on page 1548)	Enables display of a recalled trace file.
MMEMory:DPX:STORe:TRACe<x> (on page 1548)	Stores trace data in the specified file.
MMEMory:{FSETtling|PSETtling} subgroup	**Frequency and Phase Settling time measurements**
[MMEMory:{FSETtling|PSETtling}:LOAD:TRACe<x> (on page 1557)	Loads the Frequency or Phase Settling Time trace data from the specified file.
[MMEMory:{FSETtling|PSETtling}:SHOW:TRACe<x> (on page 1558)	Enables display of a recalled Frequency or Phase Settling trace file in Trace<x>.
[MMEMory:{FSETtling|PSETtling}:STORe:TRACe<x> (on page 1558)	Stores the Frequency or Phase Settling trace data in the specified file.
MMEMory:FVTime subgroup	**Frequency versus Time measurement**
MMEMory:FVTime[:MEASview<y>]:LOAD:TRACe (on page 1559)	Loads trace data from the specified file.
MMEMory:FVTime[:MEASview<y>]:SHOW:TRACe<x> (on page 1559)	Enables display of a recalled trace file.
MMEMory:FVTime[:MEASview<y>]:STORe:TRACe (on page 1560)	Stores trace data in the specified file.
MMEMory:IQVTime subgroup	**RF I&Q versus Time measurement**
MMEMory:IQVTime[:MEASview<y>]:LOAD:TRACe:I (on page 1560)	Loads I trace data from the specified file.
MMEMory:IQVTime[:MEASview<y>]:LOAD:TRACe:Q (on page 1561)	Loads Q trace data from the specified file.
MMEMory:IQVTime[:MEASview<y>]:SHOW:TRACe:I (on page 1561)	Loads trace data from the specified file.
MMEMory:IQVTime[:MEASview<y>]:SHOW:TRACe<x>:Q (on page 1562)	Enables display of a recalled trace file.
MMEMory:IQVTime[:MEASview<y>]:STORe:TRACe:I (on page 1562)	Stores I trace data in the specified file.
MMEMory:IQVTime[:MEASview<y>]:STORe:TRACe:Q (on page 1563)	Stores Q trace data in the specified file.
MMEMory:LTE subgroup	

MMEMory:LTE:ACLR:LOAD:TABLe (on page 1566)	Loads the LTE ACLR table containing the limits for enabled ranges from the specified .cvs file.
MMEMory:LTE:ACLR:STORe:TABLe (on page 1566)	Stores the LTE ACLR table containing the limits for enabled ranges in a specified .cvs file, allowing you to export the file into Microsoft Excel or other database system.
MMEMory:LOAD subgroup	**Load commands**
MMEMory:LOAD:IQ (on page 1563)	Loads time-domain IQ waveform from a specified file.
MMEMory:LOAD:STATe (on page 1563)	Loads the instrument setup from a specified file.
MMEMory:LOAD:TRACe (on page 1564)	Loads the trace data from a specified file.
MMEMory:OFDM CONSTe subgroup	**OFDM Constellation commands**
MMEMory:OFDM:CONSte:LOAD:TRACe (on page 1571)	Loads trace data from the specified file.
MMEMory:OFDM:CONSTe:SHOW:TRACe (on page 1571)	Enables the display of a recalled trace file.
MMEMory:OFDM:CONSte:STORe:TRACe (on page 1572)	Stores trace data in the specified file.
MMEMory:PHVTime subgroup	**Phase versus Time measurement**
MMEMory:PHVTime [:MEASview<y>]:LOAD:TRACe (on page 1572)	Loads trace data from the specified file.
MMEMory:PHVTime [:MEASview<y>]:SHOW:TRACe (on page 1573)	Enables display of a recalled trace file.
MMEMory:PHVTime [:MEASview<y>]:STORe:TRACe (on page 1573)	Stores trace data in the specified file.
MMEMory:PNOise subgroup	**Phase noise measurement**
MMEMory:PNOise:LOAD:TRACe<x> (on page 1574)	Loads the Phase Noise trace data from the specified file.
MMEMory:PNOise:SHOW:TRACe<x> (on page 1574)	Enables display of a recalled Phase Noise trace file.
MMEMory:PNOise:STORe:TRACe<x> (on page 1575)	Stores the Phase Noise trace data in the specified file.
MMEMory:SEM subgroup	**Spectral Emissions Mask measurement**
MMEMory:SEM:LOAD:TABLe (on page 1575)	Loads the SEM table from the specified file.
MMEMory:SEM:STORe:TABLe (on page 1575)	Stores the SEM table in the specified file.
MMEMory:SGRam subgroup	**Spurious measurement**

MMEMory:SGRam[:MEASview<y>]:LOAD:TRACe (on page 1576)	Loads the trace data from a specified file.
MMEMory:SGRam[:MEASview<y>]:SHOW:TRACe (on page 1576)	Enables display of a recalled trace file.
MMEMory:SGRam[:MEASview<y>]:STORe:TRACe (on page 1577)	Stores the Spectrogram trace data in the specified file.
MMEMory:SPECtrum subgroup	**Spectrum measurement**
MMEMory:SPECtrum[:MEASview<y>]:LOAD:TRACe (on page 1578)	Loads the trace data from a specified file.
MMEMory:SPECtrum[:MEASview<y>]:SHOW:TRACe<x> (on page 1579)	Enables display of a recalled trace file.
MMEMory:SPECtrum[:MEASview<y>]:STORe:TRACe<x> (on page 1580)	Stores the spectrum trace data in the specified file.
MMEMory:SPURious subgroup	**Spurious measurement**
MMEMory:SPURious:LOAD:TABLe (on page 1581)	Loads the spurious table from the specified file.
MMEMory:SPURious:STORe:TABLe (on page 1582)	Stores the spurious table in the specified file.
MMEMory:STORe subgroup	**Store commands**
MMEMory:STORe:IQ (on page 1583)	Saves time-domain IQ waveform in the acquisition memory to a specified file.
MMEMory:STORe:IQ:CSV (on page 1584)	Saves time-domain IQ waveform in the acquisition memory to a specified file in the CSV (Comma Separated Values) format.
MMEMory:STORe:IQ:MAT (on page 1584)	Saves time-domain IQ waveform in the acquisition memory to a specified file in the MATLAB format.
MMEMory:STORe:IQ:SELEct:DATA (on page 1584)	Sets or queries the type of data stored in an acquisition data file.
MMEMory:STORe:IQ:SELEct:FRAMes (on page 1585)	Sets or queries which frames to save when saving TIQ acquisition data files.
MMEMory:STORe:IQ:SELEct:LENGth (on page 1585)	Sets or queries what portion of each record is saved when saving acquisition data.
MMEMory:STORe:MSTate (on page 1586)	Stores the measurement parameters in a specified file.
MMEMory:STORe:RESults (on page 1586)	Stores the measurement results including measurement parameters and trace data to a specified file.
MMEMory:STORe:SCReen (on page 1587)	Stores the measurement results in a specified file.

MMEMory:STORe:STATe (on page 1587)	Stores the instrument setup in a specified file.
MMEMory:STORe:TRACe (on page 1587)	Stores trace data in a specified file.
MMEMory:TOVerview subgroup	**Spurious measurement**
MMEMory:TOVerview [:MEASview<y>]:LOAD:TRACe1 (on page 1588)	Loads the trace data from a specified file.
MMEMory:TOVerview [:MEASview<y>]:SHOW:TRACe1 (on page 1588)	Enables display of a recalled trace file.
MMEMory:TOVerview [:MEASview<y>]:STORe:TRACe1 (on page 1589)	Stores the selected trace data into the specified file.
MMEMory:WLAN subgroup	**Wireless LAN measurements**
MMEMory:WLAN:CRESponse:LOAD:TRACe<x> (on page 1592)	Loads the selected WLAN Channel Response trace data from the specified file.
MMEMory:WLAN:CRESponse:SHOW:TRACe<x> (on page 1593)	Enables the display of a recalled WLAN Channel Response trace.
MMEMory:WLAN:CRESponse:STORe:TRACe<x> (on page 1593)	Stores the WLAN Channel Response measurement trace data in the specified file.

Specifying the File

For loading and storing a file, specify the file following these rules

- You can omit the file extension to load and store data. The measurement-specific extension is automatically added.
- You can use the absolute path to specify the file name. For example,specify the SAMPLE1 file in the My Documents folder on the C drive as `"C:\My Documents\SAMPLE1"`.

`C:\Program Files\Tektronix\SignalVu-PC` initially.

Once a file is saved to a different directory, the new directory will be used as the default for all load and store operations.

Output commands

Use the OUTPut commands to control the characteristics of the signal output. See the Index for commands not listed in the following table.

Not all commands apply to all products. See the command descriptions for details.

Output commands

Command		Description
OUTPut:IF:{BANDwidth|BWIDth} (on page 1596)	(Option 05 only)	Sets or queries the IF output filter.
OUTPut:IF[:STATe] (on page 1597)	(Option 05 only)	Sets or queries whether to turn on or off IF output.
OUTPut:IQ[:STATe] (on page 1597)	(Option 05 only)	Sets or queries whether to turn on or off IQ output.

Command		Description
OUTPut:IQ:SOURce (on page 1598)	(Option 05 only)	Sets or queries the IQ data transfer via the LVDS card.
OUTPut:NOISe[:STATe] (on page 1598)		Sets or queries whether to turn on or off 28 V DC power.
OUTPut:ZS:{BANDwidth|BWIDth} (on page 1601)		Sets or queries the resolution bandwidth RBW filter.
OUTPut:ZS:{BANDwidth|BWIDth}:AUTO (on page 1601)		Sets or queries whether the resolution bandwidth will be set manually or automatically.
OUTPut:ZS:{BANDwidth|BWIDth}:STATe (on page 1601)		Sets or queries the state of the resolution bandwidth filter.
OUTPut:ZS[:STATe] (on page 1603)		Enable or disable the Zero Span output.
OUTPut:ZS:DELay? (on page 1602)		Queries the delay from the input connector to the Zero Span output.
OUTPut:ZS:FILTer:STATe (on page 1602)		Sets or queries the signal path of the filter to the Zero Span output.
OUTPut:ZS:VOLTage (on page 1603)		Sets or queries the voltage level at the Zero Span output.
OUTPut:ZS:VOLTage:AUTO (on page 1603)		Sets or queries or queries how the output voltage is referenced.
OUTPut:TGen:BRIDge:MODE (on page 1599)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the tracking generator bridge mode.
OUTPut:TGen:ENABle (on page 1599)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the power state of the tracking generator.
OUTPut:TGen:FREQuency (on page 1599)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the tracking generator frequency in Hz.
OUTPut:TGen:INSTalled? (on page 1600)	(Option 04 only; available for the RSA500A/600A series only))	Queries for the presence of the tracking generator hardware.
OUTPut:TGen:LEVel (on page 1600)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the tracking generator output level in dBm.
OUTPut:IF:{BANDwidth|BWIDth} (on page 1596)	(Option 05 only)	Sets or queries the IF output filter.
OUTPut:IF[:STATe] (on page 1597)	(Option 05 only)	Sets or queries whether to turn on or off IF output.
OUTPut:IQ[:STATe] (on page 1597)	(Option 05 only)	Sets or queries whether to turn on or off IQ output.

Command		Description
OUTPut:NOISe[:STATe] (on page 1598)		Sets or queries whether to turn on or off 28 V DC power.
OUTPut:ZS:{BANDwidth|BWIDth} (on page 1601)		Sets or queries the resolution bandwidth RBW filter.
OUTPut:ZS:{BANDwidth|BWIDth}:AUTO (on page 1601)		Sets or queries whether the resolution bandwidth will be set manually or automatically.
OUTPut:ZS:{BANDwidth|BWIDth}:STATe (on page 1601)		Sets or queries the state of the resolution bandwidth filter.
OUTPut:ZS[:STATe] (on page 1603)		Enable or disable the Zero Span output.
OUTPut:ZS:DELay? (on page 1602)		Queries the delay from the input connector to the Zero Span output.
OUTPut:ZS:FILTer:STATe (on page 1602)		Sets or queries the signal path of the filter to the Zero Span output.
OUTPut:ZS:VOLTage (on page 1603)		Sets or queries the voltage level at the Zero Span output.
OUTPut:ZS:VOLTage:AUTO (on page 1603)		Sets or queries or queries how the output voltage is referenced.
OUTPut:TGen:BRIDge:MODE (on page 1599)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the tracking generator bridge mode.
OUTPut:TGen:ENABle (on page 1599)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the power state of the tracking generator.
OUTPut:TGen:FREQuency (on page 1599)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the tracking generator frequency in Hz.
OUTPut:TGen:INSTalled? (on page 1600)	(Option 04 only; available for the RSA500A/600A series only))	Queries for the presence of the tracking generator hardware.
OUTPut:TGen:LEVel (on page 1600)	(Option 04 only; available for the RSA500A/600A series only))	Sets or queries the tracking generator output level in dBm.

Read commands

The READ commands acquire an input signal once in the single mode and obtain the measurement results from that data. See the Index for commands not listed in the following table.

To fetch the measurement results from the data currently residing in the memory without acquiring the input signal, use the FETCh commands.

Not all commands apply to all products. See the command descriptions for details.

Read commands

Command	Description
READ:ACPower subgroup	**Channel power and ACPR measurement**
READ:ACPower? (on page 1604)	Returns the ACPR measurement results.
READ:PULSe subgroup	**Pulse measurements**
READ:PULSe:CUMulative:HISTogram[:MEASview<y>]:OUTLier:HIGHer? (on page 1814)	Returns the outliers value exceeding the upper limit.
READ:PULSe:CUMulative:HISTogram[:MEASview<y>]:OUTLier:LOWer? (on page 1814)	Returns the outliers value below the lower limit.
READ:PULSe:CUMulative:HISTogram[:MEASview<y>]:PULse:COUNt? (on page 1815)	Returns the number of pulses in the bin.
READ:PULSe:CUMulative:HISTogram[:MEASview<y>]:PULse:TOTal? (on page 1815)	Returns the total number of pulses.
READ:PULSe:CUMulative:STATistics[:MEASview<y>] (on page 1816)	Returns the PulseCount, Max, Max TimeStamp, Min, Min TimeStamp, Peak to Peak, Average and Standard Deviation values for the chosen measurement.
READ:PULSe[:RESult][:MEASview<y>]:ADVanced (on page 1818)	Returns the Pulse Count, Max, Max at Pulse number, Min, Min at Pulse number, Peak to Peak, Average and Standard Deviation values for the chosen measurement in pulse table.
READ:PULSe[:RESult][:MEASview<y>]:ADVanced:RANGe (on page 1820)	Queries the Pulse Count, Max, Max TimeStamp, Min, Min TimeStamp, Peak to Peak, Average, and Standard Deviation values for the chosen measurement in the Pulse Table display.
READ:PULSe[:RESult][:MEASview<y>]:FABS? (on page 1827)	Returns the computed absolute frequency from the carrier in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:PPFD? (on page 1833)	Returns the computed pulse to pulse frequency difference from the carrier in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:PPPD? (on page 1835)	Returns the computed pulse to pulse phase difference from the carrier in the pulse table.
READ:PULSe:STATistics[:MEASview<y>]:ADVanced (on page 1842)	Returns the Pulse Count, Max, Max at Pulse number, Min, Min at Pulse number, Peak to Peak, Average and Standard Deviation values for the chosen measurement in pulse statistics.
READ:PULSe:STATistics[:MEASview<y>]:FABS (on page 1848)	Returns the absolute frequency in pulse statistics.
READ:PULSe:STATistics[:MEASview<y>]:MAX:PULSe:NUMber (on page 1852)	Returns the maximum value at a certain pulse number in pulse statistics.
READ:PULSe:STATistics[:MEASview<y>]:MIN:PULSe:NUMber? (on page 1853)	Returns the minimum value at a certain pulse number in pulse statistics.
READ:PULSe:STATistics[:MEASview<y>]:PPFD (on page 1856)	Returns the pulse-pulse frequency difference in pulse statistics.

Command	Description
READ:PULSe:STATistics[:MEASview<y>]:PPPD (on page 1858)	Returns the pulse-pulse phase difference in pulse statistics.
READ:Bluetooth subgroup	**Bluetooth measurements**
READ:BIBEmissions:FTX? (on page 1629)	Returns the band number corresponding to the transmitted FTX detected in the display.
READ:BIBEmissions:POWer? (on page 1630)	Returns all channel power results.
READ:BIBEmissions:RESUlts:STATus? (on page 1630)	Returns the Pass/Fail result status.
READ:BLUEtooth:CONSte:FERRor? (on page 1631)	Queries the frequency error.
READ:BLUEtooth:CONSte:TRACe? (on page 1631)	Returns the trace data for the display.
READ:BLUEtooth:EDIagram:FDEViation? (on page 1632)	Returns the frequency deviation vs. time trace data with the X values.
READ:BLUEtooth:EDIagram:FERRor? (on page 1632)	Returns the frequency error.
READ:BLUEtooth:EDIagram:HORiz:SCALe? (on page 1633)	Returns the value of the horizontal scale.
READ:BLUEtooth:EDIagram:I? (on page 1633)	Returns the I vs. time trace.
READ:BLUEtooth:EDIagram:Q? (on page 1634)	Returns the Q vs. time trace.
READ:BLUEtooth:FDVTime:TRACe? (on page 1634)	Returns the trace data or the display.
READ:BLUEtooth:FREQuency:ERROr? (on page 1635)	Returns the frequency error.
READ:BLUEtooth:FREQuency:ERROr:TYPE (on page 1635)	Returns the frequency error type.
READ:BLUEtooth:FREQuency:OFFSet:DRIFt:F1FZero? (on page 1636)	Returns the drift in frequency offset (f1–f0 — the frequency offset calculated in the first interval in the payload — the frequency offset calculated in the preamble).
READ:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5? (on page 1636)	Returns the maximum drift of the frequency offset in payload intervals spaced 50 µs away.
READ:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5:INTErval? (on page 1637)	Returns the interval at which the maximum drift of frequency offset in a duration of 50 µs occurred.
READ:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO? (on page 1637)	Returns the maximum drift of the frequency offset of the intervals in the payload from the preamble packet in the Bluetooth Frequency Deviation vs. Time display.

Command	Description
READ:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO:INTErval? (on page 1638)	Returns the interval (n) at which the maximum drift fn-f0 occurred in the Bluetooth Frequency Deviation vs. Time display.
READ:BLUEtooth:FREQuency:OFFSet:MAX? (on page 1638)	Returns the maximum frequency offset in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.
READ:BLUEtooth:FREQuency:OFFSet:MAX:INTErval? (on page 1639)	Returns the maximum frequency offset interval in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.
READ:BLUEtooth:FREQuency:OFFSet:PREAmble? (on page 1639)	Returns the offset calculated in the preamble region in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.
READ:BLUEtooth:MODUlation:CHARacteristics:AVErage:F? (on page 1640)	Returns the average frequency value when the selected test pattern is Other in the Bluetooth Frequency Deviation vs. Time display.
READ:BLUEtooth:MODUlation:CHARacteristics:AVErage:F2F1ratio? (on page 1640)	Returns the average ratio value for the high and low frequency deviation in the Bluetooth Frequency Deviation vs. Time display.
READ:BLUEtooth:MODUlation:CHARacteristics:AVErage:FONE? (on page 1641)	Returns the average frequency deviation for the low deviation pattern in the Bluetooth Frequency Deviation vs. Time display.
READ:BLUEtooth:MODUlation:CHARacteristics:AVErage:FTWO? (on page 1641)	Returns the average frequency deviation for the high deviation pattern.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:COUNt? (on page 1642)	Returns the number of packets analyzed to obtain average drift results.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero? (on page 1642)	Returns the drift f1–f0 value.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero:STATus? (on page 1643)	Returns the Pass/Fail drift f1–f0 result status in the packet.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5? (on page 1643)	Returns the maximum drift of the fn–fn-5 value.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5:STATus? (on page 1644)	Returns the Pass/Fail status of the maximum fn–fn-5 drift in the packet.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero? (on page 1644)	Returns the maximum drift fn–f0.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero:STATus? (on page 1645)	Returns the Pass/Fail result status of the fn–f0 maximum drift in the packet.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX? (on page 1649)	Returns the maximum frequency offset present in the packet.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX:STATus? (on page 1649)	Returns the Pass/Fail result status of the frequency offset maximum in the packet.
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble? (on page 1650)	Returns the frequency offset value in the preamble region.

Command	Description
READ:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble:STATus? (on page 1650)	Returns the Pass/Fail result status of the frequency offset in the preamble region.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:DELTa:F:MAX:PERCentage:COUNt? (on page 1651)	Returns the number of packets analyzed out of 10 packets for ΔFavg.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:DELTa:FONE:MAX:PERCentage:COUNt? (on page 1651)	Returns the number of packets analyzed out of 10 packets for the ΔF1avg.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:DELTa:FTWO:MAX:PERCentage? (on page 1652)	Returns the percentage of the ΔF2max% values that are above the specified limit.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:DELTa:FTWO:MAX:PERCentage:COUNt? (on page 1652)	Returns the number of packets analyzed out of 10 packets for ΔF2avg.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:DELTa:FTWO:MAX:PERCentage:STATus? (on page 1653)	Returns the Pass/Fail result status of the ΔF2Max% field.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:F? (on page 1654)	Returns the ΔFavg value.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:F2F1ratio? (on page 1653)	Returns the ratio of the ΔF2avg to ΔF1avg.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:F2F1ratio:STATus? (on page 1654)	Returns the Pass/Fail results status of the ΔF2avg/ΔF1avg field.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:FONE? (on page 1655)	Returns the delta F1 average value.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:FONE:STATus? (on page 1655)	Returns the Pass/Fail results status of the delta F1 average.
READ:BLUEtooth:SUMMary:MODULation:CHARacteristics:AVERage:FTWO? (on page 1656)	Returns the delta F2 average value,
READ:BLUEtooth:SUMMary:OUTPut:POWEr:AVERage? (on page 1657)	Returns the average output power.
READ:BLUEtooth:SUMMary:OUTPut:POWEr:AVERage:STATus? (on page 1657)	Returns the Pass/Fail results status of the average output power.
READ:BLUEtooth:SUMMary:OUTPut:POWEr:COUNt? (on page 1658)	Returns the number of packets analyzed out of 10 packets for the calculation of the output power.

Command	Description
READ:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:COUNt? (on page 1658)	Returns the number of packets analyzed out of 10 packets for calculation of the output power for EDR.
READ:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:DPSK? (on page 1659)	Returns the power in the DPSK portion of the EDR burst.
READ:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:GPSK? (on page 1659)	Returns the power in the GFSK portion of the EDR burst.
READ:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK? (on page 1660)	Returns the peak output power.
READ:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK:STATus? (on page 1660)	Returns the Pass/Fail results status of the peak output power.
READ:BLUEtooth:SUMMary:PACKet:BDR:CRC? (on page 1660)	Returns the Basic Rate value of the CRC field.
READ:BLUEtooth:SUMMary:PACKet:BDR:HEADer:ARQN? (on page 1661)	Returns the value of ARQN field.
READ:BLUEtooth:SUMMary:PACKet:BDR:HEADer:FLOW? (on page 1661)	Returns the value of Flow field.
READ:BLUEtooth:SUMMary:PACKet:BDR:HEADer:HEC? (on page 1662)	Returns the value of HEC field.
READ:BLUEtooth:SUMMary:PACKet:BDR:HEADer:LT:ADDRess? (on page 1662)	Returns the LT address.
READ:BLUEtooth:SUMMary:PACKet:BDR:HEADer:SEQN? (on page 1663)	Returns the value of SEQN field.
READ:BLUEtooth:SUMMary:PACKet:BDR:HEADer:TYPE? (on page 1664)	Returns the value of Type field.
READ:BLUEtooth:SUMMary:PACKet:BDR:PAYLoad:LENgth? (on page 1664)	Returns the preamble of the Basic Rate payload length.
READ:BLUEtooth:SUMMary:PACKet:BDR:PREAmble? (on page 1665)	Returns the preamble of the Basic Rate packet.
READ:BLUEtooth:SUMMary:PACKet:BDR:SYNC:WORD? (on page 1665)	Returns the sync word.
READ:BLUEtooth:SUMMary:PACKet:BDR:TYPE? (on page 1666)	Returns the packet type of the Basic Rate signal.
READ:BLUEtooth:SUMMary:PACKet:BLE:ACCEss:ADDRess? (on page 1666)	Returns the 32-bit Access Address.
READ:BLUEtooth:SUMMary:PACKet:BLE:CRC? (on page 1667)	Returns the value of the CRC field.

Command	Description
READ:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:LENGth? (on page 1668)	Returns the value of the PDU length field.
READ:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:RX:ADDRess? (on page 1670)	Returns the PDU Rx address.
READ:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TX:ADDRess? (on page 1670)	Returns the PDU Tx address.
READ:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TYPE? (on page 1671)	Returns the PDU packet type.
READ:BLUEtooth:SUMMary:PACKet:BLE:PREAmble? (on page 1671)	Returns the preamble of the BLE packet.
READ:BLUEtooth:SUMMary:PACKet:BLE:TYPE? (on page 1672)	Returns the packet type.
READ:NOISe:TABLe:VALue? (on page 1734)	Returns the noise table data.
READ:OBWidth:BOBW:XDBBandwidth? (on page 1735)	Returns the difference between the higher and lower frequency points corresponding to the value where it is X dB less from the value at the center frequency.
READ:OBWidth:BOBW:XDBMbandwidth:IN:BANDwidth? (on page 1735)	Returns the difference between the higher and lower frequency points corresponding to the value which it is the X dBm value measured inwards (coming from the ends to the center frequency).
READ:OBWidth:BOBW:XDBMbandwidth:IN:LEFT:FREQuency? (on page 1736)	Returns the frequency corresponding to the X dBm value to the left of the center frequency measured in the inward direction.
READ:OBWidth:BOBW:XDBMbandwidth:IN:RIGHt:FREQuency? (on page 1736)	Returns the frequency corresponding to the X dBm value to the right of the center frequency measured in the inward direction.
READ:OBWidth:BOBW:XDBMbandwidth:OUT:BANDwidth? (on page 1737)	Returns the difference between the higher and lower frequency points corresponding to the value which it is the X dBm value measured outwards (from the center frequency to the ends).
READ:OBWidth:BOBW:XDBMbandwidth:OUT:LEFT:FREQuency? (on page 1738)	Returns the frequency corresponding to the X dBm value to the left of the center frequency measured in the outward direction.
READ:OBWidth:BOBW:XDBMbandwidth:OUT:RIGHt:FREQuency? (on page 1738)	Returns the frequency corresponding to the X dBm value to the right of the center frequency measured in the outward direction.
READ:P25 subgroup	**P25 measurements**
READ:P25:CONSte:FERRor? (on page 1768)	Returns the frequency error.
READ:P25:SUMMary:LIMIt:SRA (on page 1772)	Returns Limit of Symbol Rate Accuracy measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:FIDelity:STATus (on page 1773)	Returns the Modulation Fidelity measurement status.

Command	Description
READ:P25:SUMMary:MODUlation:MEASurement:FIDelity? (on page 1772)	Returns the Modulation Fidelity measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:ACCUracy? (on page 1774)	Returns the Operational Frequency Accuracy measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:ACCUracy:STATus (on page 1774)	Returns the status of Frequency Accuracy measurement status.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:DEVIation:NEGPeak:STATus (on page 1775)	Returns the Status of Frequency Deviation, negative peak status.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:DEVIation:POSPeak:STATus (on page 1776)	Returns the status of Frequency Deviation, positive peak status.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:ERRor (on page 1776)	Returns the Frequency Error measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:SRA:STATus (on page 1778)	Returns Status of Symbol Rate Accuracy measurement status.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXOFF:STATus? (on page 1779)	Returns HCPM Pmax-off measurement status.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXOFF? (on page 1779)	This command returns the HCPM Pmax-off measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXON:STATus (on page 1780)	Returns Status of HCPM Pmax-on measurement status.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXON? (on page 1780)	This command returns the HCPM Pmax-on measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXSs:STATus (on page 1781)	Returns HCPM Pss-max measurement status.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXSs? (on page 1782)	Returns the HCPM Pss-max measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MINImum:STATus? (on page 1783)	Returns status of HCPM Pss-min measurement results based on the limit.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MINImum? (on page 1783)	Returns the HCPM Pss-min measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:OFFSlot:STATus? (on page 1784)	Returns Status of HCPM Offslot measurement based on the limit.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:OFFSlot? (on page 1783)	Returns the HCPM Offslot power results.

Command	Description
READ:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:HI (on page 1784)	Returns P_ACP_HI value which is displayed on P25 Summary display.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:LOW (on page 1785)	Returns P_ACP_LOW value which is displayed on P25 Summary display.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:MIN (on page 1785)	Returns Min Pk ACPR value which is displayed on P25 Summary Display.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:PEAK:ACPR:MIN:STATus (on page 1786)	Returns status of Min Pk ACPR value based on the limit.
READ:P25:SUMMary:POWEr:MEASurement:RF:STATus (on page 1786)	Returns status of RF measurement results.
READ:P25:SUMMary:POWEr:MEASurement:RF? (on page 1786)	Returns the RF output power results.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE:ACQ:COUNT? (on page 1787)	Returns the HCPM Time alignment's t_error_1 acquisition count over which the t_error_1 averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE:STATus (on page 1788)	Returns status of HCPM Time alignment's t_error_1 measurement results based on the limit.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE? (on page 1788)	Returns the HCPM Time alignment t_error_1 measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO:ACQ:COUNT? (on page 1789)	Returns the HCPM Time alignment's t_error_0 acquisition count over which the t_error_0 averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO:STATus (on page 1789)	Returns status of HCPM Time alignment's t_error_0 measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO? (on page 1790)	Returns the HCPM Time alignment's t_error_0 measurement results over which the t_error_0 averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TOBSync:ACQ:COUNT? (on page 1792)	Returns the HCPM Time alignment's t_obsync acquisition counts over which the t_obsync averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TOBSync? (on page 1790)	Returns the HCPM Time alignment's t_obsync measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT:BI? (on page 1792)	Returns the Average Transmitter Power Attack time busy/idle acquisition count over which the Phase 1 Attack time averaging is done.

Command	Description
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT? (on page 1791), READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT? (on page 1791)	Returns the Average Transmitter Power Attack acquisition count over which the Phase 1 Attack time averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:BI:STATus (on page 1793)	Returns status of Average Transmitter Power Encoder Attack Time measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:BI?	Returns the Average Transmitter Power Encoder Attack Time busy/idle measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:STATus (on page 1794)	Returns Status of Average Transmitter Encoder Attack Time measurement results based on the limit.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder? (on page 1794)	Returns the Average Transmitter Encoder Attack Time measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:BI:STATus (on page 1795)	Returns the Average Transmitter Encoder Attack Time measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:BI? (on page 1795)	Returns the Average Transmitter Power Attack Time, busy/idle measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:STATus (on page 1796)	Returns Status of Average Transmitter Power Attack Time measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr? (on page 1797)	Returns the Average Transmitter Power Attack Time measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy:ACQ:COUNT? (on page 1798)	Returns the Throughput delay acquisition counts over which the Throughput delay averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy:STATus (on page 1798)	Returns Status of Throughput delay measurement results based on the limit.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy? (on page 1797)	Returns the Throughput delay measurement results.
READ:P25:EDIagram:FDEViation? (on page 1769)	Returns the Frequency Deviation vs Time trace data with the X values.
READ:P25:EDIagram:FERRor? (on page 1769)	Returns the frequency error.
READ:P25:PVTime:BURSt:POWer? (on page 1769)	Returns the average power of the burst packet, in dBm, for the trace.
READ:P25:PVTime:FALL:TIMe? (on page 1770)	Queries the value of the width of the falling edge, in seconds.
READ:P25:PVTime:FTIMe? (on page 1770)	Queries the value of the width of the falling edge, in seconds.

Command	Description
READ:P25:PVTime:TRACe:X? (on page 1771)	Returns the horizontal values (time in seconds) for the P25 Power vs. Time trace.
READ:P25:PVTime:TRACe:XY? (on page 1771)	Returns the horizontal value (time in seconds) and vertical value (power) for the P25 Power vs. Time trace <x(n)><y(n)> is the horizontal value and vertical value pair at the *n*th data point.
READ:P25:SUMMary:MODUlation:MEASurement:FIDelity (on page 1772)	Returns the Modulation Fidelity measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:ACCUracy (on page 1773)	Returns the Operational Frequency Accuracy measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:DEVIation:NEGPeak (on page 1775)	Returns the Frequency Deviation, negative peak, measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:DEVIation:POSPeak (on page 1776)	Returns the Frequency Deviation, positive peak, measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:FREQuency:ERRor (on page 1776)	Returns the Frequency Error measurement results.
READ:P25:SUMMary:MODUlation:MEASurement:SRA (on page 1777)	Returns the Symbol Rate Accuracy measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXOFF (on page 1779)	This command returns the HCPM Pmax-off measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXON (on page 1780)	This command returns the HCPM Pmax-on measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MAXSs (on page 1781)	Returns the HCPM Pss-max measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:MINImum (on page 1783)	Returns the HCPM Pss-min measurement results.
READ:P25:SUMMary:POWEr:MEASurement:HCPM:OFFSlot (on page 1783)	Returns the HCPM Offslot power results.
READ:P25:SUMMary:POWEr:MEASurement:RF (on page 1786)	Returns the RF output power results.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE (on page 1787)	Returns the HCPM Time alignment t_error_1 measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ONE:ACQ:COUNT (on page 1787)	Returns the HCPM Time alignment's t_error_1 acquisition count over which the t_error_1 averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO (on page 1790)	Returns the HCPM Time alignment's t_error_0 measurement results over which the t_error_0 averaging is done.

Command	Description
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TERRor:ZERO:ACQ:COUNT (on page 1789)	Returns the HCPM Time alignment's t_error_0 acquisition count over which the t_error_0 averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TOBSync (on page 1790)	Returns the HCPM Time alignment's t_obsync measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:HCPM:TIME:ALIGNment:TOBSync:ACQ:COUNT (on page 1792)	Returns the HCPM Time alignment's t_obsync acquisition counts over which the t_obsync averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT (on page 1791), READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT (on page 1791)	Returns the Average Transmitter Power Attack acquisition count over which the Phase 1 Attack time averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ACQ:COUNT:BI (on page 1793)	Returns the Average Transmitter Power Attack time busy/idle acquisition count over which the Phase 1 Attack time averaging is done.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder (on page 1794)	Returns the Average Transmitter Encoder Attack Time measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:ENCOder:BI	Returns the Average Transmitter Power Encoder Attack Time, busy/idle measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr (on page 1794)	Returns the Average Transmitter Power Attack Time measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:ATTAck:TIME:POWEr:BI (on page 1795)	Returns the Average Transmitter Power Attack Time, busy/idle measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy (on page 1799)	Returns the Throughput delay measurement results.
READ:P25:SUMMary:TRIGger:MEASurement:PHASe1:THRUput:DELAy:ACQ:COUNT (on page 1797)	Returns the Throughput delay acquisition counts over which the Throughput delay averaging is done.
READ:ACPower subgroup (continued)	
READ:ACPower:CHANnel:POWer? (on page 1605)	Returns the average power of the main channel.
READ:ACPower:SPECtrum? (on page 1605)	Returns spectrum trace data of the ACPR measurement.
READ:{AM|FM|PM} subgroup (Option 21 only)	**AM/FM/PM measurement**
READ:{AM|FM|PM}? (on page 1606)	Returns the trace data.
READ:AM:AMINdex? (on page 1606)	Returns the modulation index .
READ:AM:AMNegative? (on page 1607)	Returns the negative peak modulation factor (–AM).

Command	Description
READ:AM:AMPositive? (on page 1607)	Returns the positive peak modulation factor (+AM).
READ:AM:RESult? (on page 1608)	Returns the AM measurement results.
READ:FM:PHALf? (on page 1700)	Returns the half peak-peak frequency deviation (Pk-Pk/2).
READ:{FM|PM}:FERRor? (on page 1700)	Returns the frequency error in the Frequency modulation and Phase modulation measurements.
READ:FM:PNEGative? (on page 1701)	Returns the negative peak frequency deviation (–Pk).
READ:FM:PPOSitive? (on page 1701)	Returns the positive peak frequency deviation (+Pk).
READ:FM:PTPeak? (on page 1702)	Returns the peak-peak frequency deviation (Pk-Pk).
READ:FM:RESult? (on page 1702)	Returns the FM measurement results.
READ:FM:RMS? (on page 1703)	Returns the RMS frequency deviation.
READ:PM:PNEGative? (on page 1806)	Returns the negative peak phase deviation (–Pk).
READ:PM:PPOSitive? (on page 1807)	Returns the positive peak phase deviation (+Pk).
READ:PM:PTPeak? (on page 1807)	Returns the peak-peak phase deviation (Pk-Pk).
READ:PM:RESult? (on page 1808)	Returns the PM measurement results.
READ:PM:RMS? (on page 1808)	Returns the RMS phase deviation.
READ:AUDio subgroup	**Audio measurement**
READ:AUDio:FERRor? (on page 1608)	Returns the carrier frequency error in the audio measurement.
READ:AUDio:FREQuency? (on page 1609)	Returns the audio frequency.
READ:AUDio:HARMonic:COUNt? (on page 1609)	Returns the number of harmonics in the audio spectrum measurement.
READ:AUDio:HARMonic<x>:AMPLitude? (on page 1610)	Returns the amplitude of the specified harmonic in the audio spectrum measurement.
READ:AUDio:HARMonic<x>:FREQuency? (on page 1610)	Returns the frequency of the specified harmonic in the audio spectrum measurement.
READ:AUDio:HNOise? (on page 1611)	Returns the difference between the current RMS modulation value and the reference value.
READ:AUDio:HNREFerence? (on page 1611)	Returns the Hum and Noise RMS modulation reference value.
READ:AUDio:HPTPeak? (on page 1612)	Returns the half peak-to-peak modulation excursion.
READ:AUDio:MODDist? (on page 1612)	Returns the modulation distortion for the audio measurement.

Command	Description
READ:AUDio:NHARmonic:COUNt? (on page 1613)	Returns the number of non-harmonics in the audio spectrum measurement.
READ:AUDio:NHARmonic<x>:AMPLitude? (on page 1613)	Returns the amplitude of the specified non-harmonic in the audio spectrum measurement.
READ:AUDio:NHARmonic<x>:FREQuency? (on page 1614)	Returns the frequency of the specified non-harmonic in the audio spectrum measurement.
READ:AUDio:PNEGative? (on page 1615)	Returns the minus peak modulation excursion.
READ:AUDio:POWer? (on page 1615)	Returns the carrier power or signal power depending the signal type.
READ:AUDio:PPOSitive? (on page 1616)	Returns the positive peak modulation excursion.
READ:AUDio:RMS? (on page 1616)	Returns the RMS modulation excursion for the audio measurement.
READ:AUDio:SINad? (on page 1617)	Returns the signal-to-noise and distortion for the audio measurement.
READ:AUDio:SNOise? (on page 1617)	Returns the signal level to noise level with the harmonic distortion and non-harmonic distortion components removed.
READ:AUDio:SPECtrum:TRACe<x>? (on page 1617)	Returns the audio spectrum trace data for the audio measurement.
READ:AUDio:THDist:DB? (on page 1619)	Returns the total harmonic distortion in dB in the audio measurement.
READ:AUDio:THDist? (on page 1618)	Returns the percentage of the total harmonic distortion in the audio measurement.
READ:AUDio:TNHDist:DB? (on page 1620)	Returns the total non-harmonic distortion in dB in the audio measurement.
READ:AUDio:TNHDist? (on page 1619)	Returns the percentage of the total non-harmonic distortion in the audio measurement.
READ:AVTime subgroup	**Amplitude versus Time measurement**
READ:AVTime[:MEASview<y>]:AVERage? (on page 1620)	Returns the RMS value.
READ:AVTime[:MEASview<y>]:{FIRSt|SECond|THIRd|FOURth}? (on page 1621)	Returns the trace data.
READ:AVTime[:MEASview<y>]:MAXimum? (on page 1625)	Returns the maximum value.
READ:AVTime[:MEASview<y>]:MAXLocation?	Returns the time at the maximum.
READ:AVTime[:MEASview<y>]MINimum? (on page 1626)	Returns the minimum value.
READ:AVTime[:MEASview<y>]:MINLocation? (on page 1627)	Returns the time at the minimum.

Command	Description
READ:AVTime[:MEASview<y>]:OGRAm? (on page 1627)	Returns the ogram trace data.
READ:AVTime[:MEASview<y>]:RESult: {FIRSt|SECond|THIRd|FOURth}? (on page 1628)	Returns the measurement results.
READ:AVTime[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1629)	Acquires a waveform and then returns trace waveform data of the bitmap trace in the Amplitude versus Time measurement.
READ:CCDF subgroup	**CCDF measurement**
READ:CCDF? (on page 1672)	Returns the CCDF measurement results.
READ:CCDF:{FIRSt|SECond|THIRd}:X? (on page 1673)	Returns the horizontal values of the specified trace.
READ:CCDF:{FIRSt|SECond|THIRd}:XY? (on page 1674)	Returns the horizontal and vertical value pairs of the specified trace.
READ:CCDF:{FIRSt|SECond|THIRd}[:Y]? (on page 1674)	Returns the vertical values of the specified trace.
READ:CONSte subgroup (Option 21 only)	**Constellation measurement**
READ:CONSte[:MEASview<x>]:FERRor? (on page 1675)	Returns the frequency error in Hz. The frequency error is the difference between the measured carrier frequency of the signal and the user selected center frequency of the analyzer.
READ:CONSte[:MEASview<x>]:RESults? (on page 1676)	Returns the constellation measurement results of EVM RMS, peak and location displayed on the bottom of the screen.
READ:CONSte[:MEASview<x>]:TRACe? (on page 1676)	Returns the constellation trace data.
READ:DDEMod subgroup (Option 21 only)	**General purpose digital modulation measurements**
READ:DDEMod[:MEASview<y>]:STABle? (on page 1677)	Returns the symbol table data.
READ:DIQVtime subgroup (Option 21 only)	**Demodulated I&Q versus Time measurement**
READ:DIQVtime[:MEASview<y>]:FERRor? (on page 1678)	Returns the frequency error.
READ:DIQVtime[:MEASview<y>]:I? (on page 1678)	Returns the I versus Time trace data.
READ:DIQVtime[:MEASview<y>]:Q? (on page 1679)	Returns the Q versus Time trace data.
READ:DPX subgroup	**DPX Spectrum measurement**
READ:DPX:DDENsity? (on page 1680)	Returns the calculated (DPX) density for the selected region.
READ:DPX:DGRam:LINE:COUNt? (on page 1680)	Returns the number of lines in the DPXogram measurement.

Command	Description
READ:DPX:DGRam:TIME[:SCALe]:OFFSet? (on page 1681)	Returns the time scale offset in the DPXogram measurement.
READ:DPX:RESults:TRACe<x>? (on page 1681)	Returns waveform data of specified trace.
READ:DPX:TRACe:AVERage? (on page 1682)	Returns waveform data of the average trace.
READ:DPX:TRACe:BITMap? (on page 1682)	Returns trace waveform data of the bitmap trace.
READ:DPX:TRACe:MATH? (on page 1683)	Returns waveform data of the math trace.
READ:DPX:TRACe:MAXimum? (on page 1683)	Returns waveform data of the maximum trace.
READ:DPX:TRACe:MINimum? (on page 1684)	Returns waveform data of the minimum trace.
READ:EDIagram subgroup (Option 21 only)	**Eye diagram**
READ:EDIagram[:MEASview<y>]:FDEViation? (on page 1684)	Returns the frequency deviation versus Time trace data with the X values.
READ:EDIagram[:MEASview<y>]:FERRor? (on page 1685)	Returns the frequency error in the eye diagram measurement.
READ:EDIagram[:MEASview<y>]:I? (on page 1686)	Returns the I versus Time trace data.
READ:EDIagram[:MEASview<y>]:Q? (on page 1686)	Returns the Q versus Time trace data.
READ:EVM subgroup (Option 21 only)	**EVM versus Time measurement**
READ:EVM[:MEASview<y>]:FERRor? (on page 1696)	Returns the frequency error in the EVM versus Time measurement.
READ:EVM[:MEASview<y>]:PEAK? (on page 1696)	Returns the peak value.
READ:EVM[:MEASview<y>]:PINDex? (on page 1697)	Returns the time at the EVM peak.
READ:EVM[:MEASview<y>]:RMS? (on page 1697)	Returns the RMS value.
READ:EVM[:MEASview<y>]:TRACe? (on page 1698)	Returns the EVM versus Time trace data.
READ:FDVTime subgroup (Option 21 only)	**Frequency deviation versus Time measurement**
READ:FDVTime[:MEASview<y>]:FERRor? (on page 1699)	Returns the frequency error in the Frequency deviation versus Time measurement.
READ:FDVTime[:MEASview<y>]:TRACe? (on page 1699)	Returns the Frequency deviation versus Time trace data.
READ:{FSETtling|PSETtling} subgroup	**Frequency and Phase Settling Time measurements**

Command	Description
READ:FSETtling:ERRor? (on page 1710)	Returns the settled error in Hz in Frequency Settling.
READ:{FSETtling|PSETtling}:FTTime? (on page 1703)	Returns the settling time from the trigger position in seconds.
READ:{FSETtling|PSETtling}:MASK[:PASS]? (on page 1704)	Returns whether the input signal passes the mask test.
READ:{FSETtling|PSETtling}:SETTled:FREQuency? (on page 1704)	Returns the frequency at which the signal is considered settled.
READ:{FSETtling|PSETtling}:SETTled[:PASS]? (on page 1704)	Returns whether the input signal is settled with the tolerance range.
READ:{FSETtling|PSETtling}:SETTled:TIME? (on page 1705)	Returns the settled time in seconds.
READ:{FSETtling|PSETtling}:SLMSd[:PASS]? (on page 1705)	Returns whether the input signal is settled within the specified tolerance and the signal is settled longer than the Minimum Settled Duration.
READ:{FSETtling|PSETtling}:STARt:TIME? (on page 1706)	Returns the start time for the measurement in seconds.
READ:{FSETtling|PSETtling}:TIME? (on page 1706)	Returns the settling time in seconds.
READ:{FSETtling|PSETtling}:TRACe<x>:X? (on page 1707)	Returns the Frequency or Phase values of the specified trace.
READ:{FSETtling|PSETtling}:TRACe<x>:XY? (on page 1707)	Returns the time and frequency or phase value pairs of the specified trace.
READ:{FSETtling|PSETtling}:TRACe<x>[:Y]? (on page 1708)	Returns the frequency or phase values of the specified trace.
READ:{FSETtling|PSETtling}:TRIGger:TIME? (on page 1709)	Returns the time when the trigger occurred in seconds.
READ:{FSETtling|PSETtling}:VALue? (on page 1709)	Returns the settled value in Hz for Frequency Settling and in degrees for Phase Settling.
READ:FVTime subgroup	**Frequency versus Time measurement**
READ:FVTime[:MEASview<y>]? (on page 1710)	Returns the Frequency versus Time trace data.
READ:FVTime[:MEASview<y>]:MAXimum? (on page 1711)	Returns the maximum value.
READ:FVTime[:MEASview<y>]:MAXLocation? (on page 1711)	Returns the time at which the frequency drift is maximum.
READ:FVTime[:MEASview<y>]:MINimum? (on page 1712)	Returns the minimum value.

Command	Description
READ:FVTime[:MEASview<y>]:MINLocation? (on page 1712)	Returns the time at which the frequency drift is minimum.
READ:FVTime[:MEASview<y>]:OGRAm? (Query only) (on page 1713)	Returns the ogram trace data.
READ:FVTime[:MEASview<y>]:RESult? (on page 1713)	Returns the measurement results.
READ:FVTime[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1714)	Acquires a waveform and then returns trace waveform data of the bitmap trace in the Frequency versus Time measurement.
READ:IQVTime subgroup	**RF I&Q versus Time measurement**
READ:IQVTime[:MEASview<y>]:I? (on page 1715)	Returns the I versus Time trace data.
READ:IQVTime[:MEASview<y>]:MAXimum? (on page 1715)	Returns the maximum value.
READ:IQVTime[:MEASview<y>]:MAXLocation? (on page 1716)	Returns the time at which the I or Q level is maximum.
READ:IQVTime[:MEASview<y>]:MINimum? (on page 1716)	Returns the minimum value.
READ:IQVTime[:MEASview<y>]:MINLocation? (on page 1717)	Returns the time at which the I or Q level is minimum.
READ:IQVTime[:MEASview<y>]:Q? (on page 1717)	Returns the Q versus Time trace data.
READ:IQVTime[:MEASview<y>]:RESult? (on page 1718)	Returns the measurement results.
READ:MCPower subgroup	**MCPR measurement**
READ:MCPower:ADJacent:CHANnels? (on page 1729)	Returns the power of adjacent channels.
READ:MCPower:CHANnel:POWer? (on page 1729)	Returns the reference power.
READ:MCPower:MAIN:CHANnels? (on page 1730)	Returns the power of main channels.
READ:MCPower:SPECtrum? (on page 1731)	Returns spectrum trace data.
READ:MERRor subgroup (Option 21 only)	**Magnitude Error versus Time measurement**
READ:MERRor[:MEASview<y>]:FERRor? (on page 1731)	Returns the frequency error.
READ:MERRor[:MEASview<y>]:PEAK? (on page 1732)	Returns the peak value.

Command	Description
READ:MERRor[:MEASview<y>]:PINDex? (on page 1732)	Returns the time at the Magnitude error peak.
READ:MERRor[:MEASview<y>]:RMS? (on page 1733)	Returns the RMS (Root-Mean-Square) value.
READ:MERRor[:MEASview<y>]:TRACe? (on page 1734)	Returns the Magnitude error versus Time trace data.
READ:OBWidth subgroup	**Occupied Bandwidth measurement**
READ:OBWidth:FREQuency:ERRor? (on page 1739)	Returns the frequency error.
READ:OBWidth:OBWidth:BANDwidth? (on page 1739)	Returns the occupied bandwidth.
READ:OBWidth:OBWidth:LEFT:FREQuency? (on page 1740)	Returns the left (lower) frequency of the occupied bandwidth.
READ:OBWidth:OBWidth:LEFT:LEVel? (on page 1740)	Returns the level at the left frequency of the occupied bandwidth.
READ:OBWidth:OBWidth:POWer? (on page 1741)	Returns the reference power in the Occupied Bandwidth measurement.
READ:OBWidth:OBWidth:RIGHt:FREQuency? (on page 1741)	Returns the right (higher) frequency of the occupied bandwidth.
READ:OBWidth:OBWidth:RIGHt:LEVel? (on page 1742)	Returns the level at the right frequency of the occupied bandwidth.
READ:OBWidth:SPECtrum? (on page 1742)	Returns spectrum trace data of the Occupied Bandwidth measurement.
READ:OBWidth:XDBBandwidth:BANDwidth? (on page 1743)	Returns the x dB bandwidth.
READ:OBWidth:XDBBandwidth:LEFT:FREQuency? (on page 1743)	Returns the left (lower) frequency of the x dB bandwidth.
READ:OBWidth:XDBBandwidth:LEFT:LEVel? (on page 1744)	Returns the level at the left frequency of the x dB bandwidth.
READ:OBWidth:XDBBandwidth:POWer? (on page 1744)	Returns the reference power in the x dB bandwidth measurement.
READ:OBWidth:XDBBandwidth:RIGHt:FREQuency? (on page 1745)	Returns the right (higher) frequency of the x dB bandwidth.
READ:OBWidth:XDBBandwidth:RIGHt:LEVel? (on page 1745)	Returns the level at the right frequency of the x dB bandwidth.
READ:OFDM subgroup	**Orthogonal Frequency Division Multiplexing measurement**

Command	Description
READ:OFDM:APOWer? (on page 1746)	Returns the average power.
READ:OFDM:APOWer:PEAK? (on page 1746)	Returns the peak-to-average power.
READ:OFDM:CONSte:MAGNitude? (on page 1747)	Returns the constellation magnitude data.
READ:OFDM:CONSte:PHASe? (on page 1747)	Returns the constellation phase data.
READ:OFDM:CONSte:TYPE? (on page 1748)	Returns the constellation context value
READ:OFDM:CONSte:VALue? (on page 1749)	Returns the constellation value.
READ:OFDM:CPE? (on page 1750)	Returns the Common Pilot Error magnitude.
READ:OFDM:CRESponse:MAGNitude? (on page 1750)	Returns the channel response magnitude data.
READ:OFDM:CRESponse:PHASe? (on page 1751)	Returns the channel response phase data.
READ:OFDM:EVM:PEAK:DECibel:ALL? (on page 1751)	Returns the peak EVM data for all subcarriers.
READ:OFDM:EVM:PEAK:DECibel:DATA? (on page 1752)	Returns the peak EVM data for the data subcarriers.
READ:OFDM:EVM:PEAK:DECibel:PILots? (on page 1752)	Returns the peak EVM data for the pilot subcarriers.
READ:OFDM:EVM:PEAK:PERCent:ALL? (on page 1752)	Returns the peak EVM data for all subcarriers.
READ:OFDM:EVM:PEAK:PERCent:DATA? (on page 1753)	Returns the peak EVM data for the data subcarriers.
READ:OFDM:EVM:PEAK:PERCent:PILots? (on page 1753)	Returns the peak EVM data for the pilot subcarriers.
READ:OFDM:EVM:PEAK:SCARrier:ALL? (on page 1754)	Returns the peak EVM data for all subcarriers.
READ:OFDM:EVM:PEAK:SCARrier:DATA? (on page 1754)	Returns the peak EVM data for the data subcarriers.
READ:OFDM:EVM:PEAK:SCARrier:PILots? (on page 1755)	Returns the peak EVM data for the pilot subcarriers.
READ:OFDM:EVM:PEAK:SYMBol:ALL? (on page 1755)	Returns the peak EVM data for all subcarriers.
READ:OFDM:EVM:PEAK:SYMBol:DATA? (on page 1756)	Returns the peak EVM data for the data subcarriers

Command	Description
READ:OFDM:EVM:PEAK:SYMBol:PILots? (on page 1756)	Returns the peak EVM data for the pilot subcarriers.
READ:OFDM:EVM:RMS:DECibel:ALL? (on page 1756)	Returns the RMS EVM data for all subcarriers.
READ:OFDM:EVM:RMS:DECibel:DATA? (on page 1757)	Returns the RMS EVM data for the data subcarriers.
READ:OFDM:EVM:RMS:DECibel:PILots? (on page 1757)	Returns the RMS EVM data for the pilot subcarriers.
READ:OFDM:EVM:RMS:PERCent:ALL? (on page 1758)	Returns the peak RMS data for all subcarriers.
READ:OFDM:EVM:RMS:PERCent:DATA? (on page 1758)	Returns the peak RMS data for the data subcarriers.
READ:OFDM:EVM:RMS:PERCent:PILots? (on page 1759)	Returns the peak RMS data for the pilot subcarriers.
READ:OFDM:EVM:TRACe<x>? (on page 1759)	Returns the EVM trace data.
READ:OFDM:FERRor? (on page 1760)	Returns the Frequency error reading.
READ:OFDM:FLATness:PASS? (on page 1760)	Verifies the average power levels of the subcarriers remain within the limits defined for a particular standard.
READ:OFDM:FLATness:RESult? (on page 1761)	Returns the summary results of each segment.
READ:OFDM:FLATness:TRACe<x>? (on page 1761)	Returns the OFDM Spectral Flatness trace data.
READ:OFDM:GAIN:IMBalance? (on page 1762)	Returns the gain imbalance.
READ:OFDM:IQ:ORIGin:OFFSet? (on page 1762)	Returns the IQ origin offset.
READ:OFDM:MERRor:TRACe<x>? (on page 1763)	Returns the magnitude error trace data.
READ:OFDM:PACKet:DIRection? (on page 1764)	Returns the direction of the packet.
READ:OFDM:PERRor:TRACe<x>? (on page 1764)	Returns the phase error trace data.
READ:OFDM:POWer:TRACe<x>? (on page 1765)	Returns the power trace data.
READ:OFDM:QUADrature:OFFSet? (on page 1765)	Returns the quadrature offset.
READ:OFDM:SCARriers? (on page 1766)	Returns the number of subcarriers.
READ:OFDM:SCARriers:SPACing? (on page 1766)	Returns the subcarrier spacing.

Command	Description
READ:OFDM:STABle:VALUe? (on page 1767)	Returns the number of bytes in the symbol table.
READ:OFDM:SYMBol:CERRor? (on page 1767)	Returns the symbol clock error.
READ:OFDM:SYMBol:COUNt? (on page 1768)	Returns the number of symbols.
READ:PERRor subgroup (Option 21 only)	**Phase error versus Time measurement**
READ:PERRor[:MEASview<y>]:FERRor? (on page 1799)	Returns the frequency error in the Phase error versus Time measurement.
READ:PERRor[:MEASview<y>]:PEAK? (on page 1800)	Returns the peak value in the Phase error versus Time measurement.
READ:PERRor[:MEASview<y>]:PINDex? (on page 1800)	Returns the time at the phase error peak.
READ:PERRor[:MEASview<y>]:RMS (on page 1801)	Returns the RMS (Root-Mean-Square) value in the Phase error versus Time measurement.
READ:PERRor[:MEASview<y>]:TRACe? (on page 1801)	Returns the Phase error versus Time trace data.
READ:PHVTime subgroup	**Phase versus Time measurement**
READ:PHVTime[:MEASview<y>]? (on page 1802)	Returns the Phase versus Time trace data.
READ:PHVTime[:MEASview<y>]:MAXimum? (on page 1803)	Returns the maximum value.
READ:PHVTime[:MEASview<y>]:MAXLocation? (on page 1803)	Returns the time at which the phase is maximum.
READ:PHVTime[:MEASview<y>]:MINimum? (on page 1804)	Returns the minimum value.
READ:PHVTime[:MEASview<y>]:MINLocation? (on page 1804)	Returns the time at which the phase is minimum.
READ:PHVTime[:MEASview<y>]:OGRAm? (Query Only) (on page 1805)	Returns the ogram trace data.
READ:PHVTime[:MEASview<y>]:RESult? (on page 1805)	Returns the results.
READ:PHVTime[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1806)	Acquires a waveform and then returns trace waveform data of the bitmap trace in the Phase versus Time measurement.
READ:PNOise subgroup (Option 11 only)	**Phase noise measurements**
READ:PNOise:ALL? (on page 1809)	Returns all the measurement results.
READ:PNOise:CARRier:FERRor? (on page 1810)	Returns the carrier frequency error.

Command	Description
READ:PNOise:CARRier:POWer? (on page 1810)	Returns the carrier power.
READ:PNOise:RESidual:FM? (on page 1811)	Returns the residual FM.
READ:PNOise:RMS:PNOise? (on page 1811)	Returns the RMS phase noise.
READ:PNOise:SPECtrum<x>:X? (on page 1812)	Returns the frequencies of the specified trace.
READ:PNOise:SPECtrum<x>:XY? (on page 1813)	Returns the frequency and phase noise pairs of the specified trace.
READ:PNOise:SPECtrum<x>[:Y]? (on page 1812)	Returns the phase noise values of the specified trace.
READ:PNOise:JITTer? (on page 1810)	Returns the jitter.
READ:PULSe subgroup	**Pulsed RF measurements**
READ:PULSe[:RESult][:MEASview<y>]:ATX? (on page 1823)	Returns the average transmitted power in the results table.
READ:PULSe[:RESult][:MEASview<y>]:AVERage? (on page 1824)	Returns the average on power in the results table.
READ:PULSe[:RESult][:MEASview<y>]:DRODb? (on page 1824)	Returns the droop in dB in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:DROop? (on page 1825)	Returns the droop in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:DUTPct? (on page 1826)	Returns the duty factor (%) in the results table.
READ:PULSe[:RESult][:MEASview<y>]:DUTRatio? (on page 1826)	Returns the duty factor (ratio) in the results table.
READ:PULSe[:RESult][:MEASview<y>]:FALL? (on page 1827)	Returns the fall time in the results table.
READ:PULSe[:RESult][:MEASview<y>]:FDELta? (on page 1828)	Returns the delta frequency in the results table.
READ:PULSe[:RESult][:MEASview<y>]:FRDeviation? (on page 1828)	Returns the frequency deviation in the results table.
READ:PULSe[:RESult][:MEASview<y>]:IRAMplitude? (on page 1829)	Returns the pulse impulse response amplitude in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:IRTime? (on page 1829)	Returns the impulse response time in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:MFReqerror? (on page 1830)	Returns the maximum frequency error in the results table.

Command	Description
READ:PULSe[:RESult][:MEASview<y>]:MPHerror? (on page 1830)	Returns the maximum phase error in the results table.
READ:PULSe[:RESult][:MEASview<y>]:OVEDb? (on page 1831)	Returns the overshoot in dB in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:OVERshoot? (on page 1832)	Returns the overshoot in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:PHDeviation? (on page 1832)	Returns the phase deviation in the results table.
READ:PULSe[:RESult][:MEASview<y>]:PPFRequency? (on page 1833)	Returns the pulse-pulse carrier frequency in the results table.
READ:PULSe[:RESult][:MEASview<y>]:PPOWer? (on page 1834)	Returns the peak power in the results table.
READ:PULSe[:RESult][:MEASview<y>]:PPPHase? (on page 1835)	Returns the pulse-pulse carrier phase in the results table.
READ:PULSe[:RESult][:MEASview<y>]:RINTerval? (on page 1836)	Returns the repetition interval in the results table.
READ:PULSe[:RESult][:MEASview<y>]:RIPDb? (on page 1836)	Returns the ripple in dB in the pulse table.
READ:PULSe[:RESult][:MEASview<y>]:RIPPle? (on page 1837)	Returns the ripple in the results table.
READ:PULSe[:RESult][:MEASview<y>]:RISE? (on page 1837)	Returns the rise time in the results table.
READ:PULSe[:RESult][:MEASview<y>]:RMSFreqerror? (on page 1838)	Returns the RMS frequency error in the results table.
READ:PULSe[:RESult][:MEASview<y>]:RMSPherror? (on page 1839)	Returns the RMS phase error in the results table.
READ:PULSe[:RESult][:MEASview<y>]:RRATe? (on page 1839)	Returns the repetition rate in the results table.
READ:PULSe[:RESult][:MEASview<y>]:TIME? (on page 1840)	Returns the time in the results table.
READ:PULSe[:RESult][:MEASview<y>]:WIDTh? (on page 1840)	Returns the pulse width in the results table.
READ:PULSe:STATistics[:MEASview<y>]? (on page 1841)	Returns the trace data of the pulse statistics measurement.
READ:PULSe:STATistics[:MEASview<y>]:ATX?	Returns the average transmitted power of the statistics.

Command	Description
READ:PULSe:STATistics[:MEASview<y>]:AVERage? (on page 1845)	Returns the average on power of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:DRODb? (on page 1846)	Returns the droop in dB of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:DROop? (on page 1846)	Returns the droop of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:DUTPct? (on page 1847)	Returns the duty factor (%) of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:DUTRatio? (on page 1848)	Returns the duty factor (ratio) of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:FALL? (on page 1849)	Returns the fall time of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:FDELta? (on page 1849)	Returns the delta frequency in the pulse statistics.
READ:PULSe:STATistics[:MEASview<y>]:FRDeviation? (on page 1850)	Returns the frequency deviation of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:IRAMplitude? (on page 1851)	Returns the Pulse Impulse Response amplitude measurement in the pulse statistics.
READ:PULSe:STATistics[:MEASview<y>]:IRTime? (on page 1851)	Returns the impulse response time in the pulse statistics.
READ:PULSe:STATistics[:MEASview<y>]:MFReqerror? (on page 1852)	Returns the maximum frequency error of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:MPHerror? (on page 1854)	Returns the maximum phase error of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:OVEDb? (on page 1854)	Returns the overshoot measurement result in dB in the pulse statistics
READ:PULSe:STATistics[:MEASview<y>]:OVERshoot? (on page 1855)	Returns the overshoot measurement result in the pulse statistics
READ:PULSe:STATistics[:MEASview<y>]:PHDeviation? (on page 1856)	Returns the phase deviation of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:PPFRequency? (on page 1857)	Returns the pulse-pulse carrier frequency of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:PPOWer? (on page 1857)	Returns the peak power of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:PPPHase? (on page 1859)	Returns the pulse-pulse carrier phase of the statistics.

Command	Description
READ:PULSe:STATistics[:MEASview<y>]:RINTerval? (on page 1859)	Returns the repetition interval of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:RIPDb? (on page 1860)	Returns the ripple in dB of the statistics
READ:PULSe:STATistics[:MEASview<y>]:RIPPle? (on page 1861)	Returns the ripple of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:RISE? (on page 1861)	Returns the rise time of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:RMSFreqerror? (on page 1862)	Returns the RMS frequency error of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:RMSPherror? (on page 1863)	Returns the RMS phase error of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:RRATe? (on page 1863)	Returns the repetition rate of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:WIDTh? (on page 1864)	Returns the pulse width of the statistics.
READ:PULSe:STATistics[:MEASview<y>]:X? (on page 1864)	Returns the horizontal values of the trace data of the pulse statistics measurement.
READ:PULSe:STATistics[:MEASview<y>]:XY? (on page 1865)	Returns the horizontal and vertical values of the trace data of the pulse statistics measurement.
READ:PULSe:TRACe[:MEASview<y>]:Y (on page 1866)	Returns the vertical values of the trace data of the pulse statistics measurement.
READ:PULSe:TRACe[:MEASview<y>]:X? (on page 1864)	Returns the time values of the pulse trace.
READ:PULSe:TRACe[:MEASview<y>]:XY? (on page 1865)	Returns the horizontal (time) and vertical value pairs of the pulse trace.
READ:PULSe:TRACe[:MEASview<y>]:Y? (on page 1866)	Returns the vertical values of the pulse trace.
READ:SEM subgroup	**Spectral Emissions Mask measurement**
READ:SEM:MHITs:COUNt? (on page 1868)	Returns the number of rows in the results table.
READ:SEM:MHITs<x>:AMPLitude:ABSolute? (on page 1868)	Returns the absolute amplitude of the specified mask hit signal.
READ:SEM:MHITs<x>:AMPLitude:RELative? (on page 1869)	Returns the relative amplitude of the specified mask hit signal.

Command	Description
READ:SEM:MHITs<x>:FREQuency? (on page 1869)	Returns the frequency of the specified mask hit signal.
READ:SEM:MHITs<x>:INTeg:ABSolute? (on page 1870)	Returns the absolute integration amplitude of the specified mask hit signal.
READ:SEM:MHITs<x>:INTeg:RELative? (on page 1870)	Returns the relative integration amplitude of the specified mask hit signal.
READ:SEM:MHITs<x>:MARGin:ABSolute? (on page 1871)	Returns the absolute margin for the specified mask hit signal.
READ:SEM:MHITs<x>:MARGin:RELative? (on page 1871)	Returns the relative margin for the specified mask hit signal.
READ:SEM:MHITs<x>:OFFSet? (on page 1872)	Returns the offset for the specified mask hit signal.
READ:SEM:PASS? (on page 1872)	Returns the pass/fail limit test result.
READ:SEM:REF:POWer? (on page 1873)	Returns the reference power level.
READ:SEM:SPECtrum:X? (on page 1873)	Returns the frequencies of the spectrum trace.
READ:SEM:SPECtrum:XY? (on page 1874)	Returns the frequency and amplitude pairs of the spectrum trace.
READ:SEM:SPECtrum[:Y]? (on page 1874)	Returns the amplitude of the spectrum trace.
READ:SGRam subgroup	**Spectrogram measurement**
READ:SGRam? (on page 1875)	Returns the spectrogram trace data.
READ:SPECtrum subgroup	**Spectrum measurement**
READ:SPECtrum:TRACe<x>? (on page 1875)	Returns the trace data in the Spectrum Analyzer measurement.
READ:SPECtrum[:MEASview<y>]:TRACe:BITMap? (Query Only) (on page 1876)	Acquires a waveform and then returns trace waveform data of the bitmap trace in the Spectrum measurement.
READ:SPURious subgroup	**Spurious measurement**
READ:SPURious:CARRier:POWer? (on page 1877)	Returns the carrier power.
READ:SPURious:COUNt? (on page 1877)	Returns the number of spurious signals.
READ:SPURious:PASS? (on page 1878)	Returns the pass/fail limit test result.
READ:SPURious:SPECtrum:X? (on page 1878)	Returns the frequencies of the spectrum trace.
READ:SPURious:SPECtrum:XY? (on page 1879)	Returns the frequency and amplitude pairs of the spectrum trace.
READ:SPURious:SPECtrum[:Y]? (on page 1879)	Returns the amplitudes of the spectrum trace.

Command	Description
READ:SPURious:SPUR<x>:AMPLitude:ABSolute? (on page 1880)	Returns the absolute amplitude of the specified spurious signal.
READ:SPURious:SPUR<x>:AMPLitude:RELative? (on page 1880)	Returns the relative amplitude of the specified spurious signal.
READ:SPURious:SPUR<x>:FREQuency:ABSolute? (on page 1881)	Returns the absolute frequency of the specified spurious signal.
READ:SPURious:SPUR<x>:FREQuency:RELative? (on page 1881)	Returns the relative frequency of the specified spurious signal.
READ:SPURious:SPUR<x>:LIMit:ABSolute? (on page 1882)	Returns the absolute amplitude of the limit for a spurious signal.
READ:SPURious:SPUR<x>:LIMit:RELative? (on page 1882)	Returns the relative amplitude of the limit for a spurious signal.
READ:SPURious:SPUR<x>:LIMit:VIOLation? (on page 1883)	Returns whether the specified spurious signal exceeds the limit or not.
READ:SPURious:SPUR<x>:RANGe? (on page 1883)	Returns the frequency range in which the spurious signal occurred.
READ:SQUality subgroup (Option 21 only)	**Signal quality measurement**
READ:SQUality[:MEASview<y>]:FREQuency:DEViation? (on page 1884)	Returns the frequency deviation in the signal quality measurement.
READ:SQUality[:MEASview<y>]:FREQuency:DEViation:TABLe? (on page 1884)	Returns the frequency deviation measurement results table.
READ:SQUality[:MEASview<y>]:FREQuency:ERRor? (on page 1885)	Returns the frequency error in the signal quality measurement.
READ:SQUality[:MEASview<y>]:GAIN:IMBalance? (on page 1886)	Returns the gain imbalance in the signal quality measurement.
READ:SQUality[:MEASview<y>]:ORIGin:OFFSet? (on page 1886)	Returns the origin offset in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:EVM? (on page 1887)	Returns the peak EVM (%) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:EVM:DB? (on page 1887)	Returns the peak EVM (dB) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:EVM:DB:OFFSet? (on page 1888)	Returns the peak offset EVM (dB) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:EVM:LOCation? (on page 1888)	Returns the time at which the EVM is peak.

Command	Description
READ:SQUality[:MEASview<y>]:PEAK:EVM:LOCation:OFFSet? (on page 1889)	Returns the time at which the offset EVM is peak.
READ:SQUality[:MEASview<y>]:PEAK:EVM:OFFSet? (on page 1890)	Returns the peak offset EVM (%) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:FERRor? (on page 1890)	Returns the peak FSK error in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:MERRor? (on page 1891)	Returns the peak magnitude error (%) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:MERRor:DB? (on page 1891)	Returns the peak magnitude error (dB) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:MERRor:LOCation? (on page 1892)	Returns the time at which the magnitude error is peak.
READ:SQUality[:MEASview<y>]:PEAK:PERRor? (on page 1893)	Returns the peak phase error in the signal quality measurement.
READ:SQUality[:MEASview<y>]:PEAK:PERRor:LOCation? (on page 1893)	Returns the time at which the phase error is peak.
READ:SQUality[:MEASview<y>]:QUADrature:ERRor? (on page 1894)	Returns the quadrature error in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RHO? (on page 1894)	Returns the ρ (waveform quality) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:EVM? (on page 1895)	Returns the RMS EVM (%) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:EVM:DB? (on page 1895)	Returns the RMS EVM (dB) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:EVM:DB:OFFSet? (on page 1896)	Returns the RMS offset EVM (dB) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:EVM:OFFSet? (on page 1896)	Returns the RMS offset EVM (dB) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:FERRor? (on page 1897)	Returns the RMS FSK error in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:MER:DB? (on page 1898)	Returns the RMS MER (dB) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:MERRor? (on page 1898)	Returns the RMS magnitude error (%) in the signal quality measurement.
READ:SQUality[:MEASview<y>]:RMS:MERRor:DB? (on page 1899)	Returns the RMS magnitude error (dB) in the signal quality measurement.

Command	Description
READ:SQUality[:MEASview<y>]:RMS:PERRor? (on page 1899)	Returns the RMS phase error in the signal quality measurement.
READ:SQUality[:MEASview<y>]:SYMBol:LENGth? (on page 1900)	Returns the number of analyzed symbols.
READ:SQUality[:MEASview<y>]:SYMBol:RATE? (on page 1900)	Returns the calculated symbol rate in Hz.
READ:SQUality[:MEASview<y>]:SYMBol:RATE:ERRor? (on page 1901)	Returns the value of the symbol rate error in percent.
READ:TDIagram subgroup (Option 21 only)	**Trellis diagram**
READ:TDIagram[:MEASview<y>]:FERRor? (on page 1901)	Returns the frequency error.
READ:TDIagram[:MEASview<y>]:TRACe? (on page 1902)	Returns the Trellis diagram trace data.
READ:TOVerview subgroup	**Time overview**
READ:TOVerview[:MEASview<y>]? (on page 1903)	Returns the trace data.
READ:WLAN subgroup	**Wireless LAN measurements**
READ:WLAN:CONSte:MAGNitude? (on page 1954)	Returns the magnitude data for the WLAN Constellation measurement.
READ:WLAN:CONSte:PHASe? (on page 1954)	Returns the phase values for the WLAN Constellation measurement.
READ:WLAN:CONSte:TYPE? (on page 1955)	Returns the type (context) for the WLAN Constellation measurement.
READ:WLAN:CONSte:VALue? (on page 1955)	Returns the value (decoded symbol) for the WLAN Constellation measurement.
READ:WLAN:CRESponse:MAGNitude? (on page 1956)	Returns the magnitude data of the WLAN Channel Response measurement.
READ:WLAN:CRESponse:PHASe? (on page 1956)	Returns the phase data of the WLAN Channel Response measurement.
READ:WLAN:EVM:TRACe<x>? (on page 1957)	Returns the trace data for the selected WLAN EVM trace.
READ:WLAN:FLATness:PASS? (on page 1958)	Verifies the average power level values of the subcarriers remain within the limits defined for a particular standard.
READ:WLAN:FLATness:RESult? (on page 1958)	Returns the summary results of each segment of the WLAN Spectral Flatness display.
READ:WLAN:FLATness:TRACe<x>? (on page 1959)	Returns the WLAN Spectral Flatness trace data.
READ:WLAN:MERRor:TRACe<x>? (on page 1959)	Returns the trace data for the selected WLAN Magnitude Error trace.
READ:WLAN:PERRor:TRACe<x>? (on page 1960)	Returns the trace data for the selected WLAN Phase Error trace.

Command	Description
READ:WLAN:PVTime:BURSt:POWer? (on page 1960)	Returns the average power of the burst packet.
READ:WLAN:PVTime:BURSt:WIDTh? (on page 1961)	Returns the value of the measured time width of the burst packet from Power-On to Power-Down.
READ:WLAN:PVTime:FALL:TIME? (on page 1961)	Returns the width of the falling edge.
READ:WLAN:PVTime:FALL:TIME:STARt? (on page 1962)	Returns the start time of the falling edge.
READ:WLAN:PVTime:FALL:TIME:STOP? (on page 1962)	Returns the stop time of the falling edge.
READ:WLAN:PVTime:FTIMe? (on page 1962)	Returns the width of the falling edge.
READ:WLAN:PVTime:RISE:TIME? (on page 1963)	Returns the width of the rising edge.
READ:WLAN:PVTime:RISE:TIME:STARt? (on page 1963)	Returns the start time of the rising edge.
READ:WLAN:PVTime:RISE:TIME:STOP? (on page 1964)	Returns the stop time of the rising edge.
READ:WLAN:PVTime:RTIMe? (on page 1964)	Returns the width of the rising edge.
READ:WLAN:PVTime:TRACe:X? (on page 1964)	Returns the horizontal values.
READ:WLAN:PVTime:TRACe:XY? (on page 1965)	Returns the horizontal value (time in seconds) and vertical value (power).
READ:WLAN:PVTime:TRACe[:Y]? (on page 1966)	Returns the vertical values (power).
READ:WLAN:STABle:VALUe? (on page 1966)	Returns the number of bytes in the symbol table.
READ:WLAN:SUMMary:BURSt:INDex? (on page 1967)	Returns the index of the analyzed packet.
READ:WLAN:SUMMary:BURSt:POWer? (on page 1967)	Returns the average power of all symbols in the packet.
READ:WLAN:SUMMary:BURSt:POWer:CFACtor? (on page 1967)	Returns the peak-to-average burst power factor.
READ:WLAN:SUMMary:CERRor? (on page 1968)	Returns the symbol clock error.
READ:WLAN:SUMMary:CPE? (on page 1968)	Returns the RMS magnitude error of the pilots.
READ:WLAN:SUMMary:EVM:PEAK:ALL? (on page 1969)	Returns the peak EVM value for all subcarriers or all chips.
READ:WLAN:SUMMary:EVM:PEAK:CHIP:ALL? (on page 1969)	Returns the chip at which the reported peak EVM value occurred.

Command	Description
READ:WLAN:SUMMary:EVM:PEAK:CHIP:ONEKchips? (on page 1969)	Returns the chip at which the reported peak EVM value over the first 1000 chips occurred.
READ:WLAN:SUMMary:EVM:PEAK:DATA? (on page 1970)	Returns the peak EVM value for the data subcarriers.
READ:WLAN:SUMMary:EVM:PEAK:ONEKchips? (on page 1970)	Returns the peak EVM value measured over the first 1000 chips.
READ:WLAN:SUMMary:EVM:PEAK:PILots? (on page 1971)	Returns the peak EVM value for the pilots in the WLAN measurement.
READ:WLAN:SUMMary:EVM:PEAK:SCARrier:ALL? (on page 1971)	Returns the subcarrier on which the ALL peak EVM value occurred.
READ:WLAN:SUMMary:EVM:PEAK:SCARrier:DATA? (on page 1972)	Returns the subcarrier on which the DATA peak EVM value occurred.
READ:WLAN:SUMMary:EVM:PEAK:SCARrier:PILots? (on page 1972)	Returns the subcarrier on which the PILOT peak EVM value occurred.
READ:WLAN:SUMMary:EVM:PEAK:SYMBol:ALL? (on page 1972)	Returns the symbol on which the reported EVM value occurred.
READ:WLAN:SUMMary:EVM:PEAK:SYMBol:DATA? (on page 1973)	Returns the symbol on which the DATA peak EVM value occurred.
READ:WLAN:SUMMary:EVM:PEAK:SYMBol:PILots? (on page 1973)	Returns the symbol on which the PILOT peak EVM value occurred.
READ:WLAN:SUMMary:EVM:RMS:ALL? (on page 1974)	Returns the RMS EVM data for all subcarriers.
READ:WLAN:SUMMary:EVM:RMS:AVERage? (on page 1974)	Returns the average RMS EVM value.
READ:WLAN:SUMMary:EVM:RMS:DATA? (on page 1974)	Returns the RMS EVM data for the data subcarriers.
READ:WLAN:SUMMary:EVM:RMS:MAXimum? (on page 1975)	Returns the maximum RMS EVM value.
READ:WLAN:SUMMary:EVM:RMS:ONEKchips? (on page 1975)	Returns the RMS EVM data for the 1k chips in the WLAN measurement measured over the first 1000 chips.
READ:WLAN:SUMMary:EVM:RMS:PILots? (on page 1976)	Returns the RMS EVM data for the pilot subcarriers.
READ:WLAN:SUMMary:FERRor? (on page 1976)	Returns the difference between the measured carrier frequency of the signal and the measurement frequency setting.
READ:WLAN:SUMMary:HEADer? (on page 1977)	Returns the received packet header information.

Command	Description
READ:WLAN:SUMMary:HTSig? (on page 1977)	Returns the decimal values of the received packet HT-SIGNAL
READ:WLAN:SUMMary:IQOFfset? (on page 1977)	Returns the average magnitude of the DC subcarrier level relative to total signal power.
READ:WLAN:SUMMary:LSIG? (on page 1978)	Returns the decimal values of the received packet (legacy) SIGNAL symbols fields.
READ:WLAN:SUMMary:PACKet? (on page 1978)	Returns the type and number of symbols in the Preamble and Data portions of the packet.
READ:WLAN:SUMMary:PACKet:DMODulation? (on page 1978)	Returns the modulation used in the Data symbols.
READ:WLAN:SUMMary:PACKet:FORMat? (on page 1979)	Returns the packet format setting.
READ:WLAN:SUMMary:PACKet:GUARd? (on page 1979)	Returns the packet guard interval used by the DATA symbols.
READ:WLAN:SUMMary:SIG? (on page 1980)	Returns the decimal values of the received packet SIGNAL symbols fields.
READ:WLAN:SUMMary:VHTSig:A? (on page 1980)	Returns the decimal values of the received packet VHT-SIGNAL(A) symbols fields.
READ:WLAN:SUMMary:VHTSig:B? (on page 1981)	Returns the decimal values of the received packet VHT-SIGNAL(B) symbols fields.
READ:LTE subgroup	
READ:LTE:ACLR:MHITs:COUNt? (on page 1718)	Returns the number of rows in the results table.
READ:LTE:ACLR:MHITs<x>:BANDwidth? (on page 1719)	Returns the bandwidth value of the row (channel).
READ:LTE:ACLR:MHITs<x>:CHANnel:NAME? (on page 1719)	Returns the channel name of the specified index in the results table.
READ:LTE:ACLR:MHITs<x>:FREQuency:OFFSet? (on page 1720)	Returns the frequency offset of the channel.
READ:LTE:ACLR:MHITs<x>:INTeg:LOWEr:ABSolute? (on page 1720)	Returns the lower absolute value of the channel.
READ:LTE:ACLR:MHITs<x>:INTeg:LOWEr:RELative? (on page 1720)	Returns the lower relative value of the channel.
READ:LTE:ACLR:MHITs<x>:INTeg:UPPEr:ABSolute? (on page 1721)	Returns the upper absolute value of the channel.
READ:LTE:ACLR:REFerence:POWer? (on page 1721)	Returns the frequency and amplitude pairs of the spectrum trace.

Command	Description
READ:LTE:ACLR:RESUlts:STATus? (on page 1722)	Returns the pass or fail status.
READ:LTE:ACLR:SPECtrum:X? (on page 1722)	Returns the frequency of the spectrum trace.
READ:LTE:ACLR:SPECtrum:XY? (on page 1723)	Returns the frequency and amplitude pairs of the spectrum trace
READ:LTE:ACLR:SPECtrum:Y? (on page 1723)	Returns the amplitude of the spectrum trace.
READ:LTE:CHSPectrum:OBW? (on page 1724)	Returns the Occupied Bandwidth (Hz).
READ:LTE:CHSPectrum:POWer:CHANnel? (on page 1724)	Returns the Channel Power value.
READ:LTE:CHSPectrum:SPECtrum? (on page 1724)	Returns spectrum trace data.
READ:LTE:CONSte:CELL:ID? (on page 1725)	Queries the Cell ID value.
READ:LTE:CONSte:FREQuency:ERRor? (on page 1725)	Queries Frequency Error value in Hz.
READ:LTE:CONSte:GROUp:ID? (on page 1726)	Queries the Group ID value.
READ:LTE:CONSte:SECTor:ID? (on page 1726)	Queries the Sector ID value.
READ:LTE:PVTime:OFFSlot:POWer? (on page 1726)	Returns the TOff power measurement value in dBm/MHz.
READ:LTE:PVTime:RESUlts:STATus (on page 1727)	Returns the pass or fail status.
READ:LTE:PVTime:TRACe:X? (on page 1727)	Returns the horizontal values (time in seconds).
READ:LTE:PVTime:TRACe:XY? (on page 1728)	Returns the horizontal value (time in seconds) and vertical value (power).
READ:LTE:PVTime:TRACe:Y? (on page 1728)	Returns the vertical values (power).

Sense commands

Use the SENSe commands to set up detailed measurement conditions. See the Index for commands not listed in the following table.

If the file extension is not included, it is assumed to be .tiq.

The Record and Playback command subgroup may not apply to your instrument.Details can be found in the command descriptions.

Sense commands

Command	Description
[SENSe] basic command subgroup	**General analysis parameter control**

Command	Description
[SENSe]:ACQuisition:{BANDwidth|BWIDth} (on page 1990)	Sets or queries the acquisition bandwidth.
[SENSe]:ACQuisition:RECord command subgroup	**Record and Playback function for USB RSA products**
[SENSe]:ACQuisition:RECord:FILE:LENGth (on page 1997)	Sets or queries how much data (time in milliseconds, seconds, or minutes) is recorded when recording starts.
[SENSe]:ACQuisition:RECord:FILE:LENGth:ENABle (on page 1997)	Sets or queries the file length conditions to determine how much data is recorded.
[SENSe]:ACQuisition:RECord:FILE:LENGth:UNITs (on page 1998)	Sets or queries the units used for the file length setting.
[SENSe]:ACQuisition:RECord:FILE:LOCation (on page 1998)	Sets the file location of the saved data records.
[SENSe]:ACQuisition:RECord:FILE:MAXimum (on page 1999)	Sets or queries how many times a record is created, of the specified File Length setting.
[SENSe]:ACQuisition:RECord:FILE:NAME:BASE (on page 1999)	Sets or queries the base file name that is used for all data recordings.
[SENSe]:ACQuisition:RECord:FILE:STRucture (on page 2000)	Sets or queries the file structure to use for the recorded data files.
[SENSe]:ACQuisition:RECord:STOP (on page 2002)	Starts the data recording.
[SENSe]:ACQuisition:RECord:TYPE (on page 2002)	Sets or queries when the recording starts streaming data to the specified file.
[:SENSe]:ANALysis:BANDwidth:FILTer:MODE (on page 2006)	Sets or queries measurement bandwidth filter mode.
[SENSe]:AUDio:DEMod command subgroup	**Record and Playback function for USB RSA products**
[SENSe]:AUDio:DEMod:MUTE (on page 2014)	Sets or queries the mute setting for the audio demodulation.
[SENSe]:AUDio:DEMod[:STATe] (on page 2014)	Sets or queries the audio demodulation state.
[SENSe]:AUDio:DEMod:STReam:ACTivate (on page 2015)	Sets or queries the Stream to File function.
[SENSe]:AUDio:DEMod:STReam[:FILE] (on page 2015)	Sets the file name and file location of the audio file when streaming to disc.
[SENSe]:AUDio:DEMod:TYPE (on page 2016)	Sets or queries both the audio signal demodulation type and bandwidth.
[SENSe]:AUDio:DEMod:VOLume (on page 2016)	Sets or queries the volume of the demodulated audio signal when played out through the PC speakers.
[SENSe] TXGain command subgroup	**Transmission Gain measurements**
SENSe:TXGain:{BANDwidth|BWIDth}[:RESolution] (on page 2471)	Sets or queries the resolution bandwidth.

Command	Description
SENSe:TXGain:FREQuency:CENTer (on page 2471)	Sets or queries the frequency at the center of the selected Span.
SENSe:TXGain:FREQuency:POINts (on page 2472)	Sets or queries the number of frequency steps in the measurement range.
SENSe:TXGain:FREQuency:SPAN (on page 2472)	Sets or queries the difference between the start and stop frequencies (span).
SENSe:TXGain:FREQuency:STARt (on page 2473)	Sets or queries the lowest frequency in the span.
SENSe:TXGain:FREQuency:STEP (on page 2473)	Sets or queries the frequency increment.
SENSe:TXGain:FREQuency:STOP (on page 2474)	Sets or queries the highest frequency in the span.
[SENSe] Bluetooth command subgroup	**Bluetooth measurements**
[SENSe]:BLUEtooth:ANALysis:LENGth (on page 2037)	Sets or returns the analysis length.
[SENSe]:BLUEtooth:ANALysis:LENGth:ACTual? (on page 2037)	Sets the actual analysis length.
[SENSe]:BLUEtooth:ANALysis:LENGth:AUTO (on page 2038)	Sets or queries the length mode.
[SENSe]:BLUEtooth:ANALysis:MEAS[:BANDwidth| BWIDth] (on page 2038)	Sets or returns the measurement bandwidth.
[SENSe]:BLUEtooth:ANALysis:MEAS:SOURce (on page 2039)	Sets or returns the analysis measurement source.
[SENSe]:BLUEtooth:ANALysis:OFFSet (on page 2039)	Sets or returns the symbol analysis offset.
[SENSe]:BLUEtooth:ANALysis:OFFSet:AUTO (on page 2040)	Determines whether to set the carrier frequency error automatically or manually.
[SENSe]:BLUEtooth:ANALysis:TIMe:UNITs (on page 2040)	Sets the time units.
[SENSe]:BLUEtooth([:BANDwidth]|:BWIDth):MODE (on page 2040)	Sets or returns the measurement bandwidth mode.
[SENSe]:BLUEtooth([:BANDwidth]|:BWIDth): TINTerval (on page 2041)	Sets or returns the measurement bandwidth frequency span.
[SENSe]:BLUEtooth([:BANDwidth]|:BWIDth): TINTerval:AUTO (on page 2041)	Sets or returns the bandwidth to Auto or Manual.
[SENSe]:BLUEtooth:CONStellation:PREFs: GRATicule:SHOW (on page 2042)	Show or hides the graticule state.
[SENSe]:BLUEtooth:CONStellation:PREFs: MARKERS:SHOW (on page 2042)	Show or hides the marker readout.

Command	Description
[SENSe]:BLUEtooth:CONStellation:PREFs:RADIx (on page 2043)	Sets or returns the radix of the marker readout.
[SENSe]:BLUEtooth:CONStellation:TRACE<x>: CONTent (on page 2043)	Sets or returns the appearance of the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:CONStellation:TRACe<x>: FREEze (on page 2044)	Sets or freezes the updates of the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:CONSTellation:TRACE<x>: POINtsPerSymbol (on page 2044)	Sets or returns the number of points per symbol (how many points to use between symbols) for the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:CONStellation:TRACe<x>: SHOW (on page 2045)	Shows or hides the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:DELTa:AVERage:FONE (on page 2045)	Sets or returns the average frequency for the low deviation pattern.
[SENSe]:BLUEtooth:DELTa:AVERage:FTWO (on page 2045)	Sets or returns the average frequency for the high deviation pattern.
[SENSe]:BLUEtooth:FDVTime:TRACE:OCTEt? (on page 2046)	Returns the selected octet number on the Frequency Deviation vs. Time display.
[SENSe]:BLUEtooth:FDVTime:TRACE:OCTEt:TOTAL:COUNt? (on page 2046)	Returns the total octet value to be selected on the Frequency Deviation vs. Time display.
[SENSe]:BLUEtooth:FDVTime:TRACE:VIEW:MODE (on page 2047)	Sets or queries view mode in the Frequency Deviation vs. Time display.
[SENSe]:BLUEtooth:FILTer:ALPHa (on page 2047)	Sets or returns the alpha filter factor (α/BT).
[SENSe]:BLUEtooth:FILTer:MEASurement (on page 2048)	Sets or returns the measurement filter setting.
[SENSe]:BLUEtooth:FILTer:REFerence (on page 2048)	Sets or returns the reference filter setting.
[SENSe]:BLUEtooth:FREQuency:DEViation (on page 2049)	ets or returns the frequency deviation.
[SENSe]:BLUEtooth:FREQuency:DEViation:AUTO (on page 2049)	Determines whether to detect the frequency deviation automatically or manually.
[SENSe]:BLUEtooth:FREQuency:ERRor (on page 2050)	Sets or returns the frequency error in the Bluetooth analysis parameters (when Auto is off).
[SENSe]:BLUEtooth:FREQuency:ERRor:AUTO (on page 2050)	Determines whether the frequency error is set to Auto or Manual.
[SENSe]:BLUEtooth:INBEmissions:POWEr:LIMIt<x> (on page 2050)	Sets or queries the limits of the Bluetooth InBand Emission settings.
[SENSe]:BLUEtooth:POWer:CLASs (on page 2051)	Sets or queries the power class of the Bluetooth standard.
[SENSe]:BLUEtooth:STANdard (on page 2051)	Sets or queries the Bluetooth standard.

Command	Description
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FONE:AVERage:MAX (on page 2052)	Sets or returns the maximum limit of the Basic Rate ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FONE:AVERage:MIN (on page 2052)	Sets or returns the minimum limit of the Basic Rate ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FTWO:PERcent (on page 2053)	Sets or returns the limit of the Basic Rate ΔF2 percentage.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FTWO:RESult (on page 2053)	Sets or returns the limit of the Basic Rate ΔF2 result.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:MAX:DRIFt:FNFZero (on page 2053)	Sets or returns the limit of the Basic Rate maximum drift fn–f0.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:MAX:FREQuency:OFFSet (on page 2054)	Sets or queries the limit of the Basic Rate maximum frequency offset.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:MAX:FREQuency:OFFSet:PREAmBDR (on page 2054)	Sets or queries the limit of the Basic Rate maximum frequency offset value from the preamble region.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:AVERage:MAX (on page 2055)	Sets or queries the limit of the Basic Rate Power Class 1 maximum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:AVERage:MIN (on page 2055)	Sets or queries the limit of the Basic Rate Power Class 1 minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:PEAK:MAX (on page 2056)	Sets or queries the limit of the Basic Rate Power Class 1 maximum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:PEAK:MIN (on page 2056)	Sets or queries the limit of the Basic Rate Power Class 1 minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:AVERage:MAX (on page 2057)	Sets or queries the limit of the Basic Rate Power Class 3 maximum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:AVERage:MIN (on page 2057)	Sets or queries the limit of the Basic Rate Power Class 3 minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:PEAK:MAX (on page 2058)	Sets or queries the limit of the Basic Rate Power Class 3 maximum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:PEAK:MIN (on page 2058)	Sets or queries the limit of the Basic Rate Power Class 3 minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:AVERage:MAX (on page 2058)	Sets or queries the limit of the Basic Rate Power Class 2 maximum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:AVERage:MIN (on page 2059)	Sets or queries the limit of the Basic Rate Power Class 2 minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:PEAK:MAX (on page 2059)	Sets or queries the limit of the Basic Rate Power Class 2 maximum peak output power value.

Command	Description
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:PEAK:MIN (on page 2060)	Sets or queries the limit of the Basic Rate Power Class 2 minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FONE:AVERage:MAX (on page 2064)	Sets or returns the maximum limit of the Low Energy ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FONE:AVERage:MIN (on page 2060)	Sets or returns the minimum limit of the Low Energy ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FTWO:PERcent (on page 2061)	Sets or returns the limit of the Low Energy ΔF2 percentage.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FTWO:RESult (on page 2061)	Sets or returns the limit of the Low Energy ΔF2 result.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:MAX:DRIFt:FNFZero (on page 2061)	Sets or returns the limit of the Low Energy maximum drift fn–f0.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:MAX:FREQuency:OFFSet (on page 2062)	Sets or returns the limit of the Low Energy maximum frequency offset.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:MAX:FREQuency:OFFSet:PREAmble (on page 2062)	Sets or returns the limit of the Low Energy maximum frequency offset value from the preamble region.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:AVERage:MAX (on page 2063)	Sets or returns the limit of the Low Energy maximum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:AVERage:MIN (on page 2063)	Sets or returns the limit of the Low Energy minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:PEAK:MAX (on page 2064)	Sets or returns the limit of the Low Energy maximum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:PEAK:MIN (on page 2064)	Sets or returns the limit of the Low Energy minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:MAX:DRIFt: F1FZero (on page 2065)	Sets or returns the limit of the maximum fn–fn0 drift in the packet.
[SENSe]:BLUEtooth:SUMMary:LIMIt:MAX:DRIFt: FNFN5 (on page 2065)	Sets or returns the limit of the maximum fn–fn5 drift in the packet.
[SENSe]:BLUEtooth:SYMBol:POINts (on page 2067)	Sets or returns the number of points per symbol (how many points to use between symbols).
[SENSe]:BLUEtooth:TEST:PATTern (on page 2068)	Sets or returns the test pattern type in the Bluetooth displays.
[SENSe]:BLUEtooth:TEST:PATTern:AUTO:DETEct (on page 2068)	Sets or returns the auto detect setting for the Bluetooth displays.
[SENSe]:BLUEtooth:TIME:ZERO:REFERENCE (on page 2069)	Sets or returns the Time Zero Reference setting in the Bluetooth displays.

Command	Description
[SENSe]:BLUEtooth:TRACe:TYPE (on page 2069)	Sets or returns the trace type.
SENSe:EDIagram subgroup	**Eye diagram**
[SENSe]:EDIagram[:MEASview<y>]:SELEcted: SOURce (on page 2124)	Sets or queries the source of Eye Diagram for a selected Measurement view number.
SENSe:EVM subgroup	**EVM measurement**
[SENSe]:DEMOd:EVM[:MEASview<y>]:SELEcted: SOURce (on page 2125)	Sets or queries the source of EVM versus Time for a selected Measurement view number.
SENSe:FDVTime subgroup	**FDVTime measurement**
[SENSe]:FDVTime[:MEASview<y>]:SELEcted: SOURce (on page 2172)	Sets or queries the source of Frequency deviation versus Time for a selected Measurement view number
[SENSe]:MERRor subgroup	**MERRor measurement**
[SENSe]:MERRor[:MEASview<y>]:SELEcted: SOURce (on page 2241)	Sets or queries the source of Magnitude error versus Time for a selected Measurement view number
[SENSe]:NOISe subgroup	**Noise Figure and Gain measurements**
[SENSe]:NOISe:AVERage:COUNt (on page 2242)	Sets or queries the acquisition counts over which the noise average is computed.
[SENSe]:NOISe:BANDwidth (on page 2242)	Sets or queries the resolution bandwidth (RBW).
[SENSE]:NOISe:CONTrol:SETTling:OFF[:TIME] (on page 2243)	Sets or queries the analyzer off settle time.
[SENSE]:NOISe:CONTrol:SETTling:ON[:TIME] (on page 2243)	Sets or queries the analyzer on settle time.
[SENSe]:NOISe:CORRection:ENR:CONSTant (on page 2244)	Sets and queries the excess noise ratio (ENR) constant.
[SENSe]:NOISe:CORRection:ENR:MODE (on page 2244)	Sets and queries the Noise Source mode for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:DATA? (on page 2245)	Queries the Noise Source model, serial number, and table values for frequency and ENR for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:ID (on page 2245)	Sets or queries the Noise Source Model for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:NEW (on page 2246)	Sets the Noise Source Model for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:SERial (on page 2247)	Sets or queries the Noise Source serial number for the noise displays.
[SENSe]:NOISe:CORRection:TCOLd:ADUT: UREFerence (on page 2247)	Sets or queries the analyzer to use the reference temperature (K) for the loss at the DUT output in the noise displays.

Command	Description
[SENSe]:NOISe:CORRection:TCOLd:ADUT[:VALue] (on page 2248)	Sets or queries the temperature value (K) for the loss at the DUT output in the noise displays.
[SENSe]:NOISe:CORRection:TCOLd:BDUT: UREFerence (on page 2248)	Sets or queries the analyzer to use the reference temperature (K) for the loss at the DUT input in the noise displays.
[SENSe]:NOISe:CORRection:TCOLd:BDUT[:VALue] (on page 2249)	Sets or queries the temperature value (K) for the loss at the DUT input in the noise displays.
[SENSe]:NOISe:CORRection:TCOLd[:REFerence] (on page 2249)	Sets or queries the reference temperature value (K) in the display.
[SENSe]:NOISe:FIGure:POINTs:COUNt (on page 2250)	Sets the number of sample points for the display.
[SENSe]:NOISe:FREQuency:CENTer (on page 2250)	Sets or queries the center frequency value (Hz).
[SENSe]:NOISe:FREQuency:MODE (on page 2251)	Sets or queries the frequency mode in the display.
[SENSe]:NOISe:FREQuency:SPAN (on page 2251)	Sets or queries the frequency Span value (Hz).
[SENSe]:NOISe:FREQuency:STARt (on page 2252)	Sets or queries the Start Frequency value.
[SENSe]:NOISe:FREQuency:STEPs (on page 2252)	Sets or queries the frequency Steps value.
[SENSe]:NOISe:FREQuency:STOP (on page 2253)	Sets or queries the Stop Frequency value.
[SENSe]:NOISe:FREQuency:TABLe:DATA? (on page 2253)	Queries the data in the Frequency Table.
[SENSe]:NOISe:FREQuency:TABLe:NEW (on page 2254)	Creates a new Frequency Table with the specified values for the noise display.
[SENSe]:OBWidth:BOBW:XDBM:MEASurement: DIRection (on page 2258)	Sets or queries the measurement direction.
[SENSe]:OBWidth:BOBW:XDBM:RANGe (on page 2258)	Sets or queries the measurement range.
[SENSe]:P25 subgroup	**APCO P25 measurements**
[SENSe]:P25:ANALysis:OFFSet (on page 2274)	Sets or queries the offset value.
[SENSe]:P25:ANALysis:OFFSet:AUTO (on page 2275)	Sets or queries if the offset is set to Auto or if Auto is off.
[SENSe]:P25([:BANDwidth]|:BWIDth):MODE (on page 2275)	Sets or queries the Measurement BW (bandwidth) (frequency span) mode as Auto, Manual, or Link to Span.
[SENSe]:P25([:BANDwidth]|:BWIDth):TINTerval (on page 2276)	Sets or queries the Measurement BW (bandwidth) (frequency span).
[SENSe]:P25([:BANDwidth]|:BWIDth):TINTerval: AUTO (on page 2276)	Sets or queries the Measurement BW (bandwidth) (frequency span) mode as Auto or Manual.
[SENSe]:P25:FILTer:MEASurement (on page 2277)	Sets or queries the Measurement Filter setting.

Command	Description
[SENSe]:P25:FILTer:REFerence (on page 2278)	Sets or queries the Reference Filter setting.
[SENSe]:P25:FREQuency:ERRor (on page 2279)	Sets or queries the Frequency Offset (when Auto is off).
[SENSe]:P25:FREQuency:ERRor:AUTO (on page 2279)	Sets or queries if the Frequency Error is set to Auto or if Auto is off.
[SENSe]:P25:MODUlation:CHANnel:([BANDwidth]|:BWIDth)]? (on page 2280)	Queries the actual P25 Preset channel bandwidth.
[SENSe]:P25:MODUlation:STANdard (on page 2280)	Sets or queries the modulation standard.
SENSe:P25:MODUlation:TYPE (on page 2281)	Sets or queries the modulation type.
[SENSe]:P25:SRATe (on page 2281)	Sets or queries the symbol rate value for measurements.
[SENSe]:P25:SUMMary:CLEar:RESults (on page 2282)	Clears the results from the P25 Summary display.
[SENSe]:P25:SUMMary:LIMIt:FA (on page 2282)	Sets or queries the On/Off state of limit comparison and the upper limit value for Operating Frequency Accuracy.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:AVERage:TERRor:ONE (on page 2283)	Sets or queries the On/Off state of limit comparison and the upper limit value for Average t_error_1.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:AVERage:TERRor:ZERO (on page 2283)	Sets or queries the On/Off state of limit comparison and the upper limit value for Average t_error_0.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:LOGIc:CHANnel:OFF:SLOT (on page 2284)	Sets or queries the On/Off state of limit comparison and the upper limit value for HCPM Transmitter Logic channel offslot.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:LOGIc:CHANnel:PEAK:ACPR (on page 2284)	Sets or queries the On/Off state of limit comparison and the upper limit value for HCPM Transmitter Logic channel Peak ACPR.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PEAK:NEGAtive:LO (on page 2285)	Sets or queries the On/Off state of limit comparison and the lower limit value for Frequency Deviation, negative peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PEAK:NEGAtive:UP (on page 2286)	Sets or queries the On/Off state of limit comparison and the upper limit value for Frequency Deviation, negative peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PEAK:POSItive:LO (on page 2286)	Sets or queries the On/Off state of limit comparison and the lower limit value for Frequency Deviation, positive peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PEAK:POSItive:UP (on page 2287)	Sets or queries for the On/Off state of limit comparison and the upper limit value for Frequency Deviation, positive peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PHASe[1/2]:F[1/2/3/4]:LO (on page 2288)	Sets or queries the On/Off state of limit comparison and the lower limit value for Frequency Deviation, f1/f2/f3/f4 for Phase1 or Phase2.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PHASe[1/2]:F[1/2/3/4]:UP (on page 2288)	Sets or queries the On/Off state of limit comparison and the upper limit value for Frequency Deviation, f1/f2/f3/f4 for Phase1 or Phase2.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PMAX:OFF (on page 2289)	Sets or queries the On/Off state of limit comparison and the upper limit value for Pmax-off.

Command	Description
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PMAX:ON (on page 2290)	Sets or queries the On/Off state of limit comparison and the upper limit value for Pmax-on.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PMAX:SS (on page 2291)	Sets or queries the On/Off state of limit comparison and the upper limit value for Pss-max.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:PMIN:SS (on page 2292)	Sets or queries the On/Off state of limit comparison and the upper limit value for Pss-min.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:TRANsmitter:AVERage:ATTK:ENCOder (on page 2292)	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack encoder.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:TRANsmitter:AVERage:ATTK:ENCOder:BI (on page 2293)	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack encoder, busy/idle.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:TRANsmitter: AVERage:ATTK:POWEr (on page 2293)	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack power.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:TRANsmitter: AVERage:ATTK:POWEr:BI (on page 2294)	Sets or queries for the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack power, busy/idle.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation:TRANsmitter: AVERage:THRUput:DLAY (on page 2295)	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average throughput delay.
[SENSe]:P25:SUMMary:LIMIt:MF (on page 2295)	Sets or queries the On/Off state of limit comparison and the upper limit value for Modulation Fidelity.
[SENSe]:P25:SUMMary:LIMIt:RF:OUTPower (on page 2296)	Sets or queries the On/Off state of limit comparison and the upper limit value for RF Output Power.
[SENSe]:P25:SUMMary:LIMIt:SRA (on page 2296)	Sets or queries the On/Off state of limit comparison and the upper limit value for Symbol Rate Accuracy.
[SENSe]:P25:SYMBols:POINts (on page 2297)	Sets or queries the Points/Symbols to display.
[SENSe]:P25:TEST:PATTern (on page 2297)	Sets or returns the test pattern type in the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement (on page 2298)	Sets or queries the Trigger Measurement from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TOBSync (on page 2299)	Sets or returns the tOB_sync (measured) value in the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TOBSync: AUTO (on page 2299)	Sets or queries the Auto checkbox selection from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient:FREQuency:BEHAviour (on page 2300)	Sets or queries the Trigger Measurements option Phase1-Transient Frequency Behavior from the P25 displays.

Command	Description
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency: BEHAviour:TIME:OFF (on page 2300)	Sets or queries the 't off' value when the Transient Frequency option is Transient Frequency Behavior On to Off for Phase1-Transient Frequency Behavior from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency: BEHAviour:TIME:OFF:AUTO (on page 2301)	Sets or queries the Auto checkbox selection when Transient Frequency is chosen as Transient Frequency Behavior On to Off from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency: BEHAviour:TIME:ON (on page 2301)	Sets or queries the 't on' value when the Transient Frequency option is Transient Frequency Behavior Off to On for Phase1-Transient Frequency Behavior from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency:BEHAviour:TIME:ON:AUTO (on page 2302)	Sets or queries the Auto checkbox selection when Transient Frequency is chosen as Transient Frequency behavior Off to On from the P25 displays.
[SENSe]:P25:TIMe:UNITs (on page 2298)	Sets or queries the fundamental unit of time for the P25 measurements.
SENSe:PERRor subgroup	**Perror measurement**
[SENSe]:PERRor[:MEASview<y>]:SELEcted: SOURce (on page 2302)	Sets or queries the source of Phase error versus Time for a selected Measurement view number.
SENSE:PULSe subgroup	**Pulse measurements**
[SENSe]:PULSe[:MEASview<y>]: ANALyze:MEASurement:TIME:TYPE (on page 2330)	Sets or Queries the Measurement(s) parameter from the Control panel settings of Define tab which is common across the Pulse displays.
[SENSe]:PULSe:CUMulative:HISTogram[: MEASview<y>]:BIN:COUNt (on page 2337)	Sets the Bins value in Histogram settings table in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative: HISTogram[:MEASview<y>]:CLEar:RESults (on page 2338)	Clears all scalar results in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative: HISTogram[:MEASview<y>]:MODE (on page 2338)	Sets the Histogram settings mode to Auto or Manual in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative: HISTogram[:MEASview<y>]:ORDinate (on page 2339)	Sets the Histogram readout in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative: HISTogram[:MEASview<y>]:OUTLier:ORDinate (on page 2339)	Sets the outlier readout in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative: HISTogram[:MEASview<y>]:SETtings:APPly (on page 2340)	Applies the new settings to the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative: HISTogram[:MEASview<y>]:XLIMit (on page 2340)	Sets the Xlimit in Histogram settings table in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative: STATistics[:MEASview<y>]:CLEar:RESults (on page 2341)	Clears all scalar results in the Cumulative Statistics display.

Command	Description
[SENSe]:PULSe:OGRAm[:MEASview<y>]:ANALysis :FVTime:FSTep:SHAPe (on page 2349)	Sets or queries the type of Filter shape from Analysis tab of Frequency vs Time from the Pulse-Ogram display.
[SENSe]:PULSe:OGRAm[:MEASview<y>]: ANALysis: FVTime:SPECtrum:ANALysis:REGion	Sets or queries the Spectrum Analysis region from Analysis tab of Frequency vs Time in the Pulse-Ogram display.
[SENSe]:PULSe:STATistics[:MEASview<y>]: IN:LINear:SCALe	Sets or queries the Calculate statistics in linear scale selection from the Pulse Statistics display.
[SENSe]:ROSCillator:SOURce (on page 2373)	Sets or queries the frequency reference oscillator source.
[SENSe]:ACQuisition subgroup	**Acquisition measurements**
[SENSe]: SVPC:ACQuisition:FFRame:ACTual? (on page 2463)	Queries the actual number of Fast Frames.
[SENSe]:SVPC:ACQuisition:FFRame:LIMit (on page 2463)	Sets or queries the limit number of Fast Frames.
[SENSe]:SVPC:ACQuisition:FFRame:STATe (on page 2464)	Determines whether to enable or disable the Fast Frame.
[SENSe]:ACQuisition:FSAVe:ENAble (on page 1992)	Set or queries the FastSave acquisition mode.
[SENSe]:ACQuisition:FSAVe:FILEs:MAXimum (on page 1992)	Set or queries the FastSave maximum number of files saved per run.
[SENSe]:ACQuisition:FSAVe:FORMat (on page 1993)	Set or queries the FastSave file format.
[SENSe]:ACQuisition:FSAVe:LOCation (on page 1993)	Set or queries the FastSave file save location (a directory).
[SENSe]:ACQuisition:FSAVe:NAME:BASE (on page 1994)	Set or queries the FastSave Base file name.
[SENSe]:ACQuisition:MEMory:AVAilable:SAMPles? (on page 1994)	Returns the amount of acquisition memory available in the instrument.
[SENSe]:ACQuisition:MEMory:CAPacity[:TIME]? (on page 1994)	Returns the acquisition memory capacity.
[SENSe]:ACQuisition:MEMory:USED[:PERCent]? (on page 1995)	Returns the percentage of the capacity used.
[SENSe]:ACQuisition:MODE (on page 1995)	Sets or queries the acquisition mode.
[SENSe]:ACQuisition:SAMPles (on page 2002)	Sets or queries the acquisition samples.
[SENSe]:ACQuisition:SEConds (on page 2003)	Sets or queries the acquisition length.
[SENSe]:ANALysis:ADVanced:DITHer (on page 2005)	Determines whether to enable or disable dithering.
[SENSe]:ANALysis:ADVanced:DITHer:HWARe: STATus? (on page 2006)	Returns the dithering hardware status.

Command	Description
[SENSe]:ANALysis:LENGth[:SOURce<z>]:ACTual (on page 2007)	Sets or queries the analysis length. Programming a specified length sets [SENSe]:ANALysis:AUTO OFF.
[SENSe]:ANALysis:LENGth:ACTual?	Queries the actual analysis length.
[SENSe]:ANALysis:LENGth[:SOURce<z>]:AUTO (on page 2008)	Determines whether to set the analysis length automatically or manually.
[SENSe]:ANALysis:REFerence[:SOURce<z>] (on page 2008)	Sets or queries the analysis time reference.
[SENSe]:ANALysis:STARt[:SOURce<z>] (on page 2009)	Sets or queries the analysis offset time. Programming a specified offset time sets [SENSe]:ANALysis:STARt:AUTO OFF.
[SENSe]:ANALysis:STARt[:SOURce<z>]:AUTO (on page 2009)	Determines whether to set the analysis offset automatically or manually.
[SENSe]:ANSPectrum:STARt:AUTO:METHod (on page 2010)	Sets or queries the method used for computing auto analysis and spectrum offsets.
[SENSe]:MEASurement:FREQuency[:SOURce<z>] (on page 2240)	Sets or queries the measurement frequency.
[SENSe]:MEASurement:FREQuency[:SOURce<z>]:CENTer:LOCK (on page 2241)	Sets or queries locking the measurement center frequency.
[SENSe]:POWer:UNITs (on page 2319)	Sets or queries the fundamental unit of power.
[SENSe]:ROSCillator:SOURce (on page 2373)	Sets or queries the reference oscillator source.
[SENSe]:SIGNalpath:PRIority (on page 2414)	Sets or queries the signal path priority for the measurements (for RSA5000 series only).
[SENSe]:USETtings (on page 2474)	Updates the analyzer settings.
[SENSe]:ACPower subgroup	**Channel power and ACPR measurement**
[SENSe]:ACPower:AVERage (on page 1981)	Sets or queries how to average waveform.
[SENSe]:ACPower:AVERage:COUNt (on page 1982)	Sets or queries the number of traces for averaging.
[SENSe]:ACPower:{BANDwidth|BWIDth}[:RESolution] (on page 1982)	Sets or queries the resolution bandwidth (RBW).
[SENSe]:ACPower:{BANDwidth|BWIDth}[:RESolution]:ACTual? (on page 1982)	Queries the actual resolution bandwidth (RBW).
[SENSe]:ACPower:{BANDwidth|BWIDth}[:RESolution]:AUTO (on page 1983)	Sets or queries whether to set the RBW automatically.
[SENSe]:ACPower:{BANDwidth|BWIDth}:VIDeo (on page 1983)	Sets or queries the video bandwidth (VBW).

Command	Description
[SENSe]:ACPower:{BANDwidth|BWIDth}:VIDeo: STATe (on page 1984)	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:ACPower:CHANnel:{BANDwidth|BWIDth} (on page 1984)	Sets or queries the channel bandwidth.
[SENSe]:ACPower:CHANnel:FILTer (on page 1985)	Sets or queries the adjacent channel filter.
[SENSe]:ACPower:CHANnel:PAIRs (on page 1985)	Sets or queries the number of adjacent channel pairs.
[SENSe]:ACPower:CHANnel:SPACing (on page 1986)	Sets or queries the channel-to-channel spacing.
[SENSe]:ACPower:CHIPrate (on page 1986)	Sets or queries the chip rate.
[SENSe]:ACPower:CLEar:RESults (on page 1986)	Restarts the average trace.
[SENSe]:ACPower:FREQuency (on page 1987)	Sets or queries the center frequency.
[SENSe]:ACPower:FREQuency:STEP (on page 1987)	Sets or queries the frequency step size.
[SENSe]:ACPower:FREQuency:STEP:AUTO (on page 1988)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:ACPower:NFLoor:STATe (on page 1988)	Sets or queries whether to enable the correction for noise floor.
[SENSe]:ACPower:POINts:COUNt (on page 1989)	Sets or queries the number of trace points.
[SENSe]:ACPower:RRCRolloff (on page 1989)	Sets or queries the filter parameter for the Root Raised Cosine filter.
[SENSe]:ACPower:SYMBrate (on page 1990)	Sets or queries the symbol rate.
[SENSe]:{AM|FM|PM} subgroup (Option 21 only)	**AM/FM/PM measurement**
[SENSe]:{AM|FM|PM}:{BANDwidth|BWIDth}: MEASurement (on page 2003)	Sets measurement bandwidth for the AM, FM, or PM demodulation to analyze.
[SENSe]:{AM|FM|PM}:CLEar:RESults (on page 2004)	Clears measurement results.
[SENSe]:{AM|FM|PM}:{MTPoints|MAXTracepoints} (on page 2004)	Sets or queries the maximum trace points.
[SENSe]:AM:DETect:AMPLitude (on page 2005)	Sets or queries the carrier amplitude detection method.
[SENSe]:{FM|PM}:BURSt:THReshold (on page 2172)	Sets or queries the threshold level to detect bursts.
[SENSe]:{FM|PM}:FREQuency:OFFSet (on page 2173)	Sets or queries the carrier frequency offset in the FM/PM measurement.
[SENSe]:{FM|PM}:FREQuency:OFFSet:MARKer (on page 2173)	Sets the frequency offset from selected marker or delta marker location.

Command	Description
[SENSe]:{FM|PM}:FREQuency:SEARch:AUTO (on page 2174)	Sets or queries whether to detect the carrier frequency automatically.
[SENSe]:PM:PHASe:OFFSet (on page 2314)	Sets the phase offset from the selected marker location.
[SENSe]:PM:PHASe:OFFSet:MARKer (on page 2314)	Sets the carrier frequency offset from the selected marker.
[SENSe]:PM:PHASe:SEARch:AUTO (on page 2315)	Sets or queries whether to detect the phase automatically or manually.
{SENSe}:AUDio subgroup	**Audio measurement**
[SENSe]:AUDio:AVERage:COUNt (on page 2010)	Sets or queries the number of harmonics to average in the audio measurement.
[SENSe]:AUDio:AVERage:ENABle (on page 2011)	Enables or disables averaging of harmonics in the audio measurement.
[SENSe]:AUDio:BANDwidth|BWIDth (on page 2011)	Sets or queries the audio measurement bandwidth.
[SENSe]:AUDio:BANDwidth|BWIDth:RESolution (on page 2012)	Sets or queries the resolution bandwidth for the audio measurement.
[SENSe]:AUDio:BANDwidth|BWIDth:RESolution: AUTO (on page 2012)	Sets or queries the resolution bandwidth for the audio measurement.
[SENSe]:AUDio:BANDwidth|BWIDth:RESolution: SHAPe (on page 2012)	Sets or queries the shape of the resolution bandwidth for the audio measurement.
[SENSe]:AUDio:CARRier:OFFSet (on page 2013)	Sets or queries the carrier frequency offset.
[SENSe]:AUDio:CARRier:OFFSet:AUTO (on page 2013)	Determines whether to set the carrier frequency error automatically or manually.
[SENSe]:AUDio:FILTer:DEEMphasis (on page 2017)	Sets or queries the de-emphasis filter type.
[SENSe]:AUDio:FILTer:DEEMphasis:ENABle (on page 2017)	Enables or disables the de-emphasis filter for the audio measurement.
[SENSe]:AUDio:FILTer:DEEMphasis:USER (on page 2018)	Sets or queries a user-defined de-emphasis audio filter.
[SENSe]:AUDio:FILTer:HPF (on page 2018)	Sets or queries the high-pass filter type.
[SENSe]:AUDio:FILTer:HPF:ENABle (on page 2019)	Enables or disables the high-pass audio filter for the audio measurement.
[SENSe]:AUDio:FILTer:HPF:USER (on page 2019)	Sets or queries a user-defined high-pass audio filter.
[SENSe]:AUDio:FILTer:DEEMphasis:USER (on page 2018)	Sets or queries a user-defined high-pass audio filter.
[SENSe]:AUDio:FILTer:LPF (on page 2019)	Sets or queries the low-pass filter type.
[SENSe]:AUDio:FILTer:LPF:ENABle (on page 2020)	Enables or disables the low-pass filter for the audio measurement.

Command	Description
[SENSe]:AUDio:FILTer:LPF:USER (on page 2020)	Sets or queries a user-defined low-pass audio filter.
[SENSe]:AUDio:FILTer:MODE:PREDefined (on page 2021)	Selects a predefined audio filter or a filter stored on the instrument file.
[SENSe]:AUDio:FILTer:SOURce? (on page 2021)	Queries the measurement filter from the user-defined source file.
[SENSe]:AUDio:FILTer:STANdard (on page 2022)	Sets or queries the Standard audio filter.
[SENSe]:AUDio:FILTer:STANdard:ENABle (on page 2022)	Enables or disables a Standard filter for the audio measurement.
[SENSe]:AUDio:FREQuency (on page 2023)	Sets or queries the reference audio frequency.
[SENSe]:AUDio:FREQuency:AUTO (on page 2023)	Determines whether to set the reference audio frequency automatically or manually.
[SENSe]:AUDio:HNOise:ENABle (on page 2023)	Enables or disables the Hum and Noise information in the Audio Summary display.
[SENSe]:AUDio:HNOise:REFerence (on page 2024)	Captures the current Hum and Noise information in the Audio Summary display.
[SENSe]:AUDio:SIGnal:TYPE (on page 2024)	Sets or queries the audio signal type.
[SENSe]:AUDio:SPECtrum:CLEar:RESults (on page 2025)	Clears the results of the audio spectrum measurement.
[SENSe]:AUDio:SPECtrum:POINts:COUNt (on page 2025)	Sets or queries the number of trace points acquired for the audio spectrum display.
[SENSe]:AUDio:UNITs (on page 2026)	Sets or queries the units of the audio spectrum measurement.
[SENSe]:AVTime subgroup	**Amplitude versus Time measurement**
[SENSe]:AVTime[:MEASview<y>]:{BANDwidth| BWIDth} (on page 2028)	Sets or queries the time-domain bandwidth filter.
[SENSe]:AVTime[:MEASview<y>]:{BANDwidth| BWIDth}:ACTual? (on page 2028)	Queries the actual resolution bandwidth (RBW).
[SENSe]:AVTime[:MEASview<y>]:CLEar:RESults (on page 2029)	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:AVTime[:MEASview<y>]:COLor (on page 2029)	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:AVTime[:MEASview<y>]:COLor:MAXimum (on page 2030)	Sets or queries the maximum value of the color axis in the Amplitude versus Time measurement.
[SENSe]:AVTime[:MEASview<y>]:COLor:MINimum (on page 2031)	Sets or queries the minimum value of the color axis in the Amplitude versus Time measurement.
[SENSe]:AVTime[:MEASview<y>]:COLor:REVerse[:STATe] (on page 2031)	Determines whether to reverse the color palette in the Amplitude versus Time view. When reversed, the highest density takes the color normally used for the lowest.

Command	Description
[SENSe]:AVTime[:MEASview<y>]:MAXTracepoints (on page 2032)	Sets or queries the maximum trace points.
[SENSe]:AVTime[:MEASview<y>]:METHod (on page 2032)	Sets or queries the method to set the measurement bandwidth.
[SENSe]:AVTime[:MEASview<y>]:OGRAm:COLor (on page 2033)	Sets or queries the ogram color scheme.
[SENSe]:AVTime[:MEASview<y>]:OGRAm:COLor:MAXimum (on page 2034)	Sets or queries the maximum value of the color axis in the ogram.
[SENSe]:AVTime[:MEASview<y>]:OGRAm:COLor:MINimum (on page 2034)	Sets or queries the minimum value of the color axis in the ogram.
[SENSe]:AVTime[:MEASview<y>]:OGRAm:COLor:REVerse (on page 2035)	Sets or queries reverse color scheme state.
[SENSe]:AVTime[:MEASview<y>]:PLOT (on page 2036)	Sets or queries the Amplitude vs time display mode.
[SENSe]:AVTime[:MEASview<y>]:SPAN (on page 2036)	Sets or queries the frequency span.
[SENSe]:CCDF subgroup	**CCDF measurement**
[SENSe]:CCDF:{BANDwidth|BWIDth} (on page 2070)	Sets or queries the CCDF measurement bandwidth.
[SENSe]:CCDF:CLEar (on page 2070)	Clears the CCDF accumulator and restarts the measurement.
[SENSe]:CCDF:TIME:TOTal:LENGth (on page 2071)	Sets or queries the CCDF measurement time.
[SENSe]:CCDF:TIME:TYPE (on page 2071)	Sets or queries how to repeat the CCDF measurement.
[SENSe]:CONSte[:MEASview<y>]:SELEcted: SOURce (on page 2070)	Sets or queries the Source of Constellation for a selected Measurement view number.
[SENSe]:DDEMod subgroup (Option 21 only)	**General purpose digital modulation measurements**
[SENSe]:DDEMod[:SOURce<x>]:ANALysis:LENGth (on page 2072)	Sets or queries the analysis length.
[SENSe]:DDEMod[:SOURce<x>]:ANALysis:LENGth:ACTual? (on page 2073)	Queries the actual analysis length.
[SENSe]:DDEMod[:SOURce<x>]:ANALysis:LENGth: AUTO (on page 2073)	Sets or queries whether to set the analysis length automatically.
[SENSe]:DDEMod[:SOURce<x>]:{BANDwidth|BWIDth}:MODE (on page 2074)	Sets or queries the measurement bandwidth mode.
[SENSe]:DDEMod[:SOURce<x>]:{BANDwidth|BWIDth}:TINTerval (on page 2074)	Sets or queries the measurement bandwidth (frequency span).
[SENSe]:DDEMod[:SOURce<x>]:{BANDwidth|BWIDth}:TINTerval:AUTO (on page 2075)	Sets the measurement bandwidth (frequency span) automatically.

Command	Description
[SENSe]:DDEMod[:SOURce<x>]:BURSt:DETect (on page 2076)	Sets or queries how to detect bursts.
[SENSe]:DDEMod[:SOURce<x>]:BURSt:THReshold (on page 2076)	Sets or queries the threshold level to determine a burst.
[SENSe]:DDEMod[:SOURce<x>]:CARRier:OFFSet (on page 2077)	Sets or queries the carrier frequency offset.
[SENSe]:DDEMod[:SOURce<x>]:CARRier:OFFSet: AUTO (on page 2078)	Sets or queries whether to detect the carrier frequency automatically.
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer: AVAilable? (on page 2078)	Determines if the equalizer is available.
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer: CONVergence (on page 2079)	Sets or queries the Convergence value (also known as tap update rate).
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer:ENABle (on page 2079)	Sets or queries the Equalizer state.
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer:LENGth (on page 2080)	Sets or queries the equalizer filter length.
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer:MODE (on page 2080)	Sets or queries the equalizer mode. The equalizer can in learning mode (train) or enabled (hold).
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer:RESet (on page 2081)	Resets the equalizer settings to default values.
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer:TAPS (on page 2081)	Sets or queries the number of filter coefficients for the equalizer.
[SENSe]:DDEMod[:SOURce<x>]:EQUalizer:TSRAtio (on page 2081)	Sets or queries the Equalizer Taps/Symbol parameter.
[SENSe]:DDEMod[:SOURce<x>]:FILTer:ALPHa (on page 2082)	Sets or queries the filter factor (a/BT).
[SENSe]:DDEMod[:SOURce<x>]:FILTer: MEASurement (on page 2082)	Sets or queries the measurement filter.
[SENSe]:DDEMod[:SOURce<x>]:FILTer:REFerence (on page 2083)	Sets or queries the reference filter.
[SENSe]:DDEMod[:SOURce<x>]:FREQuency: DEViation (on page 2084)	Sets or queries the frequency deviation to determine two states for FSK.
[SENSe]:DDEMod[:SOURce<x>]:FREQuency: DEViation:AUTO (on page 2085)	Sets or queries whether to detect the frequency deviation automatically.
[SENSe]:DDEMod[:SOURce<x>]:MAGNitude: NORMalize (on page 2085)	Sets or queries the method for the magnitude normalization.

Command	Description
[SENSe]:DDEMod[:SOURce<x>]:MINDex (on page 2086)	Sets or queries the modulation index for a CPM signal.
[SENSe]:DDEMod[:SOURce<x>]:MINDex:AUTO (on page 2087)	Sets or queries whether to detect the modulation index automatically.
[SENSe]:DDEMod[:SOURce<x>]:MODulation:TYPE (on page 2087)	Sets or queries the modulation type.
[SENSe]:DDEMod[:SOURce<x>]:PRESet (on page 2089)	Presets the modulation analysis to a communication standard.
[SENSe]:DDEMod[:SOURce<x>]:RING:RADius (on page 2092)	Sets or queries the APSK radius parameter.
[SENSe]:DDEMod[:SOURce<x>]:RING:ROTation (on page 2092)	Sets or queries the APSK rotation parameter.
[SENSe]:DDEMod[:SOURce<x>]:SRATe (on page 2093)	Sets or queries the symbol rate.
[SENSe]:DDEMod[:SOURce<x>]:SWAP:IQ (on page 2093)	Sets or queries whether or not to swap I and Q data.
[SENSe]:DDEMod[:SOURce<x>]:SYMBol:HSSHift (on page 2094)	Sets or queries the Q data half-symbol shift for OQPSK and SOQPSK signals.
[SENSe]:DDEMod[:SOURce<x>]:SYMBol:MAP: SOURce? (on page 2094)	Specifies or queries the user symbol map file.
[SENSe]:DDEMod[:SOURce<x>]:SYMBol:MAP[: STATe] (on page 2095)	Sets or queries whether to use the user symbol map.
[SENSe]:DDEMod[:SOURce<x>]:SYMBol:PLOT: POSition (on page 2095)	Sets or queries the symbol point location on an SOQPSK waveform.
[SENSe]:DDEMod[:SOURce<x>]:SYMBol:POINts (on page 2096)	Sets or queries the number of points per symbol.
[SENSe]:DDEMod[:SOURce<x>]:SYMBol:RATE: SEARch (on page 2097)	Determines whether to enable a symbol rate search.
[SENSe]:DDEMod[:SOURce<x>]:SYNCh:WORD (on page 2097)	Sets or queries whether to enable the synchronization word.
[SENSe]:DDEMod[:SOURce<x>]:SYNCh:WORD: SYMBol (on page 2098)	Sets or queries the synchronization word.
[SENSe]:DDEMod[:SOURce<x>]:TIMe:UNITs (on page 2098)	Sets or queries the fundamental unit of time.
[SENSe]:DIQVtime subgroup	**Demodulated I&Q versus time measurement view number**
[SENSe]:DIQVtime[:MEASview<y>]:SELEcted: SOURce (on page 2099)	Sets or queries the source for a selected Measurement view number.
[SENSe]:DPX subgroup	**DPX spectrum measurement**

Command	Description
[SENSe]:DPX:AUDio:DEMod:GAIN (on page 2099)	Sets or queries the gain for the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:RXBWidth (on page 2100)	Sets or queries the receiver bandwidth for the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:RXFRequency? (on page 2100)	Queries the receiver frequency for the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:STATe (on page 2101)	Sets or queries whether to enable or disable the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:TUNE (on page 2101)	Sets or queries how to determine the tuning frequency.
[SENSe]:DPX:AUDio:DEMod:TYPE (on page 2102)	Sets or queries the modulation type for the audio demodulation.
[SENSe]:DPX:{BANDwidth|BWIDth}:ACTual? (on page 2102)	Sets or queries the resolution bandwidth (RBW).
[SENSe]:DPX:{BANDwidth|BWIDth}:RESolution (on page 2103)	Sets or queries the resolution bandwidth.
[SENSe]:DPX:{BANDwidth|BWIDth}[:RESolution]: AUTO (on page 2103)	Determines whether to set the resolution bandwidth (RBW) automatically or manually in the DPX spectrum measurement.
[SENSe]:DPX:FREQuency:SPAN: {BANDwidth|BWIDth} [:RESolution]:RATio (on page 2114)	Sets or queries whether to set the RBW automatically.
[SENSe]:DPX:CLEar:RESults (on page 2103)	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:DPX:COLor (on page 2104)	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:DPX:COLor:MAXimum (on page 2105)	Sets or queries the maximum value of the color axis.
[SENSe]:DPX:COLor:MINimum (on page 2105)	Sets or queries the minimum value of the color axis.
[SENSe]:DPX:COLor:REVerse[:STATe] (on page 2106)	Determines whether to reverse the color palette in the DPX, Spectrum view.
[SENSe]:DPX:DDENsity:MEASurement:SHOW (on page 2106)	Sets or queries the Show measurement value (measurement always visible for DPX Trigger).
SENSe:DPX:DGRam:COLor (on page 2106)	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:DPX:DGRam:COLor:MAXimum (on page 2107)	Sets or queries the maximum value of the color axis in the DPXogram measurement.
[SENSe]:DPX:DGRam:COLor:REVerse (on page 2108)	Sets or queries reverse color scheme state.
[SENSe]:DPX:DGRam:COLor:MINimum (on page 2108)	Sets or queries the minimum value of the color axis in the DPXogram measurement.
[SENSe]:DPX:DGRam:POINts:COUNt (on page 2109)	Sets the number of trace points acquired for the DPXogram display.
[SENSe]:DPX:DGRam:TIME:CAPacity? (on page 2109)	Returns the time capacity of the DPXogram measurement.

Command	Description
[SENSe]:DPX:DGRam:TIME:RESolution (on page 2110)	Sets the time resolution of the DPXogram measurement.
[SENSe]:DPX:DGRam:TIME:RESolution:AUTO (on page 2110)	Sets the time resolution automatically or manually in the DPXogram measurement.
[SENSe]:DPX:DGRam:WATerfall:DIRection (on page 2111)	Sets or queries the direction of the Waterfall (DPXogram) display.
[SENSe]:DPX:DGRam:WATerfall:ENABle (on page 2111)	Sets or queries the Waterfall (DPXogram) display.
[SENSe]:DPX:DGRam:Y[:SCALe]:AUTO (on page 2111)	Rescales the height axis automatically to fit the waveform to the screen in the DPXogram display.
[SENSe]:DPX:DGRam:Y[:SCALe]:RESet (on page 2112)	Resets the height scale of the DPXogram display.
[SENSe]:DPX:DWELl (on page 2112)	Sets or queries the value of the Dwell time for the DPX spectrum measurement.
[SENSe]:DPX:DWELl:AUTO (on page 2113)	Sets the value of the Dwell time automatically.
[SENSe]:DPX:PLOT (on page 2117)	Sets or queries the plot in the DPX spectrum measurement.
[SENSe]:DPX:POINts:COUNt (on page 2117)	Sets or queries the number of DPX trace points.
[SENSe]:DPX:FREQuency:CENTer (on page 2113)	Sets or queries the center frequency.
[SENSe]:DPX:FREQuency:SPAN (on page 2114)	Sets or queries the frequency span.
[SENSe]:DPX:FREQuency:STARt (on page 2115)	Sets or queries the measurement start frequency.
[SENSe]:DPX:FREQuency:STEP (on page 2115)	Sets or queries the frequency step size.
[SENSe]:DPX:FREQuency:STEP:AUTO (on page 2116)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:DPX:FREQuency:STOP (on page 2116)	Sets or queries the measurement stop frequency.
[SENSe]:DPX:TDM:{BANDwidth|BWIDth} (on page 2118)	Sets or queries the value of the measurement bandwidth in the DPX measurement.
[SENSe]:DPX:TDM:{BANDwidth|BWIDth}:ACTual? (on page 2118)	Queries the actual bandwidth in the DPX measurement.
[SENSe]:DPX:TDM:FREQuency:CENTer (on page 2119)	Sets or queries the center frequency in the DPX spectrum measurement.
[SENSe]:DPX:TDM:FREQuency:TXBer:CLEar: RESults (on page 2119)	Clears the measurement results of the active Tx BER measurement.
[SENSe]:DPX:TDM:FREQuency:TXBer:ENABle (on page 2120)	Sets or queries the Tx BER measurement.

Command	Description
[SENSe]:DPX:TDM:FREQuency:TXBer:PATTern (on page 2120)	Sets or queries the Tx BER data pattern.
[SENSe]:DPX:TDM:FREQuency:TXBer:PATTern: INVert (on page 2121)	Sets or queries the data pattern Invert setting.
[SENSe]:DPX:TDM:FREQuency:TXBer:PATTern: REPeat (on page 2121)	Sets or queries the test duration for a User Pattern.
[SENSe]:DPX:TDM:FREQuency:TXBer:PATTern: REVerse (on page 2122)	Sets or queries whether the data pattern is in normal order or reversed.
[SENSe]:DPX:TDM:FREQuency:TXBer:PATTern: SOURce? (on page 2122)	Returns the path and file name of the user-defined pattern file.
[SENSe]:DPX:TDM:RBW (on page 2123)	Sets or queries the value of the RBW filter.
[SENSe]:DPX:TDM:RBW:STATe (on page 2123)	Determines whether to set the resolution bandwidth (RBW) automatically or manually.
[SENSe]:DPX:TDM:SWEep:TIME (on page 2124)	Sets or queries the sweep time.
[SENSe]:DPX:TDM:TMOTion (on page 2124)	Sets or queries the scroll direction.
[SENSe]:{FSETtling|PSETtling} subgroup	**Settling time measurements**
[SENSe]:{FSETtling|PSETtling}:{BANDwidth| BWIDTH} (on page 2174)	Sets or queries the measurement bandwidth for the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}:{BANDwidth| BWIDTH}:ACTual? (on page 2175)	Queries the actual measurement bandwidth in the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}:FREQuency:CENTer (on page 2175)	Queries the actual measurement bandwidth in the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}:FREQuency:OFFSet (on page 2176)	Sets or queries the offset frequency.
[SENSe]:{FSETtling|PSETtling}:LENGth (on page 2176)	Sets or queries the measurement length.
[SENSe]:{FSETtling|PSETtling}:LENGth:ACTual? (on page 2176)	Queries the actual measurement length for the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}:MASK:LIMit (on page 2177)	Sets or queries the frequency or phase limit for the specified region.
[SENSe]:{FSETtling|PSETtling}:MASK:STATe (on page 2178)	Sets or queries mask test state.
[SENSe]:{FSETtling|PSETtling}:MASK:TIME: REFerence (on page 2178)	Sets or queries the mask time reference.
[SENSe]:{FSETtling|PSETtling}:MASK:TIME:STARt (on page 2178)	Sets or queries the mask region start time in seconds.

Command	Description
[SENSe]:{FSETtling|PSETtling}:MASK:TIME:STOP (on page 2179)	Sets or queries the mask region stop time in seconds.
[SENSe]:{FSETtling|PSETtling}:MAXTracepoints (on page 2179)	Sets or queries the maximum trace points in the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}:SDURation:MINimum (on page 2180)	Sets or queries the minimum settled duration in seconds.
[SENSe]:{FSETtling|PSETtling}:TARGet:REFerence (on page 2180)	Sets or queries the target reference frequency.
[SENSe]:{FSETtling|PSETtling}:TOLerance (on page 2181)	Sets or queries the frequency or phase range into which the signal must settle.
[SENSe]:FVTime subgroup	**Frequency versus Time measurement**
[SENSe]:FVTime[:MEASview<y>]:CLEar:RESults (on page 2181)	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:FVTime[:MEASview<y>]:COLor (on page 2182)	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:FVTime[:MEASview<y>]:COLor:MAXimum (on page 2182)	Sets or queries the maximum value of the color axis in the Frequency versus Time measurement.
[SENSe]:FVTime[:MEASview<y>]:COLor:MINimum (on page 2183)	Sets or queries the minimum value of the color axis in the Frequency versus Time measurement.
[SENSe]:FVTime[:MEASview<y>]:COLor: REVerse[:STATe] (on page 2183)	Determines whether to reverse the color palette in the Frequency versus Time view.
[SENSe]:FVTime[:MEASview<y>]:FREQuency: CENTer (on page 2184)	Sets or queries the center frequency.
[SENSe]:FVTime[:MEASview<y>]:FREQuency: SPAN (on page 2185)	Sets or queries the frequency span.
[SENSe]:FVTime[:MEASview<y>]:FREQuency: STARt (on page 2186)	Sets or queries the measurement start frequency.
[SENSe]:FVTime[:MEASview<y>]:FREQuency: STEP (on page 2186)	Sets or queries the frequency step size.
[SENSe]:FVTime[:MEASview<y>]:FREQuency: STEP:AUTO (on page 2187)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:FVTime[:MEASview<y>]:FREQuency: STOP (on page 2187)	Sets or queries the measurement stop frequency.
[SENSe]:FVTime[:MEASview<y>]:MAXTracepoints (on page 2188)	Sets or queries the maximum trace points.

Command	Description
[SENSe]:FVTime[:MEASview<y>]:OGRAm:COLor (on page 2188)	Sets or queries the ogram color scheme.
[SENSe]:FVTime[:MEASview<y>]:OGRAm:COLor: MAXimum (on page 2189)	Sets or queries the maximum value of the color axis in the ogram.
[SENSe]:FVTime[:MEASview<y>]:OGRAm:COLor: MINimum (on page 2190)	Sets or queries the minimum value of the color axis in the ogram.
[SENSe]:FVTime[:MEASview<y>]:OGRAm:COLor: REVerse (on page 2191)	Sets or queries reverse color scheme state.
[SENSe]:FVTime[:MEASview<y>]:PLOT (on page 2191)	Sets or queries the Frequency vs time display mode.
[:SENSe]:FVTime[:MEASview<y>]:SELEcted: SOURce (on page 2192)	Sets or queries the Source with respect to the Frequency versus Time Measurement View nuumber
[SENSe]:IQVTime subgroup	**RF I&Q versus Time measurement**
[SENSe]:IQVTime[:MEASview<y>]:CLEar:RESults (on page 2192)	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:IQVTime[:MEASview<y>]:FREQuency: CENTer (on page 2193)	Sets or queries the center frequency.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency: SPAN (on page 2193)	Sets or queries the frequency span.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency: STARt (on page 2194)	Sets or queries the measurement start frequency.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency: STEP (on page 2195)	Sets or queries the frequency step size.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency: STEP:AUTO (on page 2196)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency: STOP (on page 2196)	Sets or queries the measurement stop frequency.
[SENSe]:IQVTime[:MEASview<y>]:MAXTracepoints (on page 2197)	Sets or queries the maximum trace points.
[SENSe]:IQVTime[:MEASview<y>]:SELEcted: SOURce (on page 2197)	Sets or queries the Source with respect to the RF I&Q versus Time Measurement View number
[SENSe]:MCPower subgroup	**MCPR measurement**
[SENSe]:MCPower:AVERage (on page 2228)	Sets or queries how to average waveform.
[SENSe]:MCPower:AVERage:COUNt (on page 2228)	Sets or queries the number of waveforms for average.

Command	Description
[SENSe]:MCPower:{BANDwidth|BWIDth}[: RESolution] (on page 2229)	Sets or queries the resolution bandwidth (RBW).
[SENSe]:MCPower:{BANDwidth|BWIDth}[: RESolution]:ACTual? (on page 2229)	Queries the actual resolution bandwidth (RBW).
[SENSe]:MCPower:{BANDwidth|BWIDth}[: RESolution]:AUTO (on page 2230)	Sets or queries whether to set the RBW automatically.
[SENSe]:MCPower:{BANDwidth|BWIDth}:VIDeo (on page 2230)	Sets or queries the video bandwidth (VBW).
[SENSe]:MCPower:{BANDwidth|BWIDth}:VIDeo: STATe (on page 2230)	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:MCPower:CHANnel:ADJacent:ADD (on page 2231)	Adds a pair of upper and lower adjacent channels.
[SENSe]:MCPower:CHANnel:ADJacent:DELete (on page 2232)	Deletes a selected adjacent channel.
[SENSe]:MCPower:CHANnel:ADJacent:LIMIts<x>: ENABle? (on page 2232)	Queries whether the adjacent channel is selected or not in the P25 MCPR display.
[SENSe]:MCPower:CHANnel:ADJacent:LIMIts<x> (on page 2232)	Sets or queries the selected adjacent upper and lower limit values in the P25 MCPR display.
[SENSe]:MCPower:CHANnel:FILTer (on page 2233)	Sets or queries the measurement filter.
[SENSe]:MCPower:CHANnel:MAIN:{BANDwidth| BWIDth} (on page 2233)	Sets or queries the frequency bandwidth of the main channels.
[SENSe]:MCPower:CHANnel:MAIN:COUNt (on page 2234)	Sets or queries the number of main channels.
[SENSe]:MCPower:CHANnel:MAIN:INACtive (on page 2234)	Makes a main channel inactive or queries the inactive main channels.
[SENSe]:MCPower:CHANnel:MAIN:SPACing (on page 2235)	Sets or queries the main channel spacing.
[SENSe]:MCPower:CHIPrate (on page 2235)	Sets or queries the chip rate.
[SENSe]:MCPower:CLEar:RESults (on page 2235)	Restarts the average trace.
[SENSe]:MCPower:FREQuency (on page 2236)	Sets or queries the center frequency.
[SENSe]:MCPower:FREQuency:STEP (on page 2236)	Sets or queries the frequency step size.
[SENSe]:MCPower:FREQuency:STEP:AUTO (on page 2237)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:MCPower:NFLoor:STATe (on page 2237)	Sets or queries whether to enable the correction for noise floor.
[SENSe]:MCPower:POINts:COUNt (on page 2238)	Sets or queries the number of trace points.

Command	Description
[SENSe]:MCPower:RCHannels? (on page 2238)	Queries the power reference.
[SENSe]:MCPower:RCHannels:MAIN<x> (on page 2239)	Sets the power reference to the main channel with the index (<x>).
[SENSe]:MCPower:RCHannels:TOTal (on page 2239)	Sets the power reference to the total power of all the active channels.
[SENSe]:MCPower:RRCRolloff (on page 2240)	Sets or queries the filter parameter for the Root Raised Cosine filter.
[SENSe]:OBWidth subgroup	**Occupied Bandwidth measurement**
[SENSe]:OBWidth:AVERage (on page 2254)	Sets or queries whether to enable or disable averaging.
[SENSe]:OBWidth:AVERage:COUNt (on page 2254)	Sets or queries the number of measurements for averaging.
[SENSe]:OBWidth:{BANDwidth|BWIDth}: MEASurement (on page 2255)	Sets or queries the measurement bandwidth.
[SENSe]:OBWidth:{BANDwidth|BWIDth}[: RESolution] (on page 2255)	Sets or queries the resolution bandwidth (RBW).
[SENSe]:OBWidth:{BANDwidth|BWIDth}[: RESolution]:ACTual? (on page 2256)	Queries the actual resolution bandwidth (RBW).
[SENSe]:OBWidth:{BANDwidth|BWIDth}[: RESolution]:AUTO (on page 2256)	Sets or queries whether to set the RBW automatically.
[SENSe]:OBWidth:{BANDwidth|BWIDth}:VIDeo (on page 2257)	Sets or queries the video bandwidth (VBW).
[SENSe]:OBWidth:{BANDwidth|BWIDth}:VIDeo: STATe (on page 2257)	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:OBWidth:CLEar:RESults (on page 2258)	Restarts the averaging.
[SENSe]:OBWidth:FREQuency:CENTer (on page 2259)	Sets or queries the center frequency.
[SENSe]:OBWidth:FREQuency:STEP (on page 2259)	Sets or queries the frequency step size.
[SENSe]:OBWidth:FREQuency:STEP:AUTO (on page 2260)	Determines whether to set the frequency step size automatically.
[SENSe]:OBWidth:PERCent (on page 2260)	Sets or queries the occupied bandwidth percent power.
[SENSe]:OBWidth:XDBLevel (on page 2261)	Sets or queries the x dB level.
[SENSe]:OFDM subgroup	**Orthogonal Frequency Division Multiplexing measurement**
[SENSe]:OFDM:CHANnel:ESTimation (on page 2263)	Sets or queries the channel estimation.
[SENSe]:OFDM:CHANnel[:BANDwidth|BWIDth] (on page 2261)	Sets or queries the channel bandwidth.

Command	Description
[SENSe]:OFDM:CHANnel[:BANDwidth|BWIDth]: SRATe? (on page 2262)	Returns the FFT sample rate.
[SENSe]:OFDM:CHANnel[:BANDwidth|BWIDth]: STATe (on page 2262)	Determines whether the channel bandwidth is on or off.
[SENSe]:OFDM:CONSte:DETermination (on page 2263)	Sets or queries the constellation determination.
[SENSe]:OFDM:CONSte:DETermination:MANual (on page 2263)	Sets or queries a manual constellation type.
[SENSe]:OFDM:FFT:LENGth? (on page 2269)	Returns the FFT length.
[SENSe]:OFDM:GUARd:INTerval (on page 2264)	Sets or queries the guard interval.
[SENSe]:OFDM:GUARd:INTerval:USER (on page 2264)	Sets or queries a user-defined guard interval.
[SENSe]:OFDM:PILot:TRACking:AMPLitude:STATe (on page 2265)	Determines whether to select the Amplitude pilot tracking.
[SENSe]:OFDM:PILot:TRACking:PHASe:STATe (on page 2265)	Determines whether to select the Phase pilot tracking.
[SENSe]:OFDM:PILot:TRACking:TIMing:STATe (on page 2266)	Determines whether to select the Timing pilot tracking.
[SENSe]:OFDM:RADix (on page 2266)	Sets the radix for the OFDM measurements.
[SENSe]:OFDM:SCARrier:SPACing (on page 2267)	Sets or queries the subcarrier spacing.
[SENSe]:OFDM:SCARrier:SPACing:STATe (on page 2267)	Determines whether the subcarrier spacing is on or off.
[SENSe]:OFDM:SCARriers (on page 2267)	Sets or queries the Subcarriers to display.
[SENSe]:OFDM:SCARriers:RANGe:STARt (on page 2268)	Sets or queries the subcarrier start range.
[SENSe]:OFDM:SCARriers:RANGe:STOP (on page 2268)	Sets or queries the subcarrier stop range.
[SENSe]:OFDM:SCARriers:SINGle:INDex (on page 2269)	Sets or queries the index of a single subcarrier.
[SENSe]:OFDM:STANdard (on page 2270)	Sets or queries the OFDM standard.
[SENSe]:OFDM:SWAP:IQ (on page 2270)	Determines whether or not to exchange I and Q data.
[SENSe]:OFDM:SYMBol:ANALysis:OFFSet (on page 2270)	Sets or queries the OFDM symbol analysis offset.
[SENSe]:OFDM:SYMBols (on page 2271)	Sets or queries the symbols to display.
[SENSe]:OFDM:SYMBols:MAX (on page 2271)	Sets or queries the maximum number of symbols to analyze.
[SENSe]:OFDM:SYMBols:MAX:STATe (on page 2272)	Enables or disables the maximum number of symbols to analyze.

Command	Description
[SENSe]:OFDM:SYMBols:RANGe:COUNt (on page 2272)	Sets or queries the number of symbols to display.
[SENSe]:OFDM:SYMBols:RANGe:STARt (on page 2273)	Sets or queries the symbols start range.
[SENSe]:OFDM:SYMBols:SINGle:INDex (on page 2273)	Sets or queries the symbol index
[SENSe]:OFDM:UNIT:FREQuency (on page 2273)	Specifies the frequency units.
[SENSe]:OFDM:UNIT:TIME (on page 2274)	Specifies the time units.
[SENSe]:PHVTime subgroup	**Phase versus Time measurement**
[SENSe]:PHVTime[:MEASview<y>]:CLEar:RESults (on page 2303)	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:PHVTime[:MEASview<y>]:COLor (on page 2303)	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:PHVTime[:MEASview<y>]:COLor:MAXimum (on page 2304)	Sets or queries the maximum value of the color axis in the Phase versus Time measurement.
[SENSe]:PHVTime[:MEASview<y>]:COLor:MINimum (on page 2305)	Sets or queries the minimum value of the color axis in the Phase versus Time measurement.
[SENSe]:PHVTime[:MEASview<y>]:COLor: REVerse[:STATe] (on page 2305)	Determines whether to reverse the color palette in the Phase versus Time view.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency: CENTer (on page 2306)	Sets or queries the center frequency.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency: SPAN (on page 2306)	Sets or queries the frequency span.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency: STARt (on page 2307)	Sets or queries the measurement start frequency.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency: STEP (on page 2308)	Sets or queries the frequency step size.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency: STEP:AUTO (on page 2308)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency: STOP (on page 2309)	Sets or queries the measurement stop frequency.
[SENSe]:PHVTime[:MEASview<y>]:MAXTracepoints (on page 2309)	Sets or queries the maximum trace points.
[SENSe]:PHVTime[:MEASview<y>]:OGRAm:COLor (on page 2310)	Sets or queries the Ogram color scheme.
[SENSe]:PHVTime[:MEASview<y>]:OGRAm:COLor: MAXimum (on page 2311)	Sets or queries the maximum value of the color axis in the ogram

Command	Description
[SENSe]:PHVTime[:MEASview<y>]:OGRAm:COLor: MINimum (on page 2312)	Sets or queries the minimum value of the color axis in the ogram.
[SENSe]:PHVTime[:MEASview<y>]:OGRAm:COLor: REVerse (on page 2312)	Sets or queries reverse color scheme state.
[SENSe]:PHVTime[:MEASview<y>]:PLOT (on page 2313)	Sets or queries the Phase vs Time display mode.
[SENSe]:PHVTime[:MEASview<y>]:SELEcted: SOURce (on page 2313)	Sets or queries the Source with respect to the Phaseversus Time Measurement View nuumber
[SENSe]:PNOise subgroup (Option 11 only)	**Phase noise measurement**
[SENSe]:PNOise:AVERage:COUNt (on page 2315)	Sets or queries the number of traces to combine for averaging.
[SENSe]:PNOise:AVERage:ENABle (on page 2316)	Sets or queries whether to enable or disable averaging trace.
[SENSe]:PNOise:CARRier:FREQuency:TRACk (on page 2316)	Sets or queries whether to enable tracking the carrier frequency.
[SENSe]:PNOise:CARRier:THReshold (on page 2316)	Sets or queries the threshold level to detect the carrier.
[SENSe]:PNOise:CLEar:RESults (on page 2317)	Restarts the average process.
[SENSe]:PNOise:FREQuency:INTegration:OFFSet: STARt (on page 2317)	Sets or queries the start offset frequency for integration.
[SENSe]:PNOise:FREQuency:INTegration:OFFSet: STOP (on page 2318)	Sets or queries the stop offset frequency for integration.
[SENSe]:PNOise:FREQuency:PLOT:OFFSet:STARt (on page 2318)	Sets or queries the start offset frequency for plot.
[SENSe]:PNOise:FREQuency:PLOT:OFFSet:STOP (on page 2318)	Sets or queries the stop offset frequency for plot.
[SENSe]:PNOise:OPTimization (on page 2319)	Sets or queries the method of optimization.
[SENSe]:PULSe subgroup	**Pulsed RF measurements**
[SENSe]:PULSe[:MEASview<y>]:ANALyze: FDOMain:MEASurement:TIME:ALENgth (on page 2320)	Sets or queries the absolute amount of time included in the Frequency-Domain Linearity measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: FDOMain:MEASurement:TIME:METHod (on page 2321)	Sets or queries the measurement time method for the Frequency-Domain Linearity measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: FDOMain:MEASurement:TIME:RLENgth (on page 2321)	Sets or queries the relative amount of time included in the Frequency-Domain Linearity measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: FDOMain:MEASurement:TIME:RLEVel (on page 2322)	Sets or queries the Frequency-Domain Linearity measurement reference level.

Command	Description
[SENSe]:PULSe[:MEASview<y>]:ANALyze: FDOMain:MEASurement:TIME:STARt (on page 2323)	Sets or queries the start time for the Frequency-Domain Linearity measurements
[SENSe]:PULSe[:MEASview<y>]:ANALyze: IRESponse:CORRection:AMPLitude[:STATe] (on page 2323)	Enables or disables the impulse response measurement amplitude corrections for window and for delay of the highest side lobe.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: IRESponse:KOTime (on page 2324)	Sets or queries the impulse response measurement Keep-out time.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: IRESponse:MEASurement:TIME:ALENgth (on page 2324)	Sets or queries the absolute amount of time included in impulse response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: IRESponse:MEASurement:TIME:METHod (on page 2325)	Sets or queries the impulse response measurement time method.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: IRESponse:MEASurement:TIME:RLENgth (on page 2326)	Sets or queries the relative amount of time included in Impulse Response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: IRESponse:MEASurement:TIME:RLEVel (on page 2326)	Sets or queries the measurement reference level for Impulse Response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: IRESponse:MEASurement:TIME:STARt (on page 2327)	Sets or queries the start time for the Impulse Response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:LEVel (on page 2327)	Sets or queries how to determine the 50% level.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:LEVel: FIFTy (on page 2328)	Sets or queries how to determine the 50% level.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:LEVel: HUNDred (on page 2328)	Sets or queries how to determine the 50% level.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: OVERshoot:MEASurement:TIME:ALENgth (on page 2330)	Sets or queries the absolute amount of time included in the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: OVERshoot:MEASurement:TIME:METHod (on page 2331)	Sets or queries the measurement time method for the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: OVERshoot:MEASurement:TIME:RLENgth (on page 2331)	Sets or queries the relative amount of time included in the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: OVERshoot:MEASurement:TIME:RLEVel (on page 2332)	Sets or queries the measurement reference level for the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: OVERshoot:MEASurement:TIME:STARt (on page 2333)	Sets or queries the start time for the Overshoot measurements
[SENSe]:PULSe[:MEASview<y>]:ANALyze: PMLocation (on page 2333)	Sets or queries the phase measurement location.
[SENSe]:PULSe[:MEASview<y>]:ANALyze: POINt:LOCation (on page 2334)	Sets or queries the point location method.

Command	Description
[SENSe]:PULSe[:MEASview<y>]:ANALyze:RFALl (on page 2334)	Sets or queries the threshold levels to measure the rise/fall time.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:RIPPle (on page 2335)	Sets or queries the ripple portion of the pulse top.
[SENSe]:PULSe[:MEASview<y>]:CARRier: FREQuency? (on page 2335)	Queries the carrier frequency.
[SENSe]:PULSe[:MEASview<y>]:CARRier:OFFSet (on page 2336)	Sets or queries the carrier frequency offset.
[SENSe]:PULSe[:MEASview<y>]:CARRier:SEARch (on page 2337)	Sets or queries how to detect the carrier.
[SENSe]:PULSe[:MEASview<y>]:DETect: MEASurement (on page 2342)	Sets or queries whether to set the maximum number of pulses.
[SENSe]:PULSe[:MEASview<y>]:DETect:NUMBer (on page 2343)	Sets or queries the maximum number of pulses to detect.
[SENSe]:PULSe[:MEASview<y>]:DETect:NUMBer: THReshold (on page 2343)	Sets or queries the power threshold to detect pulses.
[SENSe]:PULSe[:MEASview<y>]:DETect:TIMe[: THReshold] (on page 2344)	Sets or queries the minimum off-time between pulses.
[SENSe]:PULSe[:MEASview<y>]:FILTer: {BANDwidth| BWIDth} (on page 2345)	Sets or queries the filter bandwidth for the Gaussian filter.
[SENSe]:PULSe[:MEASview<y>]:FILTer: MEASurement (on page 2345)	Sets or queries the measurement filter.
[SENSe]:PULSe[:MEASview<y>]:FREFerence:AUTO (on page 2346)	Determines whether to estimate the frequency reference automatically.
[SENSe]:PULSe[:MEASview<y>]:FREFerence: CSLope (on page 2347)	Sets or queries the Chirp Slope.
[SENSe]:PULSe[:MEASview<y>]:FREFerence: CSLope:AUTO (on page 2347)	Sets or queries enabling automatic Chirp Slope estimating.
[SENSe]:PULSe[:MEASview<y>]:FREFerence: OFFSet (on page 2348)	Sets or queries the frequency reference offset.
[SENSe]:PULSe[:MEASview<y>]:MODulation:TYPE (on page 2348)	Sets or queries the modulation type.
[SENSe]:PULSe[:MEASview<y>]:SIGNal:TYPE (on page 2353)	Sets or queries the signal type in the pulsed RF measurements.
[SENSe]:PULSe[:MEASview<y>]:STATistics: HISTogram:ORDinate (on page 2354)	Sets or queries the Histogram Y unit.

Command	Description
[SENSe]:PULSe[:MEASview<y>]:STATistics: HISTogram:POINts (on page 2354)	Sets or queries the number of bins in the Histogram plot.
[SENSe]:PULSe[:MEASview<y>]:STATistics: HISTogram:POINts:AUTO (on page 2355)	Sets or queries enabling automatic Histogram plot bins count.
[SENSe]:REANalyze subgroup	**Spectrogram measurement**
[SENSe]:REANalyze (on page 2357)	Sets all measurements to reanalyze the current acquisition record.
[SENSe]:REANalyze:ACQuisition:SETTings? (on page 2357)	Queries the settings of all acquisitions in acquisition history.
[SENSe]:REANalyze:ALL	Replay all items in the current acquisition history selection.
[SENSe]:REANalyze:ALL:LOOP (on page 2357)	Replay all selected records/frames in a continuous loop.
[SENSe]:REANalyze:CURRent (on page 2358), [SENSe]:REANalyze:CURRent (on page 2358)	Replay the currently selected acquisition (or frame).
[SENSe]:REANalyze:CURRent:ACQuisition? (on page 2358)	Queries the Acquisition record identifier (ID) of the currently selected acquisition (or frame).
[SENSe]:REANalyze:CURRent:FRAMe? (on page 2358)	Queries the Frame identifier (ID) of the currently selected acquisition (or frame).
[SENSe]:REANalyze:CURRent:TIMestamp? (on page 2359)	Queries the time stamp of the currently selected acquisition (or frame).
[SENSe]:REANalyze:DELete:DATA (on page 2359)	Deletes all acquisition data.
[SENSe]:REANalyze:FIRSt (on page 2359)	Replays the first item in the current acquisition history selection.
[SENSe]:REANalyze:LAST (on page 2359)	Replays the last item in the current acquisition history selection.
[SENSe]:REANalyze:NEXT (on page 2360)	Replays the next item in the current acquisition history selection.
[SENSe]:REANalyze:PAUSe (on page 2360)	Sets or queries the reanalysis pause state.
[SENSe]:REANalyze:PREVious (on page 2360)	Replays the previous item in the current Replay selection.
[SENSe]:REANalyze:SELect:ACQuisition:DATA: TYPE (on page 2361)	Sets or queries the acquisition data type.
[SENSe]:REANalyze:SELect:ACQuisition:FIRSt? (on page 2361)	Queries the first selectable acquisition history Start or Stop value.
[SENSe]:REANalyze:SELect:ACQuisition:FIRSt: TIMestamp? (on page 2361)	Queries the time stamp associated with the first selectable acquisition history Start or Stop value.
[SENSe]:REANalyze:SELect:ACQuisition:LAST? (on page 2362)	Queries the last selectable acquisition history Start or Stop valu

Command	Description
[SENSe]:REANalyze:SELect:ACQuisition:LAST: TIMestamp? (on page 2362)	Queries the time stamp associated with the last selectable acquisition history Start or Stop value
[SENSe]:REANalyze:SELect:ACQuisition:STARt (on page 2362)	Sets or queries the Acquisition Start value in the acquisition history selection.
[SENSe]:REANalyze:SELect:ACQuisition:STARt: TIMestamp? (on page 2363)	Queries the time stamp associated with the current Acquisition Start selection
[SENSe]:REANalyze:SELect:ACQuisition:STOP (on page 2363)	Sets or queries the Acquisition Stop value in the acquisition history selection.
[SENSe]:REANalyze:SELect:ACQuisition:STOP: TIMestamp? (on page 2363)	Queries the time stamp associated with the current Acquisition Stop selection.
[SENSe]:REANalyze:SELect:ALL (on page 2364)	Selects all acquisitions and frames in the current acquisition history.
[SENSe]:REANalyze:SELect:FRAMe:FIRSt? (on page 2364)	Queries the first available Frame Start or Stop value available for acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:FIRSt: TIMestamp? (on page 2364)	Queries the time stamp associated with the first available frame of the first available Acquisition Start or Stop value
[SENSe]:REANalyze:SELect:FRAMe:LAST? (on page 2365)	Queries the last available Frame Start or Stop value available for acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:LAST: TIMestamp? (on page 2365)	Queries the time stamp associated with the last available frame of the last available Acquisition Start or Stop value
[SENSe]:REANalyze:SELect:FRAMe:STARt (on page 2365)	Sets or queries the Frame Start value in the acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:STARt: TIMestamp? (on page 2366)	Queries the time stamp associated with the current Frame Start selection.
[SENSe]:REANalyze:SELect:FRAMe:STOP (on page 2366)	Sets or queries the frame stop value in acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:STOP: TIMestamp? (on page 2366)	Queries the time stamp associated with the current frame stop selection.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:ALL (on page 2367)	Selects all spectra acquisitions and frames in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: CURRent:ACQuisition? (on page 2367)	Queries the acquisition record identifier (ID) of the currently selected acquisition.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: CURRent:TIMestamp? (on page 2367)	Queries the time stamp of the currently selected acquisition.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: FIRSt? (on page 2368)	Queries the first selectable acquisition start or stop value in the currently selected set.

Command	Description
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: FIRSt:TIMestamp? (on page 2368)	Queries the time stamp of the first selectable acquisition history start or stop value in the currently selected acquisition set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: LAST? (on page 2369)	Queries the last selectable acquisition start or stop value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: LAST:TIMestamp? (on page 2369)	Queries the time stamp of the last selectable acquisition start or stop value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: STARt (on page 2369)	Sets or queries the acquisition start value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: STARt:TIMestamp? (on page 2370)	Queries the time stamp of the current acquisition start selection.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: STOP (on page 2370)	Sets or queries the acquisition stop value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition: STOP:TIMestamp? (on page 2371)	Queries the time stamp of the current acquisition stop selection.
[SENSe]:REANalyze:SPEed (on page 2371)	Sets or queries the time delay value inserted between reanalysis of frames or acquisitions.
[SENSe]:REANalyze:STOP (on page 2371)	Stops the current reanalysis.
[SENSe]:REANalyze:TIMestamp:DECimal (on page 2372)	Sets or queries the number of values to the right of the decimal point to include in all time stamps.
SENSe:ROSCillator:EXTernal: TIMe (on page 2372)	Sets or queries the timing reference.
SENSe:ROSCillator:EXTernal: TIMe:STATus? (on page 2373)	Queries if the timing reference source is locked.
[SENSe]:SEM subgroup	**Spectrum Emissions Mask measurements**
[SENSe]:SEM:{BANDwidth|BWIDth}[:RESolution] (on page 2374)	Sets or queries the resolution bandwidth (RBW).
[SENSe]:SEM:{BANDwidth|BWIDth}:VIDeo (on page 2374)	Sets or queries the video bandwidth (VBW).
[SENSe]:SEM:{BANDwidth|BWIDth}:VIDeo:STATe (on page 2375)	Sets or queries the state of the video bandwidth (VBW) of the reference channel.
[SENSe]:SEM:CHANnel:FILTer (on page 2375)	Sets or queries the reference Channel Filter.
[SENSe]:SEM:CHANnel:IBANdwidth (on page 2375)	Sets or queries the reference channel integration bandwidth.
[SENSe]:SEM:CHANnel:WIDTh (on page 2376)	Sets or queries the reference Channel Filter bandwidth.
[SENSe]:SEM:CHIPrate (on page 2376)	Sets or queries the Chip rate.

Command	Description
[SENSe]:SEM:CLEar:RESults (on page 2377)	Clears the results in the Spectral Emissions Mask measurement.
[SENSe]:SEM:FREQuency (on page 2377)	Sets or queries the measurement frequency.
[SENSe]:SEM:FREQuency:SPAN? (on page 2378)	Returns the frequency span.
[SENSe]:SEM:MFILter (on page 2378)	Sets or queries the shape of the filter.
[SENSe]:SEM:MODE:REALtime (on page 2378)	Sets or queries the Real-time SEM measurement mode.
[SENSe]:SEM:MTYPe (on page 2379)	Sets or queries the measurement type.
[SENSe]:SEM:OFFSet:DETection (on page 2379)	Sets or queries the detection settings for all offsets.
[SENSe]:SEM:OFFSet<x>:BANDwidth:FILTer? (on page 2380)	Returns the bandwidth filter setting.
[SENSe]:SEM:OFFSet<x>:BANDwidth[:RESolution] (on page 2380)	Sets or queries the resolution bandwidth.
[SENSe]:SEM:OFFSet<x>:BANDwidth:RESolution: COUNt (on page 2381)	Sets or queries the count of Resolution Bandwidths (RBWs).
[SENSe]:SEM:OFFSet<x>:BANDwidth:VIDeo (on page 2381)	Sets or queries the video bandwidth setting.
[SENSe]:SEM:OFFSet<x>:BANDwidth:VIDeo:STATe (on page 2382)	Sets or queries the state of the video bandwidth.
[SENSe]:SEM:OFFSet<x>:FREQuency:STARt (on page 2382)	Sets or queries the start frequency.
[SENSe]:SEM:OFFSet<x>:FREQuency:STOP (on page 2383)	Sets or queries the stop frequency.
[SENSe]:SEM:OFFSet<x>:LIMIT:ABSolute:SAME (on page 2383)	Sets or queries the state of the limits for the absolute start and stop settings.
[SENSe]:SEM:OFFSet<x>:LIMIT:ABSolute:STARt (on page 2383)	Sets or queries the absolute power start limit.
[SENSe]:SEM:OFFSet<x>:LIMIT:ABSolute:STOP (on page 2384)	Sets or queries the absolute power stop limit.
[SENSe]:SEM:OFFSet<x>:LIMIT:MASK (on page 2384)	Sets or queries the limit mask setting.
[SENSe]:SEM:OFFSet<x>:LIMIT:RELative:SAME (on page 2385)	Sets or queries the state of the limits for the relative start and stop settings
[SENSe]:SEM:OFFSet<x>:LIMIT:RELative:STARt (on page 2385)	Sets or queries the relative power start limit.

Command	Description
[SENSe]:SEM:OFFSet<x>:LIMIT:RELative:STOP (on page 2386)	Sets or queries the relative power stop limit.
[SENSe]:SEM:OFFSet<x>:LIMIT:SIDE (on page 2386)	Sets or queries the side of the offset limit.
[SENSe]:SEM:OFFSet<x>:STATe (on page 2386)	Determines whether to display the specified row of the Offsets & Limits table.
[SENSe]:SEM:POINts:COUNt (on page 2387)	Sets or queries the maximum number of trace points.
[SENSe]:SEM:PRESet (on page 2387)	Defines the standard protocol settings for the measurement.
[SENSe]:SEM:REFerence:AUTO (on page 2388)	Determines whether to automatically update the Power Reference.
[SENSe]:SEM:REFerence:DETection (on page 2388)	Sets or queries the reference channel detection setting.
[SENSe]:SEM:REFerence[:MAGNitude] (on page 2389)	Sets or queries the power magnitude.
[SENSe]:SEM:RRCRolloff (on page 2389)	Sets or queries the filter parameter (roll-off ratio).
[SENSe]:SEM:STEP:AUTO (on page 2390)	Determines whether to automatically update the center frequency.
[SENSe]:SEM:STEP[:MAGNitude] (on page 2390)	Sets or queries the step magnitude.
[SENSe]:SEM:WIDTh:DEFinition (on page 2391)	Sets or queries the offset definition.
[SENSe]:SGRam subgroup	**Spectrogram measurements**
[SENSe]:SGRam[:MEASview<y>]:{BANDwidth| BWIDth}:RESolution (on page 2391)	Sets or queries the resolution bandwidth (RBW).
[SENSe]:SGRam[:MEASview<y>]:{BANDwidth| BWIDth}[:RESolution]: ACTual? (on page 2392)	Queries the actual resolution bandwidth (RBW).
[SENSe]:SGRam[:MEASview<y>]:{BANDwidth| BWIDth}[:RESolution]:AUTO (on page 2392)	Sets or queries whether to set the RBW automatically.
[SENSe]:SGRam[:MEASview<y>]:{BANDwidth| BWIDth}[:RESolution]:MODE (on page 2393)	Sets or queries whether to enable or disable the RBW processing.
[SENSe]:SGRam[:MEASview<y>]:{BANDwidth| BWIDth}:VIDeo (on page 2393)	Sets or queries the video bandwidth (VBW).
[SENSe]:SGRam[:MEASview<y>]:{BANDwidth| BWIDth}:VIDeo:STATe (on page 2394)	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:SGRam[:MEASview<y>]:COLor (on page 2395)	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:SGRam[:MEASview<y>]:COLor:MAXimum (on page 2396)	Sets or queries the maximum value of the color axis.

Command	Description
[SENSe]:SGRam[:MEASview<y>]:COLor:MINimum (on page 2397)	Sets or queries the minimum value of the color axis.
[SENSe]:SGRam[MEASview<y>]:COLor:REVerse (on page 2397)	Sets or queries reverse color scheme state.
[SENSe]:SGRam[:MEASview<y>]:FFT:WINDow (on page 2398)	Sets or queries the FFT window.
[SENSe]:SGRam[:MEASview<y>]:FILTer[:SHAPe] (on page 2399)	Sets or queries the filter shape.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: CENTer (on page 2400)	Sets or queries the center frequency.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: SPAN (on page 2401)	Sets or queries the frequency span.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: SPAN:BANDwidth[:RESolution]:RATio (on page 2401)	Sets or queries the ratio of span to RBW.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: SPAN:MAXimum (on page 2402)	Sets the frequency range to the maximum real-time span.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: STARt (on page 2402)	Sets or queries the measurement start frequency.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: STEP (on page 2403)	Sets or queries the frequency step size.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: STEP:AUTO (on page 2404)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:SGRam[:MEASview<y>]:FREQuency: STOP (on page 2404)	Sets or queries the measurement stop frequency.
[SENSe]:SGRam[:MEASview<y>]TIME[:SCALe]: MODe (on page 2405)	Sets or queries the vertical mode.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]: OVERlap:PERCent (on page 2406)	Sets or queries the Overlap in percent.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]: PER:DIVision (on page 2406)	Sets or queries the vertical Time/division value.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]: PER:UPDate:MINutes (on page 2409)	Sets or queries the Spectrum Monitor mode Time/Update value for minutes.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:ENABle (on page 2411)	Sets or queries the Waterfall (3-D spectrogram) display.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]: PER:UPDate:SEConds (on page 2409)	Sets or queries the Spectrum Monitor mode Time/Update value

Command	Description
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]: SPECtrums:PERLine? (on page 2410)	Queries the Spectrums/Line value.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]: STARt:DIVisions (on page 2410)	Sets or queries the Vertical offset or Position in divisions.
[SENSe]:SGRam[:MEASview<y>]:WATerfall: DIRection (on page 2411)	Sets or queries the direction of the Waterfall display.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:Y: AUTO (on page 2412)	Rescales the height axis automatically to fit the waveform to the screen in the 3-D Waterfall display.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:Y: OFFSet (on page 2412)	Sets or queries the height offset (the value at the top edge of the vertical axis) of the 3-D Waterfall display.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:Y: RESet (on page 2413)	Resets the height scale of the 3-D Waterfall display to the default values.
[SENSe]:SGRam[:MEASview<y>]:WATerfall: Y[:SCALe] (on page 2413)	Sets or queries the height (vertical) range of the Waterfall (3-D spectrogram) display.
[SENSE]:SIGNalvu subgroup	**Signalvu measurement**
[:SENSe]:SIGNalvu:ACQuisition:PER:CHANnel<x>: COUPling (on page 2419)	Sets or queries the per channel coupling of the measurement.
[:SENSe]:SIGNalvu:ACQuisition:PER:CHANnel<x>: DESKew (on page 2420)	Sets or queries the per channel deskew of the measurement.
[:SENSe]:SIGNalvu:ACQuisition:PER:CHANnel<x>: EXTattn (on page 2420)	Sets or queries the per channel external attenuation of the measurement.
[:SENSe]:SIGNalvu:ACQuisition:PER:CHANnel<x>: INSTrument:BWIDth (on page 2421)	Queries the per channel instrument bandwidth of the measurement.
[:SENSe]:SIGNalvu:ACQuisition:PER:CHANnel<x>: REFlevel (on page 2421)	Sets or queries per channel reference level of the measurement.
[:SENSe]:SIGNalvu:ACQuisition:PER:CHANnel<x>: TERMination (on page 2422)	Sets or queries the per channel Termination of the measurement.
[SENSe]:SIGNalvu:ACQuisition:CONTrol: SOURce<x>:STATe (on page 2415)	Sets or queries the Source checkbox state of measurement source for RF, I and Q, Diff I and Q data type.
[SENSe]:SIGNalvu:ACQuisition:GLOBal:REFlevel (on page 2418)	Sets or queries the Global Reference level of the measurement source.
[SENSe]:SIGNalvu:ACQuisition:INPuttype:REFlevel (on page 2418)	Sets or queries the input type of ref level of the measurement source.
[SENSe]:SIGNalvu:ACQuisition:NULL:IQ:OFFSet: CLEAR (on page 2419)	To clear Null IQ offset values that were calculated using Calibrate IQ, use the above PI command.

Command	Description
[SENSe]:SIGNalvu:ACQuisition:CONTrol:HORizontal (on page 2414)	Sets or queries the Acquisition or Horizontal settings. When the checkbox is checked, the SignalVu controls horizontal settings of the oscilloscope.
[SENSe]:SIGNalvu:ACQuisition:CONTrol:SAMPle: RATE (on page 2415)	Sets or queries the Sample rate when the checkbox is checked, the SignalVu controls Sample rate of the oscilloscope.
[SENSe]:SIGNalvu:ACQuisition:CONTrol:TRIGger: POSition (on page 2416)	Sets or queries the Trigger position, when checkbox is checked, the SignalVu controls Trigger position of the oscilloscope.
[SENSe]:SIGNalvu:ACQuisition:CONTrol:VERTical (on page 2416)	Sets or queries the Vertical settings, when the checkbox is checked, the SignalVu controls the vertical settings of the oscilloscope.
[SENSe]:SIGNalvu:ACQuisition:DIGitizer:SAMPle: RATe (on page 2417)	Sets or queries the oscilloscope sample rate from the Acquisition control panel osilloscope settings of SignalVu.
[SENSe]:SIGNalvu:ACQuisition:DIGitizer:SAMPle: RATE:AUTo (on page 2417)	Sets the oscilloscope sample rate automatically or manually from the Acquisition control panel oscilloscope settings of SignalVu.
[SENSe]:SIGNalvu:ACQuisition:IQ:CALibrate (on page 2419)	Starts the IQ calibration.
[SENSe]:SIGNalvu:ACQuisition:RESet (on page 2422)	Clears the acquisition data and restarts the SignalVu acquisitions from the oscilloscope.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CALIbrate:IQ (on page 2423)	For performing null IQ offset operation for each source use the above-mentioned PI command. It will be effective from the next acquisition.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CHANnel:I (on page 2423)	Sets or queries the channel of measurement source for I data type.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CHANnel:IMINus (on page 2425)	Sets or queries the channel of measurement source for IMinus data type.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CHANnel:IPLus (on page 2424)	Sets or queries the channel of measurement source for IPlus data type.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CHANnel:Q (on page 2424)	Sets or queries the channel of measurement source for Q data type.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CHANnel:QMINus (on page 2426)	Sets or queries the channel of measurement source for QMinus data type.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CHANnel:QPLus (on page 2425)	Sets or queries the channel of measurement source for QPlus data type.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: CHANnel[:RF] (on page 2423)	Sets or queries the channel of measurement source for RF data type.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]: DOWNconverter:INJEctionside (on page 2426)	Sets or queries the downconverter injection side.

Command	Description
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:INSTrument:BANDwidth:MAXFreq (on page 2427)	Sets or queries the maximum range of instrument bandwidth.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:INSTrument:BANDwidth:MINFreq (on page 2427)	Sets or queries the minimum range of instrument bandwidth.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:LOFReq (on page 2428)	Sets or queries the downconverter low frequency.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]:DOWNconverter:STATe (on page 2428)	Sets or queries the downconverter state.
[SENSe]:SIGNalvu:ACQuisition[:SOURce<x>]:PERSrc:REFlevel (on page 2429)	Sets or queries the Reference level Per source.
[SENSe]:SPECtrum subgroup	**Spectrum measurement**
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth|BWIDth}[:RESolution] (on page 2430)	Sets or queries the resolution bandwidth (RBW).
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth|BWIDth}[:RESolution]:ACTual? (on page 2430)	Queries the actual resolution bandwidth (RBW).
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth|BWIDth}[:RESolution]:AUTO (on page 2431)	Sets or queries whether to set the RBW automatically.
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth|BWIDth}[:RESolution]:MODE (on page 2431)	Sets or queries whether to enable or disable the RBW process.
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth|BWIDth}:VIDeo (on page 2432)	Sets or queries the video bandwidth (VBW).
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth|BWIDth}:VIDeo:STATe (on page 2432)	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:SPECtrum[:MEASview<y>]:CLEar:RESults (on page 2433)	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:SPECtrum[:MEASview<y>]:COLor (on page 2433)	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:SPECtrum[:MEASview<y>]:COLor:MAXimum (on page 2434)	Sets or queries the maximum value of the color axis in the Spectrum measurement.
[SENSe]:SPECtrum[:MEASview<y>]:COLor:MINimum (on page 2435)	Sets or queries the minimum value of the color axis in the Spectrum measurement.
[SENSe]:SPECtrum[:MEASview<y>]:COLor:REVerse[:STATe] (on page 2435)	Determines whether to reverse the color palette in the Spectrum view.
[SENSe]:SPECtrum[:MEASview<y>]:FFT:WINDow (on page 2436)	Sets or queries the FFT window.

Command	Description
[SENSe]:SPECtrum[:MEASview<y>]:FILTer[:SHAPe] (on page 2436)	Sets or queries the filter shape.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency: CENTer (on page 2437)	Sets or queries the center frequency.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency: SPAN (on page 2437)	Sets or queries the frequency span.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency: SPAN:BANDwidth[: RESolution]:RATio (on page 2438)	Sets or queries the ratio of span to RBW.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency: STARt (on page 2439)	Sets or queries the measurement start frequency.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency: STEP (on page 2439)	Sets or queries the frequency step size.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency: STEP:AUTO (on page 2440)	Sets or queries whether to set the frequency step size automatically.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency: STOP (on page 2440)	Sets or queries the measurement stop frequency.
[SENSe]:SPECtrum[:MEASview<y>]:LENGth (on page 2441)	Sets or queries the spectrum length.
[SENSe]:SPECtrum[:MEASview<y>]:LENGth: ACTual? (on page 2441)	Queries the actual spectrum length.
[SENSe]:SPECtrum[:MEASview<y>]:LENGth:AUTO (on page 2442)	Sets or queries the spectrum length mode (automatic or manual).
[SENSe]:SPECtrum[:MEASview<y>]:MAX:SPAN (on page 2442)	Sets the frequency span to the maximum span.
[SENSe]:SPECtrum[:MEASview<y>]:POINts:COUNt (on page 2443)	Sets or queries the number of sample points on the signal spectrum.
[SENSe]:SPECtrum[:MEASview<y>]:STARt (on page 2443)	Sets or queries the spectrum offset time.
[SENSe]:SPECtrum[:MEASview<y>]:STARt:AUTO (on page 2444)	Sets or queries the spectrum offset mode (automatic or manual).
[SENSe]:SPECtrum[:MEASview<y>]:TIMe:MODe (on page 2444)	Sets or queries the spectrum time parameter mode (automatic or manual).
[SENSe]:SPURious subgroup	**Spurious measurement**
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth} (on page 2445)	Sets or queries the channel width for the carrier as power reference.
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth}: INTegration (on page 2445)	Sets or queries the integration bandwidth to calculate the carrier power.

Command	Description
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth}[:RESolution] (on page 2446)	Sets or queries the resolution bandwidth to measure the carrier power.
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth}[:RESolution]:AUTO (on page 2446)	Sets or queries whether to set the resolution bandwidth automatically.
[SENSe]:SPURious:CARRier:DETection (on page 2447)	Sets or queries the carrier detection method.
[SENSe]:SPURious:CARRier:FREQuency (on page 2447)	Sets or queries the carrier frequency.
[SENSe]:SPURious:CARRier:THReshold (on page 2448)	Sets or queries the threshold level to detect the carrier.
[SENSe]:SPURious:CLEar:RESults (on page 2448)	Restarts multi-trace functions (Average and Max Hold).
[SENSe]:SPURious[:FREQuency]:OVERlap? (on page 2449)	Queries whether any of the frequency ranges (A to T) overlap.
[SENSe]:SPURious:LIST (on page 2449)	Sets or queries how to list the spurious signals.
[SENSe]:SPURious:MODE (on page 2450)	Sets or queries the frequency range mode (Multi or Single).
[SENSe]:SPURious:OPTimization (on page 2450)	Sets or queries the method of optimization.
[SENSe]:SPURious:POINts:COUNt (on page 2451)	Sets or queries the trace point count for the frequency range.
[SENSe]:SPURious:RANGe<x>:BANDwidth:VIDeo (on page 2451)	Sets or queries the VBW for the specified frequency range.
[SENSe]:SPURious:RANGe<x>:BANDwidth:VIDeo: STATe (on page 2452)	Sets or queries whether to enable the VBW for the frequency range.
[SENSe]:SPURious:RANGe<x>:DETection (on page 2452)	Sets or queries the display detector for the frequency range.
[SENSe]:SPURious:RANGe<x>:EXCursion (on page 2453)	Sets or queries the excursion level in the frequency range.
[SENSe]:SPURious:RANGe<x>:FILTer[:SHAPe] (on page 2453)	Sets or queries the filter shape for the frequency range.
[SENSe]:SPURious:RANGe<x>:FILTer[:SHAPe]: BANDwidth (on page 2453)	Sets or queries the filter bandwidth for the frequency range.
[SENSe]:SPURious:RANGe<x>:FILTer[:SHAPe]:BANDwidth:AUTO (on page 2454)	Sets or queries whether to set the filter bandwidth automatically.
[SENSe]:SPURious:RANGe<x>:FREQuency:STARt (on page 2454)	Sets or queries the start frequency of the range.
[SENSe]:SPURious:RANGe<x>:FREQuency:STOP (on page 2455)	Sets or queries the stop frequency of the range.
[SENSe]:SPURious:RANGe<x>:LIMit:ABSolute: STARt (on page 2456)	Sets or queries the absolute start amplitude of the limits for the range.

Command	Description
[SENSe]:SPURious:RANGe<x>:LIMit:ABSolute: STOP (on page 2456)	Sets or queries the absolute stop amplitude of the limits for the range.
[SENSe]:SPURious:RANGe<x>:LIMit:MASK (on page 2457)	Sets or queries the limit mask function mode for the frequency range.
[SENSe]:SPURious:RANGe<x>:LIMit:RELative: STARt (on page 2458)	Sets or queries the relative start amplitude of the limits for the range.
[SENSe]:SPURious:RANGe<x>:LIMit:RELative: STOP (on page 2458)	Sets or queries the relative stop amplitude of the limits for the range.
[SENSe]:SPURious:RANGe<x>:STATe (on page 2459)	Sets or queries whether to enable or disable the frequency range.
[SENSe]:SPURious:RANGe<x>:THReshold (on page 2459)	Sets or queries the threshold level to detect spurious signals in a range.
[SENSe]:SPURious:REFerence (on page 2460)	Sets or queries the power reference.
[SENSe]:SPURious:REFerence:MANual:POWer (on page 2460)	Sets or queries the reference power level.
[SENSe]:SQUality subgroup	**Signal quality**
[SENSe]:SQUality[:MEASview<y>]:EVM: ALL[:STATe] (on page 2460)	Sets or queries the display of Offset EVM results.
[SENSe]:SVPC subgroup	**Channel trigger**
[SENSe]:SVPC:ACQuisition:CONTrol: CHANnel (on page 2462)	Sets or queries the Channel Settings checkbox state.
[SENSe]:SVPC:ACQuisition:CONTrol:TRIGger (on page 2462)	Sets or queries the Trigger Settings checkbox state.
[SENSe]:TOVerview subgroup	**Time overview**
[SENSe]:TOVerview[:MEASview<y>]:FREQuency: CENTer (on page 2465)	Sets or queries the center frequency.
[SENSe]:TOVerview[:MEASview<y>]: MAXTracepoints (on page 2466)	Sets or queries the maximum trace points.
[SENSe]:TOVerview[:MEASview<y>]:TIME:PER: DIVision (on page 2466)	Sets or queries the time per division (dB/div) value in the Time Overview display.
[SENSe]:USETtings subgroup	**All measurements**
[SENSe]:USETtings (on page 2474)	Updates the analyzer settings.
[SENSe}:WLAN subgroup	**Wireless LAN settings**
[SENSe]:WLAN:ANALysis:LENGth (on page 2492)	Specifies the length of the analysis period.
[SENSe]:WLAN:ANALysis:LENGth:ACTual? (on page 2492)	Returns the value of the actual analysis length.

Command	Description
[SENSe]:WLAN:ANALysis:LENGth:AUTO (on page 2492)	Sets the analysis length value based on the requirements of the selected display.
[SENSe]:WLAN:ANALysis:OFFSet (on page 2493)	Specifies or queries the analysis offset in the symbol interval.
[SENSe]:WLAN:BURSt (on page 2514)	Specifies the burst to measure when multiple bursts are present in an acquisition.
[SENSe]:WLAN:CHANnel[:BANDwidth|:BWIDth] (on page 2514)	Specifies or queries a nominal channel bandwidth to use for the WLAN measurements.
[SENSe]:WLAN:EQUalizer:TRAining (on page 2515)	Specifies the method for estimating channel frequency response and equalization.
[SENSe]:WLAN:FFT:LENGth? (on page 2515)	Returns the fixed FFT length for the WLAN measurements.
[SENSe]:WLAN:FFT:SRATe? (on page 2516)	Returns the FFT sample rate for the WLAN measurements.
[SENSe]:WLAN:FREQuency:ERRor (on page 2516)	Sets or queries the frequency error in the WLAN analysis parameters.
[SENSe]:WLAN:FREQuency:ERRor:AUTO (on page 2517)	Turns on the automatic determination of the frequency error.
[SENSe]:WLAN:GUARd:INTerval (on page 2517)	Sets or queries the Guard Interval to use in the input signal.
[SENSe]:WLAN:MODulation:DETect:QAM1024 (on page 2518)	Specifies a fixed modulation type.
[SENSe]:WLAN:MODulation:SOURce (on page 2519)	Specifies the method of data symbol modulation identification.
[SENSe]:WLAN:PILot:TRACking:AMPLitude:STATe (on page 2519)	Specifies the pilot subcarrier to use to correct amplitude variations over the packet.
[SENSe]:WLAN:PILot:TRACking:PHASe:STATe (on page 2520)	Specifies the pilot subcarrier to use to correct phase variations over the packet.
[SENSe]:WLAN:PILot:TRACking:TIMing:STATe (on page 2520)	Specifies the pilot subcarrier to use to correct timing variations over the packet.
[SENSe]:WLAN:RADix (on page 2521)	Specifies or queries the format for displaying the symbol values.
[SENSe]:WLAN:SCARriers (on page 2521)	Sets or queries which subcarriers to display in the WLAN view.
[SENSe]:WLAN:SCARriers:RANGe:STARt (on page 2522)	Sets or queries the start value of the subcarrier range.
[SENSe]:WLAN:SCARriers:RANGe:STOP (on page 2522)	Sets or queries the stop value of the subcarrier range.
[SENSe]:WLAN:SCARriers:SINGle:INDex (on page 2522)	Specifies or queries the single subcarrier to display in the WLAN view.
[SENSe]:WLAN:SCARriers:SPACing (on page 2523)	Sets or queries the subcarrier spacing.
[SENSe]:WLAN:SCARriers:SPACing:AUTO (on page 2523)	Automatically sets the subcarrier spacing.

Command	Description
[SENSe]:WLAN:SIGNal:STANdard:TYPE (on page 2524)	Sets or queries the WLAN signal standard.
[SENSe]:WLAN:SubCARrier:DERotation (on page 2524)	Shows subcarriers for displays with or without the Gamma subcarrier phase rotation removed.
[SENSe]:WLAN:SUMMary:CLEar:RESults (on page 2525)	Clears the results of the WLAN Summary display.
[SENSe]:WLAN:SUMMary:CLEar:RESults (on page 2525)	Clears the results in the WLAN Summary measurement.
[SENSe]:WLAN:SUMMary:EVM:RMS:AVERage: COUNt (on page 2525)	Specifies the maximum number of bursts to average.
[SENSe]:WLAN:SUMMary:EVM:RMS:AVERage: COUNt:ENABle (on page 2526)	Enables the burst average function.
[SENSe]:WLAN:SWAP:IQ (on page 2526)	Specifies to swap the I and Q components of a signal.
[SENSe]:WLAN:SYMBols|CHIPs (on page 2527)	Specifies or queries the symbols or chips are displayed in the WLAN Symbol Table.
[SENSe]:WLAN:SYMBols|CHIPs:MAX (on page 2527)	Sets or queries the value for the maximum number of symbols/chips to analyze.
[SENSe]:WLAN:SYMBols|CHIPs:MAX:STATe (on page 2528)	Turns the maximum data symbols to analyze feature on or off.
[SENSe]:WLAN:SYMBols|CHIPs:RANGe:COUNt (on page 2528)	Sets or queries the number of symbols or chips to display.
[SENSe]:WLAN:SYMBols|CHIPs:RANGe:STARt (on page 2529)	Sets or queries the symbols/chips start value.
[SENSe]:WLAN:SYMBols|CHIPs:RANGe:STOP (on page 2529)	Sets or queries the symbols or chips stop value.
[SENSe]:WLAN:SYMBols|CHIPs:SINGle:INDex (on page 2530)	Sets or queries the symbol or chip to use when displaying results from a single symbol.
[SENSe]:WLAN:UNIT:FREQuency (on page 2530)	Specifies or queries whether the displayed frequency units are frequency (Hz) or subcarrier.
[SENSe]:WLAN:UNIT:TIME (on page 2530)	Specifies or queries whether the displayed time units are seconds, symbols or chips.
SENSe:LTE subgroup	
SENSe:LTE:ACLR:BANDwidth:RESolution (on page 2198)	Sets or queries the resolution bandwidth (RBW).
SENSe:LTE:ACLR:BANDwidth:VIDeo (on page 2198)	Sets or queries the video bandwidth (VBW).
SENSe:LTE:ACLR:BANDwidth:VIDeo:STATe (on page 2198)	Sets or queries enabling or disabling the video bandwidth (VBW).
SENSe:LTE:ACLR:CHANnel:IBANdwidth (on page 2199)	Sets or queries the reference channel integration bandwidth.

Command	Description
SENSe:LTE:ACLR:CHANnel:WIDTh (on page 2199)	Sets or queries the reference channel width.
SENSe:LTE:ACLR:CLEar:RESults (on page 2200)	Clears the results in the measurement.
SENSe:LTE:ACLR:FREQuency (on page 2200)	Sets or queries the measurement center frequency.
SENSe:LTE:ACLR:MFILter (on page 2201)	Sets or queries the shape of the filter.
SENSe:LTE:ACLR:MODE:REALtime (on page 2201)	Sets or queries the real-time LTE ACLR measurement mode.
SENSe:LTE:ACLR:NFLoor:ACQuire (on page 2202)	Enables measurement of the noise floor.
SENSe:LTE:ACLR:NFLoor:CORRected? (on page 2202)	Returns whether or not noise correction was applied on the last acquisition.
SENSe:LTE:ACLR:NFLoor:STATe (on page 2203)	Determines whether to enable or disable the correction for noise floor.
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution (on page 2203)	Sets or queries the resolution bandwidth (RBW) value in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution:COUNt (on page 2204)	Sets or queries the count for the resolution bandwidths in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<X>:BANDwidth: RESolution:FILTer (on page 2204)	Sets or queries the filter bandwidth resolution under Offset & Limit table.
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution:VIDeo (on page 2205)	Sets or queries the resolution video bandwidth (VBW) value in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution:VIDeo:STATe (on page 2205)	Sets or queries whether to enable or disable the video resolution bandwidth (VBW) in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:DETection (on page 2206)	Sets or queries the detection settings for all offsets.
SENSe:LTE:ACLR:OFFSet<x>:FREQuency: BANDwidth (on page 2206)	Sets or queries the frequency bandwidth value for the specified row of the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:FREQuency:OFFSet (on page 2207)	Sets or queries the frequency offset value of the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:ABSolute (on page 2207)	Sets or queries the absolute limit value of the row in the Offset & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:MASK (on page 2208)	Sets or queries the limit mask setting for the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:RELative (on page 2208)	Sets or queries the relative limit value of channel under Offset & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:SIDE (on page 2209)	Sets or queries the side of the offset limit for the specified row in the Offsets & Limits table.

Command	Description
SENSe:LTE:ACLR:OFFSet<x>:STATe (on page 2209)	Sets or queries the specified row of the Offsets & Limits table.
SENSe:LTE:ACLR:POINts:COUNt (on page 2210)	Sets or queries the number of points used for the trace.
SENSe:LTE:ACLR:REFerence:MAGNitude:AUTO (on page 2211)	Sets or queries the reference magnitude to automatic or manual.
SENSe:LTE:ACLR:REFerence:MAGNitude: DETection (on page 2211)	Sets or queries the reference magnitude detection.
SENSe:LTE:ACLR:REFerence:MAGNitude (on page 2210)	Sets or queries the reference power magnitude.
SENSe:LTE:ACLR:STEP:AUTO (on page 2212)	Determines whether to automatically update the center frequency increment/decrement step size.
SENSe:LTE:ACLR:STEP:MAGNitude (on page 2212)	Sets or queries the step magnitude for the center frequency.
SENSe]:LTE:ANALysis:EQUAlization:STATe (on page 2213)	Sets or queries the Enable Equalization state in the LTE Analysis Params tab.
SENSe:LTE:ANALysis:LENGth:ACTual? (on page 2214)	Queries the actual analysis length for the LTE Constellation and LTE Power vs Time displays.
[SENSe]:LTE:ANALysis:OFFSet (on page 2215)	Sets or queries the LTE analysis offset for the LTE Constellation or LTE Power vs Time.
SENSe:LTE:ANALysis:OFFSet:AUTO (on page 2216)	Sets or queries the Auto checkbox state for analysis offset.
SENSe:LTE:ANALysis:TIMe:UNIT (on page 2216)	Sets or queries the unit preference under the LTE Analysis tab.
SENSe:LTE:CHANnel:BANDwidth (on page 2219)	Specifies or queries the channel bandwidth to use.
SENSe:LTE:CHSPectrum:AVERage (on page 2219)	Sets or queries how to average the waveform.
SENSe:LTE:CHSPectrum:AVERage:COUNt (on page 2220)	Sets or queries the number of traces for averaging.
SENSe:LTE:CHSPectrum:BANDwidth:RESolution (on page 2220)	Sets or queries the resolution bandwidth (RBW).
SENSe:LTE:CHSPectrum:BANDwidth:RESOlution: AUTO (on page 2221)	Determines whether to set the resolution bandwidth (RBW) automatically or manually. Queries this setting.
SENSe:LTE:CHSPectrum:BANDwidth:VIDeo (on page 2221)	Sets or queries the video bandwidth (VBW).
SENSe:LTE:CHSPectrum:BANDwidth:VIDeo:STATe (on page 2222)	Sets or queries enabling or disabling the video bandwidth (VBW).
SENSe:LTE:CHSPectrum:CHANnel:BANDwidth (on page 2222)	Specifies or queries a nominal channel bandwidth to use.
SENSe:LTE:CHSPectrum:CLEar:RESults (on page 2222)	Clears the results in the LTE Channel Spectrum measurement.

Command	Description
SENSe:LTE:CHSPectrum:DETection (on page 2223)	Sets or queries the trace detection settings.
SENSe:LTE:CHSPectrum:FREQuency (on page 2223)	Sets or queries the measurement center frequency.
SENSe:LTE:CHSPectrum:FREQuency:SPAN (on page 2224)	Sets or queries the frequency span.
SENSe:LTE:CHSPectrum:FREQuency:STEP (on page 2224)	Sets or queries the frequency step size.
SENSe:LTE:CHSPectrum:FREQuency:STEP:AUTO (on page 2225)	Determines whether to set the frequency step size automatically or manually. Queries this setting.
SENSe:LTE:CHSPectrum:POINts:COUNt (on page 2225)	Sets or queries the number of points used for the trace.
SENSe:LTE:FRAMe:STRUcture (on page 2226)	Sets or queries the frame structure.
[SENSe]: TDIagram	**TDIagram measurement**
[SENSe]:TDIagram[:MEASview<y>]:SELEcted: SOURce (on page 2464)	Sets or queries the source of Trellis diagram for a selected Measurement view number.
SENSe:TOFF:POWEr:SPECtral:DENSity (on page 2465)	Sets or queries the limit set for comparison of the Toff power spectral density value.

Command	Description
[SENSe] basic command subgroup	**General analysis parameter control**
[SENSe]:ACQuisition:{BANDwidth|BWIDth}	Sets or queries the acquisition bandwidth.
[SENSe] Bluetooth command subgroup	**Bluetooth measurements**
[SENSe]:BLUEtooth:ANALysis:LENGth	Sets or returns the analysis length.
[SENSe]:BLUEtooth:ANALysis:LENGth:ACTual?	Sets the actual analysis length.
[SENSe]:BLUEtooth:ANALysis:LENGth:AUTO	Sets or queries the length mode.
[SENSe]:BLUEtooth:ANALysis:MEAS[:BANDwidth|BWIDth]	Sets or returns the measurement bandwidth.
[SENSe]:BLUEtooth:ANALysis:MEAS:SOURce	Sets or returns the analysis measurement source.
[SENSe]:BLUEtooth:ANALysis:OFFSet	Sets or returns the symbol analysis offset.
[SENSe]:BLUEtooth:ANALysis:OFFSet:AUTO	Determines whether to set the carrier frequency error automatically or manually.
[SENSe]:BLUEtooth:ANALysis:TIMe:UNITs	Sets the time units.
[SENSe]:BLUEtooth([:BANDwidth]|:BWIDth):MODE	Sets or returns the measurement bandwidth mode.

Command	Description
[SENSe]:BLUEtooth([:BANDwidth]|:BWIDth):TINTerval	Sets or returns the measurement bandwidth frequency span.
[SENSe]:BLUEtooth([:BANDwidth]|:BWIDth):TINTerval:AUTO	Sets or returns the bandwidth to Auto or Manual.
[SENSe]:BLUEtooth:CONStellation:PREFs:GRATicule:SHOW	Show or hides the graticule state.
[SENSe]:BLUEtooth:CONStellation:PREFs:MARKERS:SHOW	Show or hides the marker readout.
[SENSe]:BLUEtooth:CONStellation:PREFs:RADIx	Sets or returns the radix of the marker readout.
[SENSe]:BLUEtooth:CONStellation:TRACE<x>:CONTent	Sets or returns the appearance of the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:CONStellation:TRACe<x>:FREEze	Sets or freezes the updates of the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:CONSTellation:TRACE<x>:POINtsPerSymbol	Sets or returns the number of points per symbol (how many points to use between symbols) for the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:CONStellation:TRACe<x>:SHOW	Shows or hides the specified trace (Trace 1 or Trace 2).
[SENSe]:BLUEtooth:DELTa:AVERage:FONE	Sets or returns the average frequency for the low deviation pattern.
[SENSe]:BLUEtooth:DELTa:AVERage:FTWO	Sets or returns the average frequency for the high deviation pattern.
[SENSe]:BLUEtooth:FDVTime:TRACE:OCTEt?	Returns the selected octet number on the Frequency Deviation vs. Time display.
[SENSe]:BLUEtooth:FDVTime:TRACE:OCTEt:TOTAL: COUNt?	Returns the total octet value to be selected on the Frequency Deviation vs. Time display.
[SENSe]:BLUEtooth:FDVTime:TRACE:VIEW:MODE	Sets or queries view mode in the Frequency Deviation vs. Time display.
[SENSe]:BLUEtooth:FILTer:ALPHa	Sets or returns the alpha filter factor (α/BT).
[SENSe]:BLUEtooth:FILTer:MEASurement	Sets or returns the measurement filter setting.
[SENSe]:BLUEtooth:FILTer:REFerence	Sets or returns the reference filter setting.
[SENSe]:BLUEtooth:FREQuency:DEViation	ets or returns the frequency deviation.
[SENSe]:BLUEtooth:FREQuency:DEViation:AUTO	Determines whether to detect the frequency deviation automatically or manually.
[SENSe]:BLUEtooth:FREQuency:ERRor	Sets or returns the frequency error in the Bluetooth analysis parameters (when Auto is off).
[SENSe]:BLUEtooth:FREQuency:ERRor:AUTO	Determines whether the frequency error is set to Auto or Manual.

Command	Description
[SENSe]:BLUEtooth:INBEmissions:POWEr:LIMIt<x>	Sets or queries the limits of the Bluetooth InBand Emission settings.
[SENSe]:BLUEtooth:POWer:CLASs	Sets or queries the power class of the Bluetooth standard.
[SENSe]:BLUEtooth:STANdard	Sets or queries the Bluetooth standard.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FONE:AVERage:MAX	Sets or returns the maximum limit of the Basic Rate ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FONE:AVERage:MIN	Sets or returns the minimum limit of the Basic Rate ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FTWO:PERcent	Sets or returns the limit of the Basic Rate ΔF2 percentage.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:DELTa:FTWO:RESult	Sets or returns the limit of the Basic Rate ΔF2 result.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:MAX:DRIFt:FNFZero	Sets or returns the limit of the Basic Rate maximum drift fn–f0.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:MAX:FREQuency:OFFSet	Sets or queries the limit of the Basic Rate maximum frequency offset.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:MAX:FREQuency:OFFSet:PREAmBDR	Sets or queries the limit of the Basic Rate maximum frequency offset value from the preamble region.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:AVERage:MAX	Sets or queries the limit of the Basic Rate Power Class 1 maximum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:AVERage:MIN	Sets or queries the limit of the Basic Rate Power Class 1 minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:PEAK:MAX	Sets or queries the limit of the Basic Rate Power Class 1 maximum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:ONE:PEAK:MIN	Sets or queries the limit of the Basic Rate Power Class 1 minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:AVERage:MAX	Sets or queries the limit of the Basic Rate Power Class 3 maximum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:AVERage:MIN	Sets or queries the limit of the Basic Rate Power Class 3 minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:PEAK:MAX	Sets or queries the limit of the Basic Rate Power Class 3 maximum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:THREe:PEAK:MIN	Sets or queries the limit of the Basic Rate Power Class 3 minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:AVERage:MAX	Sets or queries the limit of the Basic Rate Power Class 2 maximum average output power value.

Command	Description
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:AVERage:MIN	Sets or queries the limit of the Basic Rate Power Class 2 minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:PEAK:MAX	Sets or queries the limit of the Basic Rate Power Class 2 maximum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BDR:OPOWer:CLASs:TWO:PEAK:MIN	Sets or queries the limit of the Basic Rate Power Class 2 minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FONE:AVERage:MAX	Sets or returns the maximum limit of the Low Energy ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FONE :AVERage:MIN	Sets or returns the minimum limit of the Low Energy ΔF1 average.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FTWO:PERcent	Sets or returns the limit of the Low Energy ΔF2 percentage.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:DELTa:FTWO:RESult	Sets or returns the limit of the Low Energy ΔF2 result.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:MAX:DRIFt: FNFZero	Sets or returns the limit of the Low Energy maximum drift fn–f0.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:MAX:FREQuency:OFFSet	Sets or returns the limit of the Low Energy maximum frequency offset.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:MAX:FREQuency:OFFSet:PREAmble	Sets or returns the limit of the Low Energy maximum frequency offset value from the preamble region.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:AVERage:MAX	Sets or returns the limit of the Low Energy maximum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:AVERage:MIN	Sets or returns the limit of the Low Energy minimum average output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:PEAK:MAX	Sets or returns the limit of the Low Energy maximum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:BLE:OPOWer:PEAK:MIN	Sets or returns the limit of the Low Energy minimum peak output power value.
[SENSe]:BLUEtooth:SUMMary:LIMIt:MAX:DRIFt:F1FZero	Sets or returns the limit of the maximum fn–fn0 drift in the packet.
[SENSe]:BLUEtooth:SUMMary:LIMIt:MAX:DRIFt:FNFN5	Sets or returns the limit of the maximum fn–fn5 drift in the packet.
[SENSe]:BLUEtooth:SYMBol:POINts	Sets or returns the number of points per symbol (how many points to use between symbols).
[SENSe]:BLUEtooth:TEST:PATTern	Sets or returns the test pattern type in the Bluetooth displays.
[SENSe]:BLUEtooth:TEST:PATTern:AUTO:DETEct	Sets or returns the auto detect setting for the Bluetooth displays.

Command	Description
[SENSe]:BLUEtooth:TIME:ZERO:REFERENCE	Sets or returns the Time Zero Reference setting in the Bluetooth displays.
[SENSe]:BLUEtooth:TRACe:TYPE	Sets or returns the trace type.
[SENSe]: NOISe subgroup	**Noise Figure and Gain measurements**
[SENSe]:NOISe:AVERage:COUNt	Sets or queries the acquisition counts over which the noise average is computed.
[SENSe]:NOISe:BANDwidth	Sets or queries the resolution bandwidth (RBW).
[SENSE]:NOISe:CONTrol:SETTling:OFF[:TIME]	Sets or queries the analyzer off settle time.
[SENSE]:NOISe:CONTrol:SETTling:ON[:TIME]	Sets or queries the analyzer on settle time.
[SENSe]:NOISe:CORRection:ENR:CONSTant	Sets and queries the excess noise ratio (ENR) constant.
[SENSe]:NOISe:CORRection:ENR:MODE	Sets and queries the Noise Source mode for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:DATA?	Queries the Noise Source model, serial number, and table values for frequency and ENR for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:ID	Sets or queries the Noise Source Model for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:NEW	Sets the Noise Source Model for the noise displays.
[SENSe]:NOISe:CORRection:ENR:TABLe:SERial	Sets or queries the Noise Source serial number for the noise displays.
[SENSe]:NOISe:CORRection:TCOLd:ADUT:UREFerence	Sets or queries the analyzer to use the reference temperature (K) for the loss at the DUT output in the noise displays.
[SENSe]:NOISe:CORRection:TCOLd:ADUT[:VALue]	Sets or queries the temperature value (K) for the loss at the DUT output in the noise displays.
[SENSe]:NOISe:CORRection:TCOLd:BDUT:UREFerence	Sets or queries the analyzer to use the reference temperature (K) for the loss at the DUT input in the noise displays.
[SENSe]:NOISe:CORRection:TCOLd:BDUT[:VALue]	Sets or queries the temperature value (K) for the loss at the DUT input in the noise displays.
[SENSe]:NOISe:CORRection:TCOLd[:REFerence]	Sets or queries the reference temperature value (K) in the display.
[SENSe]:NOISe:FIGure:POINTs:COUNt	Sets the number of sample points for the display.
[SENSe]:NOISe:FREQuency:CENTer	Sets or queries the center frequency value (Hz).
[SENSe]:NOISe:FREQuency:MODE	Sets or queries the frequency mode in the display.
[SENSe]:NOISe:FREQuency:SPAN	Sets or queries the frequency Span value (Hz).

Command	Description
[SENSe]:NOISe:FREQuency:STARt	Sets or queries the Start Frequency value.
[SENSe]:NOISe:FREQuency:STEPs	Sets or queries the frequency Steps value.
[SENSe]:NOISe:FREQuency:STOP	Sets or queries the Stop Frequency value.
[SENSe]:NOISe:FREQuency:TABLe:DATA?	Queries the data in the Frequency Table.
[SENSe]:NOISe:FREQuency:TABLe:NEW	Creates a new Frequency Table with the specified values for the noise display.
[SENSe]:OBWidth:BOBW:XDBM:MEASurement: DIREction	Sets or queries the measurement direction.
[SENSe]:OBWidth:BOBW:XDBM:RANGe	Sets or queries the measurement range.
[SENSe]:P25 subgroup	**APCO P25 measurements**
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PHASe[1/2]:F[1/2/3/4]:LO	Sets or queries for two values namely, the On/Off state of limit comparison and the lower limit value for Frequency deviation, f1/f2/f3/f4 for Phase1 or Phase2.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PHASe[1/2]:F[1/2/3/4]:UP	Sets or queries for two values namely, the On/Off state of limit comparison and the upper limit value for Frequency deviation, f1/f2/f3/f4 for Phase1 or Phase2.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PMAX:OFF	Sets or queries for two values namely, the On/Off state of limit comparison and the upper limit value for Pmax-off.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PMAX:ON	Sets or queries for two values namely, the On/Off state of limit comparison and the upper limit value for Pmax-on.
[SENSe]:P25:TEST:PATTern	Sets or returns the test pattern type in the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement	Sets or queries the Trigger Measurement from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TOBSync	Sets or returns the tOB_sync (measured) value in the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TOBSync:AUTO	Sets or queries the Auto checkbox selection from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency:BEHAviour	Sets or queries the Trigger Measurements option Phase1-Transient Frequency Behavior from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency: BEHAviour:TIME:OFF	Sets or queries the ‘t off’ value when the Transient Frequency option is Transient Frequency Behavior On to Off for Phase1-Transient Frequency Behavior from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency: BEHAviour:TIME:OFF:AUTO	Sets or queries the Auto checkbox selection when Transient Frequency is chosen as Transient Frequency Behavior On to Off from the P25 displays.

Command	Description
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency: BEHAviour:TIME:ON	Sets or queries the 't on' value when the Transient Frequency option is Transient Frequency Behavior Off to On for Phase1-Transient Frequency Behavior from the P25 displays.
[SENSe]:P25:TRIGgger:MEASurement:TRANsient: FREQuency:BEHAviour:TIME:ON:AUTO	Sets or queries the Auto checkbox selection when Transient Frequency is chosen as Transient Frequency behavior Off to On from the P25 displays.
SENSe:PERRor subgroup	**Perror measurement**
[SENSe]:PERRor[:MEASview<y>]:SELEcted:SOURce	Sets or queries the source of Phase error versus Time for a selected Measurement view number.
SENSE:PULSe subgroup	**Pulse measurements**
[SENSe]:PULSe[:MEASview<y>]:ANALyze: MEASurement:TIME:TYPE	Sets or Queries the Measurement(s) parameter from the Control panel settings of Define tab which is common across the Pulse displays.
[SENSe]:PULSe:CUMulative:HISTogram [:MEASview<y>]:BIN:COUNt	Sets the Bins value in Histogram settings table in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative:HISTogram [:MEASview<y>]:CLEar:RESults	Clears all scalar results in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative:HISTogram [:MEASview<y>]:MODE	Sets the Histogram settings mode to Auto or Manual in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative:HISTogram [:MEASview<y>]:ORDinate	Sets the Histogram readout in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative:HISTogram [:MEASview<y>]:OUTLier: ORDinate	Sets the outlier readout in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative:HISTogram [:MEASview<y>]:SETtings: APPly	Applies the new settings to the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative:HISTogram [:MEASview<y>]:XLIMit	Sets the Xlimit in Histogram settings table in the Cumulative Histogram display.
[SENSe]:PULSe:CUMulative:STATistics [:MEASview<y>]:CLEar: RESults	Clears all scalar results in the Cumulative Statistics display.
[SENSe]:PULSe:OGRAm[:MEASview<y>]: ANALysis:FVTime:FILTer:SHAPe	Sets or queries the type of Filter shape from Analysis tab of Frequency vs Time from the Pulse-Ogram display.
[SENSe]:PULSe:OGRAm[:MEASview<y>]: ANALysis:FVTime:SPECtrum:ANALysis:REGion	Sets or queries the Spectrum Analysis region from Analysis tab of Frequency vs Time in the Pulse-Ogram display.
[SENSe]:PULSe:STATistics[:MEASview<y>]: IN:LINear:SCALe	Sets or queries the Calculate statistics in linear scale selection from the Pulse Statistics display.
[SENSe]:ROSCillator:SOURce	Sets or queries the frequency reference oscillator source.

Command	Description
SENSe:TXGain subgroup	**Transmission Gain measurements**
SENSe:TXGain:{BANDwidth|BWIDth}[:RESolution]	Sets or queries the resolution bandwidth.
SENSe:TXGain:FREQuency:CENTer	Sets or queries the frequency at the center of the selected Span.
SENSe:TXGain:FREQuency:POINts	Sets or queries the number of frequency steps in the measurement range.
SENSe:TXGain:FREQuency:SPAN	Sets or queries the difference between the start and stop frequencies (span).
SENSe:TXGain:FREQuency:STARt	Sets or queries the lowest frequency in the span.
SENSe:TXGain:FREQuency:STEP	Sets or queries the frequency increment. Measurements are made at frequency points from Start Freq to Stop Freq in Step Size increments.
SENSe:TXGain:FREQuency:STOP	Sets or queries the highest frequency in the span.
SENSe:P25 subgroup	**P25 measurements**
[SENSe]:P25:ANALysis:OFFSet	Sets or queries the offset value.
[SENSe]:P25:ANALysis:OFFSet:AUTO	Sets or queries if the offset is set to Auto or if Auto is off.
[SENSe]:P25([:BANDwidth]|:BWIDth):MODE	Sets or queries the Measurement BW (bandwidth) (frequency span) mode as Auto, Manual, or Link to Span.
[SENSe]:P25([:BANDwidth]|:BWIDth):TINTerval	Sets or queries the Measurement BW (bandwidth) (frequency span).
[SENSe]:P25([:BANDwidth]|:BWIDth):TINTerval:AUTO	Sets or queries the Measurement BW (bandwidth) (frequency span) mode as Auto or Manual.
[SENSe]:P25:FILTer:MEASurement	Sets or queries the Measurement Filter setting.
[SENSe]:P25:FILTer:REFerence	Sets or queries the Reference Filter setting.
[SENSe]:P25:FREQuency:ERRor	Sets or queries the Frequency Offset (when Auto is off).
[SENSe]:P25:FREQuency:ERRor:AUTO	Sets or queries if the Frequency Error is set to Auto or if Auto is off.
[SENSe]:P25:MODUlation:CHANnel:([BANDwidth]|:BWIDth)]?	Queries the actual P25 Preset channel bandwidth.
[SENSe]:P25:MODUlation:STANdard	Sets or queries the modulation standard.
SENSe:P25:MODUlation:TYPE	Sets or queries the modulation type.
[SENSe]:P25:SRATe	Sets or queries the symbol rate value for measurements.

Command	Description
[SENSe]:P25:SUMMary:CLEar:RESults	Clears the results from the P25 Summary display.
[SENSe]:P25:SUMMary:LIMIt:FA	Sets or queries the On/Off state of limit comparison and the upper limit value for Operating Frequency Accuracy.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: AVERage:TERRor:ONE	Sets or queries the On/Off state of limit comparison and the upper limit value for Average t_error_1.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: AVERage:TERRor:ZERO	Sets or queries the On/Off state of limit comparison and the upper limit value for Average t_error_0.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: LOGIc:CHANnel:OFF:SLOT	Sets or queries the On/Off state of limit comparison and the upper limit value for HCPM Transmitter Logic channel offslot.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: LOGIc:CHANnel:PEAK:ACPR	Sets or queries the On/Off state of limit comparison and the upper limit value for HCPM Transmitter Logic channel Peak ACPR.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PEAK:NEGAtive:LO	Sets or queries the On/Off state of limit comparison and the lower limit value for Frequency Deviation, negative peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PEAK:NEGAtive:UP	Sets or queries the On/Off state of limit comparison and the upper limit value for Frequency Deviation, negative peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PEAK:POSItive:LO	Sets or queries the On/Off state of limit comparison and the lower limit value for Frequency Deviation, positive peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PEAK:POSItive:UP	Sets or queries for the On/Off state of limit comparison and the upper limit value for Frequency Deviation, positive peak.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PHASe[1/2]:F[1/2/3/4]:LO	Sets or queries the On/Off state of limit comparison and the lower limit value for Frequency Deviation, f1/f2/f3/f4 for Phase1 or Phase2.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PHASe[1/2]:F[1/2/3/4]:UP	Sets or queries the On/Off state of limit comparison and the upper limit value for Frequency Deviation, f1/f2/f3/f4 for Phase1 or Phase2.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PMAX:OFF	Sets or queries the On/Off state of limit comparison and the upper limit value for Pmax-off.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PMAX:ON	Sets or queries the On/Off state of limit comparison and the upper limit value for Pmax-on.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PMAX:SS	Sets or queries the On/Off state of limit comparison and the upper limit value for Pss-max.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: PMIN:SS	Sets or queries the On/Off state of limit comparison and the upper limit value for Pss-min.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: TRANsmitter: AVERage:ATTK:ENCOder	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack encoder.

Command	Description
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: TRANsmitter: AVERage:ATTK:ENCOder:BI	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack encoder, busy/idle.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: TRANsmitter: AVERage:ATTK:POWEr	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack power.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: TRANsmitter: AVERage:ATTK:POWEr:BI	Sets or queries for the On/Off state of limit comparison and the upper limit value for Transmitter Average Attack power, busy/idle.
[SENSe]:P25:SUMMary:LIMIt:FREQuency:DEVIation: TRANsmitter: AVERage:THRUput:DLAY	Sets or queries the On/Off state of limit comparison and the upper limit value for Transmitter Average throughput delay.
[SENSe]:P25:SUMMary:LIMIt:MF	Sets or queries the On/Off state of limit comparison and the upper limit value for Modulation Fidelity.
[SENSe]:P25:SUMMary:LIMIt:RF:OUTPower	Sets or queries the On/Off state of limit comparison and the upper limit value for RF Output Power.
[SENSe]:P25:SUMMary:LIMIt:SRA	Sets or queries the On/Off state of limit comparison and the upper limit value for Symbol Rate Accuracy.
[SENSe]:P25:SYMBols:POINts	Sets or queries the Points/Symbols to display.
SENSe:P25:TIMe:UNITs	Sets or queries the time units as Seconds or Symbols in the display.
[SENSe]:P25:TIMe:UNITs	Sets or queries the fundamental unit of time for the P25 measurements.
[sense]:acquisition subgroup	**Acquisition measurements**
[SENSe]:ACQuisition:MODE	Sets or queries the acquisition mode.
[SENSe]:ACQuisition:OPTimization	Sets or queries the method of the global gain and input bandwidth optimization.
[SENSe]:ACQuisition:SAMPles	Sets or queries the acquisition samples.
[SENSe]:ACQuisition:SEConds	Sets or queries the acquisition length.
[SENSe]:ANALysis:ADVanced:DITHer	Determines whether to enable or disable dithering.
[SENSe]:ANALysis:ADVanced:DITHer:HWARe: STATus?	Returns the dithering hardware status.
[SENSe]:ANALysis:LENGth	Sets or queries the analysis length.
[SENSe]:ANALysis:LENGth:ACTual?	Queries the actual analysis length.
[SENSe]:ANALysis:LENGth:AUTO	Sets or queries whether to set the analysis length automatically.
[SENSe]:ANALysis:REFerence	Sets or queries the analysis time reference.

Command	Description
[SENSe]:ANALysis:STARt	Sets or queries the analysis offset time.
[SENSe]:ANALysis:STARt:AUTO	Sets or queries whether to set the analysis offset automatically.
[SENSe]:ANSPectrum:STARt:AUTO:METHod	Sets or queries the method used for computing auto analysis and spectrum offsets.
[SENSe]:MEASurement:FREQuency	Sets or queries the measurement frequency.
[SENSe]:MEASurement:FREQuency:CENTer:LOCK	Sets or queries locking the measurement center frequency.
[SENSe]:POWer:UNITs	Sets or queries the unit of power.
[SENSe]:SIGNalpath:PRIority	Sets or queries the signal path priority for the measurements (for RSA5000 series only).
[SENSe]:USETtings	Updates the analyzer settings.
[SENSe]:ACPower subgroup	**Channel power and ACPR measurement**
[SENSe]:ACPower:AVERage	Sets or queries how to average waveform.
[SENSe]:ACPower:AVERage:COUNt	Sets or queries the number of traces for averaging.
[SENSe]:ACPower:{BANDwidth|BWIDth}[:RESolution]	Sets or queries the resolution bandwidth (RBW).
[SENSe]:ACPower:{BANDwidth|BWIDth}[:RESolution]:ACTual?	Queries the actual resolution bandwidth (RBW).
[SENSe]:ACPower:{BANDwidth|BWIDth}[:RESolution]:AUTO	Sets or queries whether to set the RBW automatically.
[SENSe]:ACPower:{BANDwidth|BWIDth}:VIDeo	Sets or queries the video bandwidth (VBW).
[SENSe]:ACPower:{BANDwidth|BWIDth}:VIDeo:STATe	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:ACPower:CHANnel:{BANDwidth|BWIDth}	Sets or queries the channel bandwidth.
[SENSe]:ACPower:CHANnel:FILTer	Sets or queries the adjacent channel filter.
[SENSe]:ACPower:CHANnel:PAIRs	Sets or queries the number of adjacent channel pairs.
[SENSe]:ACPower:CHANnel:SPACing	Sets or queries the channel-to-channel spacing.
[SENSe]:ACPower:CHIPrate	Sets or queries the chip rate.
[SENSe]:ACPower:CLEar:RESults	Restarts the average trace.
[SENSe]:ACPower:FREQuency	Sets or queries the center frequency.

Command	Description
[SENSe]:ACPower:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:ACPower:FREQuency:STEP:AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:ACPower:NFLoor:STATe	Sets or queries whether to enable the correction for noise floor.
[SENSe]:ACPower:POINts:COUNt	Sets or queries the number of trace points.
[SENSe]:ACPower:RRCRolloff	Sets or queries the filter parameter for the Root Raised Cosine filter.
[SENSe]:ACPower:SYMBrate	Sets or queries the symbol rate.
[SENSe]:{AM|FM|PM} subgroup (Option 21 only)	**AM/FM/PM measurement**
[SENSe]:{AM|FM|PM}:{BANDwidth|BWIDth}: MEASurement	Sets measurement bandwidth for the AM, FM, or PM demodulation to analyze.
[SENSe]:{AM|FM|PM}:CLEar:RESults	Clears measurement results.
[SENSe]:{AM|FM|PM}:{MTPoints|MAXTracepoints}	Sets or queries the maximum trace points.
[SENSe]:AM:DETect:AMPLitude	Sets or queries the carrier amplitude detection method.
[SENSe]:{FM|PM}:BURSt:THReshold	Sets or queries the threshold level to detect bursts.
[SENSe]:{FM|PM}:FREQuency:OFFSet	Sets or queries the carrier frequency offset in the FM/PM measurement.
[SENSe]:{FM|PM}:FREQuency:OFFSet:MARKer	Sets the frequency offset from selected marker or delta marker location.
[SENSe]:{FM|PM}:FREQuency:SEARch:AUTO	Sets or queries whether to detect the carrier frequency automatically.
[SENSe]:PM:PHASe:OFFSet	Sets the phase offset from the selected marker location.
[SENSe]:PM:PHASe:OFFSet:MARKer	Sets the carrier frequency offset from the selected marker.
[SENSe]:PM:PHASe:SEARch:AUTO	Sets or queries whether to detect the phase automatically or manually.
{SENSe]:AUDio subgroup	**Audio measurement**
[SENSe]:AUDio:AVERage:COUNt	Sets or queries the number of harmonics to average in the audio measurement.
[SENSe]:AUDio:AVERage:ENABle	Enables or disables averaging of harmonics in the audio measurement.
[SENSe]:AUDio:BANDwidth|BWIDth	Sets or queries the audio measurement bandwidth.

Command	Description
[SENSe]:AUDio:BANDwidth|BWIDth:RESolution	Sets or queries the resolution bandwidth for the audio measurement.
[SENSe]:AUDio:BANDwidth|BWIDth:RESolution:AUTO	Sets or queries the resolution bandwidth for the audio measurement.
[SENSe]:AUDio:BANDwidth|BWIDth:RESolution:SHAPe	Sets or queries the shape of the resolution bandwidth for the audio measurement.
[SENSe]:AUDio:CARRier:OFFSet	Sets or queries the carrier frequency offset.
[SENSe]:AUDio:CARRier:OFFSet:AUTO	Determines whether to set the carrier frequency error automatically or manually.
[SENSe]:AUDio:FILTer:DEEMphasis	Sets or queries the de-emphasis filter type.
[SENSe]:AUDio:FILTer:DEEMphasis:ENABle	Enables or disables the de-emphasis filter for the audio measurement.
[SENSe]:AUDio:FILTer:DEEMphasis:USER	Sets or queries a user-defined de-emphasis audio filter.
[SENSe]:AUDio:FILTer:HPF	Sets or queries the high-pass filter type.
[SENSe]:AUDio:FILTer:HPF:ENABle	Enables or disables the high-pass audio filter for the audio measurement.
[SENSe]:AUDio:FILTer:HPF:USER	Sets or queries a user-defined high-pass audio filter.
[SENSe]:AUDio:FILTer:DEEMphasis:USER	Sets or queries a user-defined high-pass audio filter.
[SENSe]:AUDio:FILTer:LPF	Sets or queries the low-pass filter type.
[SENSe]:AUDio:FILTer:LPF:ENABle	Enables or disables the low-pass filter for the audio measurement.
[SENSe]:AUDio:FILTer:LPF:USER	Sets or queries a user-defined low-pass audio filter.
[SENSe]:AUDio:FILTer:MODE:PREDefined	Selects a predefined audio filter or a filter stored on the instrument file.
[SENSe]:AUDio:FILTer:SOURce?	Queries the measurement filter from the user-defined source file.
[SENSe]:AUDio:FILTer:STANdard	Sets or queries the Standard audio filter.
[SENSe]:AUDio:FILTer:STANdard:ENABle	Enables or disables a Standard filter for the audio measurement.
[SENSe]:AUDio:FREQuency	Sets or queries the reference audio frequency.
[SENSe]:AUDio:FREQuency:AUTO	Determines whether to set the reference audio frequency automatically or manually.

Command	Description
[SENSe]:AUDio:HNOise:ENABle	Enables or disables the Hum and Noise information in the Audio Summary display.
[SENSe]:AUDio:HNOise:REFerence	Captures the current Hum and Noise information in the Audio Summary display.
[SENSe]:AUDio:SIGnal:TYPE	Sets or queries the audio signal type.
[SENSe]:AUDio:SPECtrum:CLEar:RESults	Clears the results of the audio spectrum measurement.
[SENSe]:AUDio:SPECtrum:POINts:COUNt	Sets or queries the number of trace points acquired for the audio spectrum display.
[SENSe]:AUDio:UNITs	Sets or queries the units of the audio spectrum measurement.
[SENSe]:AVTime subgroup	**Amplitude versus Time measurement**
[SENSe]:AVTime[:MEASview<y>]:{BANDwidth|BWIDth}	Sets or queries the time-domain bandwidth filter.
[SENSe]:AVTime[:MEASview<y>]:{BANDwidth|BWIDth}:ACTual?	Queries the actual resolution bandwidth (RBW).
[SENSe]:AVTime[:MEASview<y>]:CLEar:RESults	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:AVTime[:MEASview<y>]:MAXTracepoints	Sets or queries the maximum trace points.
[SENSe]:AVTime[:MEASview<y>]:METHod	Sets or queries the method to set the measurement bandwidth.
[SENSe]:AVTime[:MEASview<y>]:SPAN	Sets or queries the frequency span.
[SENSe]:DDEMod subgroup (Option 21 only)	**General purpose digital modulation measurements**
[SENSe]:DDEMod:ANALysis:LENGth	Sets or queries the analysis length.
[SENSe]:DDEMod:ANALysis:LENGth:ACTual?	Queries the actual analysis length.
[SENSe]:DDEMod:ANALysis:LENGth:AUTO	Sets or queries whether to set the analysis length automatically.
[SENSe]:DDEMod:{BANDwidth|BWIDth}:MODE	Sets or queries the measurement bandwidth mode.
[SENSe]:DDEMod:{BANDwidth|BWIDth}:TINTerval	Sets or queries the measurement bandwidth (frequency span).
[SENSe]:DDEMod:{BANDwidth|BWIDth}:TINTerval:AUTO	Sets the measurement bandwidth (frequency span) automatically.
[SENSe]:DDEMod:BURSt:DETect	Sets or queries how to detect bursts.
[SENSe]:DDEMod:BURSt:THReshold	Sets or queries the threshold level to determine a burst.
[SENSe]:DDEMod:CARRier:OFFSet	Sets or queries the carrier frequency offset.

Command	Description
[SENSe]:DDEMod:CARRier:OFFSet:AUTO	Sets or queries whether to detect the carrier frequency automatically.
[SENSe]:DDEMod:EQUalizer:AVAilable?	Determines if the equalizer is available.
[SENSe]:DDEMod:EQUalizer:CONVergence	Sets or queries the Convergence value (also known as tap update rate).
[SENSe]:DDEMod:EQUalizer:ENABle	Sets or queries the Equalizer state.
[SENSe]:DDEMod:EQUalizer:LENGth	Sets or queries the equalizer filter length.
[SENSe]:DDEMod:EQUalizer:MODE	Sets or queries the equalizer mode. The equalizer can in learning mode (train) or enabled (hold).
[SENSe]:DDEMod:EQUalizer:RESet	Resets the equalizer settings to default values.
[SENSe]:DDEMod:EQUalizer:TAPS	Sets or queries the number of filter coefficients for the equalizer.
[SENSe]:DDEMod:EQUalizer:TSRAtio	Sets or queries the Equalizer Taps/Symbol parameter.
[SENSe]:DDEMod:FILTer:ALPHa	Sets or queries the filter factor (a/BT).
[SENSe]:DDEMod:FILTer:MEASurement	Sets or queries the measurement filter.
[SENSe]:DDEMod:FILTer:REFerence	Sets or queries the reference filter.
[SENSe]:DDEMod:FREQuency:DEViation	Sets or queries the frequency deviation to determine two states for FSK.
[SENSe]:DDEMod:FREQuency:DEViation:AUTO	Sets or queries whether to detect the frequency deviation automatically.
[SENSe]:DDEMod:MAGNitude:NORMalize	Sets or queries the method for the magnitude normalization.
[SENSe]:DDEMod:MINDex	Sets or queries the modulation index for a CPM signal.
[SENSe]:DDEMod:MINDex:AUTO	Sets or queries whether to detect the modulation index automatically.
[SENSe]:DDEMod:MODulation:TYPE	Sets or queries the modulation type.
[SENSe]:DDEMod:PRESet	Presets the modulation analysis to a communication standard.
[SENSe]:DDEMod:RING:RADius	Sets or queries the APSK radius parameter.
[SENSe]:DDEMod:RING:ROTation	Sets or queries the APSK rotation parameter.
[SENSe]:DDEMod:SRATe	Sets or queries the symbol rate.
[SENSe]:DDEMod:SWAP:IQ	Sets or queries whether or not to swap I and Q data.

Command	Description
[SENSe]:DDEMod:SYMBol:HSSHift	Sets or queries the Q data half-symbol shift for OQPSK and SOQPSK signals.
[SENSe]:DDEMod:SYMBol:MAP:SOURce?	Specifies or queries the user symbol map file.
[SENSe]:DDEMod:SYMBol:MAP[:STATe]	Sets or queries whether to use the user symbol map.
[SENSe]:DDEMod:SYMBol:PLOT:POSition	Sets or queries the symbol point location on an SOQPSK waveform.
[SENSe]:DDEMod:SYMBol:POINts	Sets or queries the number of points per symbol.
[SENSe]:DDEMod:SYMBol:RATE:SEARch	Determines whether to enable a symbol rate search.
[SENSe]:DDEMod:SYNCh:WORD	Sets or queries whether to enable the synchronization word.
[SENSe]:DDEMod:SYNCh:WORD:SYMBol	Sets or queries the synchronization word.
[SENSe]:DDEMod:TIMe:UNITs	Sets or queries the fundamental unit of time.
[SENSe]:DPX subgroup	**DPX spectrum measurement**
[SENSe]:DPX:AUDio:DEMod:GAIN	Sets or queries the gain for the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:RXBWidth	Sets or queries the receiver bandwidth for the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:RXFRequency?	Queries the receiver frequency for the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:STATe	Sets or queries whether to enable or disable the audio demodulation.
[SENSe]:DPX:AUDio:DEMod:TUNE	Sets or queries how to determine the tuning frequency.
[SENSe]:DPX:AUDio:DEMod:TYPE	Sets or queries the modulation type for the audio demodulation.
[SENSe]:DPX:{BANDwidth|BWIDth}:ACTual?	Sets or queries the resolution bandwidth (RBW).
[SENSe]:DPX:{BANDwidth|BWIDth}:RESolution	Sets or queries the resolution bandwidth.
[SENSe]:DPX:{BANDwidth|BWIDth}[:RESolution]:AUTO	Determines whether to set the resolution bandwidth (RBW) automatically or manually in the DPX spectrum measurement.
[SENSe]:DPX:FREQuency:SPAN: {BANDwidth|BWIDth}[:RESolution]:RATio	Sets or queries whether to set the RBW automatically.
[SENSe]:DPX:CLEar:RESults	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:DPX:COLor	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:DPX:COLor:MAXimum	Sets or queries the maximum value of the color axis.

Command	Description
[SENSe]:DPX:COLor:MINimum	Sets or queries the minimum value of the color axis.
[SENSe]:DPX:DDENsity:MEASurement:SHOW	Sets or queries the Show measurement value (measurement always visible for DPX Trigger).
[SENSe]:DPX:DGRam:COLor:MAXimum	Sets or queries the maximum value of the color axis in the DPXogram measurement.
[SENSe]:DPX:DGRam:COLor:MINimum	Sets or queries the minimum value of the color axis in the DPXogram measurement.
[SENSe]:DPX:DGRam:POINts:COUNt	Sets the number of trace points acquired for the DPXogram display.
[SENSe]:DPX:DGRam:TIME:CAPacity?	Returns the time capacity of the DPXogram measurement.
[SENSe]:DPX:DGRam:TIME:RESolution	Sets the time resolution of the DPXogram measurement.
[SENSe]:DPX:DGRam:TIME:RESolution:AUTO	Sets the time resolution automatically or manually in the DPXogram measurement.
[SENSe]:DPX:DGRam:WATerfall:DIRection	Sets or queries the direction of the Waterfall (DPXogram) display.
[SENSe]:DPX:DGRam:WATerfall:ENABle	Sets or queries the Waterfall (DPXogram) display.
[SENSe]:DPX:DGRam:Y[:SCALe]:AUTO	Rescales the height axis automatically to fit the waveform to the screen in the DPXogram display.
[SENSe]:DPX:DGRam:Y[:SCALe]:RESet	Resets the height scale of the DPXogram display.
[SENSe]:DPX:DWELl	Sets or queries the value of the Dwell time for the DPX spectrum measurement.
[SENSe]:DPX:DWELl:AUTO	Sets the value of the Dwell time automatically.
[SENSe]:DPX:PLOT	Sets or queries the plot in the DPX spectrum measurement.
[SENSe]:DPX:POINts:COUNt	Sets or queries the number of DPX trace points.
[SENSe]:DPX:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:DPX:FREQuency:SPAN	Sets or queries the frequency span.
[SENSe]:DPX:FREQuency:STARt	Sets or queries the measurement start frequency.
[SENSe]:DPX:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:DPX:FREQuency:STEP:AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:DPX:FREQuency:STOP	Sets or queries the measurement stop frequency.

Command	Description
[SENSe]:DPX:TDM:{BANDwidth|BWIDth}	Sets or queries the value of the measurement bandwidth in the DPX measurement.
[SENSe]:DPX:TDM:{BANDwidth|BWIDth}:ACTual?	Queries the actual bandwidth in the DPX measurement.
[SENSe]:DPX:TDM:FREQuency:CENTer	Sets or queries the center frequency in the DPX spectrum measurement.
[SENSe]:DPX:TDM:FREQuency: TXBer:CLEar:RESults	Clears the measurement results of the active Tx BER measurement.
[SENSe]:DPX:TDM:FREQuency: TXBer:ENABle	Sets or queries the Tx BER measurement.
[SENSe]:DPX:TDM:FREQuency: TXBer:PATTern	Sets or queries the Tx BER data pattern.
[SENSe]:DPX:TDM:FREQuency: TXBer:PATTern:INVert	Sets or queries the data pattern Invert setting.
[SENSe]:DPX:TDM:FREQuency: TXBer:PATTern:REPeat	Sets or queries the test duration for a User Pattern.
[SENSe]:DPX:TDM:FREQuency: TXBer:PATTern:REVerse	Sets or queries whether the data pattern is in normal order or reversed.
[SENSe]:DPX:TDM:FREQuency: TXBer:PATTern: SOURce?	Returns the path and file name of the user-defined pattern file.
[SENSe]:DPX:TDM:RBW	Sets or queries the value of the RBW filter.
[SENSe]:DPX:TDM:RBW:STATe	Determines whether to set the resolution bandwidth (RBW) automatically or manually.
[SENSe]:DPX:TDM:SWEep:TIME	Sets or queries the sweep time.
[SENSe]:DPX:TDM:TMOTion	Sets or queries the scroll direction.
[SENSe]:{FSETtling|PSETtling} subgroup	**Settling time measurements**
[SENSe]:{FSETtling|PSETtling}: {BANDwidth|BWIDTH}	Sets or queries the measurement bandwidth for the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}: {BANDwidth|BWIDTH}:ACTual?	Queries the actual measurement bandwidth in the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}: FREQuency:CENTer	Queries the actual measurement bandwidth in the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}: FREQuency:OFFSet	Sets or queries the offset frequency.

Command	Description
[SENSe]:{FSETtling|PSETtling}:LENGth	Sets or queries the measurement length.
[SENSe]:{FSETtling|PSETtling}:LENGth:ACTual?	Queries the actual measurement length for the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}:MASK:LIMit	Sets or queries the frequency or phase limit for the specified region.
[SENSe]:{FSETtling|PSETtling}:MASK:STATe	Sets or queries mask test state.
[SENSe]:{FSETtling|PSETtling}:MASK:TIME: REFerence	Sets or queries the mask time reference.
[SENSe]:{FSETtling|PSETtling}:MASK:TIME: STARt	Sets or queries the mask region start time in seconds.
[SENSe]:{FSETtling|PSETtling}:MASK:TIME: STOP	Sets or queries the mask region stop time in seconds.
[SENSe]:{FSETtling|PSETtling}:MASK:TIME: STOP	Sets or queries the mask region stop time in seconds.
[SENSe]:{FSETtling|PSETtling}:MAXTracepoints	Sets or queries the maximum trace points in the Settling Time measurements.
[SENSe]:{FSETtling|PSETtling}:SDURation:MINimum	Sets or queries the minimum settled duration in seconds.
[SENSe]:{FSETtling|PSETtling}:TARGet:REFerence	Sets or queries the target reference frequency.
[SENSe]:{FSETtling|PSETtling}:TOLerance	Sets or queries the frequency or phase range into which the signal must settle.
[SENSe]:FVTime subgroup	**Frequency versus Time measurement**
[SENSe]:FVTime[:MEASview<y>]:CLEar:RESults	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:FVTime[:MEASview<y>]:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:FVTime[:MEASview<y>]:FREQuency:SPAN	Sets or queries the frequency span.
[SENSe]:FVTime[:MEASview<y>]:FREQuency:STARt	Sets or queries the measurement start frequency.
[SENSe]:FVTime[:MEASview<y>]:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:FVTime[:MEASview<y>]:FREQuency:STEP:AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:FVTime[:MEASview<y>]:FREQuency:STOP	Sets or queries the measurement stop frequency.
[SENSe]:FVTime[:MEASview<y>]:MAXTracepoints	Sets or queries the maximum trace points.
[SENSe]:IQVTime subgroup	**RF I&Q versus Time measurement**

Command	Description
[SENSe]:IQVTime[:MEASview<y>]:CLEar:RESults	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:IQVTime[:MEASview<y>]:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency:SPAN	Sets or queries the frequency span.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency:STARt	Sets or queries the measurement start frequency.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency:STEP:AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:IQVTime[:MEASview<y>]:FREQuency:STOP	Sets or queries the measurement stop frequency.
[SENSe]:IQVTime[:MEASview<y>]:MAXTracepoints	Sets or queries the maximum trace points.
[SENSe]:MCPower subgroup	**MCPR measurement**
[SENSe]:MCPower:AVERage	Sets or queries how to average waveform.
[SENSe]:MCPower:AVERage:COUNt	Sets or queries the number of waveforms for average.
[SENSe]:MCPower:{BANDwidth|BWIDth}[:RESolution]	Sets or queries the resolution bandwidth (RBW).
[SENSe]:MCPower:{BANDwidth|BWIDth}[:RESolution]:ACTual?	Queries the actual resolution bandwidth (RBW).
[SENSe]:MCPower:{BANDwidth|BWIDth}[:RESolution]:AUTO	Sets or queries whether to set the RBW automatically.
[SENSe]:MCPower:{BANDwidth|BWIDth}:VIDeo	Sets or queries the video bandwidth (VBW).
[SENSe]:MCPower:{BANDwidth|BWIDth}:VIDeo:STATe	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:MCPower:CHANnel:ADJacent:ADD	Adds a pair of upper and lower adjacent channels.
[SENSe]:MCPower:CHANnel:ADJacent:DELete	Deletes a selected adjacent channel.
[SENSe]:MCPower:CHANnel:ADJacent:LIMIts<x>: ENABle?	Queries whether the adjacent channel is selected or not in the P25 MCPR display.
[SENSe]:MCPower:CHANnel:ADJacent:LIMIts<x>	Sets or queries the selected adjacent upper and lower limit values in the P25 MCPR display.
[SENSe]:MCPower:CHANnel:FILTer	Sets or queries the measurement filter.
[SENSe]:MCPower:CHANnel:MAIN:{BANDwidth|BWIDth}	Sets or queries the frequency bandwidth of the main channels.
[SENSe]:MCPower:CHANnel:MAIN:COUNt	Sets or queries the number of main channels.

Command	Description
[SENSe]:MCPower:CHANnel:MAIN:INACtive	Makes a main channel inactive or queries the inactive main channels.
[SENSe]:MCPower:CHANnel:MAIN:SPACing	Sets or queries the main channel spacing.
[SENSe]:MCPower:CHIPrate	Sets or queries the chip rate.
[SENSe]:MCPower:CLEar:RESults	Restarts the average trace.
[SENSe]:MCPower:FREQuency	Sets or queries the center frequency.
[SENSe]:MCPower:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:MCPower:FREQuency:STEP:AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:MCPower:NFLoor:STATe	Sets or queries whether to enable the correction for noise floor.
[SENSe]:MCPower:POINts:COUNt	Sets or queries the number of trace points.
[SENSe]:MCPower:RCHannels?	Queries the power reference.
[SENSe]:MCPower:RCHannels:MAIN<x>	Sets the power reference to the main channel with the index (<x>).
[SENSe]:MCPower:RCHannels:TOTal	Sets the power reference to the total power of all the active channels.
[SENSe]:MCPower:RRCRolloff	Sets or queries the filter parameter for the Root Raised Cosine filter.
[SENSe]:OBWidth subgroup	**Occupied Bandwidth measurement**
[SENSe]:OBWidth:AVERage	Sets or queries whether to enable or disable averaging.
[SENSe]:OBWidth:AVERage:COUNt	Sets or queries the number of measurements for averaging.
[SENSe]:OBWidth:{BANDwidth|BWIDth}:MEASurement	Sets or queries the measurement bandwidth.
[SENSe]:OBWidth:{BANDwidth|BWIDth}[:RESolution]	Sets or queries the resolution bandwidth (RBW).
[SENSe]:OBWidth:{BANDwidth|BWIDth}[:RESolution]:ACTual?	Queries the actual resolution bandwidth (RBW).
[SENSe]:OBWidth:{BANDwidth|BWIDth}[:RESolution]:AUTO	Sets or queries whether to set the RBW automatically.
[SENSe]:OBWidth:{BANDwidth|BWIDth}:VIDeo	Sets or queries the video bandwidth (VBW).
[SENSe]:OBWidth:{BANDwidth|BWIDth}:VIDeo:STATe	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:OBWidth:CLEar:RESults	Restarts the averaging.

Command	Description
[SENSe]:OBWidth:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:OBWidth:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:OBWidth:FREQuency:STEP:AUTO	Determines whether to set the frequency step size automatically.
[SENSe]:OBWidth:PERCent	Sets or queries the occupied bandwidth percent power.
[SENSe]:OBWidth:XDBLevel	Sets or queries the x dB level.
[SENSe]:OFDM subgroup	**Orthogonal Frequency Division Multiplexing measurement**
[SENSe]:OFDM:CHANnel:ESTimation	Sets or queries the channel estimation.
[SENSe]:OFDM:CHANnel[:BANDwidth|BWIDth]	Sets or queries the channel bandwidth.
[SENSe]:OFDM:CHANnel[:BANDwidth|BWIDth]: SRATe?	Returns the FFT sample rate.
[SENSe]:OFDM:CHANnel[:BANDwidth|BWIDth]:STATe	Determines whether the channel bandwidth is on or off.
[SENSe]:OFDM:CONSte:DETermination	Sets or queries the constellation determination.
[SENSe]:OFDM:CONSte:DETermination:MANual	Sets or queries a manual constellation type.
[SENSe]:OFDM:FFT:LENGth?	Returns the FFT length.
[SENSe]:OFDM:GUARd:INTerval	Sets or queries the guard interval.
[SENSe]:OFDM:GUARd:INTerval:USER	Sets or queries a user-defined guard interval.
[SENSe]:OFDM:PILot:TRACking:AMPLitude:STATe	Determines whether to select the Amplitude pilot tracking.
[SENSe]:OFDM:PILot:TRACking:PHASe:STATe	Determines whether to select the Phase pilot tracking.
[SENSe]:OFDM:PILot:TRACking:TIMing:STATe	Determines whether to select the Timing pilot tracking.
[SENSe]:OFDM:RADix	Sets the radix for the OFDM measurements.
[SENSe]:OFDM:SCARrier:SPACing	Sets or queries the subcarrier spacing.
[SENSe]:OFDM:SCARrier:SPACing:STATe	Determines whether the subcarrier spacing is on or off.
[SENSe]:OFDM:SCARriers	Sets or queries the Subcarriers to display.
[SENSe]:OFDM:SCARriers:RANGe:STARt	Sets or queries the subcarrier start range.
[SENSe]:OFDM:SCARriers:RANGe:STOP	Sets or queries the subcarrier stop range.
[SENSe]:OFDM:SCARriers:SINGle:INDex	Sets or queries the index of a single subcarrier.

Command	Description
[SENSe]:OFDM:STANdard	Sets or queries the OFDM standard.
[SENSe]:OFDM:SWAP:IQ	Determines whether or not to exchange I and Q data.
[SENSe]:OFDM:SYMBol:ANALysis:OFFSet	Sets or queries the OFDM symbol analysis offset.
[SENSe]:OFDM:SYMBols	Sets or queries the symbols to display.
[SENSe]:OFDM:SYMBols:MAX	Sets or queries the maximum number of symbols to analyze.
[SENSe]:OFDM:SYMBols:MAX:STATe	Enables or disables the maximum number of symbols to analyze.
[SENSe]:OFDM:SYMBols:RANGe:COUNt	Sets or queries the number of symbols to display.
[SENSe]:OFDM:SYMBols:RANGe:STARt	Sets or queries the symbols start range.
[SENSe]:OFDM:SYMBols:SINGle:INDex	Sets or queries the symbol index
[SENSe]:OFDM:UNIT:FREQuency	Specifies the frequency units.
[SENSe]:OFDM:UNIT:TIME	Specifies the time units.
[SENSe]:PHVTime subgroup	**Phase versus Time measurement**
[SENSe]:PHVTime[:MEASview<y>]:CLEar:RESults	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:PHVTime[:MEASview<y>]:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency:SPAN	Sets or queries the frequency span.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency:STARt	Sets or queries the measurement start frequency.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency:STEP:AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:PHVTime[:MEASview<y>]:FREQuency:STOP	Sets or queries the measurement stop frequency.
[SENSe]:PHVTime[:MEASview<y>]:MAXTracepoints	Sets or queries the maximum trace points.
[SENSe]:PNOise subgroup (Option 11 only)	**Phase noise measurement**
[SENSe]:PNOise:AVERage:COUNt	Sets or queries the number of traces to combine for averaging.
[SENSe]:PNOise:AVERage:ENABle	Sets or queries whether to enable or disable averaging trace.
[SENSe]:PNOise:CARRier:FREQuency:TRACk	Sets or queries whether to enable tracking the carrier frequency.
[SENSe]:PNOise:CARRier:THReshold	Sets or queries the threshold level to detect the carrier.

Command	Description
[SENSe]:PNOise:CLEar:RESults	Restarts the average process.
[SENSe]:PNOise:FREQuency:INTegration:OFFSet:STARt	Sets or queries the start offset frequency for integration.
[SENSe]:PNOise:FREQuency:INTegration:OFFSet:STOP	Sets or queries the stop offset frequency for integration.
[SENSe]:PNOise:FREQuency:PLOT:OFFSet:STARt	Sets or queries the start offset frequency for plot.
[SENSe]:PNOise:FREQuency:PLOT:OFFSet:STOP	Sets or queries the stop offset frequency for plot.
[SENSe]:PNOise:OPTimization	Sets or queries the method of optimization.
[SENSe]:PULSe subgroup	**Pulsed RF measurements**
[SENSe]:PULSe[:MEASview<y>]:ANALyze:FDOMain :MEASurement:TIME:ALENgth	Sets or queries the absolute amount of time included in the Frequency-Domain Linearity measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:FDOMain :MEASurement:TIME:METHod	Sets or queries the measurement time method for the Frequency-Domain Linearity measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:FDOMain :MEASurement:TIME:RLENgth	Sets or queries the relative amount of time included in the Frequency-Domain Linearity measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:FDOMain :MEASurement:TIME:RLEVel	Sets or queries the Frequency-Domain Linearity measurement reference level.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:FDOMain :MEASurement:TIME:STARt	Sets or queries the start time for the Frequency-Domain Linearity measurements
[SENSe]:PULSe[:MEASview<y>]:ANALyze:IRESponse :CORRection:AMPLitude[:STATe]	Enables or disables the impulse response measurement amplitude corrections for window and for delay of the highest side lobe.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:IRESponse: KOTime	Sets or queries the impulse response measurement Keep-out time.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:IRESponse :MEASurement:TIME:ALENgth	Sets or queries the absolute amount of time included in impulse response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:IRESponse :MEASurement:TIME:METHod	Sets or queries the impulse response measurement time method.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:IRESponse: MEASurement:TIME:RLENgth	Sets or queries the relative amount of time included in Impulse Response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:IRESponse :MEASurement:TIME:RLEVel	Sets or queries the measurement reference level for Impulse Response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:IRESponse :MEASurement:TIME:STARt	Sets or queries the start time for the Impulse Response measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:LEVel	Sets or queries how to determine the 50% level.

Command	Description
[SENSe]:PULSe[:MEASview<y>]:ANALyze:LEVel:FIFTy	Sets or queries how to determine the 50% level.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:LEVel:HUNDred	Sets or queries how to determine the 50% level.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:OVERshoot:MEASurement:TIME:ALENgth	Sets or queries the absolute amount of time included in the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:OVERshoot:MEASurement:TIME:METHod	Sets or queries the measurement time method for the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:OVERshoot:MEASurement:TIME:RLENgth	Sets or queries the relative amount of time included in the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:OVERshoot:MEASurement:TIME:RLEVel	Sets or queries the measurement reference level for the Overshoot measurements.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:OVERshoot:MEASurement:TIME:STARt	Sets or queries the start time for the Overshoot measurements
[SENSe]:PULSe[:MEASview<y>]:ANALyze:PMLocation	Sets or queries the phase measurement location.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:POINt:LOCation	Sets or queries the point location method.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:RFALI	Sets or queries the threshold levels to measure the rise/fall time.
[SENSe]:PULSe[:MEASview<y>]:ANALyze:RIPPle	Sets or queries the ripple portion of the pulse top.
[SENSe]:PULSe[:MEASview<y>]:CARRier:FREQuency?	Queries the carrier frequency.
[SENSe]:PULSe[:MEASview<y>]:CARRier:OFFSet	Sets or queries the carrier frequency offset.
[SENSe]:PULSe[:MEASview<y>]:CARRier:SEARch	Sets or queries how to detect the carrier.
[SENSe]:PULSe[:MEASview<y>]:DETect:MEASurement	Sets or queries whether to set the maximum number of pulses.
[SENSe]:PULSe[:MEASview<y>]:DETect:NUMBer	Sets or queries the maximum number of pulses to detect.
[SENSe]:PULSe[:MEASview<y>]:DETect:POWer[:THReshold]	Sets or queries the power threshold to detect pulses.
[SENSe]:PULSe[:MEASview<y>]:DETect:TIMe[:THReshold]	Sets or queries the minimum off-time between pulses.
[SENSe]:PULSe[:MEASview<y>]:FILTer:{BANDwidth|BWIDth}	Sets or queries the filter bandwidth for the Gaussian filter.
[SENSe]:PULSe[:MEASview<y>]:FILTer:MEASurement	Sets or queries the measurement filter.
[SENSe]:PULSe[:MEASview<y>]:FREFerence:AUTO	Determines whether to estimate the frequency reference automatically.

Command	Description
[SENSe]:PULSe[:MEASview<y>]:FREFerence:CSLope	Sets or queries the Chirp Slope.
[SENSe]:PULSe[:MEASview<y>]:FREFerence:CSLope:AUTO	Sets or queries enabling automatic Chirp Slope estimating.
[SENSe]:PULSe[:MEASview<y>]:FREFerence:OFFSet	Sets or queries the frequency reference offset.
[SENSe]:PULSe[:MEASview<y>]:MODulation:TYPE	Sets or queries the modulation type.
[SENSe]:PULSe[:MEASview<y>]:SIGNal:TYPE	Sets or queries the signal type in the pulsed RF measurements.
[SENSe]:PULSe[:MEASview<y>]:STATistics:HISTogram:ORDinate	Sets or queries the Histogram Y unit.
[SENSe]:PULSe[:MEASview<y>]:STATistics:HISTogram:POINts	Sets or queries the number of bins in the Histogram plot.
[SENSe]:PULSe[:MEASview<y>]:STATistics:HISTogram:POINts:AUTO	Sets or queries enabling automatic Histogram plot bins count.
[SENSe]:REANalyze subgroup	**Spectrogram measurement**
[SENSe]:REANalyze	Sets all measurements to reanalyze the current acquisition record.
[SENSe]:REANalyze:ACQuisition:SETTings?	Queries the settings of all acquisitions in acquisition history.
[SENSe]:REANalyze:ALL	Replay all items in the current acquisition history selection.
[SENSe]:REANalyze:ALL:LOOP	Replay all selected records/frames in a continuous loop.
[SENSe]:REANalyze:CURRent	Replay the currently selected acquisition (or frame).
[SENSe]:REANalyze:CURRent:ACQuisition?	Queries the Acquisition record identifier (ID) of the currently selected acquisition (or frame).
[SENSe]:REANalyze:CURRent:FRAMe?	Queries the Frame identifier (ID) of the currently selected acquisition (or frame).
[SENSe]:REANalyze:CURRent:TIMestamp?	Queries the time stamp of the currently selected acquisition (or frame).
[SENSe]:REANalyze:DELete:DATA	Deletes all acquisition data.
[SENSe]:REANalyze:FIRSt	Replays the first item in the current acquisition history selection.
[SENSe]:REANalyze:LAST	Replays the last item in the current acquisition history selection.
[SENSe]:REANalyze:NEXT	Replays the next item in the current acquisition history selection.
[SENSe]:REANalyze:PAUSe	Sets or queries the reanalysis pause state.

Command	Description
[SENSe]:REANalyze:PREVious	Replays the previous item in the current Replay selection.
[SENSe]:REANalyze:SELect:ACQuisition:DATA:TYPE	Sets or queries the acquisition data type.
[SENSe]:REANalyze:SELect:ACQuisition:FIRSt?	Queries the first selectable acquisition history Start or Stop value.
[SENSe]:REANalyze:SELect:ACQuisition:FIRSt:TIMestamp?	Queries the time stamp associated with the first selectable acquisition history Start or Stop value.
[SENSe]:REANalyze:SELect:ACQuisition:LAST?	Queries the last selectable acquisition history Start or Stop valu
[SENSe]:REANalyze:SELect:ACQuisition:LAST:TIMestamp?	Queries the time stamp associated with the last selectable acquisition history Start or Stop value
[SENSe]:REANalyze:SELect:ACQuisition:STARt	Sets or queries the Acquisition Start value in the acquisition history selection.
[SENSe]:REANalyze:SELect:ACQuisition:STARt:TIMestamp?	Queries the time stamp associated with the current Acquisition Start selection
[SENSe]:REANalyze:SELect:ACQuisition:STOP	Sets or queries the Acquisition Stop value in the acquisition history selection.
[SENSe]:REANalyze:SELect:ACQuisition:STOP:TIMestamp?	Queries the time stamp associated with the current Acquisition Stop selection.
[SENSe]:REANalyze:SELect:ALL	Selects all acquisitions and frames in the current acquisition history.
[SENSe]:REANalyze:SELect:FRAMe:FIRSt?	Queries the first available Frame Start or Stop value available for acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:FIRSt:TIMestamp?	Queries the time stamp associated with the first available frame of the first available Acquisition Start or Stop value
[SENSe]:REANalyze:SELect:FRAMe:LAST?	Queries the last available Frame Start or Stop value available for acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:LAST:TIMestamp?	Queries the time stamp associated with the last available frame of the last available Acquisition Start or Stop value
[SENSe]:REANalyze:SELect:FRAMe:STARt	Sets or queries the Frame Start value in the acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:STARt:TIMestamp?	Queries the time stamp associated with the current Frame Start selection.
[SENSe]:REANalyze:SELect:FRAMe:STOP	Sets or queries the frame stop value in acquisition history selection.
[SENSe]:REANalyze:SELect:FRAMe:STOP:TIMestamp?	Queries the time stamp associated with the current frame stop selection.

Command	Description
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:ALL	Selects all spectra acquisitions and frames in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:CURRent:ACQuisition?	Queries the acquisition record identifier (ID) of the currently selected acquisition.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:CURRent:TIMestamp?	Queries the time stamp of the currently selected acquisition.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:FIRSt?	Queries the first selectable acquisition start or stop value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:FIRSt:TIMestamp?	Queries the time stamp of the first selectable acquisition history start or stop value in the currently selected acquisition set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:LAST?	Queries the last selectable acquisition start or stop value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:LAST:TIMestamp?	Queries the time stamp of the last selectable acquisition start or stop value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:STARt	Sets or queries the acquisition start value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:STARt:TIMestamp?	Queries the time stamp of the current acquisition start selection.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:STOP	Sets or queries the acquisition stop value in the currently selected set.
[SENSe]:REANalyze:SELect:SPECtra:ACQuisition:STOP:TIMestamp?	Queries the time stamp of the current acquisition stop selection.
[SENSe]:REANalyze:SPEed	Sets or queries the time delay value inserted between reanalysis of frames or acquisitions.
[SENSe]:REANalyze:STOP	Stops the current reanalysis.
[SENSe]:REANalyze:TIMestamp:DECimal	Sets or queries the number of values to the right of the decimal point to include in all time stamps.
[SENSe]:SEM subgroup	**Spectrum Emissions Mask measurements**
[SENSe]:SEM:{BANDwidth|BWIDth}[:RESolution]	Sets or queries the resolution bandwidth (RBW).
[SENSe]:SEM:{BANDwidth|BWIDth}:VIDeo	Sets or queries the video bandwidth (VBW).
[SENSe]:SEM:{BANDwidth|BWIDth}:VIDeo:STATe	Sets or queries the state of the video bandwidth (VBW) of the reference channel.
[SENSe]:SEM:CHANnel:FILTer	Sets or queries the reference Channel Filter.

Command	Description
[SENSe]:SEM:CHANnel:IBANdwidth	Sets or queries the reference channel integration bandwidth.
[SENSe]:SEM:CHANnel:WIDTh	Sets or queries the reference Channel Filter bandwidth.
[SENSe]:SEM:CHIPrate	Sets or queries the Chip rate.
[SENSe]:SEM:CLEar:RESults	Clears the results in the Spectral Emissions Mask measurement.
[SENSe]:SEM:FREQuency	Sets or queries the measurement frequency.
[SENSe]:SEM:FREQuency:SPAN?	Returns the frequency span.
[SENSe]:SEM:MFILter	Sets or queries the shape of the filter.
[SENSE]:SEM:NFLoor:STATe (This command only applies when an MDO4000B or MDO4000C series instrument is connected.)	Sets or queries if Noise Correction is enabled or disabled.
[SENSE]:SEM:NFLoor:ACQuire (This command only applies when an MDO4000B or MDO4000C series instrument is connected.)	Measures the noise floor on the next acquisition.
[SENSe]:SEM:NFLoor:CORRected? (This command only applies when an MDO4000B or MDO4000C series instrument is connected.)	Queries whether or not noise correction was performed.
[SENSe]:SEM:MODE:REALtime	Sets or queries the Real-time SEM measurement mode.
[SENSe]:SEM:MTYPe	Sets or queries the measurement type.
[SENSe]:SEM:OFFSet:DETection	Sets or queries the detection settings for all offsets.
[SENSe]:SEM:OFFSet<x>:BANDwidth:FILTer?	Returns the bandwidth filter setting.
[SENSe]:SEM:OFFSet<x>:BANDwidth[:RESolution]	Sets or queries the resolution bandwidth.
[SENSe]:SEM:OFFSet<x>:BANDwidth:RESolution:COUNt	Sets or queries the count of Resolution Bandwidths (RBWs).
[SENSe]:SEM:OFFSet<x>:BANDwidth:VIDeo	Sets or queries the video bandwidth setting.
[SENSe]:SEM:OFFSet<x>:BANDwidth:VIDeo:STATe	Sets or queries the state of the video bandwidth.
[SENSe]:SEM:OFFSet<x>:FREQuency:STARt	Sets or queries the start frequency.
[SENSe]:SEM:OFFSet<x>:FREQuency:STOP	Sets or queries the stop frequency.
[SENSe]:SEM:OFFSet<x>:LIMIT:ABSolute:SAME	Sets or queries the state of the limits for the absolute start and stop settings.
[SENSe]:SEM:OFFSet<x>:LIMIT:ABSolute:STARt	Sets or queries the absolute power start limit.

Command	Description
[SENSe]:SEM:OFFSet<x>:LIMIT:ABSolute:STOP	Sets or queries the absolute power stop limit.
[SENSe]:SEM:OFFSet<x>:LIMIT:MASK	Sets or queries the limit mask setting.
[SENSe]:SEM:OFFSet<x>:LIMIT:RELative:SAME	Sets or queries the state of the limits for the relative start and stop settings
[SENSe]:SEM:OFFSet<x>:LIMIT:RELative:STARt	Sets or queries the relative power start limit.
[SENSe]:SEM:OFFSet<x>:LIMIT:RELative:STOP	Sets or queries the relative power stop limit.
[SENSe]:SEM:OFFSet<x>:LIMIT:SIDE	Sets or queries the side of the offset limit.
[SENSe]:SEM:OFFSet<x>:STATe	Determines whether to display the specified row of the Offsets & Limits table.
[SENSe]:SEM:POINts:COUNt	Sets or queries the maximum number of trace points.
[SENSe]:SEM:PRESet	Defines the standard protocol settings for the measurement.
[SENSe]:SEM:REFerence:AUTO	Determines whether to automatically update the Power Reference.
[SENSe]:SEM:REFerence:DETection	Sets or queries the reference channel detection setting.
[SENSe]:SEM:REFerence[:MAGNitude]	Sets or queries the power magnitude.
[SENSe]:SEM:RRCRolloff	Sets or queries the filter parameter (roll-off ratio).
[SENSe]:SEM:STEP:AUTO	Determines whether to automatically update the center frequency.
[SENSe]:SEM:STEP[:MAGNitude]	Sets or queries the step magnitude.
[SENSe]:SEM:WIDTh:DEFinition	Sets or queries the offset definition.
[SENSe]:SGRam subgroup	**Spectrogram measurements**
[SENSe]:SGRam[:MEASview<y>]: {BANDwidth|BWIDth}:RESolution	Sets or queries the resolution bandwidth (RBW).
[SENSe]:SGRam[:MEASview<y>]: {BANDwidth|BWIDth}[:RESolution]: ACTual?	Queries the actual resolution bandwidth (RBW).
[SENSe]:SGRam[:MEASview<y>]: {BANDwidth|BWIDth}[:RESolution]:AUTO	Sets or queries whether to set the RBW automatically.
[SENSe]:SGRam[:MEASview<y>]: {BANDwidth|BWIDth}[:RESolution]:MODE	Sets or queries whether to enable or disable the RBW processing.
[SENSe]:SGRam[:MEASview<y>]: {BANDwidth|BWIDth}:VIDeo	Sets or queries the video bandwidth (VBW).

Command	Description
[SENSe]:SGRam[:MEASview<y>]:{BANDwidth|BWIDth}:VIDeo:STATe	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:SGRam[:MEASview<y>]:COLor	Sets or queries the color palette of three-dimensional graphs.
[SENSe]:SGRam[:MEASview<y>]:COLor:MAXimum	Sets or queries the maximum value of the color axis.
[SENSe]:SGRam[:MEASview<y>]:COLor:MINimum	Sets or queries the minimum value of the color axis.
[SENSe]:SGRam[:MEASview<y>]:FFT:WINDow	Sets or queries the FFT window.
[SENSe]:SGRam[:MEASview<y>]:FILTer[:SHAPe]	Sets or queries the filter shape.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:SPAN	Sets or queries the frequency span.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:SPAN:BANDwidth[:RESolution]:RATio	Sets or queries the ratio of span to RBW.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:SPAN:MAXimum	Sets the frequency range to the maximum real-time span.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:STARt	Sets or queries the measurement start frequency.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:STEP	Sets or queries the frequency step size.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:STEP:AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:SGRam[:MEASview<y>]:FREQuency:STOP	Sets or queries the measurement stop frequency.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]:MODe	Sets or queries the vertical mode.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]:OVERlap:PERCent	Sets or queries the Overlap in percent.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]:PER:DIVision	Sets or queries the vertical Time/division value.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]:PER:UPDate:MINutes	Sets or queries the Spectrum Monitor mode Time/Update value for minutes.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:ENABle	Sets or queries the Waterfall (3-D spectrogram) display.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]:PER:UPDate:SEConds	Sets or queries the Spectrum Monitor mode Time/Update value
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]:SPECtrums:PERLine?	Queries the Spectrums/Line value.
[SENSe]:SGRam[:MEASview<y>]:TIME[:SCALe]:STARt:DIVisions	Sets or queries the Vertical offset or Position in divisions.

Command	Description
[SENSe]:SGRam[:MEASview<y>]:WATerfall:DIRection	Sets or queries the direction of the Waterfall display.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:Y:AUTO	Rescales the height axis automatically to fit the waveform to the screen in the 3-D Waterfall display.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:Y:OFFSet	Sets or queries the height offset (the value at the top edge of the vertical axis) of the 3-D Waterfall display.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:Y:RESet	Resets the height scale of the 3-D Waterfall display to the default values.
[SENSe]:SGRam[:MEASview<y>]:WATerfall:Y[:SCALe]	Sets or queries the height (vertical) range of the Waterfall (3-D spectrogram) display.
[SENSe]:SPECtrum subgroup	**Spectrum measurement**
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth |BWIDth}[:RESolution]	Sets or queries the resolution bandwidth (RBW).
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth |BWIDth}[: RESolution]:ACTual?	Queries the actual resolution bandwidth (RBW).
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth |BWIDth}[:RESolution]:AUTO	Sets or queries whether to set the RBW automatically.
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth |BWIDth}[:RESolution]:MODE	Sets or queries whether to enable or disable the RBW process.
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth |BWIDth}:VIDeo	Sets or queries the video bandwidth (VBW).
[SENSe]:SPECtrum[:MEASview<y>]:{BANDwidth |BWIDth}:VIDeo:STATe	Sets or queries whether to enable the video bandwidth (VBW).
[SENSe]:SPECtrum[:MEASview<y>]:CLEar:RESults	Restarts multi-trace functions (Average and Max/Min Hold).
[SENSe]:SPECtrum[:MEASview<y>]:FFT:WINDow	Sets or queries the FFT window.
[SENSe]:SPECtrum[:MEASview<y>]:FILTer[:SHAPe]	Sets or queries the filter shape.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency:SPAN	Sets or queries the frequency span.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency:SPAN :BANDwidth[: RESolution]:RATio	Sets or queries the ratio of span to RBW.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency:STARt	Sets or queries the measurement start frequency.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency:STEP	Sets or queries the frequency step size.

Command	Description
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency:STEP :AUTO	Sets or queries whether to set the frequency step size automatically.
[SENSe]:SPECtrum[:MEASview<y>]:FREQuency:STOP	Sets or queries the measurement stop frequency.
[SENSe]:SPECtrum[:MEASview<y>]:LENGth	Sets or queries the spectrum length.
[SENSe]:SPECtrum[:MEASview<y>]:LENGth:ACTual?	Queries the actual spectrum length.
[SENSe]:SPECtrum[:MEASview<y>]:LENGth:AUTO	Sets or queries the spectrum length mode (automatic or manual).
[SENSe]:SPECtrum[:MEASview<y>]:MAX:SPAN	Sets the frequency span to the maximum span.
[SENSe]:SPECtrum[:MEASview<y>]:POINts:COUNt	Sets or queries the number of sample points on the signal spectrum.
[SENSe]:SPECtrum[:MEASview<y>]:STARt	Sets or queries the spectrum offset time.
[SENSe]:SPECtrum[:MEASview<y>]:STARt:AUTO	Sets or queries the spectrum offset mode (automatic or manual).
[SENSe]:SPECtrum[:MEASview<y>]:TIMe:MODe	Sets or queries the spectrum time parameter mode (automatic or manual).
[SENSe]:SPURious subgroup	**Spurious measurement**
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth}	Sets or queries the channel width for the carrier as power reference.
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth}: INTegration	Sets or queries the integration bandwidth to calculate the carrier power.
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth} [:RESolution]	Sets or queries the resolution bandwidth to measure the carrier power.
[SENSe]:SPURious:CARRier:{BANDwidth|BWIDth} [:RESolution]:AUTO	Sets or queries whether to set the resolution bandwidth automatically.
[SENSe]:SPURious:CARRier:DETection	Sets or queries the carrier detection method.
[SENSe]:SPURious:CARRier:FREQuency	Sets or queries the carrier frequency.
[SENSe]:SPURious:CARRier:THReshold	Sets or queries the threshold level to detect the carrier.
[SENSe]:SPURious:CLEar:RESults	Restarts multi-trace functions (Average and Max Hold).
[SENSe]:SPURious[:FREQuency]:OVERlap?	Queries whether any of the frequency ranges (A to T) overlap.
[SENSe]:SPURious:LIST	Sets or queries how to list the spurious signals.
[SENSe]:SPURious:MODE	Sets or queries the frequency range mode (Multi or Single).
[SENSe]:SPURious:OPTimization	Sets or queries the method of optimization.

Command	Description
[SENSe]:SPURious:POINts:COUNt	Sets or queries the trace point count for the frequency range.
[SENSe]:SPURious:RANGe<x>:BANDwidth:VIDeo	Sets or queries the VBW for the specified frequency range.
[SENSe]:SPURious:RANGe<x>:BANDwidth:VIDeo:STATe	Sets or queries whether to enable the VBW for the frequency range.
[SENSe]:SPURious:RANGe<x>:DETection	Sets or queries the display detector for the frequency range.
[SENSe]:SPURious:RANGe<x>:EXCursion	Sets or queries the excursion level in the frequency range.
[SENSe]:SPURious:RANGe<x>:FILTer[:SHAPe]	Sets or queries the filter shape for the frequency range.
[SENSe]:SPURious:RANGe<x>:FILTer[:SHAPe]:BANDwidth	Sets or queries the filter bandwidth for the frequency range.
[SENSe]:SPURious:RANGe<x>:FILTer[:SHAPe]:BANDwidth:AUTO	Sets or queries whether to set the filter bandwidth automatically.
[SENSe]:SPURious:RANGe<x>:FREQuency:STARt	Sets or queries the start frequency of the range.
[SENSe]:SPURious:RANGe<x>:FREQuency:STOP	Sets or queries the stop frequency of the range.
[SENSe]:SPURious:RANGe<x>:LIMit:ABSolute:STARt	Sets or queries the absolute start amplitude of the limits for the range.
[SENSe]:SPURious:RANGe<x>:LIMit:ABSolute:STOP	Sets or queries the absolute stop amplitude of the limits for the range.
[SENSe]:SPURious:RANGe<x>:LIMit:MASK	Sets or queries the limit mask function mode for the frequency range.
[SENSe]:SPURious:RANGe<x>:LIMit:RELative:STARt	Sets or queries the relative start amplitude of the limits for the range.
[SENSe]:SPURious:RANGe<x>:LIMit:RELative:STOP	Sets or queries the relative stop amplitude of the limits for the range.
[SENSe]:SPURious:RANGe<x>:STATe	Sets or queries whether to enable or disable the frequency range.
[SENSe]:SPURious:RANGe<x>:THReshold	Sets or queries the threshold level to detect spurious signals in a range.
[SENSe]:SPURious:REFerence	Sets or queries the power reference.
[SENSe]:SPURious:REFerence:MANual:POWer	Sets or queries the reference power level.
[SENSe]:SQUality subgroup	**Signal quality**
[SENSe]:SQUality[:MEASview<y>]:EVM:ALL[:STATe]	Sets or queries the display of offset EVM results.

Command	Description
[SENSe]:SQUality[:MEASview<y>]:SELEcted:SOURce	Sets or queries the source of Signal quality for a selected Measurement view number.
[SENSe]: STABle subgroup	**Source measurement**
[SENSe]: STABle[:MEASview<y>]:SELEcted:SOURce	Sets or queries the source of Symbol table for a selected Measurement view number.
[SENSe]:TOVerview subgroup	**Time overview**
[SENSe]:TOVerview[:MEASview<y>]:FREQuency:CENTer	Sets or queries the center frequency.
[SENSe]:TOVerview[:MEASview<y>]:MAXTracepoints	Sets or queries the maximum trace points.
[SENSe]:TOVerview[:MEASview<y>]:TIME:PER:DIVision	Sets or queries the time per division (dB/div) value in the Time Overview display.
[SENSe]:USETtings subgroup	**All measurements**
[SENSe]:USETtings	Updates the analyzer settings.
[SENSe}:WLAN subgroup	**Wireless LAN settings**
[SENSe]:WLAN:ANALysis:LENGth	Specifies the length of the analysis period.
[SENSe]:WLAN:ANALysis:LENGth:ACTual?	Returns the value of the actual analysis length.
[SENSe]:WLAN:ANALysis:LENGth:AUTO	Sets the analysis length value based on the requirements of the selected display.
[SENSe]:WLAN:ANALysis:OFFSet	Specifies or queries the analysis offset in the symbol interval.
[SENSe]:WLAN:BURSt	Specifies the burst to measure when multiple bursts are present in an acquisition.
[SENSe]:WLAN:CHANnel[:BANDwidth|:BWIDth]	Specifies or queries a nominal channel bandwidth to use for the WLAN measurements.
[SENSe]:WLAN:EQUalizer:TRAining	Specifies the method for estimating channel frequency response and equalization.
[SENSe]:WLAN:FFT:LENGth?	Returns the fixed FFT length for the WLAN measurements.
[SENSe]:WLAN:FFT:SRATe?	Returns the FFT sample rate for the WLAN measurements.
[SENSe]:WLAN:FREQuency:ERRor	Sets or queries the frequency error in the WLAN analysis parameters.
[SENSe]:WLAN:FREQuency:ERRor:AUTO	Turns on the automatic determination of the frequency error.
[SENSe]:WLAN:GUARd:INTerval	Sets or queries the Guard Interval to use in the input signal.

Command	Description
[SENSe]:WLAN:MODulation:DETect:QAM1024	Specifies a fixed modulation type.
[SENSe]:WLAN:MODulation:SOURce	Specifies the method of data symbol modulation identification.
[SENSe]:WLAN:PILot:TRACking:AMPLitude:STATe	Specifies the pilot subcarrier to use to correct amplitude variations over the packet.
[SENSe]:WLAN:PILot:TRACking:PHASe:STATe	Specifies the pilot subcarrier to use to correct phase variations over the packet.
[SENSe]:WLAN:PILot:TRACking:TIMing:STATe	Specifies the pilot subcarrier to use to correct timing variations over the packet.
[SENSe]:WLAN:RADix	Specifies or queries the format for displaying the symbol values.
[SENSe]:WLAN:SCARriers	Sets or queries which subcarriers to display in the WLAN view.
[SENSe]:WLAN:SCARriers:RANGe:STARt	Sets or queries the start value of the subcarrier range.
[SENSe]:WLAN:SCARriers:RANGe:STOP	Sets or queries the stop value of the subcarrier range.
[SENSe]:WLAN:SCARriers:SINGle:INDex	Specifies or queries the single subcarrier to display in the WLAN view.
[SENSe]:WLAN:SCARriers:SPACing	Sets or queries the subcarrier spacing.
[SENSe]:WLAN:SCARriers:SPACing:AUTO	Automatically sets the subcarrier spacing.
[SENSe]:WLAN:SIGNal:STANdard:TYPE	Sets or queries the WLAN signal standard.
[SENSe]:WLAN:SubCARrier:DERotation	Shows subcarriers for displays with or without the Gamma subcarrier phase rotation removed.
[SENSe]:WLAN:SUMMary:CLEar:RESults	Clears the results of the WLAN Summary display.
[SENSe]:WLAN:SUMMary:CLEar:RESults	Clears the results in the WLAN Summary measurement.
[SENSe]:WLAN:SUMMary:EVM:RMS:AVERage: COUNt	Specifies the maximum number of bursts to average.
[SENSe]:WLAN:SUMMary:EVM:RMS:AVERage: COUNt:ENABle	Enables the burst average function.
[SENSe]:WLAN:SWAP:IQ	Specifies to swap the I and Q components of a signal.
[SENSe]:WLAN:SYMBols|CHIPs	Specifies or queries the symbols or chips are displayed in the WLAN Symbol Table.
[SENSe]:WLAN:SYMBols|CHIPs:MAX	Sets or queries the value for the maximum number of symbols/chips to analyze.
[SENSe]:WLAN:SYMBols|CHIPs:MAX:STATe	Turns the maximum data symbols to analyze feature on or off.

Command	Description
[SENSe]:WLAN:SYMBols|CHIPs:RANGe:COUNt	Sets or queries the number of symbols or chips to display.
[SENSe]:WLAN:SYMBols|CHIPs:RANGe:STARt	Sets or queries the symbols/chips start value.
[SENSe]:WLAN:SYMBols|CHIPs:RANGe:STOP	Sets or queries the symbols or chips stop value.
[SENSe]:WLAN:SYMBols|CHIPs:SINGle:INDex	Sets or queries the symbol or chip to use when displaying results from a single symbol.
[SENSe]:WLAN:UNIT:FREQuency	Specifies or queries whether the displayed frequency units are frequency (Hz) or subcarrier.
[SENSe]:WLAN:UNIT:TIME	Specifies or queries whether the displayed time units are seconds, symbols or chips.
SENSe:LTE subgroup	
SENSe:LTE:ACLR:BANDwidth:RESolution	Sets or queries the resolution bandwidth (RBW).
SENSe:LTE:ACLR:BANDwidth:VIDeo	Sets or queries the video bandwidth (VBW).
SENSe:LTE:ACLR:BANDwidth:VIDeo:STATe	Sets or queries enabling or disabling the video bandwidth (VBW).
SENSe:LTE:ACLR:CHANnel:IBANdwidth	Sets or queries the reference channel integration bandwidth.
SENSe:LTE:ACLR:CHANnel:WIDTh	Sets or queries the reference channel width.
SENSe:LTE:ACLR:CLEar:RESults	Clears the results in the measurement.
SENSe:LTE:ACLR:FREQuency	Sets or queries the measurement center frequency.
SENSe:LTE:ACLR:MFILter	Sets or queries the shape of the filter.
SENSe:LTE:ACLR:MODE:REALtime	Sets or queries the real-time LTE ACLR measurement mode.
SENSe:LTE:ACLR:NFLoor:ACQuire	Enables measurement of the noise floor.
SENSe:LTE:ACLR:NFLoor:CORRected?	Returns whether or not noise correction was applied on the last acquisition.
SENSe:LTE:ACLR:NFLoor:STATe	Determines whether to enable or disable the correction for noise floor.
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution	Sets or queries the resolution bandwidth (RBW) value in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution: COUNt	Sets or queries the count for the resolution bandwidths in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<X>:BANDwidth:RESolution: FILTer	Sets or queries the filter bandwidth resolution under Offset & Limit table.

Command	Description
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution :VIDeo	Sets or queries the resolution video bandwidth (VBW) value in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:BANDwidth: RESolution:VIDeo:STATe	Sets or queries whether to enable or disable the video resolution bandwidth (VBW) in the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:DETection	Sets or queries the detection settings for all offsets.
SENSe:LTE:ACLR:OFFSet<x>:FREQuency: BANDwidth	Sets or queries the frequency bandwidth value for the specified row of the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:FREQuency:OFFSet	Sets or queries the frequency offset value of the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:ABSolute	Sets or queries the absolute limit value of the row in the Offset & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:MASK	Sets or queries the limit mask setting for the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:RELative	Sets or queries the relative limit value of channel under Offset & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:LIMit:SIDE	Sets or queries the side of the offset limit for the specified row in the Offsets & Limits table.
SENSe:LTE:ACLR:OFFSet<x>:STATe	Sets or queries the specified row of the Offsets & Limits table.
SENSe:LTE:ACLR:POINts:COUNt	Sets or queries the number of points used for the trace.
SENSe:LTE:ACLR:REFerence:MAGNitude:AUTO	Sets or queries the reference magnitude to automatic or manual.
SENSe:LTE:ACLR:REFerence:MAGNitude:DETection	Sets or queries the reference magnitude detection.
SENSe:LTE:ACLR:REFerence:MAGNitude	Sets or queries the reference power magnitude.
SENSe:LTE:ACLR:STEP:AUTO	Determines whether to automatically update the center frequency increment/decrement step size.
SENSe:LTE:ACLR:STEP:MAGNitude	Sets or queries the step magnitude for the center frequency.
SENSe]:LTE:ANALysis:EQUAlization:STATe	Sets or queries the Enable Equalization state in the LTE Analysis Params tab.
SENSe:LTE:ANALysis:LENGth:ACTual?	Queries the actual analysis length for the LTE Constellation and LTE Power vs Time displays.
[SENSe]:LTE:ANALysis:OFFSet	Sets or queries the LTE analysis offset for the LTE Constellation or LTE Power vs Time.
SENSe:LTE:ANALysis:OFFSet:AUTO	Sets or queries the Auto checkbox state for analysis offset.

Command	Description
SENSe:LTE:ANALysis:TIMe:UNIT	Sets or queries the unit preference under the LTE Analysis tab.
SENSe:LTE:CHANnel:BANDwidth	Specifies or queries the channel bandwidth to use.
SENSe:LTE:CHSPectrum:AVERage	Sets or queries how to average the waveform.
SENSe:LTE:CHSPectrum:AVERage:COUNt	Sets or queries the number of traces for averaging.
SENSe:LTE:CHSPectrum:BANDwidth:RESolution	Sets or queries the resolution bandwidth (RBW).
SENSe:LTE:CHSPectrum:BANDwidth:RESOlution:AUTO	Determines whether to set the resolution bandwidth (RBW) automatically or manually. Queries this setting.
SENSe:LTE:CHSPectrum:BANDwidth:VIDeo	Sets or queries the video bandwidth (VBW).
SENSe:LTE:CHSPectrum:BANDwidth:VIDeo:STATe	Sets or queries enabling or disabling the video bandwidth (VBW).
SENSe:LTE:CHSPectrum:CHANnel:BANDwidth	Specifies or queries a nominal channel bandwidth to use.
SENSe:LTE:CHSPectrum:CLEar:RESults	Clears the results in the LTE Channel Spectrum measurement.
SENSe:LTE:CHSPectrum:DETection	Sets or queries the trace detection settings.
SENSe:LTE:CHSPectrum:FREQuency	Sets or queries the measurement center frequency.
SENSe:LTE:CHSPectrum:FREQuency:SPAN	Sets or queries the frequency span.
SENSe:LTE:CHSPectrum:FREQuency:STEP	Sets or queries the frequency step size.
SENSe:LTE:CHSPectrum:FREQuency:STEP:AUTO	Determines whether to set the frequency step size automatically or manually. Queries this setting.
SENSe:LTE:CHSPectrum:POINts:COUNt	Sets or queries the number of points used for the trace.
SENSe:LTE:FRAMe:STRUcture	Sets or queries the frame structure.
SENSe:TOFF:POWEr:SPECtral:DENSity	Sets or queries the limit set for comparison of the Toff power spectral density value.
SENSe:ROSCillator:EXTernal:TIMe	Sets or queries the timing reference.
SENSe:ROSCillator:EXTernal:TIMe:STATus?	Queries if the timing reference source is locked.

Status commands

Use the STATus commands to control registers defined in the SCPI status reporting structure. See the Index for commands not listed in the following table.

Status commands

Header	Description
STATus:ACPower:EVENts? (on page 2533)	Returns the current events for the ACPR measurement.
STATus:BIBEmissions:EVENts? (on page 2536)	Returns the current events and status conditions for the Bluetooth InBand Emission measurement.
STATus:BLUEtooth:CONSte:EVENts? (on page 2536)	Returns the current events and status conditions for the Bluetooth Constellation measurement.
STATus:BLUEtooth:EDIAgram:EVENts? (on page 2537)	Returns the current events and status conditions for the Bluetooth Eye Diagram measurement.
STATus:BLUEtooth:FDVTime:EVENts? (on page 2537)	Returns the current events and status conditions for the Frequency Deviation versus Time measurement.
STATus:P25:EDIagram:EVENts? (on page 2555)	Returns the current events and status conditions for the P25 Eye Diagram measurement.
STATus:{AM|FM|PM}:EVENts? (on page 2533)	Returns the current events for the AM/FM/PM measurement.
STATus:AUDio:SPECtrum:EVENts? (on page 2534)	Returns the current events and status conditions for the audio measurement.
STATus:AUDio:SUMMary:EVENts? (on page 2534)	Returns the current events and status conditions for the audio measurement.
STATus:AVTime[:MEASview<y>]:EVENts? (on page 2535)	Returns the current events for the Amplitude versus Time measurement.
STATus:CCDF:EVENts? (on page 2539)	Returns the current events for the CCDF measurement.
STATus:CONSte[:MEASview<x>]:EVENts? (on page 2539)	Returns the current events and status conditions for the constellation measurement.
STATus:DIQVtime[:MEASview<y>]:EVENts? (on page 2540)	Returns the current events and status conditions for the Demod I&Q versus Time measurement.
STATus:DPX:EVENts? (on page 2540)	Returns the current events for the DPX spectrum measurement.
STATus:DPX:EVENts?	Returns the current events for the DPX spectrum measurement.
STATus:EDIagram[:MEASview<y>]:EVENts? (on page 2541)	Returns the current events and status conditions for the eye diagram measurement.
STATus:EVM[:MEASview<y>]:EVENts? (on page 2542)	Returns the current events and status conditions for the EVM versus Time measurement.
STATus:FDVTime[:MEASview<y>]:EVENts? (on page 2543)	Returns the current events and status conditions for the Frequency deviation versus Time measurement.
STATus:{FSETtling|PSETtling}:EVENts? (on page 2544)	Returns the current events for the specified settling time measurement.
STATus:FVTime[:MEASview<y>]:EVENts? (on page 2544)	Returns the current events for the Frequency versus Time measurement.

Header	Description
STATus:IQVTime[:MEASview<y>]:EVENts? (on page 2545)	Returns the current events for the RF I&Q versus Time measurement.
STATus:MCPower:EVENts? (on page 2547)	Returns the current events for the MCPR measurement.
STATus:MERRor[:MEASview<y>]:EVENts? (on page 2548)	Returns the current events and status conditions for the Magnitude error versus Time measurement.
STATus:OBWidth:EVENts? (on page 2549)	Returns the current events for the Occupied Bandwidth measurement.
STATus:OFDM:CONSte:EVENts? (on page 2549)	Returns the current events and status condition for the OFDM Constellation measurement.
STATus:OFDM:EVM:EVENts? (on page 2550)	Returns the current events and status condition for the OFDM EVM (Error Vector Magnitude) versus Time measurement.
STATus:OFDM:MERRor:EVENts? (on page 2550)	Returns the current events and status condition for the OFDM Magnitude versus Time measurement.
STATus:OFDM:PERRor:EVENts? (on page 2551)	Returns the current events and status condition for the OFDM Phase error versus Time measurement.
STATus:OFDM:POWer:EVENts? (on page 2552)	Returns the current events and status condition for the OFDM Power measurement.
STATus:OFDM:STABle:EVENts? (on page 2552)	Returns the current events and status condition for the OFDM Symbol table measurement.
STATus:OPERation:CONDition? (on page 2553)	Queries the contents of the OCR.
STATus:OPERation:ENABle (on page 2553)	Sets or queries the mask for the OENR.
STATus:OPERation[:EVENt]? (on page 2554)	Queries the contents of the OEVR.
STATus:OPERation:NTRansition (on page 2554)	Sets or queries the value of the negative transition filter.
STATus:OPERation:PTRansition (on page 2555)	Sets or queries the value of the positive transition filter.
STATus:PERRor[:MEASview<y>]:EVENts? (on page 2556)	Returns the current events and status conditions for the Phase error versus Time measurement.
STATus:PHVTime[:MEASview<y>]:EVENts? (on page 2557)	Returns the current events for the Phase versus Time measurement.
STATus:PNOise:EVENts? (on page 2558)	Returns the current events for the phase noise measurement.
STATus:PRESet (on page 2558)	Presets a status byte.
STATus:PULSe:RESult[:MEASview<y>]:EVENts? (on page 2560)	Returns the current events for the pulse table measurement.

Header	Description
STATus:PULSe:STATistics[:MEASview<y>]:EVENts? (on page 2561)	Returns the current events for the pulse statistics measurement.
STATus:PULSe:TRACe[:MEASview<y>]:EVENts? (on page 2562)	Returns the current events for the pulse trace measurement.
STATus:QUEStionable:CONDition? (on page 2565)	Queries the contents of the QCR.
STATus:QUEStionable:ENABle (on page 2565)	Sets or queries the mask for the OENR.
STATus:QUEStionable[:EVENt]? (on page 2566)	Queries the contents of the QER.
STATus:QUEStionable:NTRansition (on page 2569)	Sets or queries the value of the negative transition filter.
STATus:QUEStionable:PTRansition (on page 2569)	Sets or queries the value of the positive transition filter.
STATus:QUEStionable:CALibration:CONDition? (on page 2562)	Queries the contents of the questionable calibration condition register.
STATus:QUEStionable:CALibration:ENABle (on page 2563)	Sets or queries the mask for the questionable calibration enable register.
STATus:QUEStionable:CALibration[:EVENt]? (on page 2563)	Queries the contents of the questionable calibration event register.
STATus:QUEStionable:CALibration:NTRansition (on page 2564)	Sets or queries the value of the negative transition filter.
STATus:QUEStionable:CALibration:PTRansition (on page 2564)	Sets or queries the value of the positive transition filter.
STATus:QUEStionable:FREQuency:CONDition? (on page 2566)	Queries the contents of the questionable frequency condition register.
STATus:QUEStionable:FREQuency:ENABle (on page 2567)	Sets or queries the mask for the questionable frequency enable register.
STATus:QUEStionable:FREQuency[:EVENt]? (on page 2567)	Queries the contents of the questionable frequency event register.
STATus:QUEStionable:FREQuency:NTRansition (on page 2568)	Sets or queries the value of the negative transition filter.
STATus:QUEStionable:FREQuency:PTRansition (on page 2568)	Sets or queries the value of the positive transition filter.
STATus:SEM:EVENts? (on page 2570)	Returns the current events and status conditions for the Spectral Emissions Mask measurement.
STATus:SGRam[:MEASview<y>]:EVENts? (on page 2570)	Returns the current events for the spectrogram measurement.

Header	Description
STATus:SPECtrum[:MEASview<y>]:EVENts? (on page 2571)	Returns the current events for the spectrum measurement.
STATus:SPURious:EVENts? (on page 2571)	Returns the current events for the spurious measurement.
STATus:SQUality[:MEASview<y>]:EVENts? (on page 2572)	Returns the current events and status conditions for the signal quality measurement.
STATus:TDIagram[:MEASview<y>]:EVENts? (on page 2573)	Returns the current events and status conditions for the trellis diagram measurement.
STATus:WLAN:CONSte:EVENts? (on page 2574)	Returns the current status concatenated with WLAN Constellation-specific event information.
STATus:WLAN:CRESponse:EVENts? (on page 2575)	Returns the current events and status conditions for the WLAN Channel Response display.
STATus:WLAN:EVM:EVENts? (on page 2576)	Returns the current status concatenated with WLAN EVM-specific event information.
STATus:WLAN:MERRor:EVENts? (on page 2579)	Returns the current status concatenated with WLAN Magnitude Error-specific event information.
STATus:WLAN:PERRor:EVENts? (on page 2579)	Returns status concatenated with WLAN Phase Error-specific event information.
STATus:WLAN:PVTime:EVENts? (on page 2580)	Returns the current status concatenated with WLAN Power vs. Time-specific event information.
STATus:WLAN:STABle:EVENts? (on page 2580)	Returns status concatenated with WLAN Symbol Table-specific event information.
STATus:WLAN:SUMMary:EVENts? (on page 2581)	Returns the current events and status conditions for the WLAN summary measurement.
STATus:TXGain subgroup	**Transmission Gain measurements**
STATus:TXGain:EVENts? (on page 2573)	Queries events for the Transmission Gain display.
STATus:LTE subgroup	**LTE analysis**
STATus:LTE:ACLR:EVENts? (on page 2545)	Returns the current events and status conditions for this display.
STATus:LTE:CHSPectrum:EVENts? (on page 2546)	Returns the current events and status conditions for this display.
STATus:LTE:CONSte:EVENts? (on page 2546)	Returns the current events and status conditions for this display.
STATus:LTE:PVTime:EVENts? (on page 2547)	Returns the current events and status conditions for this display.

Source commands

Use the SOURce commands to control output power level of the tracking generator. See the Index for commands not listed in the following table.

These commands only apply when a RSA500A and RSA600A Series instrument with Option 04 (Tracking Generator) installed is connected.

Source commands

Command	Description
SOURce:TXGain:POWer (on page 2531)	Sets or queries the output power level of the tracking generator.

System commands

Use the SYSTem commands to set or query system parameters for operation. See the Index for commands not listed in the following table.

System commands

Header	Description
SYSTem:COMMunicate:GPIB[:SELF]:ADDRess (on page 2590)	Sets or queries the GPIB address of the instrument.
SYSTem:PRESet:BLUEtooth:STANdard (on page 2602)	Sets or queries the standard, setup, Retaining Current Reflevel, and Retaining Center Frequency in the Bluetooth standard preset.
SYSTem:PRESet:P25:STANdard (on page 2606)	Restores the analyzer defaults for the P25 Standards preset.
SYSTem:DATE (on page 2591)	Sets or queries the current date.
SYSTem:ERRor:ALL? (on page 2591)	Queries all the error or event information.
SYSTem:ERRor:CODE:ALL? (on page 2592)	Queries all the error or event codes.
SYSTem:ERRor:CODE[:NEXT]? (on page 2593)	Queries the latest error or event information.
SYSTem:ERRor:COUNt? (on page 2593)	Queries the number of errors or events.
SYSTem:ERRor[:NEXT]? (on page 2593)	Queries the latest error or event information.
SYSTem:KLOCk (on page 2599)	Enables or disables the local lockout operation.
SYSTem:LASTaligned:DATEtime? (on page 2600)	Queries the last alignment date and time of device.
SYSTem:LASTaligned:TEMPerature? (on page 2600)	Queries the last aligned temperature of device.
SYSTem:LINK:SETTings (on page 2600)	Sets or queries whether or not global settings linking enabled for the measurements displayed.
SYSTem:LINK:SETTings:SYNC (on page 2601)	Sets the synchronize settings referring to source for the measurements displayed.

Header	Description
SYSTem:OPTions? (on page 2601)	Queries the optional information.
SYSTem:PRESet (on page 2602)	Restores the analyzer to the defaults.
SYSTem:PRESet:APPLication (on page)	Restores the analyzer to the defaults for the application preset type.
SYSTem:PRESet:APPLication:ACTion (on page 2602)	Sets or queries the preset action for the application preset type.
SYSTem:PRESet:APPLication:SELected (on page)	Sets or queries the presets for the application preset type.
SYSTem:PRESet:DPX (on page 2603)	Presets the analyzer.
SYSTem:PRESet:DPX:ACTion (on page 2603)	Sets or queries the preset action for the DPX preset type.
SYSTem:PRESet:DPX:SELected (on page 2604)	Sets or queries the presets for the DPX preset type.
SYSTem:PRESet[:MAIN] (on page 2605)	Restores the analyzer to the defaults.
SYSTem:PRESet:MAIN:ACTion (on page 2605)	Sets or queries the preset action for the main preset type.
SYSTem:PRESet:MAIN:SELected (on page 2606)	Sets or queries the presets for the main preset type.
SYSTem:PRESet:STANdards (on page 2607)	Restores the instrument to the defaults for the WLAN standards preset type.
SYSTem:PRESet:STANdards:ACTion (on page 2607)	Sets or queries the preset action for the standards preset type.
SYSTem:PRESet:USER (on page 2607)	Restores the analyzer to the defaults for the user preset type.
SYSTem:PRESet:USER:ACTion (on page 2608)	Sets or queries the preset action for the user preset type.
SYSTem:PRESet:USER:SELected (on page 2608)	Sets or queries the presets for the user preset type.
SYSTem:PRESet:WLAN:STANdard (on page 2610)	Sets or queries the standard and bandwidth presets for the WLAN standards preset type.
SYSTem:TEMPerature? (on page 2618)	Queries the current device temperature.
SYSTem:TIME (on page 2618)	Sets or queries the current time.
SYSTem:VERSion? (on page 2619)	Queries the version of the SCPI.
SYSTem:PRESet:LTE:STANdard (on page 2604)	Sets or queries LTE standard preset parameters.
SYSTem:SVPC:HSInterface:ENABLE (on page 2611)	Sets or queries the status of the HSI interface as enabled or disabled.
SYSTem:SVPC:HSInterface:USE:LOCAlhost (on page 2613)	Sets or queries whether the HSI interface is connected via the local host.

Header	Description
SYSTem:SVPC:HSInterface:IP:ADDRess (on page 2612)	Sets or queries the IP address of the instrument connected via HIS interface.
SYSTem (on page 2616):SVPC:HSInterface:PORT:NUMBer (on page 2612)	Sets or queries the Port number of the instrument connected via HSI interface.
SYSTem:SVPC:SOURce (on page 2615)<x> (on page 2616):ADD (on page 2615)	Adds Measurement Source.
SYSTem:SVPC:SOURce (on page 2615)<x> (on page 2616):REMOve (on page 2615)	Removes latest user defined measurement Source from source configuration
SYSTem:SVPC:SOURce (on page 2616)<x> (on page 2616):REMOve:ALL (on page 2616)	Removes all user defined measurement Sources from source configuration
SYSTem:SVPC:SOURce<x>:RENAme (on page 2616)	Sets or queries measurement Source name under source configuration
SYSTem:SVPC:VINStr:CONNect (on page 2617)	Connects to the Virtual Instrument MSO5/6, DPO7.
SYSTem:SVPC:VINStr:CHANnel2:CONFig (on page 2617)	Sets or queries the channel configurations of the Virtual Instrument.

Trace commands

Use the TRACe commands to select trace type and to control trace arithmetic. See the Index for commands not listed in the following table.

Trace commands

Commands	Description
TRACe<x>:{AM|FM|PM} subgroup	**AM/FM/PM measurement**
TRACe<x>:{AM|FM|PM} (on page 2673)	Determines whether or not to show the specified trace.
TRACe:{AM|FM|PM}:DETection (on page 2619)	Sets or queries the display detector, the method to be used for decimating traces to fit the available horizontal space on screen.
TRACe:{AM|FM|PM}:FREeze (on page 2620)	Sets or queries whether or not to freeze the trace display.
TRACe:{AM|FM|PM}:FUNCtion (on page 2620)	Sets or queries the trace function.
TRACe<x>:Bluetooth subgroup	**Bluetooth measurement**
TRACe<x>:BLUEtooth:CONSte (on page 2684)	Determines whether or not to show the specified trace.
TRACe<x>:BLUEtooth:CONSte:FREeze (on page 2685)	Sets or queries whether or not to freeze the specified trace.
TRACe<x>:BLUEtooth:CONSte:MODE (on page 2685)	Sets or queries the trace display mode.

Commands	Description
TRACe<x>:BLUEtooth:CONSte:SELect (on page 2686)	Selects the specified trace.
TRACe<x>:BLUEtooth:EDIagram:ENABle:I (on page 2686)	Determines whether to show or hide the I trace.
TRACe<x>:BLUEtooth:EDIagram:ENABle:Q (on page 2686)	Determines whether to show or hide the Q trace.
TRACe<x>:BLUEtooth:EDIagram:SELect:I (on page 2687)	Selects the I trace or queries if the I trace is selected or not.
TRACe<x>:BLUEtooth:EDIagram:SELect:Q (on page 2687)	Selects the Q trace or queries if the Q trace is selected or not.
TRACe<x>:BLUEtooth:FDVTime:MODE (on page 2688)	Sets or queries whether to display the Frequency Deviation vs. Time trace as vectors or symbols (points).
TRACe:P25 subgroup	**APCO P25 measurement**
TRACe<x>:P25:CONStellation (on page 2731)	Determines whether or not to show the specified trace.
TRACe<x>:P25:CONStellation:FREeze (on page 2731)	Determines whether or not to freeze (halt updates of) the specified trace.
TRACe<x>:P25:CONStellation:MODE (on page 2732)	Sets or queries how to display the trace content.
TRACe<x>:P25:CONStellation:SELect (on page 2732)	Selects the specified trace.
TRACe<x>:P25:EDIagram:ENABle:I (on page 2733)	Determines whether to show or hide the I trace.
TRACe<x>:P25:EDIagram:ENABle:Q (on page 2733)	Determines whether to show or hide the Q trace.
TRACe<x>:P25:EDIagram:SELect:I (on page 2734)	Selects the I trace or queries if the I trace is selected or not.
TRACe<x>:P25:EDIagram:SELect:Q (on page 2735)	Selects the Q trace or queries if the Q trace is selected or not.
TRACe:Noise subgroup	**Noise Figure and Gain measurement**
TRACe<x>:NOISe:FIGure:AVERageCOUNt (on page 2709)	Sets or queries the average counts for the specified trace.
TRACe<x>:NOISe:FIGure:COUNt:ENABle (on page 2710)	Sets to enable the count feature, or queries the enables status, of the specified trace.
TRACe<x>:NOISe:FIGure:DETection (on page 2710)	Sets or queries the trace detection method.
TRACe<x>:NOISe:FIGure:FREeze (on page 2711)	Determines whether or not to freeze (halt updates of) the specified trace.
TRACe<x>:NOISe:FIgure:FUNCtion (on page 2711)	Sets or queries the trace processing method (function) in the display.
TRACe<x>:NOISe:FIGure:SELect (on page 2712)	Selects the specified trace.
TRACe<x>:NOISe:FIGure:SHOW (on page 2712)	Determines whether or not to show the specified trace.

Commands	Description
TRACe<x>:NOISe:GAIN:AVERage:COUNt (on page 2713)	Sets or queries the average counts for the specified trace.
TRACe<x>:NOISe:GAIN:COUNt:ENABle (on page 2714)	Enables or disables the count feature for the specified trace.
TRACe<x>:NOISe:GAIN:DETection (on page 2714)	Sets or queries the trace detection method.
TRACe<x>:NOISe:GAIN:FREeze (on page 2715)	Determines whether or not to freeze (halt updates of) the specified trace.
TRACe<x>:NOISe:GAIN:FUNCtion (on page 2715)	Sets or queries the trace processing method (function) in the display.
TRACe<x>:NOISe:GAIN:SELect (on page 2716)	Selects the specified trace.
TRACe<x>:NOISe:GAIN:SHOW (on page 2717)	Determines whether or not to show the specified trace.
TRACe<x>:NOISe:TEMPerature:AVERageCOUNt (on page 2717)	Sets or queries the average counts for the specified trace.
TRACe<x>:NOISe:TEMPerature:COUNt:ENABle (on page 2718)	Enables or disables the count feature for the specified trace.
TRACe<x>:NOISe:TEMPerature:DETection (on page 2718)	Sets or queries the trace detection method.
TRACe<x>:NOISE:TEMPerature:FREeze (on page 2719)	Determines whether or not to freeze (halt updates of) the specified trace.
TRACe<x>:NOISe:TEMPerature:FUNCtion (on page 2719)	Sets or queries the trace processing method (function) in the display.
TRACe<x>:NOISe:TEMPerature:SELect (on page 2720)	Selects the specified trace.
TRACe<x>:NOISe:TEMPerature:SHOW (on page 2720)	Determines whether or not to show the specified trace.
TRACe<x>:NOISe:YFACtor:AVERage:COUNt (on page 2721)	Sets or queries the average counts for the specified trace.
TRACe<x>:NOISe:YFACtor:COUNt:ENABle (on page 2722)	Enables or disables the count feature for the specified trace.
TRACe<x>:NOISe:YFACtor:DETection (on page 2722)	Sets or queries the trace detection method.
TRACe<x>:NOISE:YFACtor:FREeze (on page 2723)	Determines whether or not to freeze (halt updates of) the specified trace.
TRACe<x>:NOISe:YFACtor:FUNCtion (on page 2723)	Sets or queries the trace processing method (function) in the display.
TRACe<x>:NOISe:YFACtor:SELect (on page 2724)	Selects the specified trace.
TRACe<x>:NOISe:YFACtor:SHOW (on page 2724)	Determines whether or not to show the specified trace.
TRACe<x>:AVTime subgroup	**Amplitude versus time measurement**

Commands	Description
TRACe<x>:AVTime[:MEASview<y>] (on page 2674)	Sets or queries whether or not to show the specified trace.
TRACe:{FSETtling|PSETtling}:AVERage:COUNt (on page 2632)	Sets or queries the number of traces to combine for averaging.
TRACe<x>:AVTime[:MEASview<y>]:AVERage: COUNt (on page 2674)	Sets or queries the number of traces to combine.
TRACe<x>:AVTime[:MEASview<y>]:AVERage: RESet (on page 2675)	Clears the average data and resets the average counter.
TRACe<x>:AVTime[:MEASview<y>]:COLor:CURVe (on page 2675)	Sets or queries how colors are mapped to the signal density in the Amplitude versus Time bitmap display.
TRACe<x>:AVTime[:MEASview<y>]:COLor: SCALe:AUTO (on page 2676)	Automatically adjusts the Max and Min color settings to display the broadest range of colors in the Amplitude versus Time bitmap display.
TRACe<x>:AVTime[:MEASview<y>]:COUNt (on page 2676)	Sets or queries the count for the Max or Min Hold trace.
TRACe<x>:AVTime[:MEASview<y>]:COUNt:ENABle (on page 2677)	Sets or queries whether or not to enable the count for Max/Min Hold.
TRACe<x>:AVTime[:MEASview<y>]:COUNt:RESet (on page 2677)	Clears the Max or Min Hold data and counter, and restarts the process.
TRACe<x>:AVTime[:MEASview<y>]:DETection (on page 2678)	Sets or queries the display detector.
TRACe<x>:AVTime[:MEASview<y>]:DOT:PERSistent (on page 2679)	Determines whether to enable or disable the dot persistence for the bitmap trace (Trace 5) in the Amplitude versus Time view.
TRACe<x>:AVTime[:MEASview<y>]:DOT:PERSistent: TYPE (on page 2679)	Sets or queries the persistence type for the bitmap trace (Trace 5) in the Amplitude versus Time view.
TRACe<x>:AVTime[:MEASview<y>]:DOT:PERSistent: VARiable (on page 2680)	Sets or queries how long data points are displayed.
TRACe<x>:AVTime[:MEASview<y>]:FREeze (on page 2680)	Sets or queries whether or not to freeze the display of the trace.
TRACe<x>:AVTime[:MEASview<y>]:FUNCtion (on page 2681)	Sets or queries the trace function.
TRACe<x>:AVTime[:MEASview<y>]:LEFToperand (on page 2681)	Sets or queries the left operand for the math trace.
TRACe<x>:AVTime[:MEASview<y>]:RIGHtoperand (on page 2682)	Sets or queries the right operand for the math trace.
TRACe<x>:AVTime[:MEASview<y>]:SELect (on page 2683)	Sets or queries the trace number to display the readout.
TRACe<x>:AVTime[:MEASview<y>]:SELect:LINe (on page 2683)	Sets or queries the line number to send to the Ampliude vs time ogram display.
TRACe<x>:CCDF subgroup	**CCDF measurement**

Commands	Description
TRACe<x>:CCDF:FREeze (on page 2688)	Sets or queries whether or not to freeze the display of the trace.
TRACe<x>:CCDF:SELect (on page 2689)	Sets or queries the trace number to display the readout.
TRACe<x>:CCDF:SHOW (on page 2689)	Sets or queries whether to show or hide the trace.
TRACe<x>:CCDF:X (on page 2690)	Sets or queries the horizontal position of the measurement pointer.
TRACe<x>:CCDF:Y? (on page 2690)	Queries the vertical position (CCDF value) of the measurement pointer.
TRACe:CONSte subgroup (Option 21 only)	**Constellation measurement**
TRACe<x>:CONSte[:MEASview<y>] (on page 2691)	Specifies whether or not to show the specified trace (Trace 1 or 2) in the Constellation display.
TRACe<x>:CONSte[:MEASview<y>]:FREeze (on page 2692)	Halts updates to the specified trace in the Constellation display.
TRACe<x>:CONSte[:MEASview<y>]:MODE (on page 2692)	Sets or queries how to display the constellation trace.
TRACe<x>:CONSte[:MEASview<y>]:Q:OFFSet (on page 2693)	Sets the Q offset in the Constellation display to Use shared Pref, remove Q offset, or include Q offset.
TRACe<x>:CONSte[:MEASview<y>]:SELect (on page 2693)	Sets or queries the trace to which the Show, Freeze, Content, and Q Offset settings apply.
TRACe:DIQVtime subgroup (Option 21 only)	**Demodulated I&Q versus time measurement**
TRACe:DIQVtime[:MEASview<y>]:ENABle:I (on page 2621)	Enable or disables the trace I.
TRACe:DIQVtime[:MEASview<y>]:ENABle:Q (on page 2621)	Enable or disables the Q trace.
TRACe:DIQVtime[:MEASview<y>]:MODE (on page 2622)	Sets or queries whether to display the Demod I&Q vs Time trace as vectors or symbols.
TRACe:DIQVtime[:MEASview<y>]:SELect:I (on page 2622)	Selects the I trace.
TRACe:DIQVtime[:MEASview<y>]:SELect:Q (on page 2623)	Selects the Q trace.
TRACe<x>:DPX subgroup	**DPX spectrum measurement**
TRACe<x>:DPX (on page 2694)	Sets or queries whether or not to show the waveform.
TRACe<x>:DPX:AVERage:COUNt (on page 2695)	Sets or queries the number of traces to combine for averaging.
TRACe<x>:DPX:COLor:CURVe (on page 2695)	Sets or queries the color intensity.
TRACe<x>:DPX:COLor:INTensity (on page 2695)	Sets or queries the color intensity in the DPX spectrum view.
TRACe<x>:DPX:COLor:SCALe:AUTO (on page 2696)	Automatically adjusts the Max and Min color settings to display the broadest range of colors.

Commands	Description
TRACe<x>:DPX:DETection (on page 2696)	Sets or queries the function.
TRACe<x>:DPX:DGRAM:SELect:LINE (on page 2697)	Sets or queries a line in the DPXogram display to send to the DPX spectrum display.
TRACe<x>:DPX:DOT:PERSistent (on page 2697)	Sets or queries whether to enable or disable the dot persistence.
TRACe<x>:DPX:DOT:PERSistent:TYPE (on page 2698)	Sets or queries the persistence type.
TRACe<x>:DPX:DOT:PERSistent:VARiable (on page 2698)	Sets or queries the length of time that data points are displayed.
TRACe<x>:DPX:FREeze (on page 2699)	Sets or queries whether or not to freeze the display of the trace.
TRACe<x>:DPX:FUNCtion (on page 2699)	Sets or queries the trace function for the in the DPX spectrum view.
TRACe<x>:DPX:LEFToperand (on page 2700)	Sets or queries the left operand for the math trace.
TRACe<x>:DPX:RIGHtoperand (on page 2700)	Sets or queries the right operand for the math trace.
TRACe<x>:DPX:SELect (on page 2701)	Sets or queries the trace number to display the readout.
TRACe:EDIagram subgroup (Option 21 only)	**Eye diagram**
TRACe:EDIagram[:MEASview<y>]:ENABle:I (on page 2623)	Determines whether to show or hide the I trace in the eye diagram.
TRACe:EDIagram[:MEASview<y>]:ENABle:Q (on page 2624)	Determines whether to show or hide the Q trace in the eye diagram.
TRACe:EDIagram[:MEASview<y>]:SELect:I (on page 2624)	Selects the I trace in the eye diagram. The query version of this command returns whether the I trace is selected or not.
TRACe:EDIagram[:MEASview<y>]:SELect:Q (on page 2625)	Selects the Q trace in the eye diagram. The query version of this command returns whether the Q trace is selected or not.
TRACe:EVM subgroup	**EVM measurement**
TRACe:EVM[:MEASview<y>]:MODE (on page 2631)	Sets or queries whether to display the EVM versus Time trace as vectors or symbols (points).
TRACe:FDVTime subgroup	**Frequency deviation versus time measurement**
TRACe:FDVTime:MODE (on page 2632)	Sets or queries whether to display the Frequency Deviation versus Time trace as vectors or symbols.
TRACe:FVTime subgroup	**Frequency versus time measurement**
TRACe:FVTime[:MEASview<y>] (on page 2635)	Sets or queries whether or not to show the trace.
TRACe:FVTime[:MEASview<y>]:AVERage:COUNt (on page 2635)	Sets or queries the number of traces to combine for averaging.

Commands	Description
TRACe<x>:FVTime[:MEASview<y>]:COLor:CURVe (on page 2636)	Sets or queries how colors are mapped to the signal density in the Frequency versus Time bitmap display.
TRACe<x>:FVTime[:MEASview<y>]:COLor:SCALe: AUTO (on page 2636)	Automatically adjusts the Max and Min color settings to display the broadest range of colors in the Frequency versus Time bitmap display.
TRACe:FVTime[:MEASview<y>]:COUNt (on page 2637)	Sets or queries the count for the Max or Min Hold trace.
TRACe:FVTime[:MEASview<y>]:COUNt:ENABle (on page 2637)	Sets or queries whether or not to enable the count for Max or Min Hold.
TRACe:FVTime[:MEASview<y>:COUNt:RESet (on page 2638)	Clears the Max or Min Hold data and counter, and restarts the process.
TRACe<x>:FVTime[:MEASview<y>]:DETection (on page 2638)	Enables or queries the type of detection for the specified trace.
TRACe<x>:FVTime[:MEASview<y>]:DOT: PERSistent (on page 2639)	Determines whether to enable or disable the dot persistence for the bitmap trace (Trace 5) in the Frequency versus Time view.
TRACe<x>:FVTime[:MEASview<y>]:DOT:PERSistent: TYPE (on page 2639)	Sets or queries the persistence type for the bitmap trace (Trace 5) in the Frequency versus Time view.
TRACe<x>:FVTime[:MEASview<y>]:DOT:PERSistent: VARiable (on page 2640)	Sets or queries how long data points are displayed.
TRACe:FVTime[:MEASview<y>]:FREeze (on page 2640)	Sets or queries whether or not to freeze the display of the trace.
TRACe:FVTime[:MEASview<y>]:FUNCtion (on page 2641)	Sets or queries the trace function.
TRACe<x>:FVTime[:MEASview<y>]:SELect (on page 2642)	Sets or queries the selected trace.
TRACe<x>:FVTime[:MEASview<y>]:SELect:LINe (on page 2642)	Sets or queries the line number to send to the Frequency vs time ogram display.
TRACe:IQVTime subgroup	**RF I&Q versus time measurement**
TRACe:IQVTime[:MEASview<y>]:AVERage:COUNt (on page 2643)	Sets or queries the number of traces to combine for averaging.
TRACe:IQVTime[:MEASview<y>]:COUNt (on page 2643)	Sets or queries the count for the Max or Min Hold trace.
TRACe:IQVTime[:MEASview<y>]:COUNt:ENABle (on page 2644)	Determines whether to enable or disable the count for the Max or Min Hold trace.
TRACe:IQVTime[:MEASview<y>]:DETection (on page 2645)	Sets or queries whether or not to enable the count for Max/Min Hold.
TRACe:IQVTime[:MEASview<y>]:COUNt:RESet (on page 2644)	Clears the Max or Min Hold data and counter, and restarts the process.
TRACe:IQVTime:[MEASview<y>]:ENABle:I (on page 2645)	Sets or queries whether to show or hide the trace I.

Commands	Description
TRACe:IQVTime[:MEASview<y>]:ENABle:Q (on page 2646)	Sets or queries whether to show or hide the trace Q.
TRACe:IQVTime[:MEASview<y>]:FREeze (on page 2646)	Sets or queries whether to freeze the IQ traces.
TRACe:IQVTime[:MEASview<y>]:FUNCtion (on page 2647)	Sets or queries the trace function.
TRACe:IQVTime[:MEASview<y>]:SELect:I (on page 2647)	Sets or queries whether to choose the I trace.
TRACe:IQVTime[:MEASview<y>]:SELect:Q (on page 2648)	Sets or queries whether to choose the Q trace.
TRACe:MERRor subgroup	**Magnitude Error measurement**
TRACe:MERRor[:MEASview<y>]:MODE (on page 2649)	Sets or queries whether to display the Magnitude error trace as vectors or symbols.
TRACe:OBWidth subgroup	**Occupied Bandwidth measurement**
TRACe:OBW:MAXHold (on page 2649)	Determines whether to enable or disable the Max Hold trace.
TRACe:OFDM subgroup	**OFDM measurements**
TRACe:OFDM:CONSte (on page 2650)	Determines whether or not to show the trace.
TRACe:OFDM:CONSte:FREeze (on page 2650)	Determines whether or not to freeze the display of the trace.
TRACe<x>:OFDM:EVM (on page 2725)	Determines whether or not to show the specified trace.
TRACe<x>:OFDM:EVM:FREeze (on page 2725)	Determines whether or not to freeze the display of the specified trace.
TRACe<x>:OFDM:EVM:SELect (on page 2726)	Sets or queries the specified trace to display.
TRACe<x>:OFDM:MERRor (on page 2726)	Determines whether or not to show the specified trace.
TRACe<x>:OFDM:MERRor:FREeze (on page 2727)	Determines whether or not to freeze the display of the specified trace.
TRACe<x>:OFDM:MERRor:SELect (on page 2727)	Sets or queries the specified trace to display.
TRACe<x>:OFDM:PERRor (on page 2728)	Determines whether or not to show the specified trace.
TRACe<x>:OFDM:PERRor:FREeze (on page 2728)	Determines whether or not to freeze the display of the specified trace.
TRACe<x>:OFDM:PERRor:SELect (on page 2729)	Sets or queries the specified trace to display.
TRACe<x>:OFDM:POWer (on page 2729)	Determines whether or not to show the specified trace.
TRACe<x>:OFDM:POWer:FREeze (on page 2730)	Determines whether or not to freeze the display of the specified trace.
TRACe<x>:OFDM:POWer:SELect (on page 2730)	Sets or queries the specified trace to display.

Commands	Description
TRACe:OFDM:FLATness:FREeze (on page 2650)	Sets or queries whether to freeze the average trace
TRACe:OFDM:FLATness:SHOW (on page 2651)	Displays or hides the trace on the OFDM Spectral Flatness display.
TRACe:PERRpr subgroup	**Phase Error measurement**
TRACe:PERRor[:MEASview<y>]:MODE (on page 2651)	Sets or queries whether to display the Frequency deviation vs Time trace as vectors or symbols.
TRACe:PHVTime subgroup	**Phase versus time measurement**
TRACe:PHVTime[:MEASview<y>] (on page 2652)	Sets or queries whether or not to show the trace.
TRACe:PHVTime[:MEASview<y>]:AVERage:COUNt (on page 2653)	Sets or queries the number of traces to combine for averaging.
TRACe<x>:PHVTime[:MEASview<y>]:COLor:CURVe (on page 2653)	Sets or queries how colors are mapped to the signal density in the Phase versus Time bitmap display.
TRACe<x>:PHVTime[:MEASview<y>]:COLor:SCALe: AUTO (on page 2654)	Automatically adjusts the Max and Min color settings to display the broadest range of colors in the Phase versus Time bitmap display.
TRACe:PHVTime[:MEASview<y>]:COUNt (on page 2654)	Sets or queries the count for the Max or Min Hold trace.
TRACe:PHVTime[:MEASview<y>]:COUNt:ENABle (on page 2655)	Sets or queries whether or not to enable the count for Max/Min Hold.
TRACe:PHVTime[:MEASview<y>]:COUNt:RESet (on page 2655)	Clears the Max or Min Hold data and counter, and restarts the process.
TRACe<x>:PHVTime[:MEASview<y>]:DETection (on page 2656)	Sets or queries the display detector.
TRACe<x>:PHVTime[:MEASview<y>]:DOT: PERSistent (on page 2656)	Determines whether to enable or disable the dot persistence for the bitmap trace (Trace 5) in the Phase versus Time view.
TRACe<x>:PHVTime[:MEASview<y>]:DOT:PERSistent: TYPE (on page 2657)	Sets or queries the persistence type for the bitmap trace (Trace 5) in the Phase versus Time view.
TRACe<x>:PHVTime[:MEASview<y>]:DOT:PERSistent: VARiable (on page 2657)	Sets or queries how long data points are displayed.
TRACe<x>:{FSETtling|PSETtling}:FREeze (on page 2706)	Sets or queries whether to freeze the trace.
TRACe:PHVTime[:MEASview<y>]:FREeze (on page 2658)	Determines whether to freeze the trace display in the Phase versus Time measurement.
TRACe:PHVTime[:MEASview<y>]:FUNCtion (on page 2658)	Sets or queries the trace function.
TRACe<x>:PHVTime[:MEASview<y>]:SELect (on page 2659)	Sets or queries the selected trace.

Commands	Description
TRACe<x>:PHVTime[:MEASview<y>]:SELect:LINe (on page 2660)	Sets or queries the line number to send to the Phase vs time ogram display.
TRACe:PNOise subgroup (Option 11 only)	**Phase noise measurement**
TRACe<x>:{FSETtling|PSETtling}:SELect (on page 2706)	Selects a trace or queries the currently selected trace.
TRACe<x>:{FSETtling|PSETtling}:SHOW (on page 2707)	Sets or queries whether to show or hide the trace.
TRACe:{FSETtling|PSETtling}:AVERage:ENABle (on page 2633)	Sets or queries the number of data points for smoothing the trace.
TRACe<x>:PNOise:SELect (on page 2735)	Selects the trace in the phase noise measurement.
TRACe<x>:PNOise:SHOW (on page 2736)	Shows or hides the specified trace in the phase noise view.
TRACe<x>:PNOise:SMOothing:COUNt (on page 2736)	Sets or queries the number of data points to take the moving average for smoothing the trace.
TRACe<x>:PNOise:SMOothing:ENABle (on page 2736)	Sets or queries whether to enable smoothing the specified trace.
TRACe<x>:PNOise:SMOothing:RESet (on page 2737)	Restarts the smoothing process.
TRACe:{FSETtling|PSETtling} subgroup (Option 12 only)	**Settling time measurements**
TRACe:{FSETtling|PSETtling}:AVERage:COUNt (on page 2632)	Sets or queries the number of traces to combine.
TRACe:{FSETtling|PSETtling}:AVERage:COUNt: CURRent? (on page 2633)	Queries the current running average count value.
TRACe:{FSETtling|PSETtling}:AVERage:ENABle (on page 2633)	Determines whether to enable or disable averaging the trace(s).
TRACe:{FSETtling|PSETtling}:RESet (on page 2633)	If trace averaging is enabled, this command resets the current averaged trace to 0.
TRACe:{FSETtling|PSETtling}:SMOothing:COUNt (on page 2634)	Sets or queries the number of data points to take the moving average for smoothing the traces.
TRACe:{FSETtling|PSETtling}:SMOothing:ENABle (on page 2634)	Determines whether to enable or disable smoothing the trace(s).
TRACe<x>:{FSETtling|PSETtling}:FREeze (on page 2706)	Determines whether to freeze the specified trace in the Settling Time measurement display.
TRACe<x>:{FSETtling|PSETtling}:SELect (on page 2706)	Selects the trace in the settling time measurement.
TRACe<x>:{FSETtling|PSETtling}:SHOW (on page 2707)	Determines whether to show or hide the specified trace in the settling time view.
TRACe:SEM subgroup	**Spectral Emissions Mask measurements**
TRACe:SEM:COUNt (on page 2660)	Sets or queries how many acquisitions run in the single acquisition mode for multi-trace functions.

Commands	Description
TRACe:SEM:COUNt:RESet (on page 2661)	Clears the multi-function data and counter and restarts the process.
TRACe:SEM:FUNCtion (on page 2661)	Sets or queries the trace function.
TRACe:SGRam subgroup	**Spectrogram measurement**
TRACe:SGRam[:MEAview<y>]:DETection (on page 2662)	Sets or queries the method to be used for decimating traces to fit the on screen.
TRACe:SGRam[:MEAview<y>]:FREeze (on page 2662)	Sets or queries whether or not to freeze the spectrogram display.
TRACe:SGRam[:MEAview<y>]:FUNCtion (on page 2663)	Sets or queries the trace function for the specified trace in the spectrogram.
TRACe:SGRam[:MEAview<y>]:FUNCtion:TIME (on page 2664)	Sets or queries the number of traces to combine for the trace function.
TRACe:SGRam[:MEAview<y>]:SELect:LINE (on page 2665)	Sets or queries the line number to send to the spectrum display.
TRACe<x>:SPECtrum subgroup	**Spectrum measurement**
TRACe<x>:SPECtrum[:MEAview<y>] (on page 2737)	Sets or queries whether to show or hide the specified trace.
TRACe<x>:SPECtrum[:MEAview<y>]:AVERage: COUNt (on page 2738)	Sets or queries the number of traces to combine for averaging.
TRACe<x>:SPECtrum[:MEAview<y>]:AVERage: RESet (on page 2738)	Clears the average data and resets the average counter.
TRACe<x>:SPECtrum[:MEASview<y>]:COLor:CURVe (on page 2739)	Sets or queries how colors are mapped to the signal density in the Spectrum bitmap display.
TRACe<x>:SPECtrum[:MEASview<y>]:COLor:SCALe: AUTO (on page 2740)	Automatically adjusts the Max and Min color settings to display the broadest range of colors in the Spectrum bitmap display.
TRACe<x>:SPECtrum[:MEAview<y>]:COUNt (on page 2740)	Sets or queries the count for the Max or Min Hold trace.
TRACe<x>:SPECtrum[:MEAview<y>]:COUNt: ENABle (on page 2741)	Sets or queries whether or not to enable the count for Max/Min Hold.
TRACe<x>:SPECtrum[:MEAview<y>]:COUNt:RESet (on page 2741)	Clears the Max or Min Hold data and counter, and restarts the process.
TRACe<x>:SPECtrum[:MEAview<y>]:DETection (on page 2742)	Sets or queries the display detector.
TRACe<x>:SPECtrum[:MEASview<y>]:DOT:PERSistent (on page 2742)	Determines whether to enable or disable the dot persistence for the bitmap trace (Trace 6) in the Spectrum view.
TRACe<x>:SPECtrum[:MEASview<y>]:DOT:PERSistent: TYPE (on page 2743)	Sets or queries the persistence type for the bitmap trace (Trace 6) in the Spectrum view.

Commands	Description
TRACe<x>:SPECtrum[:MEASview<y>]:DOT:PERSistent:VARiable (on page 2743)	Sets or queries how long data points are displayed.
TRACe<x>:SPECtrum[:MEAview<y>]:FREeze (on page 2744)	Sets or queries whether or not to freeze the display of the trace.
TRACe<x>:SPECtrum[:MEAview<y>]:FUNCtion (on page 2744)	Sets or queries the trace function.
TRACe<x>:SPECtrum[:MEAview<y>]:LEFToperand (on page 2745)	Sets or queries the left operand for the math trace.
TRACe<x>:SPECtrum[:MEAview<y>]:RIGHtoperand (on page 2746)	Sets or queries the right operand for the math trace.
TRACe<x>:SPECtrum[:MEAview<y>]:SELect (on page 2746)	Sets or queries the trace number to display the readout.
TRACe:SPURious subgroup	**Spurious measurement**
TRACe:SPURious:COUNt (on page 2665)	Sets or queries the count for the Max Hold or Average trace.
TRACe:SPURious:COUNt:ENABle (on page 2666)	Sets or queries whether to enable the count for Max Hold or Average.
TRACe:SPURious:COUNt:RESet (on page 2666)	Clears Max Hold or Average data and counter, and restarts the process.
TRACe:SPURious:FREeze (on page 2666)	Determines whether or not to freeze the display of the trace.
TRACe:SPURious:FUNCtion (on page 2667)	Sets or queries the trace function.
TRACe:TOVerview subgroup	**All measurements**
TRACe1:TOVerview[:MEASview<y>] (on page 2669)	Enables display of or queries the display status of the specified trace.
TRACe1:TOVerview[:MEASview<y>]:AVERage: COUNt (on page 2670)	Sets or queries the number of traces averaged to generate the specified trace.
TRACe1:TOVerview[:MEASview<y>]:COUNt (on page 2670)	Enables or queries the count set for the specified trace.
TRACe1:TOVerview[:MEASview<y>]:COUNt:ENABle (on page 2671)	Enables or queries the Average count for the specified trace.
TRACe1:TOVerview[:MEASview<y>]:COUNt:RESet (on page 2671)	Sets or queries whether or not to freeze the display of the trace.
TRACe1:TOVerview[:MEASview<y>]:DETection (on page 2672)	Enables or queries the type of detection for the specified trace.
TRACe1:TOVerview[:MEASview<y>]:FREeze (on page 2672)	Enables or queries a halt to acquisition updates for the specified trace.
TRACe1:TOVerview[:MEASview<y>]:FUNCTion (on page 2673)	Enables or queries the selected Function for the specified trace.
TRACe:WLAN group	**Wireless LAN measurements**

Commands	Description
TRACe:WLAN:FLATness:FREeze (on page 2668)	Sets or queries whether to freeze the average trace on the WLAN Spectral Flatness display.
TRACe:WLAN:FLATness:SHOW (on page 2669)	Displays or hides the trace on the WLAN Spectral Flatness display.
TRACe<x>:WLAN:CONSte (on page 2753)	Turns the selected trace on or off in the Constellation plot display.
TRACe<x>:WLAN:CONSte:FREeze (on page 2753)	Turns the freeze state of the selected trace on or off.
TRACe<x>:WLAN:CRESponse:SELect (on page 2754)	Sets or queries the active trace in the WLAN Channel Response.
TRACe<x>:WLAN:EVM:FREeze (on page 2754)	Turns the freeze state of the selected trace on or off.
TRACe<x>:WLAN:EVM[:SHOW] (on page 2755)	Displays or hides the selected trace.
TRACe<x>:WLAN:MERRor:FREeze (on page 2755)	Turns the freeze state of the selected trace on or off.
TRACe<x>:WLAN:MERRor[:SHOW] (on page 2756)	Displays or hides the selected trace.
TRACe<x>:WLAN:PERRor:FREeze (on page 2756)	Turns the freeze state of the selected trace on or off.
TRACe<x>:WLAN:PERRor[:SHOW] (on page 2757)	Displays or hides the selected trace.
TRACe:LTE subgroup	
TRACe<x>:LTE:ACLR:COUNt (on page 2707)	Sets or queries how many acquisitions run in the single acquisition mode for multitrace functions.
TRACe<x>:LTE:ACLR:COUNt:RESet (on page 2708)	Clears the multifunction (Max Hold or Average) data and counter and restarts the process.
TRACe<x>:LTE:ACLR:FUNCtion (on page 2708)	Sets or queries the trace function.
TRACe<x>:LTE:CONSte:SYNChronization: SEQUence:STATe? (on page 2709)	Returns whether or not a measurement signal (Primary Synchronization Signal/Secondary Synchronization Signal) is selected for the specified trace.

Trace mnemonics

Trace Mnemonics

Multiple traces can be used in some measurement displays. The traces are specified by the trace specifier TRACe<x> (<x>=1 to 5) which is defined for each measurement display as follows.

Trace mnemonics

Measurement display	TRACe1	TRACe2	TRACe3	TRACe4	TRACe5
Amplitude versus Time	Trace 1	Trace 2	Math trace	NA	NA
Phase noise	Trace 1	Trace 2	NA	NA	NA

Measurement display	TRACe1	TRACe2	TRACe3	TRACe4	TRACe5
Spectrum	Trace 1	Trace 2	Trace 3	Math trace	Spectrogram

NOTE: Valid traces depend on commands. Refer to each command description.

Trigger commands

Use the TRIGger commands to set up the trigger system.

Trigger commands

Commands	Description
*TRG (No Query Form) (on page 2757)	Generates a trigger. It produces the same effect as the Force Trigger button on the Trigger control panel. This command is valid when the trigger mode is Triggered.
TRIGger:ADVanced:SWEep:MODE (on page 2758)	Sets or enables the analyzer to wait for a trigger for each acquisition in a swept spectrum or other measurement requiring multiple acquisitions worth of span.
TRIGger:DPX:SHOW:FRAMes (on page 2758)	Sets or queries whether to trigger each segment in the swept mode.
TRIGger:DPX:TDM:SHOW:ALL (on page 2759)	Sets or queries the selections of the DPX Prefs control panel tab page.
TRIGger:EVENt:EXTernal:SLOPe (on page 2759)	Sets or queries the signal slope of the External input to determine a trigger event.
TRIGger:EVENt:INPut:LEVel (on page 2760)	Sets or queries the power level that the signal must pass through to cause a trigger event when the trigger type is set to Power.
TRIGger:EVENt:INPut:SLOPe (on page 2760)	Sets or queries the signal slope of the RF Input to determine a trigger event.
TRIGger:EVENt:INPut:TYPE (on page 2760)	Sets or queries the type of trigger. (Power is the only available setting.)
TRIGger:EVENt:SOURce (on page 2761)	Sets or queries the source of the signal to be monitored for a trigger event.
TRIGger:MASK:NEW (on page 2761)	Loads a new frequency mask.
TRIGger:MASK:NEW:AUTO (on page 2762)	Draws a new frequency mask automatically.
TRIGger:MASK:OPEN (on page 2763)	Opens a trigger mask with a specified file.
TRIGger:MASK:SAVE (on page 2764)	Saves the current trigger mask to a specified file.
TRIGger:SAVE:COUNt:MAXimum (on page 2764)	Sets or queries the number of times a Save on Trigger action stores a file.
TRIGger:SAVE:COUNt[:STATe] (on page 2764)	Sets or queries the Maximum total number of files feature.
TRIGger:SAVE:DATA:FORMat (on page 2765)	Sets or queries the file format used when saving the acquisition data on a trigger event.
TRIGger:SAVE:DATA[:STATe] (on page 2765)	Sets or queries to save data when a trigger event occurs.

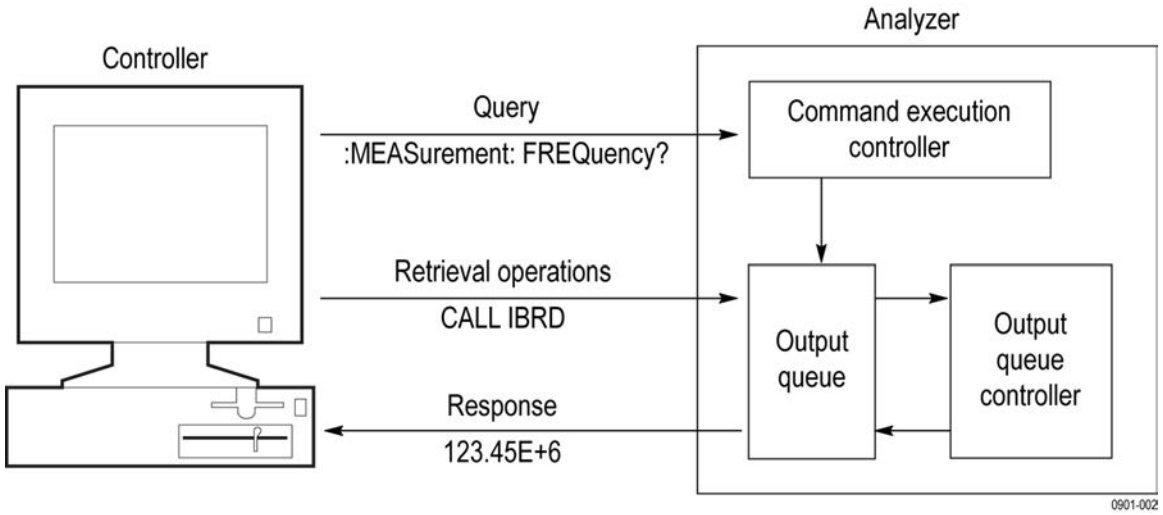
Commands	Description
TRIGger:SAVE:PICTure:FORMat (on page 2766)	Sets or queries the file format used when saving a picture of the display when a trigger event occurs.
TRIGger:SAVE:PICTure[:STATe] (on page 2766)	Sets or queries the save picture on trigger setting.
TRIGger[:SEQuence]:ADVanced:HOLDoff (on page 2766)	FIRST Sets or queries the trigger holdoff time.
TRIGger[:SEQuence]:ADVanced:HOLDoff:ENABle (on page 2767)	Sets or queries the trigger delay time.
TRIGger[:SEQuence]:ADVanced:SWEep:MODE (on page 2767)	Determines whether or not to trigger each segment in the swept acquisition mode.
TRIGger[:SEQuence]:ADVanced:SWEPt:SEGMent:ENABle (on page 2768)	Determines whether or not to wait for a trigger for each acquisition in a swept spectrum.
TRIGger[:SEQuence]:EVENt:A:EDGE:COUPling (on page 2768)	Sets or queries the choice of Trigger coupling type.
TRIGger[:SEQuence]:EVENt:A:EDGE:HOLDoff:MODE (on page 2769)	Sets or queries the trigger hold off mode.
TRIGger[:SEQuence]:EVENt:A:EDGE:HOLDoff:TIME (on page 2769)	Sets or queries the hold off time.
TRIGger[:SEQuence]:EVENt:A:EDGE:LEVEl (on page 2769)	Sets or queries where the trigger point occurs for trigger source type.
TRIGger[:SEQuence]:EVENt:EXTFront:IMPedance (on page 2770)	Sets or queries the impedance of the external trigger input (front).
TRIGger[:SEQuence]:EVENt:EXTFront:LEVel (on page 2770)	Sets or queries the trigger level at the external trigger input (front).
TRIGger[:SEQuence]:EVENt:EXTFront:SLOPe (on page 2771)	Sets or queries the trigger slope of the external trigger input (front).
TRIGger[:SEQuence]:EVENt:EXTRear:SLOPe (on page 2771)	Sets or queries the trigger slope of the external trigger input (rear).
TRIGger[:SEQuence]:EVENt:GATed (on page 2771)	Sets or queries the logic for the gated trigger input.
TRIGger[:SEQuence]:EVENt:INPut:DDENsity:AMPLitude (on page 2772)	Sets or queries the center vertical level for the density trigger region.
TRIGger[:SEQuence]:EVENt:INPut:DDENsity:AMPLitude:TOLerance (on page 2772)	Sets or queries the trigger level for the RF input level trigger.
TRIGger[:SEQuence]:EVENt:INPut:DDENsity:FREQuency (on page 2773)	Sets or queries the center horizontal level for the density trigger region.

Commands	Description
TRIGger[:SEQuence]:EVENt:INPut:DDENsity:FREQuency:TOLerance (on page 2773)	Sets or queries the left and right extensions of the density trigger region from the center horizontal level.
TRIGger[:SEQuence]:EVENt:INPut:DDENsity:THReshold (on page 2774)	Sets or queries the DPX Density threshold that defines a trigger event.
TRIGger[:SEQuence]:EVENt:INPut:DDENsity:VIOLation (on page 2774)	Sets or queries whether a density value higher or lower than the THReshold value defines a trigger event.
TRIGger[:SEQuence]:EVENt:INPut:FEDGe:LEVel (on page 2775)	Sets or queries the trigger level at the frequency edge input.
TRIGger[:SEQuence]:EVENt:INPut:FEDGe:LEVel:ACTual? (on page 2775)	Queries the actual length of the frequency edge input for the DPX measurement.
TRIGger[:SEQuence]:EVENt:INPut:FEDGe:SLOPe (on page 2776)	Sets or queries the trigger slope of the frequency edge input.
TRIGger[:SEQuence]:EVENt:INPut:FEDGe:THReshold:LEVel (on page 2776)	Set or queries the threshold level in the DPX measurement.
TRIGger[:SEQuence]:EVENt:INPut:FEDGe:THReshold:STATe (on page 2777)	Set or queries the threshold state in the DPX measurement.
TRIGger[:SEQuence]:EVENt:INPut:FMASk:{ BANDwidth|BWIDth}[:RESolution] (on page 2777)	Sets or queries the Resolution Bandwidth value to be used in thespectrum view for the frequency mask trigger.
TRIGger[:SEQuence]:EVENt:INPut:FMASk:BANDwidth|BWIDth[:RESolution]:ACTual? (on page 2778)	Sets or queries when the trigger occurs in the frequency mask trigger.
TRIGger[:SEQuence]:EVENt:INPut:FMASk:BANDwidth|BWIDth[:RESolution]:AUTO (on page 2778)	Sets or queries whether to automatically set the Resolution Bandwidth value used in the spectrum view for the frequency mask trigger.
TRIGger[:SEQuence]:EVENt:INPut:FMASk:VIOLation (on page 2778)	Sets or queries when the analyzer triggers in the frequency mask trigger.
TRIGger[:SEQuence]:EVENt:INPut:LEVel (on page 2779)	Sets or queries the trigger level for the RF input level trigger.
TRIGger[:SEQuence]:EVENt:INPut:RUNT:PULSe (on page 2780)	Sets or queries the Runt trigger for a positive or negative going pulse.
TRIGger[:SEQuence]:EVENt:INPut:RUNT:PULse:HIGH:LEVel (on page 2780)	Sets or queries the trigger slope for the RF input level trigger.
TRIGger[:SEQuence]:EVENt:INPut:RUNT:PULSe:LOW:LEVel (on page 2781)	Sets or queries the lower level (second threshold) to qualify a Runt trigger.
TRIGger[:SEQuence]:EVENt:INPut:SLOPe (on page 2781)	Sets or queries the trigger slope for the RF input level trigger.

Commands	Description
TRIGger[:SEQuence]:EVENt:INPut:TDBWidth (on page 2781)	Sets or queries the time-domain bandwidth.
TRIGger[:SEQuence]:EVENt:INPut:TDBWidth:ACTual? (on page 2782)	Queries the actual time-domain bandwidth.
TRIGger[:SEQuence]:EVENt:INPut:TDBWidth:STATe (on page 2782)	Determines whether to set the time-domain bandwidth automatically.
TRIGger[:SEQuence]:EVENt:INPut:TYPE (on page 2783)	Sets or queries the trigger type for the source of RF input.
TRIGger[:SEQuence]:EVENt:PPS:UTCtrigger (on page 2784)	Queries the last triggered Global UTC time when 1-PPS trigger is selected.
TRIGger[:SEQuence]:EVENt:PPS:SYStrigger (on page 2783)	Queries the last triggered Local system time when 1-PPS trigger is selected
TRIGger[:SEQuence]:EVENt:SOURce (on page 2784)	Sets or queries the trigger event source.
TRIGger[:SEQuence]:FORCed (on page 2785)	Sets or queries whether to causes a manual trigger.
TRIGger:SEQuence:FORCed (No Query Form) (on page 2785)	Causes a trigger event to occur when the trigger mode is set to Triggered, regardless of the set trigger conditions.
TRIGger[:SEQuence]:IMMediate (on page 2786)	Causes a trigger immediately.
TRIGger[:SEQuence]:STATus (on page 2786)	Sets or queries the trigger mode (Free Run or Triggered).
TRIGger[:SEQuence][:STATus] (on page 2786)	Sets or queries the trigger mode setting.
TRIGger[:SEQuence]:TIME:DELay (on page 2787)	Sets or queries the trigger delay time.
TRIGger[:SEQuence]:TIME:POSition (on page 2787)	Sets or queries the trigger position.
TRIGger[:Sequence]:TIME:POSition:AUTO (on page 2788)	Sets or queries the position of the trigger event (automatic or manual) within the acquisition record.
TRIGger[:SEQuence]:TIME:QUALified (on page 2788)	LAST Sets or queries the timing qualification setting for triggers.
TRIGger[:SEQuence]:TIME:QUALified:TIME<x> (on page 2789)	Sets or queries the trigger mode (Free Run or Triggered).
TRIGger[:SEQuence]:EVENt:A:EDGE:LEVEl:ANALog (on page 2789)	Sets or queries where the trigger point occurs for Analog Trigger Source Type.
TRIGger[:SEQuence]:EVENt:A:EDGE:LEVEl:FREQuency (on page 2789)	Sets or queries where the trigger point occurs for FreqVsTime Trigger Source Type.

Commands	Description
TRIGger[:SEQuence]:EVENt:A:EDGE:LEVEl:MAGNitude (on page 2790)	Sets or queries where the trigger point occurs for MagVsTime Trigger Source Type.
TRIGger[:SEQuence]:EVENt:A:EDGE:SETTings (on page 2790)	Sets or queries the settings of Trigger source type.
TRIGger[:SEQuence]:EVENt:A:EDGE:SLOPe (on page 2791)	Sets or queries whether instrument finds the trigger point on rising or falling edge or either edge of a signal.
TRIGger[:SEQuence]:EVENt:A:EDGE:SOURce (on page 2791)	Sets or queries the channel on which signal is to be monitored for a trigger event.
TRIGger[:SEQuence]:EVENt:A:EDGE:SOURce:FORMat (on page 2792)	Sets or queries the vertical scale mode to Amplitude (Vrms) or Power (log).
TRIGger[:SEQuence]:EVENt:A:EDGE:SOURce:TYPE (on page 2792)	Sets or queries the choice of Trigger source type.
TRIGger[:SEQuence:]EVENt:A:TYPE (on page 2792)	Sets or queries the trigger type {supporting only Edge trigger}.
TRIGger[:SEQuence]:MODE (on page 2793)	Sets or queries the trigger mode setting.
TRIGger:TIME:POSition (on page 2793)	Sets or queries the point (in percent) along the acquisition record the trigger event should occur.
TRIGger:TIME:POSition:AUTO (on page 2793)	Sets or queries the instrument to automatically set the position of the trigger event.

Unit commands



Specify fundamental units for measurement.

Unit commands

Header	Description
UNIT:POWer (on page 2794)	Sets or queries the unit of power.

Retrieving response message

When receiving a query command from the external controller, the analyzer puts the response message on the Output Queue. This message cannot be retrieved unless you perform retrieval operations through the external controller. (For example, call the IBRD subroutine included in the GPIB software of National Instruments.)

Retrieving response message

When the Output Queue contains a response message, sending another command from the external controller before retrieving this message deletes it from the queue. The Output Queue always contains the response message to the most recent query command.

You can use the MAV bit of the Status Byte Register (SBR) to check whether the Output Queue contains a response message. For details, refer to Status Byte (on page 2798).

Command descriptions

ABORt (No query form)

Resets the trigger system and places all trigger sequences in the idle state. Any actions related to the trigger system that are in progress, such as a sweep or acquiring a measurement is also aborted.

To start data acquisition, use the INITiate commands.

Conditions

Measurement views: All

Group

Abort commands

Syntax

```
ABORt
```

Related Commands

INITiate:CONTinuous (on page 1530)

INITiate:RESume (on page 1531)

Arguments

None

Examples

`ABORt` resets the trigger system and stops data acquisition.

*CAL (Query only)

Conditions

Measurement views: All

Group

IEEE common commands

Syntax

```
*CAL
```

Returns

`<NR1>=1` indicates that the alignment was successful.

`<NR1>=0` indicates that the alignment was unsuccessful.

Examples

*CAL performs an internal self-alignment and will return 1 if the alignment is successful.

Calculate commands

CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation

Sets or queries the destination folder for “search match” output files.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation <string>
CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation?
```

Arguments

<string> specifies the destination folder.

Returns

<string>

Examples

CALCULATE:[:SEARCH|:TEST]:LIMIT[:STATE]:MATCH:FILE:LOCATION? might return c:\rsamap files, indicating the destination folder.

CALCulate[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:NAME:BASE

Sets or queries the file basename for “search match” output files.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:NAME:BASE<string>
CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:NAME:BASE?
```

Arguments

<string> specifies the output file.

Returns

<string>

Examples

CALCULATE:SEARCH:LIMIT:STATE:MATCH:FILE:NAME:BASE "BASE" sets the base filename as BASE

CALCulate:ACPower:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker in the Channel power and ACPR measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Channel power and ACPR

Group

Calculate commands

Syntax

CALCulate:ACPower:MARKer<x>:DELTa:X?

Related Commands

CALCulate:MARKer:ADD (on page 507)

CALCulate:ACPower:MARKer<x>:DELTa:Y? (on page 393)

Returns

<NRf> Delta marker frequency for the selected marker.

Examples

CALCULATE:ACPOWER:MARKER1:DELTA:X? might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz.

CALCulate:ACPower:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the Channel power and ACPR measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Channel power and ACPR

Group

Calculate commands

Syntax

CALCulate:ACPower:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:MARKer:ADD (on page 507)

CALCulate:ACPower:MARKer<x>:DELTa:X? (on page 393)

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCULATE:ACPOWER:MARKER1:DELTA:Y? might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:ACPower:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Channel power and ACPR measurement

Conditions

Measurement views: Channel power and ACPR

Group

Calculate commands

Syntax

CALCulate:ACPower:MARKer<x>:MAXimum

Arguments

None

Examples

CALCULATE:ACPOWER:MARKER1:MAXIMUM moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:ACPower:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Channel power and ACPR measurement.

Conditions

Measurement views: Channel power and ACPR

Group

Calculate commands

Syntax

CALCulate:ACPower:MARKer<x>:PEAK:LEFT

Related Commands

CALCulate:ACPower:MARKer<x>:PEAK:RIGHt (on page 394)

Arguments

None

Examples

CALCULATE:ACPOWER:MARKER1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:ACPower:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Channel power and ACPR measurement.

Conditions

Measurement views: Channel power and ACPR

Group

Calculate commands

Syntax

```
CALCulate:ACPower:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:ACPower:MARKer<x>:PEAK:LEFT (on page 394)

Arguments

None

Examples

`CALCULATE:ACPOWER:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:ACPower:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Channel power and ACPR measurement.

Conditions

Measurement views: Channel power and ACPR

Group

Calculate commands

Syntax

```
CALCulate:ACPower:MARKer<x>:X <value>
CALCulate:ACPower:MARKer<x>:X?
```

Related Commands

CALCulate:ACPower:MARKer<x>:Y? (on page 395)

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker. Range: Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

`CALCULATE:ACPOWER:MARKER1:X 800MHz` places Marker 1 (M1) at 800 MHz on the trace.

CALCulate:ACPower:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the Channel power and ACPR measurement.

Conditions

Measurement views: Channel power and ACPR

Group

Calculate commands

Syntax

CALCulate:ACPower:MARKer<x>:Y?

Related Commands

CALCulate:ACPower:MARKer<x>:X (on page 395)

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker.

Examples

CALCULATE:ACPOWER:MARKER1:Y might return -34.28, indicating Marker 1 (M1) is at -34.28 dBm.

CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker time for the selected marker in the AM/FM/PM measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:X?

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:Y? (on page 396)

Arguments

None

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCULATE:AM:MARKER1:DELTA:X? might return 38.0E-6, indicating that the delta marker time is 38.0 µs.

CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the AM/FM/PM measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

`CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:DELTa:X? (on page 396)

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker, indicating the difference of modulation factor in percent (AM), frequency deviation in Hz (FM), or phase deviation in degrees (PM) with the reference marker.

Examples

`CALCULATE:AM:MARKER1:DELTA:Y?` might return 45.82, indicating that the delta marker amplitude is the modulation factor difference of 45.82% in the AM measurement.

CALCulate:{AM|FM|PM}:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the AM/FM/PM measurement.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

`CALCulate:{AM|FM|PM}:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCULATE:AM:MARKER1:MAXIMUM` moves Marker 1 (M1) to the highest peak on the AM-demodulated trace.

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the trace in the AM/FM/PM measurement.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

`CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LOWer (on page 398)

Arguments

None

Examples

CALCULATE:AM:MARKER1:PEAK:HIGHER moves Marker 1 (M1) to the next peak higher in amplitude on the AM-demodulated trace.

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the AM/FM/PM measurement.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LEFT

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:RIGHt (on page 399)

Arguments

None

Examples

CALCULATE:AM:MARKER1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the left on the AM-demodulated trace.

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the trace in the AM/FM/PM measurement.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LOWer

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:HIGHer (on page 397)

Arguments

None

Examples

CALCULATE:AM:MARKER1:PEAK:LOWER moves Marker 1 (M1) to the next peak lower in amplitude on the AM-demodulated trace.

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the AM/FM/PM measurement.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:RIGHt

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:PEAK:LEFT (on page 398)

Arguments

None

Examples

CALCULATE:AM:MARKER1:PEAK:RIGHT moves Marker 1 (M1) to the next peak to the right on the AM-demodulated trace.

CALCulate:{AM|FM|PM}:MARKer<x>:X

Sets or queries the horizontal position (time) of the selected marker in the AM/FM/PM measurement.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

CALCulate:{AM|FM|PM}:MARKer<x>:X <value>
CALCulate:{AM|FM|PM}:MARKer<x>:X?

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:Y? (on page 400)

Arguments

<value>::=<NRf> specifies the horizontal position of the marker. Range: (analysis offset) to [(analysis offset) + (analysis length)].

Examples

`CALCULATE:AM:MARKER1:X 1.5us` places Marker 1 (M1) at 1.5 µs on the AM-demodulated trace.

CALCulate:{AM|FM|PM}:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the AM/FM/PM measurement.

Conditions

Measurement views: General purpose analog demodulation

Group

Calculate commands

Syntax

```
CALCulate:{AM|FM|PM}:MARKer<x>:Y?
```

Related Commands

CALCulate:{AM|FM|PM}:MARKer<x>:X (on page 399)

Arguments

None

Returns

`<NRf>` Marker amplitude of the selected marker, indicating the modulation factor in percent (AM), frequency deviation in Hz (FM), or phase deviation in degrees (PM) at the marker.

Examples

`CALCULATE:AM:MARKER1:Y?` might return 23.4, indicating that Marker 1 (M1) reads the modulation factor of 23.4% in the AM measurement.

CALCulate:AUDio:HARMonic:HNUMber

Sets or queries the number of harmonics used for the audio measurement. The range of values is an integer from 1 to 20.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:HARMonic:HNUMber <value>
CALCulate:AUDio:HARMonic:HNUMber?
```

Arguments

`<value> ::= <NR1>` specifies the number of harmonics.

Examples

`CALCULATE:AUDIO:HARMONIC:HNUMBER` 20 sets the number of harmonics to 20.

CALCulate:AUDio:HARMonic:NHNumber

Sets or queries the number of non-harmonics used for the audio measurement. The range of values is an integer from 0 to 20.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:HARMonic:NHNumber <value>
CALCulate:AUDio:HARMonic:NHNumber?
```

Arguments

`<value> ::= <NR1>` specifies the number of non-harmonics.

Examples

`CALCULATE:AUDIO:HARMONIC:NHNUMBER 20` sets the number of non-harmonics to 20.

CALCulate:AUDio:NHARmonic:EXCursion

Sets or queries the non-harmonic excursion value. The range of values is 0 dB to 30 dB.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:NHARmonic:EXCursion <value>
CALCulate:AUDio:NHARmonic:EXCursion?
```

Arguments

`<value> ::= <NR1>` The specifies the non-harmonic excursion value.

Examples

`CALCULATE:AUDIO:NHARMONIC:EXCURSION 6` sets the non-harmonic excursion to 6.0 dB.

CALCulate:AUDio:NHARmonic:IGNore

Sets or queries the ignore region of the non-harmonics in the audio measurement. The range of the ignore region is from 0 Hz to the audio bandwidth.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:NHARmonic:IGNore <value>
CALCulate:AUDio:NHARmonic:IGNore?
```

Arguments

`<value> ::= <NRf>` specifies the ignore region.

Examples

`CALCULATE:AUDIO:NHARMONIC:IGNORE 1E+3` sets the non-harmonic ignore region to 1.0 kHz.

CALCulate:AUDio:NHARmonic:THReshold

Sets or queries the non-harmonic threshold value for the audio measurement. The range is from -200 dBc to 0 dBc.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:NHARmonic:THReshold <value>
CALCulate:AUDio:NHARmonic:THReshold?
```

Arguments

`<value> ::= <NR1>` specifies the threshold value.

Examples

`CALCULATE:AUDIO:NHARMONIC:THRESHOLD -100` sets the non-harmonic threshold value to -100 dBc.

CALCulate:AUDio:SPECtrum:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker on the spectrum trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:SPECtrum:MARKer<x>:DELTa:X?
```

Arguments

None

Returns

`<NRf>` the delta marker frequency for the selected marker.

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:DELTa:X?` might return 5.0020E+3 indicating the delta marker frequency is 5.002 kHz.

CALCulate:AUDio:SPECtrum:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the spectrum trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

`CALCulate:AUDio:SPECtrum:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:AUDio:SPECtrum:MARKer<x>:DELTa:X? (on page 402)

Arguments

None

Returns

`<NRf>` the delta marker amplitude for the selected marker.

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:DELTa:Y?` might return 3.435 indicating that the delta marker amplitude is 3.435 dB.

CALCulate:AUDio:SPECtrum:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the spectrum trace.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

`CALCulate:AUDio:SPECtrum:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the spectrum trace.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

`CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LOWer (on page 405)

Arguments

None

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next higher peak in amplitude on the trace.

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the spectrum trace.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

`CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:RIGHt (on page 405)

Arguments

None

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the spectrum trace.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:HIGHer (on page 404)

Arguments

None

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next lower peak in amplitude on the trace.

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the spectrum trace.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:AUDio:SPECtrum:MARKer<x>:PEAK:LEFT (on page 404)

Arguments

None

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:AUDio:SPECtrum:MARKer<x>:TRACe

Sets or queries the trace on which the specified marker is placed in the spectrum measurement.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:SPECtrum:MARKer<x>:TRACe TRACE1
CALCulate:AUDio:SPECtrum:MARKer<x>:TRACe?
```

Arguments

`TRACE1` places the specified marker on Trace 1.

Examples

`CALCulate:AUDio:SPECtrum:MARKer1 TRACE1` places Marker 1 (M1) on Trace 1.

CALCulate:AUDio:SPECtrum:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the spectrum trace.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

```
CALCulate:AUDio:SPECtrum:MARKer<x>:X <value>
CALCulate:AUDio:SPECtrum:MARKer<x>:X?
```

Related Commands

CALCulate:AUDio:SPECtrum:MARKer<x>:Y? (on page 406)

Arguments

`<value> ::= <NRf>` specifies the horizontal position of the marker. Range: Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

`CALCulate:AUDio:SPECtrum:MARKer1:X 800` places Marker 1 (M1) at 800 Hz on the spectrum trace.

CALCulate:AUDio:SPECtrum:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker on the spectrum trace.

Conditions

Measurement views: Audio Spectrum

Group

Calculate commands

Syntax

CALCulate:AUDio:SPECtrum:MARKer<x>:Y?

Related Commands

CALCulate:AUDio:SPECtrum:MARKer<x>:X (on page 406)

Arguments

None

Returns

<NRf> the marker amplitude for the selected marker.

Examples

CALCulate:AUDio:SPECtrum:MARKer1:Y? might return 53.818 indicating that Marker 1 (M1) is at 53.818 dBm.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker time for the selected marker in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Calculate commands

Syntax

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:X?

Related Commands

CALCulate:MARKer:ADD (on page 507)

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 408)

Arguments

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCULATE:AVTIME:MEASVIEW1:MARKER1:DELTA:X? might return 38.0E-9, indicating that the delta marker time is 38.0 ns on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Calculate commands

Syntax

`CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:MARKer:ADD (on page 507)

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 407)

Arguments

The parameter `<x>` = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter `<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NRf>` Delta marker amplitude for the selected marker.

Examples

`CALCULATE:AVTIME:MEASVIEW1:MARKER1:DELTA:Y?` might return 23.45, indicating that the delta marker amplitude is 23.45 dB on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time with specified Measurement view number.

Group

Calculate commands

Syntax

`CALCulate:AVTime[:MEASview<y>]:MARKer<x>:MAXimum`

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

CALCULATE:AVTIME:MEASVIEW1:MARKER1:MAXIMUM moves Marker 1 (M1) to the highest peak on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the Amplitude versus Time trace.

Conditions

Measurement views: Amplitude versus Time with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer

Related Commands

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 410)

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

CALCULATE:AVTIME:MEASVIEW1:MARKER1:PEAK:HIGHER moves Marker 1 (M1) to the next peak higher in amplitude on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Calculate commands

Syntax

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT

Related Commands

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 410)

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`CALCulate:AVTime:MEASVIEW1:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the Amplitude versus Time trace

Conditions

Measurement views: Amplitude versus Time with specified Measurement view number.

Group

Calculate commands

Syntax

`CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 409)

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`CALCULATE:AVTIME:MEASVIEW1:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Calculate commands

Syntax

`CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 409)

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`CALCULATE:AVTIME:MEASVIEW1:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:TRACe

Sets or queries the trace on which the specified marker is placed in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:TRACe {TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 | TRACE6
    | TRACE7}
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:TRACe?
```

Arguments

`TRACE1` places the selected marker on Trace 1.

`TRACE2` places the selected marker on Trace 2.

`TRACE3` places the selected marker on Trace 3.

`TRACE4` places the selected marker on Trace 4 (Math trace).

`TRACE5` places the selected marker on Trace 5 (Bitmap trace).

`TRACE6` places the selected marker on Trace 6 (Ogram).

`TRACE7` places marker on Trace 7 (Ogram line).

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1.

Examples

`CALCULATE:AVTIME:MEASVIEW1:MARKER1:TRACe TRACE1` places Marker 1 (M1) on Trace 1 of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Calculate commands

Syntax

```
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:Y? (on page 412)

Arguments

<value>::=<NRf> specifies the horizontal position of the marker. Range: (analysis offset) to [(analysis offset) + (analysis length)].

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

CALCULATE:AVTIME:MEASVIEW1:MARKER1:X 1.5U places Marker 1 (M1) at 1.5 µs on the trace of Amplitude versus Time Measurement View 1.

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Calculate commands

Syntax

```
CALCulate:AVTime[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:AVTime[:MEASview<y>]:MARKer<x>:X (on page 411)

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf> Marker amplitude of the selected marker.

Examples

CALCULATE:AVTIME:MEASVIEW1:MARKER1:Y? might return -2.73, indicating Marker 1 (M1) is at -2.73 dBm on the trace of Amplitude versus Time Measurement View 1.

CALCulate:BLUEtooth:CONSte:MARKer<x>:DELTa:X[:TIME]? (Query only)

Queries the delta marker time for the selected marker on the Bluetooth display.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:CONSte:MARKer<x>:DELTa:X[:TIME]?
```

Arguments

None

Returns

`<NRf>` Delta marker time for the selected marker.

Use `[SENSe]:BLUEtooth:ANALysis:TIMe:UNITs` to select the time unit: symbolsor seconds.

Examples

`CALCulate:BLUEtooth:CONSte:MARKer1:DELTa:X:TIME?` might return 62.75, Indicating that the delta marker time is 62.75 symbols.

CALCulate:BLUEtooth:CONSte:MARKer<x>:FDEViation? (Query Only)

Queries the frequency deviation for the selected marker in the Bluetooth Constellation measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation.

Applicable when the Trace Type is set to Freq Dev.

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:CONSte:MARKer<x>:FDEViation?
```

Related Commands

The following commands are applicable when the Trace Type is set to IQ:

CALCulate:BLUETooth:CONSte:MARKer<x>:MAGNitude? (on page 414)

CALCulate:BLUETooth:CONSte:MARKer<x>:PHASe? (on page 416)

Use " " to change the Trace Type.

Arguments

None

Returns

<NRf> The frequency deviation readout for the selected marker.

Examples

CALCulate:BLUEtooth:CONSte:MARKer1:FDEViation? might return 102.824E+3, indicating the frequency deviation readout of Marker 1 (M1) is 102.824 kHz.

CALCulate:BLUETooth:CONSte:MARKer<x>:MAGNitude? (Query Only)

Queries the magnitude readout of the selected marker in the Bluetooth Constellation.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation

Applicable when the Trace Type is set to IQ.

Group

Calculate commands

Syntax

CALCulate:BLUETooth:CONSte:MARKer<x>:MAGNitude?

Arguments

None

Returns

<NRf> The magnitude for the selected marker.

Examples

CALCulate:BLUETooth:CONSte:MARKer1:MAGNitude? might return 923E-3, indicating the magnitude readout of Marker 1 (M1) is 923E-3.

CALCulate:BLUEtooth:CONSte:MARKer<x>:MAXimum (No Query Form)

Positions the selected marker at the symbol in the center of the analyzed time record.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:CONSte:MARKer<x>:MAXimum
```

Arguments

None

Examples

`CALCulate:BLUEtooth:CONSte:MARKer1:MAXimum` positions Marker 1 (M1) at the symbol in the center of the time record.

CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker in the time domain to the next symbol number to the left, relative to the previous marker position.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:RIGHt (on page 415)

Arguments

None

Examples

`CALCulate:BLUEtooth:CONSte:MARKer1:PEAK:LEFT` moves Marker 1 (M1) in the time domain to the next lower symbol number.

CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker in the time domain to the next higher symbol number, relative to the previous marker position.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:RIGHt

Related Commands

CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:LEFT (on page 415)

Arguments

None

Examples

CALCulate:BLUEtooth:CONSte:MARKer1:PEAK:RIGHT moves the Marker 1 (M1) in the time domain to the next higher symbol number.

CALCulate:BLUETooth:CONSte:MARKer<x>:PHASe? (Query Only)

Queries the phase readout of the selected marker in the Bluetooth Constellation.

Conditions

Measurement views: Bluetooth Constellation.

Applicable when the Trace Type is set to IQ.

Group

Calculate commands

Syntax

CALCulate:BLUETooth:CONSte:MARKer<x>:PHASe?

Arguments

None

Returns

<NRf>

The phase readout for the selected marker in degrees between -180 and +180.

Examples

CALCulate:BLUETooth:CONSte:MARKer1:PHASe? might return 35.74, indicating the phase readout of Marker 1 (M1) is 35.74°.

CALCulate:BLUEtooth:CONSte:MARKer<x>:SYMBol? (Query Only)

Queries the symbol readout value for the selected marker in the Bluetooth Constellation measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:CONSte:MARKer<x>:SYMBol?
```

Related Commands

CALCulate:BLUEtooth:CONSte:MARKer<x>:X (on page 418)

Arguments

None

Returns

<NRf> The symbol readout for the selected marker.

Examples

CALCulate:BLUEtooth:CONSte:MARKer1:SYMBol? might return 62.00, indicating the Symbol readout of Marker 1 (M1) is 62.

CALCulate:BLUEtooth:CONSte:MARKer<x>:Trace

Sets or queries the Trace for the selected marker on the Bluetooth Constellation display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:CONSte:MARKer<x>:Trace <Enum>
CALCulate:BLUEtooth:CONSte:MARKer<x>:Trace?
```

Arguments

<Enum> ::= {TRACE1 | TRACE2}. The arguments specify which trace to place the marker on.

Examples

CALCulate:BLUEtooth:CONSte:MARKer1:TRACe TRACE1 places Marker 1 (M1) on the Trace 1.

CALCulate:BLUETooth:CONSte:MARKer<x>:VALue? (Query Only)

Queries the value readout of the selected marker in the Bluetooth Constellation.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

```
CALCulate:BLUETooth:CONSte:MARKer<x>:VALue?
```

Arguments

None

Returns

<NRf> The value readout for the selected marker.

Examples

CALCulate:BLUETooth:CONSte:MARKer2:VALue? might return 1.00, indicating the value readout of Marker 2(M2) is 1.

CALCulate:BLUEtooth:CONSte:MARKer<x>:X

Sets or queries the time position of the selected marker on the Bluetooth Constellation.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth Constellation

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:CONSte:MARKer<x>:X <value>
CALCulate:BLUEtooth:CONSte:MARKer<x>:X?
```

Arguments

<value> ::= <NRf> specifies the time position of the marker. Range (analysis offset) to [(analysis offset) + (analysis length)].

Examples

CALCulate:BLUEtooth:CONSte:MARKER1:X -1.63875ms places the Marker 1 (M1) at -1.63875 ms on the CONStellation trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:X[:TIME]? (Query Only)

Returns the delta marker time for the selected marker on the Bluetooth eye diagram display.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:X[:TIME]?
```

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:Y? (on page 419)

Arguments

None

Returns

<NRf> the delta marker time for the selected marker.

Use [SENSe]:BLUEtooth:ANALysis:TIMe:UNITs to select the time unit: symbols or seconds.

Examples

CALCulate:BLUEtooth:EDIagram:MARKer1:DELTa:X:TIME? might return 62.75, indicating that the delta marker time is 62.75 symbols.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected markers in the Bluetooth eye diagram.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:DELTa:X[:TIME]? (on page 418)

Returns

<NRf>

the delta marker amplitude for the selected marker. Units are in Hz if the Trace Type is set to Freq Dev and no units if the Trace Type is set to IQ.

Examples

CALCulate:BLUEtooth:EDIagram:MARKer1:DELTa:Y? might return -1.043, indicating that the delta marker amplitude is -1.043.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the Bluetooth eye diagram trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

`CALCulate:BLUEtooth:EDIagram:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCulate:BLUEtooth:EDIagram:MARKer1:MAXImum` moves Marker 1 (M1) to the Highest peak on the trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the Bluetooth eye diagram trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

`CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LOWer (on page 421)

Arguments

None

Examples

`CALCulate:BLUEtooth:EDIagram:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the Bluetooth eye diagram trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LEFT

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:RIGHt (on page 421)

Arguments

None

Examples

CALCulate:BLUEtooth:EDIagram:MARKer1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the Bluetooth eye diagram trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LOWer

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:HIGHer (on page 420)

Arguments

None

Examples

CALCulate:BLUEtooth:EDIagram:MARKer1:PEAK:LOWer moves Marker 1(M1) to the next peak lower in amplitude on the trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the Bluetooth eye diagram trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:PEAK:LEFT (on page 420)

Arguments

None

Examples

`CALCulate:BLUEtooth:EDIagram:MARKer1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:TRACe

The command places the selected marker on the I or Q trace in the Bluetooth eye diagram display. The query returns the name of the trace where the current marker resides.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADDcommand.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:EDIagram:MARKer<x>:TRACe <Enum>
CALCulate:BLUEtooth:EDIagram:MARKer<x>:TRACe?
```

Arguments

```
<Enum> ::= {TRACE1 | TRACE2}.
```

The arguments specify which trace to place the marker on.

Trace1 specifies the I trace and Trace2 specifies the Q trace.

Returns

For I and Q traces, TRACE1 identifies the I trace and TRACE2 identifies the Q trace.

Examples

`CALCulate:BLUEtooth:EDIagram:MARKer1:TRACe TRACE1` places Marker 1 (M1) on the I trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:X[:TIME]

Sets or queries the horizontal position (time) of the selected marker in the Bluetooth eye diagram measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:EDIagram:MARKer<x>:X[:TIME] <value>
CALCulate:BLUEtooth:EDIagram:MARKer<x>:X[:TIME]?
```

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:Y? (on page 423)

Arguments

`<value> ::= <NRf>` the horizontal position (time) of the marker.

Use [SENSe]:BLUEtooth:ANALysis:TIMe:UNITs to select the time unit: symbols or seconds.

Examples

`CALCulate:BLUEtooth:EDIagram:MARKer1:X:TIME 38.5` places Marker 1 (M1) at 38.5 symbols on the trace.

CALCulate:BLUEtooth:EDIagram:MARKer<x>:Y? (Query Only)

Returns the vertical position of the selected marker in the Bluetooth Eye diagram measurement.

The parameter `<x>` = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth eye diagram

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:EDIagram:MARKer<x>:Y?
```

Related Commands

CALCulate:BLUEtooth:EDIagram:MARKer<x>:X[:TIME] (on page 422)

Arguments

None

Returns

`<value> ::= <NRf>` the vertical position of the selected marker. The units are Hz if the Trace Type is set to Freq Dev; if the Trace Type is set to IQ, there are no units.

Examples

`CALCulate:BLUEtooth:EDIagram:MARKer1:Y?` might return `571.8E-3`, indicating Marker 1 (M1) is at 0.5718.

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:X[:TIME]? (Query Only)

Queries the delta marker time for the selected marker on the Frequency Deviation vs. Time display

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Use [SENSe]:BLUEtooth:ANALysis:TIMe:UNITs to select the time unit symbols or seconds.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

`CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:X[:TIME]?`

Related Commands

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:Y? (on page 424)

Arguments

None

Returns

`<NRf>` the delta marker time for the selected marker.

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:DELTa:X:TIME?` might return 62.75, indicating that the delta marker time is 62.75 symbols.

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the Frequency Deviation vs. Time display.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

`CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:DELTa:X[:TIME]? (on page 423)

Arguments

None

Returns

`<NRf>` the delta marker amplitude for the selected marker.

Examples

`CALCulate:BLUEtooth:FDVTIME:MARKer1:DELTa:Y?` return -1.043, indicating that the delta marker amplitude is -1.043.

CALCulate:BLUEtooth:FDVTime:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Frequency Deviation vs. Time display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:FDVTime:MARKer<x>:MAXimum
```

Arguments

None

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:MAXIMUM` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude in the Frequency Deviation vs. Time display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LOWer (on page 426)

Arguments

None

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Frequency Deviation vs. Time display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

`CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:BLUEtooth:CONSte:MARKer<x>:PEAK:RIGHt (on page 415)

Arguments

None

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on Frequency Deviation vs. Time display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

`CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:HIGHer (on page 425)

Arguments

None

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:RIGHT (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Frequency Deviation vs. Time display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:RIGHT
```

Related Commands

CALCulate:BLUEtooth:FDVTime:MARKer<x>:PEAK:LEFT (on page 426)

Arguments

None

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:X[:TIME]

Sets or queries the marker time in the Frequency Deviation vs. Time display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Use [SENSe]:BLUEtooth:ANALysis:TIMe:UNITs to select the time unit symbols (default) or seconds.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

```
CALCulate:BLUEtooth:FDVTIME:MARKer<x>:X[:TIME] <value>
CALCulate:BLUEtooth:FDVTIME:MARKer<x>:X[:TIME]?
```

Related Commands

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:Y (on page 428)

Arguments

`<value> ::= <NRf>` specifies the marker time in seconds or in symbols based on the Units specified under the Analysis Time.

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:X:TIME -234.5E-6` places Marker 1 (M1) at -234.5 µs on the trace.

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:Y

Sets or queries the marker amplitude in the Frequency Deviation vs. Time display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Calculate commands

Syntax

`CALCulate:BLUEtooth:FDVTIME:MARKer<x>:Y`

Related Commands

CALCulate:BLUEtooth:FDVTIME:MARKer<x>:X[:TIME] (on page 427)

Arguments

`<value> ::= <NRf>` specifies the marker frequency value in Hz.

Examples

`CALCULATE:BLUETOOTH:FDVTIME:MARKER1:Y?` might return 571.8E-3, indicating Marker 1 (M1) is 0.5718 Hz.

CALCulate:BOBW:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker on the Bluetooth 20 dB bandwidth measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

`CALCulate:BOBW:MARKer<x>:DELTa:X?`

Related Commands

CALCulate:BOBW:MARKer<x>:DELTa:Y? (on page 429)

Arguments

None

Returns

`<NRf>` Delta marker frequency for the selected marker in Hz.

Examples

CALCULATE:BOBW:MARKER1:DELTA:X? might return 62.75E+3, indicating that the delta marker time is 62.75 kHz.

CALCulate:BOBW:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the Bluetooth 20 dB bandwidth measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

CALCulate:BOBW:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:BOBW:MARKer<x>:DELTa:X? (on page 428)

Arguments

None

Returns

<NRf> the Delta marker amplitude for the selected marker.

Examples

CALCULATE:BOBW:MARKER1:DELTA:Y? might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:BOBW:MARKer<x>:MAXimum (No Query Form)

Positions the selected marker at the maximum value of the display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

CALCulate:BOBW:MARKer<x>:MAXimum

Arguments

None

Examples

CALCULATE:BOBW:MARKER1:MAXIMUM positions Marker 1 (M1) at the maximum value of the display.

CALCulate:BOBW:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the BT 20dB bandwidth trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:BOBW:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:BOBW:MARKer<x>:PEAK:LOWer (on page 430)

Arguments

None

Examples

`CALCULATE:BOBW:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:BOBW:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker in the time domain to the left, relative to the previous marker position on the trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:BOBW:MARKer<x>:PEAK:LEFT
```

Arguments

None

Examples

`CALCULATE:BOBW:MARKER1:PEAK:LEFT` moves the Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:BOBW:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the BT 20dB bandwidth trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:BOBW:MARKer<x>:PEAK:LOWer
```

Arguments

None

Examples

`CALCULATE:BOBW:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:BOBW:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker in the time domain to the right, relative to the previous marker position on the trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:BOBW:MARKer<x>:PEAK:RIGHt
```

Arguments

None

Examples

`CALCULATE:BOBW:MARKER1:PEAK:RIGHT` moves the Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:BOBW:MARKer<x>[:SET]:CENTer (No Query Form)

Sets the center frequency to the value at the marker position in the BT 20 dB Bandwidth view.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:BOBW:MARKer<x>[:SET]:CENTer
```

Arguments

None

Examples

`CALCULATE:BOBW:MARKER1:SET:CENTER` sets the center frequency to the value at the Marker 1 (M1) position.

CALCulate:BOBW:MARKer<x>:X

Sets or queries the time position of the selected marker on the BT 20 dB Bandwidth measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:BOBW:MARKer<x>:X <value>
CALCulate:BOBW:MARKer<x>:X?
```

Related Commands

CALCulate:BOBW:MARKer<x>:Y? (on page 432)

Arguments

`<value> ::= <NRf>` specifies the horizontal position of the marker.

Range: Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

`CALCULATE:BOBW:MARKER1:X 2.4800000000E+9` places the Marker 1 (M1) at 2.4800000000E+9 on the BT 20dB Bandwidth trace.

CALCulate:BOBW:MARKer<x>:Y? (Query Only)

Returns the amplitude position of the selected marker on the Bluetooth 20 dB Bandwidth trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: BT 20 dB Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:BOBW:MARKer<x>:Y?
```

Related Commands

CALCulate:BOBW:MARKer<x>:DELTa:X? (on page 428)

Arguments

None

Returns

<value> ::= <NRf> specifies the vertical position of the marker.

Examples

CALCULATE:BOBW:MARKER1:Y? returns the marker amplitude in dB on the BT 20dB Bandwidth trace.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (Query only)

Returns the delta marker time for the selected marker on the Constellation trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]?

Returns

<NRf> Delta marker time for the selected marker.

The unit can be changed by the [SENSe]:DDEMod:TIMe:UNITs command.

Examples

CALCulate:CONSte:MEASview2:MARKer1:DELTa:X:TIME? might return -62.75, indicating that the delta marker time is -62.75 symbols for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:FDEViation? (Query only)

Queries the frequency deviation of the selected marker in the Constellation measurement for an FSK modulated signal.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

The command is valid for 2, 4, 8, 16 FSK or C4FM modulated signals.

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

```
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:FDEViation?
```

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAGNitude? (on page 434)

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PHASe? (on page 436)

Arguments

None

Returns

<NRf> the frequency deviation readout for the selected marker.

Examples

CALCulate:CONSte:MEASview2:MARKer1:FDEViation? might return 102.824E+3, indicating the frequency deviation readout of Marker 1 (M1) is 102.824 kHz for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAGNitude? (Query only)

Queries the magnitude readout of the selected marker in the Constellation measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

```
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAGNitude?
```

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X (on page 438)

Arguments

None

Returns

<NRf> the magnitude readout for the selected marker.

Examples

`CALCulate:CONSte:MEASview2:MARKer1:MAGNitude?` might return 0.713927, indicating the magnitude readout of Marker 1 (M1) is 0.713927 for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Positions the selected marker at the symbol in the center of the time record.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

`CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCulate:CONSte:MEASview2:MARKer1:MAXimum` positions Marker 1 (M1) at the symbol in the center of the time record for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker in the time domain to the next lower symbol number, relative to the previous marker position.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

`CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 436)

Arguments

None

Examples

`CALCulate:CONSte:MEASview2:MARKer1:PEAK:LEFT` moves Marker 1 (M1) in the time domain to the next lower symbol number for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker in the time domain to the next higher symbol number, relative to the previous marker position.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

`CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 435)

Arguments

None

Examples

`CALCulate:CONSte:MEASview2:MARKer1:PEAK:RIGHT` moves the Marker 1 (M1) in the time domain to the next higher symbol number for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PHASe? (Query only)

Queries the phase readout of the selected marker in the Constellation measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

`CALCulate:CONSte[:MEASview<y>]:MARKer<x>:PHASe?`

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X (on page 438)

Arguments

None

Returns

`<NRf>` The phase readout for the selected marker.

Examples

`CALCulate:CONSte:MEASview2:MARKer1:PHASe` might return 35.74, indicating the phase readout of Marker 1 (M1) is 35.74 ° for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:SYMBol? (Query only)

Queries the symbol readout of the selected marker in the Constellation measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

`CALCulate:CONSte[:MEASview<y>]:MARKer<x>:SYMBol?`

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X (on page 438)

Arguments

None

Returns

`<NRf>` the symbol readout for the selected marker.

Examples

`CALCulate:CONSte:MEASview2:MARKer1:SYMBol?` might return 62.00, indicating the symbol readout of Marker 1 (M1) is 62 for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:VALue? (Query only)

Queries the value readout of the selected marker in the Constellation measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

`CALCulate:CONSte[:MEASview<y>]:MARKer<x>:VALue?`

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X (on page 438)

Arguments

None

Returns

`<NRf>` the value readout for the selected marker.

Examples

`CALCulate:CONSte:MEASview2:MARKer1:VALue?` might return 2.00, indicating the value readout of Marker 1 (M1) is 2 for measview 2 of constellation.

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X

Sets or queries the time position of the selected marker on the Constellation trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Calculate commands

Syntax

```
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X<value>
CALCulate:CONSte[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:MAGNitude? (on page 434)

CALCulate:CONSte[:MEASview<y>]: MARKer<x>:PHASe? (on page 436)

CALCulate:CONSte[:MEASview<y>]:MARKer<x>:SYMBol? (on page 437)

Arguments

`<value>::=<NRf>` specifies the time position of the marker. Range: (analysis offset) to [(analysis offset) + (analysis length)].

Examples

`CALCulate:CONSte:MEASview2:MARKer1:X` -1.63875 m places the Marker 1 (M1) at -1.63875 ms on the Constellation trace for measview 2 of constellation.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (Query only)

Returns the delta marker time for the selected marker on the Demodulated I&Q versus Time trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

```
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]?
```

Related Command

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 440)

Arguments

None

Returns

`<NRf>` Delta marker time for the selected marker.

Use the `[SENSe]:DDEMod:TIMe:UNITs` command to select the time unit, symbols (default) or seconds.

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:DELTa:X:TIME?` might return 62.75, indicating that the delta marker time is 62.75 symbols measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker amplitude for the selected marker on the Demodulated I&Q versus Time trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

`CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 439)

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker in volts.

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:DELTa:Y?` might return -78.24E-3, indicating that the delta marker amplitude is -78.24 mV measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Moves the selected marker to the highest peak on the Demodulated I&Q versus Time trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

`CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak on the trace measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No query form)

Moves the selected marker to the next peak higher in amplitude on the Demodulated I&Q versus Time trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

`CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 442)

Arguments

None

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker to the next peak to the left on the Demodulated I&Q versus Time trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

`CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 443)

Arguments

None

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No query form)

Moves the selected marker to the next peak lower in amplitude on the Demodulated I&Q versus Time trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

`CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 441)

Arguments

None

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker to the next peak to the right on the Demodulated I&Q versus Time trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

`CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 442)

Arguments

None

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:TRACe

Places the selected marker on the Demodulated I&Q versus Time trace. The query returns the name of the trace on which the marker resides.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

```
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:TRACe <Enum>
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:TRACe?
```

Related Commands

CALCulate:IQVTime:MARKer<x>:TRACe (on page 492)

Arguments

`<Enum>::= TRACE1 | TRACE2` specifies which trace to place the marker on. TRACE1 specifies the “I” trace and TRACE2 specifies the “Q” trace.

Returns

For I and Q traces, TRACE1 identifies the “I” trace and TRACE2 identifies the “Q” trace.

Examples

`CALCulate:DIQVtime:MEASview1:MARKer1:TRACe TRACE1` places Marker 1 (M1) on the I trace measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:Y? (Query only)

Queries the marker amplitude of the selected marker in the Demod I&Q versus Time measurement.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

```
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 445)

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker in volts.

Examples

CALCulate:DIQVtime:MEASview1:MARKer1:Y? might return 25.803E-3, indicating Marker 1 (M1) is at 25.803 mV measurement view 1.

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:X[:TIME]

Sets or queries the horizontal position (time) of the selected marker in the Demodulated I&Q versus Time measurement.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Calculate commands

Syntax

```
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:X[:TIME] <value>
CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:X[:TIME]?
```

Related Commands

CALCulate:DIQVtime[:MEASview<y>]:MARKer<x>:Y? (on page 444)

Arguments

<value>::=<NRf> specifies the horizontal position (time) of the marker. Use the [SENSe]:DDEMod:TIMe:UNITs command to select the time unit, symbols (default) or seconds.

Examples

CALCulate:DIQVtime:MEASview1:MARKER1:X:TIME 38.5 places Marker 1 (M1) at 38.5 symbols on the trace measurement view 1.

CALCulate:DPX:MARKer<x>:DELTa:X:AMPLitude? (Query Only)

Returns the delta marker amplitude for the selected marker on the DPX spectrum trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command and attached to the Bitmap trace using the CALCulate:DPX:MARKer<x>:TRACe command.

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

`CALCulate:DPX:MARKer<x>:DELTa:X:AMPLitude?`

Related Commands

CALCulate:DPX:MARKer<x>:X[:FREQuency] (on page 452), CALCulate:DPX:MARKer<x>:Y? (on page 454)

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker in dB.

Examples

`CALCULATE:DPX:MARKER1:DELTA:X:AMPLITUDE?` might return 35.12, indicating that the delta marker amplitude is 35.12 dB for Marker 1 (M1).

CALCulate:DPX:MARKer<x>:DELTa:X[:FREQuency]? (Query Only)

Returns the delta marker frequency for the selected marker on the DPX spectrum trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

`CALCulate:DPX:MARKer<x>:DELTa:X[:FREQuency]?`

Related Commands

CALCulate:DPX:MARKer<x>:DELTa:X:AMPLitude? (on page 445)

CALCulate:DPX:MARKer<x>:DELTa:Y? (on page 446)

Arguments

None

Returns

`<NRf>` Delta marker frequency for the selected marker in Hz.

Examples

`CALCULATE:DPX:MARKER1:DELTA:X?` might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz for Marker 1 (M1).

CALCulate:DPX:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the DPX spectrum trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

CALCulate:DPX:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:DPX:MARKer<x>:DELTa:X[:FREQuency]? (on page 446)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCULATE:DPX:MARKER1:DELTA:Y? might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:DPX:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the DPX spectrum trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

CALCulate:DPX:MARKer<x>:MAXimum

Arguments

None

Examples

CALCULATE:DPX:MARKER1:MAXIMUM moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:DPX:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the DPX spectrum trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

`CALCulate:DPX:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:DPX:MARKer<x>:PEAK:LOWer (on page 448)

Arguments

None

Examples

`CALCULATE:DPX:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:DPX:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the DPX spectrum trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

`CALCulate:DPX:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:DPX:MARKer<x>:PEAK:RIGHt (on page 449)

Arguments

None

Examples

`CALCULATE:DPX:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:DPX:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the DPX spectrum trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:DPX:MARKer<x>:PEAK:HIGHer (on page 447)

Arguments

None

Examples

`CALCULATE:DPX:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:DPX:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the DPX spectrum trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:DPX:MARKer<x>:PEAK:LEFT (on page 448)

Arguments

None

Examples

`CALCULATE:DPX:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:DPX:MARKer<x>:POWer:DENSity? (Query Only)

Returns the power density of the specified marker in the DPX measurement.

Conditions

Measurement view: DPX

The parameter <x> = 0 to 4.

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:POWer:DENSity?
```

Returns

<NRf> is the power density of the selected marker in dBm/Hz.

Examples

CALCULATE:DPX:MARKER1:POWER:DENSITY? might return 80.2432546111, indicating the power density is 80.24 dBm/Hz.

CALCulate:DPX:MARKer<x>:POWer:IDensity? (Query Only)

Returns the integrated power density reading between the MR (reference marker) and the selected marker in the DPX measurement.

Conditions

Measurement view: DPX

The parameter <x> = 0 to 4.

Group

Calculate commands

Syntax

CALCulate:DPX:MARKer<x>:POWer:IDensity?

Returns

<NRf> is the integrated power density reading between the MR (reference marker) and the selected marker in dBm.

Examples

CALCULATE:DPSA:MARKER1:POWER:REFDENSITY? might return -78.56 dBm/Hz.

CALCulate:DPX:MARKer<x>:POWer:INTEgrated? (Query Only)

Returns the integrated power reading between the MR (reference marker) and the selected marker in the DPX measurement.

Conditions

Measurement view: DPX

The parameter <x> = 0 to 4.

Group

Calculate commands

Syntax

CALCulate:DPX:MARKer<x>:POWer:INTEgrated?

Returns

<NRf> is the integrated power reading between MR (reference marker) and the selected marker in dBm.

Examples

CALCULATE:DPX:MARKER1:POWER:INTEGRATED? might return -14.66, indicating the integrated power is -14.66 dBm.

CALCulate:DPX:MARKer<x>[:SET]:CENTer (No Query Form)

Sets the center frequency to the marker frequency in the DPX spectrum view.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>[:SET]:CENTer
```

Arguments

None

Examples

`CALCULATE:DPX:MARKER1:SET:CENTER` sets the center frequency to the marker frequency in the DPX spectrum view.

CALCulate:DPX:MARKer<x>:TRACe

Sets or queries the trace to attach the specified marker to in the DPX spectrum measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:TRACe { BITMAP | TRACE1 | TRACE2 |TRACE3 | TRACE4 }
CALCulate:DPX:MARKer<x>:TRACe?
```

Arguments

`BITMAP` attaches the specified marker to the Bitmap trace.

`TRACE1` attaches the specified marker to the +Peak trace.

`TRACE2` attaches the specified marker to the -Peak trace.

`TRACE3` attaches the specified marker to the Average trace.

`TRACE4` attaches the specified marker to the Math trace.

Examples

`CALCULATE:DPX:MARKER1:TRACE TRACE1` attaches Marker 1 (M1) to the +Peak trace.

CALCulate:DPX:MARKer<x>:X:AMPLitude

Sets or queries the amplitude position of the selected marker in the DPX spectrum view. This command is valid for the marker on the bitmap trace (refer to the CALCulate:DPX:MARKer<x>:TRACe command). The frequency position is set by the CALCulate:DPX:MARKer<x>:X[:FREQuency] command.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:X:AMPLitude <value>
CALCulate:DPX:MARKer<x>:X:AMPLitude?
```

Arguments

`<value>::=<NRf>` specifies the amplitude position of the marker.Range: -100 to 0 dBm.

Examples

`CALCULATE:DPX:MARKER1:X:AMPLITUDE -34.5dBm` places Marker 1 (M1) at -34.5 dBm.

CALCulate:DPX:MARKer<x>:X[:FREQuency]

Sets or queries the frequency position of the selected marker in the DPX spectrum view.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The command is only valid for the Spectrum and Frequency plots.

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:X[:FREQuency] <value>
CALCulate:DPX:MARKer<x>:X[:FREQuency]?
```

Related Commands

CALCulate:DPX:MARKer<x>:Y? (on page 454)

Arguments

`<value>::=<NRf>` specifies the frequency position of the marker.Range: Start to Stop frequency (left to right edge of the horizontal axis).Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

`CALCULATE:DPX:MARKER1:X:FREQUENCY 800MHz` places Marker 1 (M1) at 800 MHz on the trace.

CALCulate:DPX:MARKer<x>:X:PHASe

Sets or queries the phase position of the selected marker in the DPX phase plot.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:X:PHASe <value>
CALCulate:DPX:MARKer<x>:X:PHASe?
```

Arguments

`<value>::<NRf>` phase setting in degrees for the specified marker.

Examples

`CALCulate:DPX:MARKer0:X:PHASe?` might return 94.0000000 indicating the phase for the reference marker (M0) is 94.00°.

CALCulate:DPX:MARKer<x>:X:TIME

Sets or queries the time position of the selected marker in the DPX spectrum view.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The command is valid for the Amplitude, Frequency, and Phase plots.

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:X:TIME <value>
CALCulate:DPX:MARKer<x>:X:TIME?
```

Arguments

`<value>::<NRf>` Time position of the specified marker.

Examples

`CALCulate:DPX:MARKer0:X:TIME?` might return 1.000000000E–3 indicating the time position of the reference marker (MR0) is 1.000 ms.

CALCulate:DPX:MARKer<x>:Y? (Query Only)

Queries the vertical position of the selected marker in the DPX spectrum view. The data occurrence rate is returned for the bitmap trace, and the amplitude value for the +peak, -peak, average, and math traces. The horizontal position can be set by the CALCulate:DPX:MARKer<x>:X:AMPLitude and CALCulate:DPX:MARKer<x>:X[:FREQuency] commands.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: DPX spectrum

Group

Calculate commands

Syntax

```
CALCulate:DPX:MARKer<x>:Y?
```

Arguments

None

Returns

`<NRf>` The value type depends on which trace the marker is placed on (refer to the CALCulate:DPX:MARKer<x>:TRACe command):

The amplitude value is returned in dBm for the marker on the +peak, -peak, average, or math trace. The data occurence rate is returned in percent (%) for the marker on the bitmap trace.

Examples

`CALCULATE:DPX:MARKER1:Y?` might return -34.28 indicating Marker 1 (M1) is at -34.28 dBm when it is placed on the +peak, -peak, average, or math trace.

`CALCULATE:DPX:MARKER1:Y?` might return 76.5 indicating Marker 1 (M1) is at 76.5% when it is placed on the bitmap trace.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (Query only)

Returns the delta marker time for the selected marker on the eye diagram trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of the measurement (Example: Eye Diagram).

Group

Calculate commands

Syntax

```
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]?
```

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 455)

Arguments

None

Returns

<NRf> Delta marker time for the selected marker. Use the [SENSe]:DDEMod:TIMe:UNITs command to select the time unit:symbols (default) or seconds.

Examples

CALCulate:EDIagram:MEASview2:MARKer1:DELTa:X:TIME? might return 62.75, indicating that the delta marker time is 62.75 symbols for measview2 of the Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker amplitude for the selected marker on the eye diagram trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Calculate commands

Syntax

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 454)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCulate:EDIagram:MEASview2:MARKer<x>:DELTa:Y? might returns -1.043, indicating that the delta marker amplitude is -1.043 for measview2 of the Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Moves the selected marker to the highest peak on the eye diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye Diagram).

Group

Calculate commands

Syntax

```
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:MAXimum
```

Arguments

None

Examples

`CALCulate:EDIagram:MEASview1:MARKer<x>:MAXimum` moves the Marker 1 (M1) to the highest peak on the trace for measview1 of the Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No query form)

Moves the selected marker to the next peak higher in amplitude on the eye diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye Diagram).

Group

Calculate commands

Syntax

```
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 457)

Arguments

None

Examples

`CALCulate:EDIagram:MEASview1:MARKer<x>:PEAK:HIGHer` moves the Marker 1 (M1) to the next peak higher in amplitude on the trace for measview2 of the Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker to the next peak to the left on the eye diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Calculate commands

Syntax

`CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 458)

Arguments

None

Examples

`CALCulate:EDIagram:MEASview2:MARKer<x>:PEAK:LEFT` moves the Marker 1 (M1) to the next peak to the left on the trace for measview2 of the Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No query form)

Moves the selected marker to the next peak lower in amplitude on the eye diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye Diagram).

Group

Calculate commands

Syntax

`CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 456)

Arguments

None

Examples

`CALCulate:EDIagram:MEASview2:MARKer<x>:PEAK:LOWer` moves the Marker 1 (M1) to the next peak lower in amplitude on the trace for measview2 of the Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker to the next peak to the right on the eye diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Calculate commands

Syntax

`CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 457)

Arguments

None

Examples

`CALCulate:EDIagram:MEASview2:MARKer<x>:PEAK:RIGHt` moves the Marker 1 (M1) to the next peak to the right on the trace for measview2 of the Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:TRACe

Places the selected marker on the I or Q trace in the eye diagram display. The query returns the name of the trace on which the marker resides. It is valid for all types of modulation except 2|4|8|16 FSK and C4FM.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Calculate commands

Syntax

```
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:TRACe<Enum>
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:TRACe?
```

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 459)

Arguments

`<Enum>::= TRACE1 | TRACE2` specifies which trace to place the marker on.TRACE1 specifies the “I” trace and TRACE2 specifies the “Q” trace.

Returns

For I and Q traces, TRACE1 identifies the “I” trace and TRACE2 identifies the “Q” trace.

Examples

`CALCulate:EDIagram:MEASview2:MARKer1:TRACe TRACE1` places the Marker 1 (M1) on the I trace in an eye diagram for the measview2.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:X[:TIME]

Sets or queries the horizontal position (time) of the selected marker in the eye diagram measurement.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye Diagram).

Group

Calculate commands

Syntax

```
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:X[:TIME]<value>
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:X[:TIME]?
```

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:Y? (on page 460)

Arguments

`<value>::=<NRf>` specifies the horizontal position (time) of the marker. Use the `[SENSe]:DDEMod:TIMe:UNITs` command to select the time unit:symbols (default) or seconds.

Examples

`CALCulate:EDIagram:MEASVIEW2:MARKer1:X:TIME` 38.5 places Marker 1 (M1) at 38.5 symbols on the trace for the measview2 of Eye diagram.

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:Y? (Query only)

Queries the vertical position of the selected marker in the eye diagram measurement.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Calculate commands

Syntax

```
CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:EDIagram[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 459)

Arguments

None

Returns

`<NRf>` Vertical position of the selected marker.

Examples

`CALCulate:EDIagram:MEASview2:MARKer<x>:Y?` might return 571.8E-3, indicating Marker 1 (M1) is at 0.5718 for the measview 2 of Eye diagram.

CALCulate:EMC:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency value for the selected marker in the EMC view.

<x> = 1,2,3,4 is the marker.

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>:DELTa:X?`

Arguments

None

Returns

`<NRf>`

Examples

`CALCulate:EMC:MARKer1:DELTa:X?` might return -178.9375, indicating that the delta marker frequency of Marker 1 (M1) is -178.93 KHz.

CALCulate:EMC:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the EMC view.

<x> = 1,2,3,4 is the marker.

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>:DELTa:Y?`

Arguments

None

Returns

`<NRf>`

Examples

`CALCulate:EMC:MARKer1:DELTa:Y?` might return -2.2589, indicating that the delta marker Amplitude of Marker 1 (M1) is -2.25 dB.

CALCulate:EMC:MARKer<x>:MAXimum (No Query Form)

Positions the specified marker at the maximum value of the display on the EMC trace.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>:MAXimum`

Arguments

None

Returns

None

Examples

`CALCulate:EMC:MARKer1:MAXimum` positions the marker 1 (M1) at the maximum value of the display.

CALCulate:EMC:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the specified marker to the next peak higher in amplitude on the EMC trace.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>:PEAK:HIGHer`

Arguments

None

Returns

None

Examples

`CALCulate:EMC:MARKer2:PEAK:HIGHer` moves Marker 2 (M2) to the next peak higher in amplitude on the trace.

CALCulate:EMC:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the specified marker to the next peak to the left on the EMC trace.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>:PEAK:LEFT`

Arguments

None

Returns

None

Examples

`CALCulate:EMC:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:EMC:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the specified marker to the next peak lower in amplitude on the EMC trace.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>:PEAK:LOWer`

Arguments

None

Returns

None

Examples

`CALCulate:EMC:MARKer2:PEAK:LOWer` moves Marker 2 (M2) to the next peak lower in amplitude on the trace.

CALCulate:EMC:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the specified marker to the next peak to the right on the EMC trace.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>:PEAK:RIGHt`

Arguments

None

Returns

None

Examples

`CALCulate:EMC:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:EMC:MARKer<x>[:SET]:CENTer (No Query Form)

Sets the center frequency to the value at the specified marker position in the EMC view.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

`CALCulate:EMC:MARKer<x>[:SET]:CENTer`

Arguments

None

Returns

None

Examples

`CALCulate:EMC:MARKer1[:SET]:CENTer` sets the center frequency to the value at the Marker 1 (M1) position.

CALCulate:EMC:MARKer<x>:X

Sets or queries the frequency position of the selected marker on the EMC view.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

```
CALCulate:EMC:MARKer<x>:X <value>
CALCulate:EMC:MARKer<x>:X ?
```

Arguments

`<value> = <NRf>` specifies the horizontal position of the marker.

Returns

`<NRf>`

Examples

`CALCulate:EMC:MARKer1:X` might return 254.562500000E+3, indicating that the frequency position of the Marker 1 (M1) is 254.56 KHz.

CALCulate:EMC:MARKer<x>:Y

Sets or queries the amplitude position of the selected marker in the EMC view.

<x> = 0,1,2,3,4 is the marker

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

```
CALCulate:EMC:MARKer<x>:Y <value>
CALCulate:EMC:MARKer<x>:Y?
```

Arguments

`<value> = <NRf>` specifies the amplitude position of the marker.

Returns

`<NRf>`

Examples

`CALCulate:EMC:MARKer1:Y` might return 8.9157, indicating that the amplitude position of Marker 1 (M1) is 8.92 dBuV.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:X? (Query only)

Returns the delta marker time for the selected marker in the EVM versus Time measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

`CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:X?`

Related Commands

CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 466)

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker in percent (%).

Examples

`CALCulate:EVM:MEASview2:MARKer<x>:DELTa:X?` might return 1.62, indicating that the delta marker duration is 1.62 for measview2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker amplitude for the selected marker in the EVM versus Time measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD command`.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

`CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:EVM[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 465)

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker in percent (%).

Examples

`CALCulate:EVM:MEASview2:MARKer<x>:DELTa:Y?` might return 1.62, indicating that the delta marker amplitude is 1.62% for measview2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Moves the selected marker to the highest peak on the trace in the EVM versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

`CALCulate:EVM[:MEASview<y>]:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCulate:EVM:MEASview2:MARKer<x>:MAXimum` moves Marker 1 (M1) to the highest peak on the trace for measview2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No query form)

Moves the selected marker to the next peak higher in amplitude on the EVM versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

`CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 468)

Arguments

None

Examples

`CALCulate:EVM:MEASview2:MARKer<x>:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace for measview2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker to the next peak to the left on the trace in the EVM versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

`CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 469)

Arguments

None

Examples

`CALCulate:EVM:MEASview2:MARKer<x>:PEAK:LEFT` moves the Marker 1 (M1) to next peak to the left on the trace for measview2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No query form)

Moves the selected marker to the next peak lower in amplitude on the EVM versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time)

Group

Calculate commands

Syntax

`CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 467)

Arguments

None

Examples

`CALCulate:EVM:MEASview2:MARKer<x>:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace for measview2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker to the next peak to the right on the trace in the EVM versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

`CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:EVM[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 468)

Arguments

None

Examples

`CALCulate:EVM:MEASview2:MARKer<x>:PEAK:RIGHt` moves the Marker 1 (M1) to the next peak to the right on the trace for measview2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the EVM versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

```
CALCulate:EVM[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:EVM[:MEASview<y>]:MARKer<x>:X?
```

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker Range: (analysis offset) to (analysis offset) + (analysis length). The unit can be changed by the `[SENSe]:DDEMod:TIMe:UNITs` command.

Examples

`CALCulate:EVM:MEASview2:MARKer1:X 1.5 µs` places Marker 1 (M1) at 1.5 µs on the trace for measview 2 of EVM.

CALCulate:EVM[:MEASview<y>]:MARKer<x>:Y? (Query only)

Queries the marker amplitude of the selected marker in the EVM versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Calculate commands

Syntax

```
CALCulate:EVM[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:EVM[:MEASview<y>]:MARKer<x>:X (on page 470)

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker in percent (%).

Examples

CALCulate:EVM:MEASview2:MARKer<x>:Y? might return 5.34, indicating Marker 1 (M1) is at 5.34% for measview2 of EVM.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (Query only)

Returns the delta marker time for the selected marker on the Frequency deviation versus Time trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

CALCulate:FDVTime:MEASview<y>:MARKer<x>:DELTa:X[:TIME]?

Related Commands

CALCulate:FDVTime[:MEASVIEW<y>]:MARKer<x>:DELTa:Y? (on page 471)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCULATE:FDVTime:MEASview2:MARKER1:DELTA:X? might return 120.0E-9, indicating that the delta marker duration is 120 ns.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker amplitude for the selected marker on the Frequency deviation versus Time trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

`CALCulate:FDVTime:MEASview<y>2:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:FDVTime:MEASVIEW2:MARKer<x>:DELTa:X[:TIME]? (on page 471)

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker in Hz.

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:DELTA:Y?` might return 27.05E+3, indicating that the delta marker amplitude is 27.05 KHz.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Moves the selected marker to the highest peak on the trace in the Frequency deviation versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation vs Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

`CALCulate:FDVTime:MEASview<y>:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:MAXIMUM` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No query form)

Moves the selected marker to the next peak higher in amplitude on the Frequency deviation versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency Deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

```
CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 474)

Arguments

None

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker to the next peak to the left on the Frequency deviation versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

```
CALCulate:FDVTime:MEASview<y>:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:FDVTime[:MEASVIEW<y>]:MARKer<x>:PEAK:RIGHt (on page 474)

Arguments

None

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No query form)

Moves the selected marker to the next peak lower in amplitude on the Frequency deviation vs Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation vs Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

`CALCulate:FDVTime:MEASview<y>:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:FDVTime[:MEASVIEW<y>]:MARKer<x>:PEAK:HIGHer (on page 473)

Arguments

None

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker to the next peak to the right on the trace in the Frequency deviation vs Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation vs Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

```
CALCulate:FDVTime:MEASview<y>:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:FDVTime[:MEASVIEW<y>]:MARKer<x>:PEAK:LEFT (on page 473)

Arguments

None

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:X[:TIME]

Sets or queries the horizontal position (time) of the selected marker in the Frequency deviation vs Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation vs Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

```
CALCulate:FDVTime:MEASview<y>:MARKer<x>:X[:TIME]<value>
CALCulate:FDVTime:MEASview<y>:MARKer<x>:X[:TIME]?
```

Related Commands

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:Y? (Query only) (on page 476)

Arguments

None.

Returns

`<NRf>` Marker amplitude of the selected marker in Hz.

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:X -15.34E+06` places Marker 1 (M1) at -15.34 MHz on the trace.

CALCulate:FDVTime[:MEASview<y>]:MARKer<x>:Y? (Query only)

Queries the marker amplitude of the selected marker in the Frequency deviation versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Calculate commands

Syntax

`CALCulate:FDVTime:MEASview<y>:MARKer<x>:Y?`

Related Commands

CALCulate:FDVTime[:MEASVIEW<y>]:MARKer<x>:X[:TIME] (on page 475)

Arguments

None

Returns

`<NRf>` Marker amplitude of the selected marker in Hz.

Examples

`CALCULATE:FDVTime:MEASview2:MARKER1:Y?` might return -15.34E+6, indicating Marker 1 (M1) is at -15.34 MHz.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:DELTa:X? (Query only)

Returns the delta marker time for the selected marker in the Frequency and Phase Settling displays.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

`CALCulate:{FSETtling|PSETtling}:MARKer<x>:DELTa:X?`

Related Commands

CALCulate:FVTime:MARKer<x>:DELTa:Y? (on page 482)

Arguments

None

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCULATE:FSETTLING:MARKER1:DELTA:X? might return 120.0E-9,indicating that the delta marker time is 120 ns.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker frequency for the selected marker in the Frequency and Phase Settling displays.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

CALCulate:{FSETtling|PSETtling}:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:{FSETtling|PSETtling}:MARKer<x>:DELTa:X? (on page 476)

Arguments

None

Returns

<NRf> Delta marker frequency for the selected marker in Hz.

Examples

CALCULATE:FSETTLING:MARKER1:DELTA:Y? might return 27.05E+3, indicating that the delta marker frequency is 27.05 kHz.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Frequency or Phase Settling display.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

CALCulate:{FSETtling|PSETtling}:MARKer<x>:MAXimum

Arguments

None

Examples

`CALCULATE:FSETTLING:MARKER1:MAXIMUM` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the Frequency or Phase Settling trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

`CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:LOWer (on page 479)

Arguments

None

Examples

`CALCULATE:FSETTLING:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Frequency or Phase Settling display.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

`CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:RIGHt (on page 479)

Arguments

None

Examples

`CALCULATE:FSETTLING:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the Frequency or Phase Settling trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

`CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:HIGHer (on page 478)

Arguments

None

Examples

`CALCULATE:FSETTLING:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Frequency or Phase Settling display.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

`CALCulate:{FSETtling|PSETtling}:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 483)

Arguments

None

Examples

`CALCULATE:FSETTLING:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:TRACe

Sets or queries the trace on which the specified marker is placed in the spectrum measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

```
CALCulate:{FSETtling|PSETtling}:MARKer<x>:TRACe { TRACE1 |TRACE2 }
CALCulate:{FSETtling|PSETtling}:MARKer<x>:TRACe?
```

Arguments

`TRACE1` places the specified marker on Trace 1.

`TRACE2` places the specified marker on Trace 2.

Examples

`CALCULATE:FSETTLING:MARKER1:TRACE TRACE1` places Marker 1 (M1) on Trace 1.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Frequency and Phase Settling display.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

```
CALCulate:{FSETtling|PSETtling}:MARKer<x>:X <value>
CALCulate:{FSETtling|PSETtling}:MARKer<x>:X?
```

Related Commands

CALCulate:{FSETtling|PSETtling}:MARKer<x>:Y? (on page 481)

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker.Range: (analysis offset) to [(analysis offset) + (analysis length)].

Examples

`CALCULATE:FVTIME:MARKER1:X 1.5u` places Marker 1 (M1) at 1.5 µs on the trace.

CALCulate:{FSETtling|PSETtling}:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the Frequency and Phase Settling display.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement views: Frequency and Phase Settling

Group

Calculate commands

Syntax

`CALCulate:{FSETtling|PSETtling}:MARKer<x>:Y?`

Related Commands

CALCulate:{FSETtling|PSETtling}:MARKer<x>:X (on page 480)

Arguments

None

Returns

`<NRf>` Marker amplitude of the selected marker in Hz or degrees.

Examples

`CALCULATE:FSETTLING:MARKER1:Y?` might return -15.34E+6, indicating Marker 1 (M1) is at -15.34 MHz.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker time for the selected marker in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

`CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:X?`

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 482)

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCULATE:FVTIME:MEASview1:MARKER1:DELTA:X? might return 120.0E-9, indicating that the delta marker time is 120 ns.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker frequency for the selected marker in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 481)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker frequency for the selected marker in Hz.

Examples

CALCULATE:FVTIME:MEASview1:MARKER1:DELTA:Y? might return 27.05E+3, indicating that the delta marker frequency is 27.05 kHz.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

```
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:MAXimum
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCULATE:FVTIME:MEASview1:MARKER1:MAXIMUM` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the Frequency versus Time trace.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

```
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 484)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCULATE:FVTIME:MEASview1:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 484)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCULATE:FVTIME:MEASview1:MARKER1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the Frequency versus Time trace.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 483)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCULATE:FVTIME:MEASview1:MARKER1:PEAK:LOWER moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 483)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCULATE:FVTIME:MEASview1:MARKER1:PEAK:RIGHT moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:TRACe

Sets or queries the trace on which the specified marker is placed in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:TRACe {TRACE1 | TRACE5 | TRACE6 | TRACE7}

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:TRACe?

Arguments

TRACE1 places the selected marker on Trace 1.

TRACE5 places the selected marker on Trace 5 (Bitmap trace).

TRACE6 places the selected marker on Trace 6 (Ogram).

TRACE7 places marker on Trace 7 (Ogram line).

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. By default y is 1.

Examples

CALCULATE:FVTIME:MEASVIEW1:MARKER1:TRACE1 places Marker 1 (M1) on Trace 1 of Frequency versus Time Measurement View.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

```
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:Y? (on page 486)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<value>::=<NRf> specifies the horizontal position of the marker. Range: (analysis offset) to [(analysis offset) + (analysis length)].

Examples

`CALCULATE:FVTIME:MEASview1:MARKER1:X 1.5u` places Marker 1 (M1) at 1.5 µs on the trace.

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Calculate commands

Syntax

```
CALCulate:FVTime[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:FVTime[:MEASview<y>]:MARKer<x>:X (on page 485)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Marker amplitude of the selected marker in Hz.

Examples

`CALCULATE:FVTIME:MEASview1:MARKER1:Y?` might return -15.34E+6, indicating Marker 1 (M1) is at -15.34 MHz.

CALCulate:HARMonic:APPLy (No Query Form)

Based on the fundamental frequency and harmonic factor values the harmonic markers are applied and markers are placed in their respective positions on the plot.

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

```
CALCulate:HARMonic:APPLy
```

Arguments

None

Returns

None

Examples

`CALCULATE:HARMONIC:APPLY` places the harmonic markers in their respective positions.

CALCulate:HARMonic:MARKer<x>:FACTor

Sets or queries the factor value for the specified harmonic marker in EMC view.

<x> = <NR1> 1 to 5 (marker number)

Conditions

Measurement view: EMC - EMI Display

Group

Calculate commands

Syntax

```
CALCulate:HARMonic:MARKer<x>:FACTor <value>
CALCulate:HARMonic:MARKer<x>:FACTor?
```

Arguments

<value> =

Either

`OEIG` = 1/8

`QUAR` = 1/4

`HALF` = 1/2

`ONE` = 1

`TWO` = 2

`THREE` = 3

`FOUR` = 4

FIVE = 5

SIX = 6

SEVEN = 7

EIGHT = 8

NINE = 9

TEN = 10

Returns

<String> See Arguments

Examples

CALCulate:HARMonic:MARKer1:FACTor? might return 4 indicating that the factor value of harmonic marker 1 is 4.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker time for the selected marker in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:X?

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 488)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCULATE:IQVTIME:MEASview1:MARKER1:DELTA:X? might return 120.0E-9, indicating that the delta marker time is 120 ns.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

Syntax

```
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:Y?
```

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 488)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker amplitude for the selected marker in volts.

Examples

CALCULATE:IQVTIME:MEASview1:MARKER1:DELTA:Y? might return -3.45E-3, indicating that the delta marker amplitude is -3.45 mV.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

```
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:MAXimum
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCULATE:IQVTIME:MEASview1:MARKER1:MAXIMUM moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the RF I&Q versus Time trace.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

```
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 491)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCULATE:IQVTIME:MEASview1:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

```
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 491)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCULATE:IQVTIME:MEASview1:MARKER1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the RF I&Q versus Time trace.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 490)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCULATE:IQVTIME:MEASview1:MARKER1:PEAK:LOWER moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 490)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCULATE:IQVTIME:MEASview1:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:TRACe

Places the selected marker on the I or Q trace in the RF I&Q versus Time measurement. The query command returns which trace the selected marker is placed on.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

```
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:TRACe { TRACE1 | TRACE2 }
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:TRACe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

`TRACE1` places the selected marker on the I trace.

`TRACE2` places the selected marker on the Q trace.

Examples

`CALCULATE:IQVTIME:MEASview1:MARKER1:TRACE TRACE1` places Marker 1 (M1) on the I trace.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

```
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:Y? (on page 493)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

`<value>::=<NRf>` specifies the horizontal position of the marker.Range: (analysis offset) to [(analysis offset) + (analysis length)].

Examples

`CALCULATE:IQVTIME:MEASview1:MARKER1:X 1.5us` places Marker 1 (M1) at 1.5 µs on the trace.

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Calculate commands

Syntax

`CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:Y?`

Related Commands

CALCulate:IQVTime[:MEASview<y>]:MARKer<x>:X (on page 492)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

`<NRf>` Marker amplitude of the selected marker in volts.

Examples

`CALCULATE:IQVTIME:MEASview1:MARKER1:Y?` might return 25.803E-3, indicating Marker 1 (M1) is at 25.803 mV.

CALCulate:LTE:ACLR:MARKer:<x>PEAK:HIGHer (No Query Form)

Moves the specified marker to the next peak higher in amplitude on the trace in the LTE ACLR display.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

Conditions

Measurement view: LTE ACLR

Group

Calculate commands

Syntax

`CALCulate:LTE:ACLR:MARKer:<x>PEAK:HIGHer`

Arguments

None

Examples

`CALCULATE:LTE:ACLR:MARKER1:PEAK:HIGHER` moves marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:LTE:ACLR:MARKer<x>:DELTa:X? (Query Only)

Returns the frequency of the specified delta marker on the trace in the LTE ACLR display. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement view: LTE ACLR

<x> parameters: <x> = 1,2,3,4 is the marker.

Group

Calculate commands

Syntax

`CALCulate:LTE:ACLR:MARKer<x>:DELTa:X?`

ReturnsCALCulate:P25:PVTime:MARKer<x>:DELTa:Y[:TIME]? (Query Only)

`<NR3>`

Examples

`CALCULATE:LTE:ACLR:MARKER1:DELTA:X?` might return 1.25000000E+6,indicating that the frequency of the specified delta marker is 1.25 MHz.

CALCulate:LTE:ACLR:MARKer<x>:DELTa:Y? (Query Only)

Returns the amplitude for the specified delta marker on the trace in the LTE ACLR display. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement view: LTE ACLR

<x> = 1,2,3,4 is the marker.

Group

Calculate commands

Syntax

CALCulate:LTE:ACLR:MARKer<x>:DELTa:Y? (on page 494)

Returns

`<NRf>`

Examples

CALC:LTEACLR:MARK1:DELT:Y? might return 23.45, indicating that the amplitude of the specified delta marker is 23.45 dB.

CALCulate:LTE:ACLR:MARKer<x>:MAXimum (No Query Form)

Positions the specified marker at the highest peak on the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

CALCulate:LTE:ACLR:MARKer<x>:MAXimum

Arguments

None

Examples

CALCULATE:LTE:ACLR:MARKER1:MAXIMUM moves marker 1 (M1) to the highest peak on the trace.

CALCulate:LTE:ACLR:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

CALCulate:LTE:ACLR:MARKer<x>:PEAK:LEFT

Arguments

None

Examples

CALCULATE:LTE:ACLR:MARKER1:PEAK:LEFT moves marker 1 (M1) to the next peak to the left on the trace.

CALCulate:LTE:ACLR:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:ACLR:MARKer<x>:PEAK:LOWer`

Arguments

None

Examples

`CALCULATE:LTE:ACLR:MARKER1:PEAK:LOWER` moves marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:LTE:ACLR:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:ACLR:MARKer<x>:PEAK:RIGHt`

Arguments

None

Examples

`CALCULATE:LTE:ACLR:MARKER1:PEAK:RIGHT` moves marker 1 (M1) to the next peak to the right on the trace.

CALCulate:LTE:ACLR:MARKer<x>:SET:CENTer (No Query Form)

Moves the specified marker to the center frequency in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:ACLR:MARKer<x>:SET:CENTer`

Arguments

None

Examples

`CALCULATE:LTE:ACLR:MARKER1:SET:CENTER` moves marker 1 (M1) to the center frequency on the trace.

CALCulate:LTE:ACLR:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:LTE:ACLR:MARKer<x>:X <value>
CALCulate:LTE:ACLR:MARKer<x>:X?
```

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker.

Returns

`<NRf>`

Examples

`CALCULATE:LTE:ACLR:MARKER1:X 800.000000000E+6` places marker 1 (M1) at 800 MHz on the trace.

CALCulate:LTE:ACLR:MARKer<x>:Y? (Query Only)

Queries the amplitude of the selected marker on the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:LTE:ACLR:MARKer<x>:Y?
```

Returns

`<NRf>`

Examples

`CALCULATE:LTE:ACLR:MARKER1:Y?` might return –34.28, indicating that the amplitude of marker 1 (M1) is –34.28 dBm.

CALCulate:LTE:CHSPectrum:MARKer<x>:DELTa:X? (Query Only)

Returns the frequency of the specified delta marker on the trace in the LTE Channel Spectrum display. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement view: LTE Channel Spectrum

<x> = 1,2,3,4 is the marker.

Group

Calculate commands

Syntax

`CALCulate:LTE:CHSPectrum:MARKer<x>:DELTa:X?`

Returns

`<NR3>`

Examples

`CALCULATE:LTE:CHSPECTRUM:MARKER1:DELTA:X?` might return 1.25000000E+6, indicating that the frequency of the specified delta marker is 1.25 MHz.

CALCulate:LTE:CHSPectrum:MARKer<x>:DELTa:Y? (Query Only)

Returns the amplitude for the specified delta marker on the trace in the LTE Channel Spectrum display. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement view: LTE Channel Spectrum

<x> = 1,2,3,4 is the marker.

Group

Calculate commands

Syntax

`CALCulate:LTE:CHSPectrum:MARKer<x>:DELTa:Y?`

Returns

`<NRf>`

Examples

`CALC:LTE:CHSPECTRUM:MARK1:DELT:Y?` might return 23.45, indicating that the amplitude of the specified delta marker is 23.45 dB.

CALCulate:LTE:CHSPectrum:MARKer<x>:MAXimum (No Query Form)

Positions the marker at the highest peak on the trace in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:CHSPectrum:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCULATE:LTE:CHSPECTRUM:MARKER1:MAXIMUM` moves marker 1 (M1) to the highest peak on the trace.

CALCulate:LTE:CHSPectrum:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:CHSPectrum:MARKer<x>:PEAK:LEFT`

Arguments

None

Examples

`CALCULATE:LTE:CHSPECTRUM:MARKER1:PEAK:LEFT` moves marker 1 (M1) to the next peak to the left on the trace.

CALCulate:LTE:CHSPectrum:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

CALCulate:LTE:CHSPectrum:MARKer<x>:PEAK:RIGHt

Arguments

None

Examples

CALCULATE:LTE:CHSPECTRUM:MARKER1:PEAK:RIGHT moves marker 1 (M1) to the next peak to the right on the trace.

CALCulate:LTE:CHSPectrum:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the trace in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:LTE:CHSPectrum:MARKer<x>:X <value>
CALCulate:LTE:CHSPectrum:MARKer<x>:X?
```

Arguments

<value>::=<NRf> specifies the horizontal position of the marker.

Returns

<NRf>

Examples

CALCULATE:LTE:CHSPECTRUM:MARKER1:X 800.000000000E+6 places marker 1 (M1) at 800 MHz on the trace.

CALCulate:LTE:CHSPectrum:MARKer<x>:Y? (Query Only)

Queries the amplitude of the selected marker on the trace in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

CALCulate:LTE:CHSPectrum:MARKer<x>:Y?

Returns

<NRf>

Examples

CALCULATE:LTE:CHSPECTRUM:MARKER1:Y? might return –34.28, indicating that the amplitude of marker 1 (M1) is –34.28 dBm.

CALCulate:LTE:CONSte:MARKer<x>:FREQuency

Sets or returns the subcarrier number of the LTE symbol in the LTE Constellation display. This constellation shows only primary and secondary synchronization signals. Any input outside this range will show the marker set to -31 or +31.

Conditions

Measurement view: LTE Constellation

<x> parameters: 0 to 4

Range: –31 to +31

Group

Calculate commands

Syntax

```
CALCulate:LTE:CONSte:MARKer<x>:FREQuency <value>
CALCulate:LTE:CONSte:MARKer<x>:FREQuency?
```

Arguments

<value>::<NRf> specifies the subcarrier number of the specified marker

Returns

<NRf> The value type depends on where the marker is placed.

Examples

CALCULATE:LTE:CONSTE:MARKER2:FREQUENCY? might return +31, indicating that Marker 2 (M2) is positioned at the subcarrier +31 in the LTE Constellation display.

CALCulate:LTE:CONSte:MARKer<x>:MAGNitude? (Query Only)

Queries the marker magnitude of the selected marker in the LTE Constellation display.

Conditions

Measurement view: LTE Constellation

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:LTE:CONSte:MARKer<x>:MAGNitude?
```

Returns

<NRf> The magnitude for the selected marker.

Examples

CALCULATE:LTE:CONSTE:MARKER2:MAGNITUDE might return "1.004" indicating readout of Marker 2 (M2) is "1.004".

CALCulate:LTE:CONSte:MARKer<x>:PHASe? (Query Only)

Queries the phase readout of the selected marker in the LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Calculate commands

Syntax

CALCulate:LTE:CONSte:MARKer<x>:PHASe?

Returns

<NRf> The phase readout for the selected marker.

Examples

CALCULATE:LTE:CONSTE:MARKER1:PHASE? might return 35.74, indicating the phase readout of Marker 1 (M1) is 35.74°

CALCulate:LTE:CONSte:MARKer<x>:TIME

Sets or queries the X position (Symbol Value) of the selected marker in the LTE Constellation display.

Conditions

Measurement view: LTE Constellation

<x> parameters: 0 to 4

For FDD, the range is 0 and 1.

For TDD the range is 0 and 3.

Group

Calculate commands

Syntax

CALCulate:LTE:CONSte:MARKer<x>:TIME <value>
CALCulate:LTE:CONSte:MARKer<x>:TIME?

Arguments

<value>::=<NRf> specifies the specified marker symbol number.

Returns

<NR1>

Examples

CALCULATE:LTE:CONSTE:MARKER<x>:TIME 0 places Marker 1 (M1) at the symbol 0 on range for time.

CALCulate:LTE:CONSte:MARKer<x>:TYPE? (Query Only)

Queries the data type of the selected marker in LTE Constellation display.The data type can either be “PSS” (Primary Synchronization Signal) or “SSS” (Secondary Synchronization Signal).

Conditions

Measurement view: LTE Constellation

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:CONSte:MARKer<x>:TYPE?`

Returns

`PSS` means that the data type for the selected marker is Primary Synchronization Signal

`SSS` means that the data type for the selected marker is Secondary Synchronization Signal

Examples

`CALCULATE:LTE:CONSTE:MARKER1:TYPE?` might return SSS, indicating that the data type for the Marker 1 (M1) is SSS.

CALCulate:LTE:PVTime:MARKer:<x>PEAK:HIGHer (No Query Form)

Moves the specified marker to the next peak higher in amplitude on the trace in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Parameter <x>: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:PVTime:MARKer:<x>PEAK:HIGHer`

Arguments

None

Examples

`CALCULATE:LTE:PVTIME:MARKER1:PEAK:HIGHER` moves marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:LTE:PVTime:MARKer<x>:DELTa:X? (Query Only)

Returns the frequency of the specified delta marker on the trace in the LTE Power vs Time display. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 1, 2, 3...(valid integral values range from 0 to the number of markers active for the display).

Querying an out-of-range value causes an execution error (-222, “Data out of range”).

Group

Calculate commands

Syntax

```
CALCulate:LTE:PVTime:MARKer<x>:DELTa:X?
```

Returns

```
<NR3>
```

Examples

`CALCULATE:LTE:PVTIME:MARKER1:DELTA:X?` might return `1.28000000E-6`, indicating that the frequency of the specified delta marker is 1.28 µs.

CALCulate:LTE:PVTime:MARKer<x>:DELTa:Y? (Query Only)

Returns the amplitude for the specified delta marker on the trace in the LTE Power vs Time display using the currently selected amplitude unit. You can set/query the amplitude unit with the SENSe:POWer:UNITs command. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 1, 2, 3...(valid integral values range from 0 to the number of markers active for the display).

Querying an out-of-range value causes an execution error (-222, "Data out of range").

Group

Calculate commands

Syntax

```
CALCulate:LTE:PVTime:MARKer<x>:DELTa:Y?
```

Returns

```
<NRf>
```

Examples

`CALCULATE:LTE:PVTIME:MARKER3:DELTA:Y?` might return –12.91, indicating that the amplitude of the delta marker 3 (M3) is –12.91 dB.

CALCulate:LTE:PVTime:MARKer<x>:MAXimum (No Query Form)

Positions the specified marker at the highest peak on the trace in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:PVTime:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCULATE:LTE:PVTIME:MARKER1:MAXIMUM` moves marker 1 (M1) to the highest peak on the trace.

CALCulate:LTE:PVTime:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:PVTime:MARKer<x>:PEAK:LEFT`

Arguments

None

Examples

`CALCULATE:LTE:PVTIME:MARKER1:PEAK:LEFT` moves marker 1 (M1) to the next peak to the left on the trace.

CALCulate:LTE:PVTime:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the trace in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

`CALCulate:LTE:PVTime:MARKer<x>:PEAK:LOWer`

Arguments

None

Examples

CALCULATE:LTE:PVTIME:MARKER1:PEAK:LOWER moves marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:LTE:PVTime:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:LTE:PVTime:MARKer<x>:PEAK:RIGHt
```

Arguments

None

Examples

CALCULATE:LTE:PVTIME:MARKER1:PEAK:RIGHT moves Marker 1 (M1) to the next peak to the right on the trace

CALCulate:LTE:PVTime:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the trace in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 0 to 4

Range: Start to Stop time (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Group

Calculate commands

Syntax

```
CALCulate:LTE:PVTime:MARKer<x>:X <NRf>
CALCulate:LTE:PVTime:MARKer<x>:X?
```

Arguments

<NRf> specifies the value of the horizontal position of the marker.

Returns

<NRf>

Examples

CALCULATE:LTE:PVTIME:MARKER3:X 1.000000000E-6 places Marker 3(M3) at 1 µs on the trace.

CALCulate:LTE:PVTime:MARKer<x>:Y? (Query Only)

Queries the amplitude of the selected marker on the trace in the LTE Power vs Time display. You can set/query the amplitude units with the `SENSe:POWer:UNITs` command.

Conditions

Measurement view: LTE Power vs Time

<x> parameters: 0 to 4 Querying an out-of-range value causes an execution error (-222, “Data out of range”).

Group

Calculate commands

Syntax

`CALCulate:LTE:PVTime:MARKer<x>:Y?`

Returns

`<NRf>` specifies the value of the horizontal position of the marker.

Examples

`CALCULATE:LTE:PVTIME:MARKER1:Y?` might return 33.393856E-3, indicating that the amplitude of marker 1 (M1) is 0.033 dBm.

CALCulate:MARKer:ADD (No Query Form)

Adds a marker. Every execution of this command adds a marker from MR, then M1 to M4, sequentially.

NOTE: If all markers are already turned on, the error message "Cannot add another marker" (execution error -200) is returned.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

`CALCulate:MARKer:ADD`

Related Commands

CALCulate:MARKer:AOFF (on page 508)

CALCulate:MARKer:DELete (on page 508)

Arguments

None

Examples

`CALCULATE:MARKER:ADD` adds a marker.

CALCulate:MARKer:AOFF (No Query Form)

Turns off all markers.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

`CALCulate:MARKer:AOFF`

Related Commands

CALCulate:MARKer:ADD (on page 507)

CALCulate:MARKer:DELete (on page 508)

Arguments

None

Examples

`CALCULATE:MARKER:AOFF` turns off all markers.

CALCulate:MARKer:DELete (No Query Form)

Deletes the last marker added.

NOTE: If all markers are turned off, the error message "Cannot delete another marker" (execution error -200) is returned.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

`CALCulate:MARKer:DELete`

Related Commands

CALCulate:MARKer:ADD (on page 507)

CALCulate:MARKer:AOFF (on page 508)

Arguments

None

Examples

`CALCULATE:MARKER:DELETE` deletes the last marker added.

CALCulate:MARKer:DENSity:EXCursion

Sets or queries the minimum excursion of DPX signal density, or how far the density (hit count for pixels) must be above the surrounding noise to be detected as a peak. This command is effective for the DPX bitmap trace.

For marker peak up and marker peak down operations, the signal is considered to be a peak if it exceeds the excursion and the threshold set by the CALCulate:MARKer:DENSity:THReshold command.

For marker peak left and marker peak right operations, the signal is considered to be a peak if it first exceeds the amplitude excursion set by CALCulate:MARKer:PEAK:EXCursion, the amplitude threshold set by CALCulate:MARKer:PEAK:THReshold, the density excursion set by CALCulate:MARKer:DENSity:EXCursion and the density threshold set by CALCulate:MARKer:DENSity:THReshold.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:DENSity:EXCursion <number>
CALCulate:MARKer:DENSity:EXCursion?
```

Related Commands

CALCulate:MARKer:DENSity:THReshold (on page 510)

CALCulate:MARKer:PEAK:EXCursion (on page 511)

CALCulate:MARKer:PEAK:THReshold (on page 512)

Arguments

`<number>::=<NR1>` specifies the minimum excursion density.Range: 0 to 100%.

Examples

`CALCULATE:MARKER:DENSITY:EXCURSION 30` sets the minimum excursion density to 30.

CALCulate:MARKer:DENSity:SMOothing

Sets or queries the number of pixels squared for smoothing the DPX signal density. This command is effective for the DPX bitmap trace.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:DENSity:SMOothing <number>
CALCulate:MARKer:DENSity:SMOothing?
```

Arguments

`<number>::=<NR1>` specifies the number of pixels squared for smoothing the DPX signal density. Range: 1 to 20.

Examples

CALCULATE:MARKER:DENSITY:SMOOTHING5 sets the smoothing number to 5.

CALCulate:MARKer:DENSity:THReshold

Sets or queries the threshold of DPX signal density above which the density (hit count for pixels) is detected as a peak. This command is effective for the DPX bitmap trace.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:DENSity:THReshold <number>
CALCulate:MARKer:DENSity:THReshold?
```

Related Commands

CALCulate:MARKer:DENSity:EXCursion (on page 509)

Arguments

<number>::=<NR1> specifies the threshold density for detecting peaks.Range: 0 to 100%.

Examples

CALCULATE:MARKER:DENSITY:THRESHOLD 300 sets the threshold density to 300.

CALCulate:MARKer:DRAG:SEARch:STATe

Enables or disables peak searching when dragging a marker in a plot.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:DRAG:SEARch:STATe { OFF | ON | 0 | 1 }
CALCulate:MARKer:DRAG:SEARch:STATe?
```

Arguments

OFF or 0 disables peak searching in a plot.

ON or 1 enables peak searching in a plot.

Examples

CALCULATE:MARKER:DRAG:SEARCH:STATE OFF disables peak searching when dragging a marker in a plot.

CALCulate:MARKer:MODE

Sets or queries the marker mode.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:MODE { ABSolute | DELTa }
CALCulate:MARKer:MODE?
```

Arguments

`ABSolute` selects the absolute marker mode, in which the marker readout indicates the absolute value.

`DELTa` selects the delta marker mode, in which the marker readout indicates the relative value to the reference marker.

Examples

`CALCULATE:MARKER:MODEDELTa` selects the delta marker mode.

CALCulate:MARKer:NOISe:MODE

Sets or queries the view/hide status of the dBc/Hz Marker noise reading.

Group

Calculate commands

Syntax

```
CALCulate:MARKer:NOISe:MODE { 0 | 1 }
```

Arguments

`0` disables the dBc/Hz reading.

`1` enables the dBc/Hz reading.

Returns

`0` means the dBc/Hz reading is not available.

`1` means the dBc/Hz reading is not available.

Examples

`CALCULATE:MARKER:NOISE:MODE 0` will disable the dBc/Hz marker noise reading.

CALCulate:MARKer:PEAK:EXCursion

Sets or queries the minimum excursion level (how far a signal must be above the surrounding noise to be detected as a peak). The signal is considered to be a peak if it exceeds the minimum excursion level and the threshold level set by the CALCulate:MARKer:PEAK:THReshold command.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:PEAK:EXCursion <value>
CALCulate:MARKer:PEAK:EXCursion?
```

Arguments

`<value>::=<NRf>` specifies the excursion level. Range: 0 to 100 dB.

Examples

`CALCULATE:MARKER:PEAK:EXCURSION 10` sets the excursion level to 10 dB.

CALCulate:MARKer:PEAK:THReshold

Sets or queries the threshold level above which a signal is detected as a peak.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:PEAK:THReshold <value>
CALCulate:MARKer:PEAK:THReshold?
```

Arguments

`<value>::=<NRf>` specifies the threshold level for detecting peaks.Range: -170 to +130 dBm.

Examples

`CALCULATE:MARKER:PEAK:THRESHOLD -50` sets the threshold level to -50 dBm.

CALCulate:MCPower:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker in the MCPR measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement views: MCPR

Group

Calculate commands

Syntax

```
CALCulate:MCPower:MARKer<x>:DELTa:X?
```

Related Commands

CALCulate:MCPower:MARKer<x>:DELTa:Y? (on page 513)

Arguments

None

Returns

<NRf> Delta marker frequency for the selected marker.

Examples

CALCULATE:MCPOWER:MARKER1:DELTA:X? might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz.

CALCulate:MCPower:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the MCPR measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: MCPR

Group

Calculate commands

Syntax

CALCulate:MCPower:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:MCPower:MARKer<x>:DELTa:X? (on page 512)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCULATE:MCPOWER:MARKER1:DELTA:Y? might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:MCPower:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the MCPR measurement.

Conditions

Measurement views: MCPR

Group

Calculate commands

Syntax

CALCulate:MCPower:MARKer<x>:MAXimum

Arguments

None

Examples

CALCULATE:MCPOWER:MARKER1:MAXIMUM moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:MCPower:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the MCPR measurement.

Conditions

Measurement views: MCPR

Group

Calculate commands

Syntax

CALCulate:MCPower:MARKer<x>:PEAK:LEFT

Related Commands

CALCulate:MCPower:MARKer<x>:PEAK:RIGHt (on page 514)

Arguments

None

Examples

CALCULATE:MCPOWER:MARKER1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:MCPower:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the MCPR measurement.

Conditions

Measurement views: MCPR

Group

Calculate commands

Syntax

CALCulate:MCPower:MARKer<x>:PEAK:RIGHt

Related Commands

CALCulate:MCPower:MARKer<x>:PEAK:LEFT (on page 514)

Arguments

None

Examples

CALCULATE:MCPOWER:MARKER1:PEAK:RIGHT moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:MCPower:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the MCPR measurement.

Conditions

Measurement views: MCPR

Group

Calculate commands

Syntax

```
CALCulate:MCPower:MARKer<x>:X <value>
CALCulate:MCPower:MARKer<x>:X?
```

Related Commands

CALCulate:MCPower:MARKer<x>:Y? (on page 515)

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker.Range: Start to Stop frequency (left to right edge of the horizontal axis).Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

`CALCULATE:MCPOWER:MARKER1:X 800MHz` places Marker 1 (M1) at 800 MHz on the trace.

CALCulate:MCPower:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the MCPR measurement.

Conditions

Measurement views: MCPR

Group

Calculate commands

Syntax

```
CALCulate:MCPower:MARKer<x>:Y?
```

Related Commands

CALCulate:MCPower:MARKer<x>:X (on page 514)

Arguments

None

Returns

`<NRf>` Marker amplitude of the selected marker.

Examples

`CALCULATE:MCPOWER:MARKER1:Y?` might return -34.28, indicating Marker 1 (M1) is at -34.28 dBm.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:X? (Query only)

Returns the delta marker time for the selected marker in the Magnitude error versus Time measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:X?
```

Related Commands

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 516)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker in percent (%).

Examples

CALCulate:MERRor:MEASview2:MARKer1:DELTa:X? might return 3.84, indicating that the delta marker duration is 3.84.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker amplitude for the selected marker in the Magnitude error versus Time measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:Y?
```

Related Commands

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 515)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker in percent (%).

Examples

CALCulate:MERRor:MEASview2:MARKer1:DELTa:Y? might return 3.84, indicating that the delta marker amplitude is 3.84%.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Moves the selected marker to the highest peak on the trace in the Magnitude error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:MAXimum

Arguments

None

Examples

CALCulate:MERRor:MEASview2:MARKer1:MAXimum moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No query form)

Moves the selected marker to the next peak higher in amplitude on the Magnitude error versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 518)

Arguments

None

Examples

`CALCUlate:MERRor:MEASview2:MARKer1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker to the next peak to the left on the trace in the Magnitude error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 519)

Arguments

None

Examples

`CALCulate:MERRor:MEASview2:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No query form)

Moves the selected marker to the next peak lower in amplitude on the Magnitude error versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 517)

Arguments

None

Examples

CALCulate:MERRor:MEASview2:MARKer1:PEAK:LOWer moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker to the next peak to the right on the trace in the Magnitude error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 518)

Arguments

None

Examples

`CALCulate:MERRor:MEASview2:MARKer1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Magnitude error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:X?
```

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker. Range: (analysis offset) to [(analysis offset) + (analysis length)].

The unit can be changed by the `[SENSe]:DDEMod:TIMe:UNITs` command.

Examples

`CALCUlate:MERRor:MEASview2:MARKer1:X 1.5µs` places Marker 1 (M1) at 1.5 µs on the trace.

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:Y? (Query only)

Queries the marker amplitude of the selected marker in the Magnitude error versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:MERRor[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:MERRor[:MEASview<y>]:MARKer<x>:X (on page 520)

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker in percent (%).

Examples

CALCulate:MERRor:MEASview2:MARKer1:Y? might return 5.34, indicating Marker 1 (M1) is at 5.34%.

CALCulate:MARKer:MODE

Sets or queries the marker mode.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:MARKer:MODE { ABSolute | DELTa | POWer }
CALCulate:MARKer:MODE?
```

Arguments

ABSolute selects the absolute marker mode, in which the marker readout indicates the absolute value.

DELTa selects the delta marker mode, in which the marker readout indicates the relative value to the selected marker.

POWer selects the power marker mode, in which the marker readout indicates the power value of the selected marker.

Examples

CALCULATE:MARKER:MODE POWER selects the power marker mode.

CALCULATE:MARKER:MODE? might return POW, meaning the Power is the assigned mode for the marker readout.

CALCulate:NOISe:FIGure:MARKer<x>:DELTa:X? (Query Only)

Queries the frequency difference between MR (reference marker) and the selected marker.

Conditions

Measurement view: Noise Figure

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

```
CALCulate:NOISe:FIGure:MARKer<x>:DELTa:X?
```

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:Y? (on page 526)

Returns

<NRf> is the frequency difference value between MR and the selected marker.

Examples

CALCULATE:NOISE:FIGURE:MARKER1:DELTA:X? might return 0.0000,indicating the frequency difference between MR (reference marker) and the selected marker (M1) is 0.0000 dB.

CALCulate:NOISe:FIGure:MARKer<x>:DELTa:Y? (Query only)

Queries the power difference value between MR (reference marker) and the selected marker.

Conditions

Measurement view: Noise Figure

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

CALCulate:NOISe:FIGure:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:X? (on page 526)

Returns

<NRf> is the power difference value between MR and the selected marker.

Examples

CALCULATE:NOISE:FIGURE:MARKER1:DELTA:Y? might return18.7647705078, indicating the difference between MR (reference marker) and the selected marker (M1) is 18.76 dB.

CALCulate:NOISe:FIGure:MARKer<x>:MAXimum (No Query Form)

Places the selected marker at the maximum value on the peak of the trace.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

CALCulate:NOISe:FIGure:MARKer<x>:MAXimum

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer (on page 524)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt (on page 524)

Arguments

None

Returns

None

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer (No Query Form)

Places the selected marker at the next highest peak on the trace.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:MAXimum? (on page 528)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer (on page 524)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt (on page 524)

Arguments

None

Returns

None

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT (No Query Form)

Places the selected marker at the next peak on the trace to the left of the selected marker.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:MAXimum (on page 522)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer (on page 524)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt (on page 524)

Arguments

None

Returns

None

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer (No Query Form)

Places the selected marker at the next lowest peak on the trace.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:MAXimum (on page 522)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt (on page 524)

Arguments

None

Returns

None

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt (No Query Form)

This command places the specified marker on a specified trace. The query form returns the trace on which the marker resides.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:MAXimum (on page 522)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer (on page 524)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT (on page 523)

Arguments

None

Returns

None

CALCulate:NOISe:FIGure:MARKer<x>:TRACe

Sets or queries which trace the specified marker is attached to.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:FIGure:MARKer<x>:TRACe {TRACE1|TRACE2|TRACE3}
CALCulate:NOISe:FIGure:MARKer<x>:TRACe?
```

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:MAXimum (on page 522)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:HIGHer (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LOWer (on page 524)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:LEFT (on page 523)

CALCulate:NOISe:FIGure:MARKer<x>:PEAK:RIGHt (on page 524)

Arguments

`TRACE1` moves the specified marker to trace 1.

`TRACE2` moves the specified marker to trace 2.

`TRACE3` moves the specified marker to trace 3.

Returns

TRACE1 means the specified marker is on trace 1.

TRACE2 means the specified marker is on trace 2.

TRACE3 means the specified marker is on trace 3.

Examples

`CALCULATE:NOISE:FIGURE:MARKER1:TRACE?` might return TRACE2, indicating that M1 (marker 1) is on trace 2.

CALCulate:NOISe:FIGure:MARKer<x>:X? (Query Only)

Queries the frequency of the specified marker.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

`CALCulate:NOISe:FIGure:MARKer<x>:X?`

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:Y? (on page 526)

Returns

`<NR3>` = a floating point value with an exponent. This is the frequency of the specified marker

Examples

`CALCULATE:NOISE:FIGURE:MARKER1:X?` might return 608.0000000000E+6,indicating the frequency of M1 (marker 1) is 608 MHz.

CALCulate:NOISe:FIGure:MARKer<x>:Y? (Query Only)

Queries the vertical position of the specified marker.

Conditions

Measurement view: Noise Figure

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

`CALCulate:NOISe:FIGure:MARKer<x>:Y?`

Related Commands

CALCulate:NOISe:FIGure:MARKer<x>:X? (on page 526)

Returns

<NR2> = a floating point value without an exponent. This is the vertical position(dB) of the specified marker.

Examples

CALCULATE:NOISE:FIGURE:MARKER1:Y? might return 18.7647705078,indicating the value of M1 (marker 1) is 18.76 dB.

CALCulate:NOISe:GAIN:MARKer<x>:DELTa:X? (Query Only)

Query returns the frequency difference between MR (reference marker) and the selected marker.

Conditions

Measurement view: Gain

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

CALCulate:NOISe:GAIN:MARKer<x>:DELTa:X?

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:DELTa:Y? (on page 527)

Returns

<NR2> = a floating point value without an exponent. This is the frequency difference value between MR and the selected marker.

Examples

CALCULATE:NOISE:GAIN:MARKER1:DELTA:X? might return 100.0000, indicating the frequency difference between MR (reference marker) and the selected marker (M1) is 100 dB.

CALCulate:NOISe:GAIN:MARKer<x>:DELTa:Y? (Query Only)

Query returns the power difference value between MR (reference marker) and the selected marker.

Conditions

Measurement view: Gain

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

CALCulate:NOISe:GAIN:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:DELTa:X? (on page 527)

Returns

<NR2> = a floating point value without an exponent. This is the power difference value between MR and the selected marker.

Examples

CALCULATE:NOISE:GAIN:MARKER1:DELTA:Y? might return 18.7647705078, indicating the difference between MR (reference marker) and the selected marker(M1) is 18.76 dB.

CALCulate:NOISe:GAIN:MARKer<x>:MAXimum? (Query Only)

Places the selected marker at the maximum value on the peak of the trace.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

CALCulate:NOISe:GAIN:MARKer<x>:MAXimum?

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:HIGHer? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LEFT? (on page 529)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:RIGHt? (on page 530)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LOWer? (on page 529)

Arguments

None

Returns

None

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:HIGHer? (Query Only)

Places the selected marker at the next highest peak on the trace.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:HIGHer?

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:MAXimum? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LEFT? (on page 529)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:RIGHt? (on page 530)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LOWer? (on page 529)

Arguments

None

Returns

None

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LEFT? (Query Only)

Places the selected marker at the next peak on the trace to the left of the selected marker.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LEFT?
```

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:MAXimum? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:HIGHer? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:RIGHt? (on page 530)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LOWer? (on page 529)

Arguments

None

Returns

None

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LOWer? (Query Only)

Places the selected marker at the next lowest peak on the trace.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LOWer?
```

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:MAXimum? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:HIGHer? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LEFT? (on page 529)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:RIGHt? (on page 530)

Arguments

None

Returns

None

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:RIGHt? (Query Only)

Places the specified marker on a specified trace. The query form returns the trace on which the marker resides.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:GAIN:MARKer<x>:PEAK:RIGHt?
```

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:MAXimum? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:HIGHer? (on page 528)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LEFT? (on page 529)

CALCulate:NOISe:GAIN:MARKer<x>:PEAK:LOWer? (on page 529)

Arguments

None

Returns

None

CALCulate:NOISe:GAIN:MARKer<x>:TRACe

Sets or queries which trace the specified marker is attached to.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:GAIN:MARKer<x>:TRACe { TRACE1 | TRACE2 | TRACE3}
CALCulate:NOISe:GAIN:MARKer<x>:TRACe?
```

Arguments

`TRACE1` moves the specified marker to trace 1.

`TRACE2` moves the specified marker to trace 2.

`TRACE3` moves the specified marker to trace 3.

Returns

TRACE1 means the specified marker is on trace 1.

TRACE2 means the specified marker is on trace 2.

TRACE3 means the specified marker is on trace 3.

Examples

`CALCULATE:NOISE:GAIN:MARKER1:TRACE?` might return TRACE2, indicating that M1 (marker 1) is on trace 2.

CALCulate:NOISe:GAIN:MARKer<x>:X? (Query Only)

This command queries the frequency of the specified marker.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:GAIN:MARKer<x>:X?
```

Related Commands

CALCulate:NOISe:GAIN:MARKer<x>:Y? (on page 531)

Returns

`<NR3>`= a floating point value with an exponent. This is the frequency of the specified marker.

Examples

`CALCULATE:NOISE:GAIN:MARKER1:X?` might return `608.0000000000E+6`, indicating the frequency of M1 (marker 1) is 608 MHz.

CALCulate:NOISe:GAIN:MARKer<x>:Y? (Query Only)

Queries the vertical position (dB) of the specified marker.

Conditions

Measurement view: Gain

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

`CALCulate:NOISe:GAIN:MARKer<x>:Y?`

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:X? (on page 532)

Returns

`<NR2>` = a floating point value without an exponent. This is the vertical position(dB) of the specified marker.

Examples

`CALCULATE:NOISE:GAIN:MARKER1:Y?` might return `18.7647705078`, indicating the value of M1 (marker 1) is 18.76 dB.

CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:X? (Query Only)

eturns the frequency difference between MR (reference marker) and the selected marker.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

`CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:X?`

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:Y? (on page 532)

Returns

<NR2> = a floating point value without an exponent. This is the frequency difference value between MR and the selected marker.

Examples

`CALC:NOIS:TEMP:MARK1:DELT:X?` might return 100.0000, indicating the frequency difference between MR (reference marker) and the selected marker(M1) is 100 dB.

CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:Y? (Query Only)

Returns the temperature difference between MR (reference marker) and the selected marker.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

`CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:DELTa:X? (on page 532)

Returns

`<NR3>` = a floating point value with an exponent. This is the temperature difference value between MR and the selected marker.

Examples

`CALC:NOIS:TEMP:MARK1:DELT:Y?` might return 2.3663560181E+3,indicating the difference between MR (reference marker) and the selected marker(M1) is 2.36 kK.

CALCulate:NOISe:TEMPerature:MARKer<x>:MAXimum? (Query Only)

Places the selected marker at the maximum value on the peak of the trace.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

`CALCulate:NOISe:TEMPerature:MARKer<x>:MAXimum?`

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:HIGHer? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LEFT? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LOWer? (on page 535)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:RIGHt? (on page 535)

Arguments

None

Returns

None

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:HIGHer? (Query Only)

Places the selected marker at the highest peak on the trace.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:HIGHer?
```

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:MAXimum? (on page 533)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LEFT? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LOWer? (on page 535)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:RIGHt? (on page 535)

Arguments

None

Returns

None

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LEFT? (Query Only)

Places the selected marker at the next peak on the trace to the left of the selected marker.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LEFT?
```

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:MAXimum? (on page 533)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:HIGHer? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LOWer? (on page 535)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:RIGHt? (on page 535)

Arguments

None

Returns

None

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LOWer? (Query Only)

Places the selected marker at the next lowest peak on the trace.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LOWer?
```

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:MAXimum? (on page 533)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:HIGHer? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LEFT? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:RIGHt? (on page 535)

Arguments

None

Returns

None

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:RIGHt? (Query Only)

This command places the specified marker on a specified trace. The query form returns the trace on which the marker resides.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:RIGHt?
```

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:MAXimum? (on page 533)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:HIGHer? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LEFT? (on page 534)

CALCulate:NOISe:TEMPerature:MARKer<x>:PEAK:LOWer? (on page 535)

Arguments

None

Returns

None

CALCulate:NOISe:TEMPerature:MARKer<x>:TRACe

Sets or queries which trace the specified marker is attached to.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:TEMPerature:MARKer<x>:TRACe { TRACE1 | TRACE2| TRACE3 }
CALCulate:NOISe:TEMPerature:MARKer<x>:TRACe?
```

Arguments

`TRACE1` moves the specified marker to trace 1.

`TRACE2` moves the specified marker to trace 2.

`TRACE3` moves the specified marker to trace 3.

Returns

TRACE1 means the specified marker is on trace 1.

TRACE2 means the specified marker is on trace 2.

TRACE3 means the specified marker is on trace 3.

Examples

`CALC:NOIS:TEMP:MARK1:TRAC?` might return TRACE2, indicating that M1(marker 1) is on trace 2.

CALCulate:NOISe:TEMPerature:MARKer<x>:X? (Query Only)

Queries the frequency of the specified marker.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:TEMPerature:MARKer<x>:X?
```

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:Y? (on page 537)

Returns

<NR2> = a floating point value without an exponent. This is the frequency of the specified marker.

Examples

CALC:NOIS:TEMP:MARK1:X? might return 608.0000000000E+6, indicating the frequency of M1 (marker 1) is 608 MHz.

CALCulate:NOISe:TEMPerature:MARKer<x>:Y? (Query Only)

Queries the temperature (Kelvin) at the specified marker.

Conditions

Measurement view: Noise Temperature

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:TEMPerature:MARKer<x>:Y?
```

Related Commands

CALCulate:NOISe:TEMPerature:MARKer<x>:X? (on page 536)

Returns

<NR3> = a floating point value with an exponent. This is the temperature at the specified marker.

Examples

CALC:NOIS:TEMP:MARK1:Y? might return 1.4544410400E+3, indicating the value at M1 (marker 1) is 1.45 kK.

CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:X? (Query Only)

Queries the frequency difference between MR (reference marker) and the selected marker.

Conditions

Measurement view: Y Factor

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:X?
```

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:Y? (on page 538)

Returns

<NR2> = a floating point value without an exponent. This is the frequency difference value between MR and the selected marker.

Examples

CALC:NOIS:YFAC:MARK1:DELT:X? might return 100.0000, indicating the frequency difference between MR (reference marker) and the selected marker(M1) is 100 dB.

CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:Y? (Query Only)

Queries the power difference value between MR (reference marker) and the selected marker.

Conditions

Measurement view: Y Factor

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:Y?
```

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:DELTa:X? (on page 537)

Returns

<NR2> = a floating point value without an exponent. This is the power difference value between MR and the selected marker.

Examples

CALC:NOIS:YFAC:MARK1:DELT:Y? might return 18.7647705078, indicating the difference between MR (reference marker) and the selected marker (M1) is 18.76 dB.

CALCulate:NOISe:YFACtor:MARKer<x>:MAXimum (No Query Form)

Places the selected marker at the maximum value on the peak of the trace.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:MAXimum
```

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:HIGHer? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LEFT? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LOWer? (on page 540)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:RIGHt? (on page 541)

Arguments

None

Returns

None

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:HIGHer? (Query Only)

This command places the selected marker at the next highest peak on the trace.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:HIGHer?
```

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:MAXimum (on page 538)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LEFT? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LOWer? (on page 540)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:RIGHt? (on page 541)

Arguments

None

Returns

None

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LEFT? (Query Only)

This command places the selected marker at the next peak on the trace to the left of the selected marker.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LEFT?
```

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:MAXimum (on page 538)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:HIGHer? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LOWer? (on page 540)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:RIGHt? (on page 541)

Arguments

None

Returns

None

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LOWer? (Query Only)

Places the selected marker at the next lowest peak on the trace.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LOWer?
```

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:MAXimum (on page 538)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:HIGHer? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LEFT? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:RIGHt? (on page 541)

Arguments

None

Returns

None

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:RIGHt? (Query Only)

Places the specified marker on a specified trace. The query form returns the trace on which the marker resides.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:RIGHt?
```

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:MAXimum (on page 538)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:HIGHer? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LEFT? (on page 539)

CALCulate:NOISe:YFACtor:MARKer<x>:PEAK:LOWer? (on page 540)

Arguments

None

Returns

None

CALCulate:NOISe:YFACtor:MARKer<x>:TRACe

Sets or queries which trace the specified marker is attached to.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

```
CALCulate:NOISe:YFACtor:MARKer<x>:TRACe {TRACE1|TRACE2|TRACE3}
CALCulate:NOISe:YFACtor:MARKer<x>:TRACe?
```

Arguments

`TRACE1` moves the specified marker to trace 1.

`TRACE2` moves the specified marker to trace 2.

`TRACE3` moves the specified marker to trace 3.

Returns

TRACE1 means the specified marker is on trace 1.

TRACE2 means the specified marker is on trace 2.

TRACE3 means the specified marker is on trace 3.

Examples

`CALC:NOIS:YFAC:MARK1:TRAC?` might return TRACE2, indicating that M1(marker 1) is on trace 2.

CALCulate:NOISe:YFACtor:MARKer<x>:X? (Query Only)

Queries the frequency of the specified marker.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

`CALCulate:NOISe:YFACtor:MARKer<x>:X?`

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:Y? (on page 542)

Returns

<NR3> = a floating point value with an exponent. This is the frequency of the specified marker.

Examples

`CALC:NOIS:YFAC:MARK1:X?` might return 608.0000000000E+6, indicating the frequency of M1 (marker 1) is 608 MHz.

CALCulate:NOISe:YFACtor:MARKer<x>:Y? (Query Only)

This command queries the vertical position (dB) of the specified marker.

Conditions

Measurement view: Y Factor

The parameter <x> = 0 to 4

Group

Calculate commands

Syntax

`CALCulate:NOISe:YFACtor:MARKer<x>:Y?`

Related Commands

CALCulate:NOISe:YFACtor:MARKer<x>:X? (on page 542)

Returns

<NR2> = a floating point value without an exponent. This is the dB of the specified marker.

Examples

CALCULATE:NOISE:YFACTOR:MARKER1:Y? might return 18.7647705078,indicating the value of M1 (marker 1) is 18.76 dB.

CALCulate:OBWidth:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker in the Occupied Bandwidth measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

CALCulate:OBWidth:MARKer<x>:DELTa:X?

Related Commands

CALCulate:OBWidth:MARKer<x>:DELTa:Y? (on page 543)

Arguments

None

Returns

<NRf> Delta marker frequency for the selected marker.

Examples

CALCULATE:OBWIDTH:MARKER1:DELTA:X? might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz.

CALCulate:OBWidth:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker in the Occupied Bandwidth measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

CALCulate:OBWidth:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:OBWidth:MARKer<x>:DELTa:X? (on page 543)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCULATE:OBWIDTH:MARKER1:DELTA:Y? might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:OBWidth:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Occupied Bandwidth measurement.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

CALCulate:OBWidth:MARKer<x>:MAXimum

Arguments

None

Examples

CALCULATE:OBWIDTH:MARKER1:MAXIMUM moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:OBWidth:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the Occupied Bandwidth trace.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

CALCulate:OBWidth:MARKer<x>:PEAK:HIGHer

Related Commands

CALCulate:OBWidth:MARKer<x>:PEAK:LOWer (on page 545)

Arguments

None

Examples

CALCULATE:OBWIDTH:MARKER1:PEAK:HIGHER moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:OBWidth:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Occupied Bandwidth measurement.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:OBWidth:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:OBWidth:MARKer<x>:PEAK:RIGHt (on page 545)

Arguments

None

Examples

`CALCULATE:OBWIDTH:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:OBWidth:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the Occupied Bandwidth trace.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:OBWidth:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:OBWidth:MARKer<x>:PEAK:HIGHer (on page 544)

Arguments

None

Examples

`CALCULATE:OBWIDTH:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:OBWidth:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Occupied Bandwidth measurement.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:OBWidth:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:OBWidth:MARKer<x>:PEAK:LEFT (on page 545)

Arguments

None

Examples

`CALCULATE:OBWIDTH:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:OBWidth:MARKer<x>[:SET]:CENTer (No Query Form)

Sets the center frequency to the value at the marker position in the Occupied Bandwidth measurement.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

CALCulate:OBWidth:MARKer<x>[:SET]:CENTer (on page 546)

Arguments

None

Examples

`CALCULATE:OBWIDTH:MARKER1:SET:CENTER` sets the center frequency to the value at the Marker 1 position.

CALCulate:OBWidth:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Occupied Bandwidth measurement.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

```
CALCulate:OBWidth:MARKer<x>:X <value>
CALCulate:OBWidth:MARKer<x>:X?
```

Related Commands

CALCulate:OBWidth:MARKer<x>:Y? (on page 547)

Arguments

<value>::=<NRf> specifies the horizontal position of the marker.Range: Start to Stop frequency (left to right edge of the horizontal axis).Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

CALCULATE:OBWIDTH:MARKER1:X 800MHz places Marker 1 (M1) at 800 MHz on the trace.

CALCulate:OBWidth:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the Occupied Bandwidth measurement.

Conditions

Measurement views: Occupied Bandwidth

Group

Calculate commands

Syntax

CALCulate:OBWidth:MARKer<x>:Y?

Related Commands

CALCulate:OBWidth:MARKer<x>:X (on page 546)

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker.

Examples

CALCULATE:OBWIDTH:MARKER1:Y? might return -34.28 indicating Marker 1(M1) is at -34.28 dBm.

CALCulate:OFDM:CONSte:MARKer<x>:FREQuency

Sets or queries the frequency position of the selected marker in the OFDM Constellation view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

CALCulate:OFDM:CONSte:MARKer<x>:FREQuency <value>
CALCulate:OFDM:CONSte:MARKer<x>:FREQuency?

Arguments

<value>::=<NRf> specifies the frequency position of the marker. Range: Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Returns

<NRf> The value type depends on where the marker is placed.

Examples

CALCulate:OFDM:CONSte:MARKer1:FREQuency? might return 800 MHz,indicating that Marker 1 M1 is positioned at the 800 MHz position in the OFDM Constellation view.

CALCulate:OFDM:CONSte:MARKer<x>:MAGNitude? (Query Only)

Queries the marker magnitude of the selected marker in the OFDM Constellation view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

CALCulate:OFDM:CONSte:MARKer<x>:MAGNitude?

Arguments

None

Returns

<NRf> The magnitude for the selected marker in dB.

Examples

CALCulate:OFDM:CONSte:MARKer1:MAGNitude might return 35 indicating readout of Marker 1 (M1) is 35 dB.

CALCulate:OFDM:CONSte:MARKer<x>:PHASe? (Query Only)

Queries the phase readout of the selected marker in the OFDM Constellation measurement view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

CALCulate:OFDM:CONSte:MARKer<x>:PHASe?

Arguments

None

Returns

<NRf> The phase readout for the selected marker.

Examples

`CALCulate:OFDM:CONSte:MARKer1:PHASe?` might return 35.74, indicating the phase readout of Marker 1 (M1) is 35.74°.

CALCulate:OFDM:CONSte:MARKer<x>:TIME

Sets or queries the X position of the selected marker in the OFDM Constellation measurement view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

```
CALCulate:OFDM:CONSte:MARKer<x>:TIME <value>
CALCulate:OFDM:CONSte:MARKer<x>:TIME?
```

Arguments

`<value::=NRf>` specifies the marker time.

Examples

`CALCulate:OFDM:CONSte:MARKer1:TIME -234.5us` places Marker 1 (M1) at the –234.5 µs on the trace.

CALCulate:OFDM:CONSte:MARKer<x>:TYPE? (Query Only)

Queries the data type of the selected marker in OFDM Constellation view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

```
CALCulate:OFDM:CONSte:MARKer<x>:TYPE?
```

Arguments

None

Returns

1.000 if the marker type is a data marker.

0.000 if the marker type is a pilot marker.

Examples

`CALCulate:OFDM:CONSte:MARKer1:TYPE?` might return 1.000 indicating Marker 1 (M1) is a data marker.

CALCulate:OFDM:CONSte:MARKer<x>:VALue? (Query Only)

Queries the value of the specified marker in OFDM Constellation view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

`CALCulate:OFDM:CONSte:MARKer<x>:VALue?`

Arguments

None

Returns

`<NRf>` The value readout for the selected marker.

Examples

`CALCulate:OFDM:CONSte:MARKer2:VALue?` might return 2.00, indicating the value readout of Marker 2 (M2) is 2.

CALCulate:OFDM:CRESponse:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

`CALCulate:OFDM:CRESponse:MARKer<x>:DELTa:X?`

Arguments

None

Returns

`<NRf>` Delta Marker frequency for the selected marker.

Examples

`CALCulate:OFDM:CRESponse:MARKer2:DELTa:X` might return 1.28E+6 indicating that the delta marker frequency for Marker 2 (M2) is 1.28 MHz.

CALCulate:OFDM:CRESponse:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker frequency for the selected marker in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

`CALCulate:OFDM:CRESponse:MARKer<x>:DELTa:Y?`

Arguments

None

Returns

`<NRf>` Delta Marker frequency for the selected marker.

Examples

`CALCulate:OFDM:CRESponse:MARKer2:DELTa:Y` might return 1.28E+6 indicating that the delta marker frequency for Marker 2 (M2) is 1.28 MHz.

CALCulate:OFDM:CRESponse:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

`CALCulate:OFDM:CRESponse:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCulate:OFDM:CRESponse:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak in the OFDM Channel response view.

CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

`CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:HIGHer`

Arguments

None

Examples

`CALCulate:OFDM:CRESponse:MARKer1:PEAK:HIGHer` moves Marker 1(M1) to the next peak higher in amplitude in the OFDM Channel response view.

CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Measurement views: OFDM

Calculate commands

Syntax

`CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:LEFT`

Arguments

None

Examples

`CALCulate:OFDM:CRESponse:MARKer1:PEAK:LEFT` moves Marker1 (M1) to the next peak to the left in the OFDM Channel response view.

CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

`CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:LOWer`

Arguments

None

Examples

`CALCulate:OFDM:CRESponse:MARKer2:PEAK:LOWer` moves Marker 2 (M2) to the next peak lower in amplitude in the OFDM Channel response view.

CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

```
CALCulate:OFDM:CRESponse:MARKer<x>:PEAK:RIGHt
```

Arguments

None

Examples

`CALCulate:OFDM:CRESponse:MARKer1:PEAK:RIGHt` moves Marker1 (M1) to the next peak to the right in the OFDM Channel response view.

CALCulate:OFDM:CRESponse:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the OFDM

Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

```
CALCulate:OFDM:CRESponse:MARKer<x>:X <value>
CALCulate:OFDM:CRESponse:MARKer<x>:X?
```

Arguments

`<value::=<NRf>` specifies the horizontal position of the marker. Range: Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

`CALCulate:OFDM:CRESponse:MARKer1:X 800MHZ` places Marker 1 (M1) at 800 MHz on the trace.

CALCulate:OFDM:CRESponse:MARKer<x>:Y? (Query Only)

Returns the amplitude of the selected marker in the OFDM Channel response view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

`CALCulate:OFDM:CRESponse:MARKer<x>:Y?`

Arguments

None

Returns

`<NRf>` Amplitude of the selected marker in dB.

Examples

`CALCulate:OFDM:CRESponse:MARKer1:Y` might return 33.393856E–3 indicating the amplitude of Marker 1 (M1) is 0.033 dB.

CALCulate:OFDM:FLATness:MARKer<x>:MAXimum (No Query Form)

Positions the specified marker at the maximum point on the trace in the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Calculate commands

Syntax

`CALCulate:OFDM:FLATness:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALC:OFDM:FLAT:MARK2:MAX` positions the Marker 2 (M2) at the maximum point on the trace.

CALCulate:OFDM:FLATness:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the specified marker to the next peak higher in amplitude on the trace on the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Calculate commands

Syntax

CALCulate:OFDM:FLATness:MARKer<x>:PEAK:HIGHer

Arguments

None

Examples

CALC:OFDM:FLAT:MARK2:PEAK:HIGHer moves Marker 2 (M2) to the next peak higher in amplitude on the trace.

CALCulate:OFDM:FLATness:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the specified marker to the next peak to the left on the trace in the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Calculate commands

Syntax

CALCulate:OFDM:FLATness:MARKer<x>:PEAK:LEFT

Arguments

None

Examples

CALC:OFDM:FLAT:MARK2:PEAK:LEFT moves Marker 2 (M2) to the next peak to the left on the trace.

CALCulate:OFDM:FLATness:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the marker to the next peak lower in amplitude on the trace on the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Calculate commands

Syntax

CALCulate:OFDM:FLATness:MARKer<x>:PEAK:LOWer

Arguments

None

Examples

CALC:OFDM:FLAT:MARK2:PEAK:LOW moves Marker 2 (M2) to the next peak lower on the trace.

CALCulate:OFDM:FLATness:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the marker to the next peak to the right on the trace on the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Calculate commands

Syntax

```
CALCulate:OFDM:FLATness:MARKer<x>:PEAK:RIGHt
```

Arguments

None

Examples

`CALC:OFDM:FLAT:MARK2:PEAK:RIGHT` moves Marker 2 (M2) to the next peak to the next peak on the right on the trace.

CALCulate:OFDM:FLATness:MARKer<x>:X

Sets or queries the horizontal value at the selected marker position on the points trace in the OFDM Spectral Flatness display. The units are in Frequency or Subcarrier.

To set the units, use the command `[SENSe]:OFDM:UNIT:FREQuency`.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Calculate commands

Syntax

```
CALCulate:OFDM:FLATness:MARKer<x>:X <NRf>
CALCulate:OFDM:FLATness:MARKer<x>:X?
```

Arguments

Floating point number that specifies the horizontal position of the marker. Range:Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, “Data out of range”).

Examples

`CALC:OFDM:FLAT:MARK3:X 22` places Marker 3 at 22 Subcarrier on the trace(assuming the units have been set to Subcarrier).

CALCulate:OFDM:FLATness:MARKer<x>:Y? (Query Only)

Returns the value of the amplitude (vertical position) at the selected marker position on the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Calculate commands

Syntax

```
CALCulate:OFDM:FLATness:MARKer<x>:Y?
```

Returns

Floating point number that indicates the amplitude at the selected marker position in dB.

Examples

`CALC:OFDM:FLAT:MARK1:Y?` might return 33.393856E-3 indicating the amplitude at Marker 1 is 0.033 dB.

CALCulate:OFDM:TABLe:MARKer<x>:FREQuency

Sets or queries the frequency position of the selected marker in the OFDM Symbol table view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

```
CALCulate:OFDM:TABLe:MARKer<x>:FREQuency <value>
CALCulate:OFDM:TABLe:MARKer<x>:FREQuency?
```

Arguments

`<value>::=<NRf>` specifies the marker frequency.

Examples

`CALCulate:OFDM:TABLe:MARKer1:FREQuency 800MHZ` places Marker 1(M1) at 800 MHz in the symbol table.

CALCulate:OFDM:TABLe:MARKer<x>:TIMe

Sets or queries the marker time in the OFDM Symbol table view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

```
CALCulate:OFDM:TABLe:MARKer<x>:TIMe <value>
CALCulate:OFDM:TABLe:MARKer<x>:TIMe?
```

Arguments

`<value>::=<NRf>` specifies the marker time.

Examples

`CALCulate:OFDM:TABLe:MARKer1:TIMe -234.5us` places Marker 1 (M1) at –234.5 µs in the symbol table.

CALCulate:OFDM:TABLe:MARKer<x>:VALue? (Query Only)

Queries the value readout of the selected marker in the OFDM Symbol table view.

Conditions

Measurement views: OFDM

Group

Calculate commands

Syntax

```
CALCulate:OFDM:TABLe:MARKer<x>:VALue?
```

Arguments

None

Returns

`<NRf>` The value readout of the selected marker.

Examples

`CALCulate:OFDM:TABLe:MARKer2:VALue?` might return 2.00 indicating the value readout of Marker 2 (M2) is 2.

CALCulate:P25:CONSte:MARKer<x>:DELTa:X[:TIME]? (Query Only)

Returns the delta marker time for the selected marker on the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

```
CALCulate:P25:CONSte:MARKer<x>:DELTa:X[:TIME]?
```

Returns

`<NR2>` = a floating point value without an exponent. This is the time for the selected Delta marker.

NOTE: Use the `[SENSe]:P25:TIMe:UNITs` command to select the time unit: symbols (default) or seconds.

Examples

`CALCulate:P25:CONSte:MARKer1:DELTa:X:TIME?` might return 62.75,indicating that the Delta marker time is 62.75 symbols.

CALCulate:P25:CONSte:MARKer<x>:FDEViation? (Query Only)

Queries the frequency deviation of the selected marker in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

The parameter <x> =0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

`CALCulate:P25:CONSte:MARKer<x>:FDEViation?`

Returns

<NR2> = a floating point value without an exponent. This is the frequency deviation readout for the selected marker.

Examples

`CALC:P25:CONS:MARr1:FDEV?` might return 102.82380000E+3, indicating the frequency deviation readout of Marker 1 (M1) is 102.824 kHz.

CALCulate:P25:CONSte:MARKer<x>:MAGNitude? (Query Only)

Queries the frequency deviation (for Freq Dev trace types) or magnitude (for IQ trace types) of the selected marker in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

Group

Calculate commands

Syntax

`CALCulate:P25:CONSte:MARKer<x>:MAGNitude?`

Returns

<NRf> is the frequency deviation or magnitude of the selected marker.

Examples

`CALC:P25:CONS:MARK1:MAGN?` might return 1.6257750459E+3 if the trace type is Freq Dev, indicating that Marker 1 (M1) has a frequency deviation of 1.626 kHz.

`CALC:P25:CONS:MARK1:MAGN?` might return 1.0048475788 if the trace type is IQ, indicating that Marker1 (M1) has a magnitude of 1.005.

CALCulate:P25:CONSte:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

```
CALCulate:P25:CONSte:MARKer<x>:MAXimum
```

Related Commands

CALCulate:P25:CONSte:MARKer<x>:PEAK:LEFT (on page 560)

CALCulate:P25:CONSte:MARKer<x>:PEAK:RIGHt (on page 560)

Examples

`CALC:P25:CONS:MARK1:MAX` positions Marker 1 (M1) at the symbol in the center of the time record.

CALCulate:P25:CONSte:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

Group

Calculate commands

Syntax

```
CALCulate:P25:CONSte:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:P25:CONSte:MARKer<x>:PEAK:RIGHt (on page 560)

CALCulate:P25:CONSte:MARKer<x>:MAXimum (on page 560)

Examples

`CALC:P25:CONS:MARK1:PEAK:LEFT` moves Marker 1 (M1) in the time domain to the next lower symbol number.

CALCulate:P25:CONSte:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

`CALCulate:P25:CONSte:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:P25:CONSte:MARKer<x>:MAXimum (on page 560)

CALCulate:P25:CONSte:MARKer<x>:PEAK:LEFT (on page 560)

Examples

`CALC:P25:CONS:MARK1:PEAK:RIGH` moves the Marker 1 (M1) in the time domain to the next higher symbol number to the right.

CALCulate:P25:CONSte:MARKer<x>:PHASe? (Query Only)

Queries the phase of the selected marker in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

IQ trace type required.

Group

Calculate commands

Syntax

`CALCulate:P25:CONSte:MARKer<x>:PHASe?`

Returns

<NR2> = a floating point value without an exponent. This is the phase value for the selected marker.

Examples

`CALC:P25:CONS:MARK1:PHAS?` might return 41.4721108251, indicating the phase of Marker 1 (M1) is 41.5°.

CALCulate:P25:CONSte:MARKer<x>:SYMBol? (Query Only)

Queries the readout symbol of the selected marker in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

The parameter <x> = 0,1,2,3,4 is the marker.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

`CALCulate:P25:CONSte:MARKer<x>:SYMBol?`

Returns

<NR2> = a floating point value is the readout symbol for the selected marker.

Examples

`CALCulate:P25:CONSte:MARKer1:SYMBol?` might return 62.0000000000,indicating the readout symbol of Marker 1 (M1) is 62.

CALCulate:P25:CONSte:MARKer<x>:Trace

Places the selected marker on the Demodulated I and Q versus Time trace. The query returns the name of the trace on which the marker resides.

Conditions

Measurement view: P25 Constellation

The parameter <x>= 0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

```
CALCulate:P25:CONSte:MARKer<x>:Trace {Trace1 | Trace2}
CALCulate:P25:CONSte:MARKer<x>:Trace?
```

Arguments

`Trace 1`: sets the I trace marker on.

`Trace 2`: sets the Q trace marker on.

Returns

Trace 1 = I trace

Trace 2 = Q trace

Examples

`CALC:P25:CONS:MARK1:TRAC` Trace1 places Marker 1 (M1) on the I trace.

CALCulate:P25:CONSte:MARKer<x>:VALue? (Query Only)

Queries the readout value of the specified marker in P25 Constellation display.

Conditions

Measurement view: P25 Constellation

Group

Calculate commands

Syntax

```
CALCulate:P25:CONSte:MARKer<x>:VALue?
```

Returns

<NRf> is the readout value for the selected marker.

Examples

CALC:P25:CONS:MARK2:VAL? might return 2.00, indicating the readout value of Marker 2 (M2) is 2.

CALCulate:P25:CONSte:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

Group

Calculate commands

Syntax

```
CALCulate:P25:CONSte:MARKer<x>:X <value>
CALCulate:P25:CONSte:MARKer<x>:X?
```

Arguments

<value>::=<NRf> specifies the time position of the marker. Range is (analysis offset) to [(analysis offset) + (analysis length)]

Returns

Offset set value(-500Hz t0 +500Hz).

Examples

CALCulate:P25:PVTime:MARKer1:X 800MHz places Marker 1 (M1) at 800 MHz on the trace. When used as a query, the return will show the horizontal position of the trace. For example, 800 MHz.

CALCulate:P25:EDIagram:MARKer<x>:DELTa:X[:TIME]? (Query Only)

Returns the delta marker time for the selected marker on the P25 Eye Diagram trace.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>= 1 to 4. MARKer0 (reference marker) is invalid.

The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

```
CALCulate:P25:EDIagram:MARKer<x>:DELTa:X[:TIME]?
```

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:DELTa:Y? (on page 564)

Returns

<NRf> is the Delta marker time for the selected marker. Use the [SENSe]:P25:TIMe:UNITs command to select the time unit: symbols (default) or seconds.

Examples

CALCulate:P25:EDIagram:MARKer1:DELTa:X:TIME? might return 62.750000000, Indicating that the delta marker time is 62.75 symbols.

CALCulate:P25:EDIagram:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the P25 Eye Diagram trace.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>= 1 to 4.

The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

CALCulate:P25:EDIagram:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:DELTa:X[:TIME]? (Query Only) (on page 563)

Returns

<NRf> is the Delta marker amplitude for the selected marker.

Examples

CALCulate:P25:EDIagram:MARKer1:DELTa:Y? might return -1.04300000,indicating that the delta marker amplitude is -1.043.

CALCulate:P25:EDIagram:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the P25 Eye Diagram trace.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

CALCulate:P25:EDIagram:MARKer<x>:MAXimum

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:PEAK:HIGHer (on page 565)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LEFT (on page 566)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LOWer (on page 566)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:RIGHt (on page 567)

Arguments

None

Returns

None

Examples

`CALCulate:P25:EDIagram:MARKer1:MAXImum` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:P25:EDIagram:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the P25 Eye Diagram trace.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

`CALCulate:P25:EDIagram:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:MAXimum (on page 564)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LEFT (on page 566)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LOWer (on page 566)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:RIGHt (on page 567)

Arguments

None

Returns

None

Examples

`CALCulate:P25:EDIagram:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the P25 Eye Diagram trace.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

```
CALCulate:P25:EDIagram:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:MAXimum (on page 564)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:HIGHer (on page 565)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LOWer (on page 566)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:RIGHt (on page 567)

Arguments

None

Returns

None

Examples

`CALCulate:P25:EDIagram:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the P25 Eye Diagram trace.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

```
CALCulate:P25:EDIagram:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:MAXimum (on page 564)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:HIGHer (on page 565)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LEFT (on page 566)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:RIGHt (on page 567)

Arguments

None

Returns

None

Examples

`CALCulate:P25:EDIagram:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:P25:EDIagram:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the P25 Eye Diagram trace.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

`CALCulate:P25:EDIagram:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:MAXimum (on page 564)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:HIGHer (on page 565)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LEFT (on page 566)

CALCulate:P25:EDIagram:MARKer<x>:PEAK:LOWer (on page 566)

Arguments

None

Returns

None

Examples

`CALCulate:P25:EDIagram:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:P25:EDIagram:MARKer<x>:TRACe

Sets the selected marker on the I or Q trace, or queries the trace that the specified marker is on, in the P25 Eye Diagram display.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

```
CALCulate:P25:EDIagram:MARKer<x>:TRACe { TRACe1 | TRACe2 }
CALCulate:P25:EDIagram:MARKer<x>:TRACe?
```

Arguments

`TRACe1` places the specified marker on the I trace.

`TRACe2` places the specified marker on the Q trace.

Returns

TRACe1 means the specified marker is on the I trace.

TRACe2 means the specified marker is on the Q trace.

Examples

`CALCulate:P25:EDIagram:MARKer1:TRACe` TRACe1 places Marker 1 (M1) on the I trace in the P25 Eye Diagram display.

CALCulate:P25:EDIagram:MARKer<x>:X

Sets or queries the horizontal position (time) of the selected marker in the P25 Eye Diagram display.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Group

Calculate commands

Syntax

```
CALCulate:P25:EDIagram:MARKer<x>:X <NRf>
CALCulate:P25:EDIagram:MARKer<x>:X?
```

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:Y (on page 569)

Arguments

`<NRf>` specifies the horizontal position (time) of the marker.

NOTE: Use the `[SENSe]:P25:TIMe:UNITs` command to select the time unit:Symbols (default) or seconds.

Returns

<NRf> is the horizontal position of the selected marker.

Examples

CALC:P25:EDI:MARK1:X 38.5 places Marker 1 (M1) at 38.5 symbols on the trace.

CALCulate:P25:EDIagram:MARKer<x>:Y

Sets or queries the vertical position of the selected marker in the P25 Eye Diagram display.

Conditions

Measurement view: P25 Eye Diagram

The parameter <x>=0 to 4.

The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

```
CALCulate:P25:EDIagram:MARKer<x>:Y <value>
CALCulate:P25:EDIagram:MARKer<x>:Y?
```

Related Commands

CALCulate:P25:EDIagram:MARKer<x>:X (on page 568)

Arguments

<value>:: =<NRf> specifies the vertical position of the marker.

Returns

<NRf> is the vertical position of the selected marker.

Examples

CALC:P25:EDI:MARK1:Y? might return 571.8E-3, indicating Marker 1 (M1) is at 0.5718.

CALCulate:P25:PVTime:MARKer<x>:DELTa:X[:TIME]? (Query Only)

Returns the delta marker time (seconds) for the selected marker on the Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

The parameter <x> = 1,2,3,4 is the marker.

The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

```
CALCulate:P25:PVTime:MARKer<x>:DELTa:X[:TIME]?
```

Related Commands

CALCulate:P25:PVTime:MARKer<x>:DELTa:Y[:TIME]? (on page 570)

SENSe:P25:TIMe:UNITs (on page 2298)

Returns

<NRf> is the Delta marker time for the selected marker.

NOTE: Use the SENSe:P25:TIME:UNITs command to select the time unit symbols (default) or seconds.

Examples

CALC:P25:PVT:MARK1:DELT:X? might return -3.99372800000E-3, indicating that the delta marker 1 (M1) time is -3.937 ms.

CALCulate:P25:PVTime:MARKer<x>:DELTa:Y[:TIME]? (Query Only)

Returns the Delta marker amplitude (dB) for the selected marker on the Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

The parameter <x> = 1,2,3,4 is the marker.

The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

CALCulate:P25:PVTime:MARKer<x>:DELTa:Y[:TIME]?

Related Commands

CALCulate:P25:PVTime:MARKer<x>:DELTa:X[:TIME]? (on page 569)

Returns

<NR3> is a floating point value with an exponent. This is the Delta marker amplitude.

Examples

CALC:P25:PVT:MARK1:DELT:Y? might return 552.6123046875E-3, indicating that the Delta marker 1 (M1) amplitude is 0.55 dB.

CALCulate:P25:PVTime:MARKer<x>:Maximum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Calculate commands

Syntax

```
CALCulate:P25:PVTime:MARKer<x>:Maximum
```

Related Commands

CALCulate:P25:PVTime:MARKer<x>:PEAK:LOWer (on page 572)

CALCulate:P25:PVTime:MARKer<x>:PEAK:HIGHer (on page 571)

CALCulate:P25:PVTime:MARKer<x>:PEAK:LEFT (on page 572)

CALCulate:P25:PVTime:MARKer<x>:PEAK:RIGHt (on page 573)

Arguments

None

Returns

None

Examples

`CALC:P25:PVT:MARK1:PEAK:MAX` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:P25:PVTime:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the trace in the Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Calculate commands

Syntax

```
CALCulate:P25:PVTime:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:P25:PVTime:MARKer<x>:Maximum (on page 570)

CALCulate:P25:PVTime:MARKer<x>:PEAK:LOWer (on page 572)

CALCulate:P25:PVTime:MARKer<x>:PEAK:LEFT (on page 572)

CALCulate:P25:PVTime:MARKer<x>:PEAK:RIGHt (on page 573)

Arguments

None

Returns

None

Examples

`CALC:P25:PVT:MARK1:PEAK:HIGH` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:P25:PVTime:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Calculate commands

Syntax

```
CALCulate:P25:PVTime:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:P25:PVTime:MARKer<x>:PEAK:LOWer (on page 572)

CALCulate:P25:PVTime:MARKer<x>:Maximum (on page 570)

CALCulate:P25:PVTime:MARKer<x>:PEAK:HIGHer (on page 571)

CALCulate:P25:PVTime:MARKer<x>:PEAK:RIGHt (on page 573)

Arguments

None

Returns

None

Examples

`CALC:P25:PVT:MARK1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:P25:PVTime:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the trace in the Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Calculate commands

Syntax

```
CALCulate:P25:PVTime:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:P25:PVTime:MARKer<x>:PEAK:HIGHer (on page 571)

CALCulate:P25:PVTime:MARKer<x>:Maximum (on page 570)

CALCulate:P25:PVTime:MARKer<x>:PEAK:LEFT (on page 572)

CALCulate:P25:PVTime:MARKer<x>:PEAK:RIGHt (on page 573)

Arguments

None

Returns

None

Examples

`CALC:P25:PVT:MARK1:PEAK:LOW` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:P25:PVTime:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Power vs. Time display.

Conditions

Measurement view: Power vs. Time

Group

Calculate commands

Syntax

`CALCulate:P25:PVTime:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:P25:PVTime:MARKer<x>:PEAK:LOWer (on page 572)

CALCulate:P25:PVTime:MARKer<x>:PEAK:HIGHer (on page 571)

CALCulate:P25:PVTime:MARKer<x>:Maximum (on page 570)

CALCulate:P25:PVTime:MARKer<x>:PEAK:LEFT (on page 572)

Arguments

None

Returns

None

Examples

`CALC:P25:PVT:MARK1:PEAK:RIGH` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:P25:PVTime:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Power vs.Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Calculate commands

Syntax

```
CALCulate:P25:PVTime:MARKer<x>:X <value>
CALCulate:P25:PVTime:MARKer<x>:X?
```

Related Commands

CALCulate:P25:PVTime:MARKer<x>:Y (on page 574)

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker. Range is Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Returns

`<value>::=<NRf>` specifies the horizontal position of the marker.

Examples

`CALC:P25:PVT:MARK1:X 800MHz` places Marker 1 (M1) at 800 MHz on the trace. When used as a query, the return will show the horizontal position of the trace. For example, 800 MHz.

CALCulate:P25:PVTime:MARKer<x>:Y

Sets or queries the vertical position of the selected marker in the P25 Power vs.Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Calculate commands

Syntax

```
CALCulate:P25:PVTime:MARKer<x>:Y <value>
CALCulate:P25:PVTime:MARKer<x>:Y?
```

Related Commands

CALCulate:P25:PVTime:MARKer<x>:X (on page 573)

Arguments

`<value>::=<NRf>` specifies the vertical position of the marker

Returns

`<NR2>` = floating point value without an exponent.

Examples

`CALC:P25:PVT:MARK1:Y?` might return -67.1001052856, indicating that the horizontal position of Marker 1 (M1) is -67.10 dBm.

`CALC:P25:PVT:MARK1:Y -75.66dBm` places Marker 1 (M1) at -75.66 on the trace.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:DELTa:X? (Query only)

Returns the delta marker time for the selected marker in the Phase error versus Time measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:DELTa:X?
```

Related Commands

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 575)

Arguments

None

Returns

`<NRf>` Delta marker time for the selected marker in percent (%).

Examples

`CALCulate:PERRor:MEASview2:MARKer1:DELTa:X?` might return 3.84, indicating that the delta marker duration is 3.84 for measurement view 2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker phase for the selected marker in the Phase error versus Time measurement.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:DELTa:Y?
```

Related Commands

CALCulate:PERRor [:MEASview<y>]:MARKer<x>:DELTa:X? (on page 574)

Arguments

None

Returns

<NRf> Delta marker phase for the selected marker in percent (%).

Examples

CALCulate:PERRor:MEASview2:MARKer1:DELTa:Y? might return 3.84, indicating that the delta marker amplitude is 3.84% for measurement view2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Moves the selected marker to the highest peak on the trace in the Phase error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:MAXimum

Arguments

None

Examples

CALCulate:PERRor:MEASview2:MARKer1:MAXimum moves Marker 1 (M1) to the highest peak on the trace for measurement view2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No query form)

Moves the selected marker to the next peak higher in amplitude on the Phase error versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

`CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:PERRor[:MEASview<y>] :MARKer<x>:PEAK:LOWer (on page 577)

Arguments

None

Examples

`CALCulate:PERRor:MEASview2:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace for measurement view 2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker to the next peak to the left on the trace in the Phase error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

`CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 578)

Arguments

None

Examples

`CALCulate:PERRor:MEASview2:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace for measurement view 2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No query form)

Moves the selected marker to the next peak lower in amplitude on the Phase error versus Time trace.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

`CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 576)

Arguments

None

Examples

`CALCulate:PERRor:MEASview2:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace for measurement view 2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker to the next peak to the right on the trace in the Phase error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

`CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 577)

Arguments

None

Examples

`CALCulate:PERRor:MEASview2:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace for measurement view 2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Phase error versus Time measurement.

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:X?
```

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker. Range: (analysis offset) to [(analysis offset) + (analysis length)]. The unit can be changed by `[SENSe]:DDEMod:TIMe:UNITs` command.

Examples

`CALCulate:PERRor:MEASview2:MARKer1:X 1.5 µs` places Marker 1 (M1) at 1.5 µs on the trace for measurement view 2.

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:Y? (Query only)

Queries the marker amplitude of the selected marker in the Phase error versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Calculate commands

Syntax

```
CALCulate:PERRor[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:PERRor[:MEASview<y>]:MARKer<x>:X (on page 579)

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker in percent (%).

Examples

CALCulate:PERRor:MEASview2:MARKer1:Y? might return 5.34, indicating Marker 1 (M1) is at 5.34% for measurement view2.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker time for the selected marker in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:X?

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 580)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCULATE:PHVTIME:MEASview1:MARKER1:DELTA:X? might return 38.0E-9, indicating that the delta marker time is 38.0 ns.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker phase for the selected marker in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

`CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:Y?`

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 580)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

`<NRf>` Delta marker phase for the selected marker in degrees.

Examples

`CALCULATE:PHVTIME:MEASview1:MARKER1:DELTA:Y?` might return 162.38, indicating that the delta marker phase is 162.38 °.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

`CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:MAXimum`

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

Examples

`CALCULATE:PHVTIME:MEASview1:MARKER1:MAXIMUM` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the Phase versus Time trace.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

`CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 582)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

Examples

`CALCULATE:PHVTIME:MEASview1:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the trace in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

`CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 583)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

Examples

`CALCULATE:PHVTIME:MEASview1:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the Phase versus Time trace.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

```
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 581)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

Examples

`CALCULATE:PHVTIME:MEASview1:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the trace in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

```
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 582)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

Examples

`CALCULATE:PHVTIME:MEASview1:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:TRACe

Sets or queries the trace on which the specified marker is placed in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time with specified Measurement view number.

Group

Calculate commands

Syntax

`CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:TRACe {TRACE1 | TRACE5 | TRACE6 | TRACE7}`

`CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:TRACe?`

Arguments

`TRACE1` places the selected marker on Trace 1.

`TRACE5` places the selected marker on Trace 5 (Bitmap trace).

`TRACE6` places the selected marker on Trace 6 (Ogram).

`TRACE7` places marker on Trace 7 (Ogram line).

The parameter <x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. By default y is 1.

Examples

`CALCULATE:PHVTIME:MEASVIEW1:MARKER1:TRACE1` places Marker 1 (M1) on Trace 1 of Phase versus Time Measurement View 1.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

```
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:Y? (on page 585)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

<value>::=<NRf> specifies the horizontal position of the marker.Range: (analysis offset) to [(analysis offset) + (analysis length)].

Examples

CALCULATE:PHVTIME:MEASview1:MARKER1:X 1.5US places Marker 1 (M1) at 1.5 µs on the trace.

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the Phase versus Time measurement.

Conditions

Measurement views: Phase versus Time

Group

Calculate commands

Syntax

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:Y?

Related Commands

CALCulate:PHVTime[:MEASview<y>]:MARKer<x>:X (on page 584)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

Returns

<NRf> Marker amplitude of the selected marker in degrees.

Examples

CALCULATE:PHVTIME:MEASview1:MARKER1:Y? might return -18.435, indicating Marker 1(M1) is at -18.435 °.

CALCulate:PULSe:CUMulative:HISTogram[:MEASview<y>]:INDicator:X

Sets or queries the horizontal position of the indicator on the trace in the Cumulative Histogram display. Where <x> parameters: 0 to 4

Conditions

Measurement views: Pulse Cumulative Histogram with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:PULSe:CUMulative:HISTogram[:MEASview<y>]:INDicator:X <value>
CALCulate:PULSe:CUMulative:HISTogram[:MEASview<y>]:INDicator:X?

Arguments

<value>::=<NRf> specifies the horizontal position of the marker.

The parameter <x> = 0 to 4.

Returns

<NRf>

Examples

CALCulate:PULSe:CUMulative:HISTogram:MEASview1:INDicator:X 9.5409090173E-6 places the indicator at the nearest bins mid value at 9.540E-6 on the trace.

CALCulate:PULSe:CUMulative:HISTogram[:MEASview<y>]:INDicator:Y (Query Only)

Queries the vertical position value of the indicator on the trace in the Cumulative Histogram display.

Conditions

Measurement views: Pulse Cumulative Histogram with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:PULSe:CUMulative:HISTogram[:MEASview<y>]:INDicator:Y?

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<value>

Where <value>::<NRf> is the vertical position value of the marker.

Examples

CALCulate:PULSe:CUMulative:HISTogram:MEASview1:INDicator:Y might return 1.000000 for the vertical position of the marker in cumulative histogram Measurement View 1.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:DELTa:X (Query Only)

Returns the delta marker time for the selected marker in the Frequency vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:DELTa:X?

Arguments

<x> = 1, 2, 3, 4 is the marker.The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCulate:PULSe:OGRAm:MEASview1:MARKer1:FVTime:DELTa:X? might return 38.0E-6, indicating that the delta marker time for M1 is 38.0 µs.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:DELTa:Y (Query Only)

Returns the delta marker amplitude for the selected marker in the Frequency vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:DELTa:Y?

Arguments

<x> = 1, 2, 3, 4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Delta marker Amplitude for the selected marker

Examples

CALCulate:PULSe:OGRAm:MEASview1:MARKer1:FVTime:DELTa:Y? might return 45.82,indicating that the delta marker amplitude for Marker 1 (M1) is 45.82.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in Frequency vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:MAXimum

Arguments

<x> = 0,1,2,3,4 is the marker.. MARKer0 (reference marker) is invalid. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

CALCulate:PULSe:OGRAm:MEASview1:MARKer1:FVTime:MAXimum moves Marker 1(M1) to the highest peak on the trace.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:X

Sets or Queries the horizontal position of the selected marker in Frequency vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

```
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:X <value>
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:X?
```

Arguments

<x> = 0, 1, 2, 3, 4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value>=<NRf> specifies the horizontal position of the marker.

Returns

<NRf>

Examples

CALCulate:PULSe:OGRAm:MEASview1:MARKer1:FVTime:X 2E-6 places Marker 1 (M1) at 2 µs on the Frequency vs Time trace.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:Y (Query Only)

Returns the marker amplitude of the selected marker in Frequency vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:FVTime:Y?

Arguments

<x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Marker amplitude of the selected marker.

Examples

CALCulate:PULSe:OGRAm:MEASview1:MARKer1:FVTime:Y? might return -34.28,indicating Marker 1 (M1) is at the amplitude of -34.28 dBm.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:DELTa:X (Query Only)

Returns the delta marker time for the selected marker in the Time vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:DELTa:X ?

Arguments

<x> = 1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Delta marker time for the selected marker

Examples

CALCulate:PULSe:OGRAm:MEASview1:MARKer1:TVTime:DELTa:X? might return -197.57E-6, indicating that the delta marker time for Marker 1 (M1) is 197.57 µs.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:DELTa:Y (Query Only)

Queries the delta marker amplitude for the selected marker in the Time vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

`CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:DELTa:Y ?`

Arguments

<x> = 1, 2, 3, 4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Delta marker amplitude for the selected marker

Examples

`CALCulate:PULSe:OGRAm:MEASview1:MARKer1:TVTime:DELTa:Y?` might return `-813.10E-3`, indicating that the delta marker amplitude for Marker 1 (M1) is -813.10E-3.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the trace in Time vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

`CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:MAXimum`

Arguments

<x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

None

Examples

`CALCulate:PULSe:OGRAm:MEASview1:MARKer1:TVTime:MAXimum` moves Marker 1(M1) to the highest peak on the trace of PulseOgram Measurement View 1.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:X

Sets or Queries the horizontal position of the selected marker in Time vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

```
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:X <value>
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:X ?
```

Arguments

<x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value>=<NRf>` specifies the horizontal position of the marker

Returns

`<NRf>`

Examples

`CALCulate:PULSe:OGRAm:MEASview1:MARKer1:TVTime:X 2E-6` places Marker 1 (M1) at 2 µs on the Time vs Time trace of PulseOgram Measurement View 1.

CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:Y (Query Only)

Returns the marker amplitude of the selected marker in Time vs Time display of Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Calculate commands

Syntax

```
CALCulate:PULSe:OGRAm[:MEASview<y>]:MARKer<x>:TVTime:Y?
```

Arguments

<x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

`<NRf>` Marker amplitude of the selected marker

Examples

`CALCulate:PULSe:OGRAm:MEASview1:MARKer1:TVTime:Y?` might return `-44.85`, indicating Marker 1 (M1) is at the amplitude of -44.85 dBm.

CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:X

Sets or queries the current bin number where the indicator is positioned from the histogram display.Sets or queries the frequency in Hz for the X indicator. This command is valid when `DISPlay:PULSe:STATistics:PLOT` is set to FFT.

Conditions

Measurement views: Pulse statistics

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:X <value>
CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:X?
```

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:Y? (on page 592)

Arguments

`<value>::=<NRf>` specifies the indicator X value in Hz.

Examples

`CALCulate:PULSe:STATistics:MEASview2:FFT:INDicator:X 1000` sets the FFT indicator X value to 1 kHz.

CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:Y? (Query)Only

Returns the frequency level in dB for the Y indicator. This command is valid when `DISPlay:PULSe:STATistics:PLOT` is set to FFT.

Conditions

Measurement views: Pulse statistics

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:Y?
```

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:FFT:INDicator:X (on page 592)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NRf>` the indicator Y value in dB.

Examples

CALCulate:PULSe:STATistics:MEASview2:FFT:INDicator:Y? might return -34.5 indicating that the FFT indicator is at -34.5 dB.

CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:X

Sets or queries the histogram indicator X value. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to histogram.

Conditions

Measurement views: Pulse statistics

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:X <value>
CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:X?
```

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:Y? (on page 593)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<value>::=<NRf> specifies the indicator X value.

Examples

CALCulate:PULSe:STATistics:MEASview2:HISTogram:INDicator:X 0.3 sets the histogram indicator X value to 0.3.

CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:Y? (Query Only)

Queries the Histogram indicator Y value. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Histogram.

Conditions

Measurement views: Pulse statistics

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:Y?
```

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:HISTogram:INDicator:X (on page 593)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf> indicates the indicator Y value.

Examples

CALCulate:PULSe:STATistics:MEASview2:HISTogram:INDicator:Y? might return 20 to indicate 20 counts in the histogram bin in dB.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:X?

Returns the delta marker time for the selected marker on the pulse trace. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:X?

Related Commands

DISPlay:PULSe:STATistics[:MEASview<y>]:PLOT (on page 989)

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 594)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker time in seconds for the selected marker.

Examples

CALCulate:PULSe:STATistics:MEASview1:MARKer1:DELTa:X? might return 3.01e-3, indicating that the delta marker time is 3.01 ms on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:Y?

Returns the delta marker amplitude for the selected marker on the pulse trace. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:Y?
```

Related Commands

DISPlay:PULSe:STATistics[:MEASview<y>]:PLOT (on page 989)

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 594)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker amplitude for the selected marker, in the unit of the current measurement.

Examples

`CALCulate:PULSe:STATistics:MEASview1:MARKer1:DELTa:Y?` might return 2.345, indicating that the delta marker amplitude is 2.345 dB on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:MAXimum

Moves the selected marker to the highest peak on the pulse statistics trace. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:MAXimum
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCulate:PULSe:STATistics:MEASview1:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:HIGHer

Moves the selected marker to the next peak higher in amplitude on the pulse statistics trace. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

`CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:HIGHer`

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 597)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCulate:PULSe:STATistics:MEASview1:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LEFT

Moves the selected marker to the next peak to the left on the pulse statistics trace. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

`CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:RIGHT (on page 597)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCulate:PULSe:STATistics:MEASview1:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LOWer

Moves the selected marker to the next peak lower in amplitude on the pulse statistics trace. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

`CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 595)

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

`<x>` = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Examples

`CALCulate:PULSe:STATistics:MEASview1:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:RIGHt

Moves the selected marker to the next peak to the right on the pulse statistics trace. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

`CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 596)

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

`<x>` = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Examples

`CALCulate:PULSe:STATistics[:MEASview1:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the pulse statistics view. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:Y (on page 598)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

`<NRf>` specifies the horizontal position of the marker.

Examples

`CALCulate:PULSe:STATistics:MEASvie1:MARKer1:X 3.01e-3` places Marker 1 (M1) at 3.01 ms on the trace of Pulse Statistics Measurement View 1.

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:Y?

Queries the marker amplitude of the selected marker in the pulse statistics view. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to Time Trend.

Conditions

Measurement views: Pulse statistics with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:PULSe:STATistics[:MEASview<y>]:MARKer<x>:X (on page 598)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Returns

`<NRf>` Amplitude of the specified marker in the unit of the current measurement.

Examples

`CALCulate:PULSe:STATistics:MEASview1:MARKer1:Y?` might return -28.173, indicating Marker 1 (M1) is at -28.173 dB on the trace of pulse statistics measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:X

Returns the delta marker time for the selected marker on the pulse trace.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

`CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:X?`

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 599)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

`<NRf>` Delta marker time for the selected marker.

Examples

`CALCulate:PULSe:TRACe:MEASview1:MARKer1:DELTa:X?` might return 38.0E-9, indicating that the delta marker time is 38.0 ns on the trace of pulse trace measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:Y

Returns the delta marker amplitude for the selected marker on the pulse trace.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:Y?
```

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 599)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCulate:PULSe:TRACe:MEASview1:MARKer1:DELTa:Y? might return 23.45,indicating that the delta marker amplitude is 23.45 dB on the trace of pulse trace measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:MAXimum

Moves the selected marker to the highest peak on the pulse trace.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:MAXimum
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCulate:PULSe:TRACe:MEASview1:MARKer1:MAXimum moves Marker 1 (M1) to the highest peak on the trace of pulse trace measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:HIGHer

Moves the selected marker to the next peak higher in amplitude on the pulse trace.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 601)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCulate:PULSe:TRACe:MEASview1:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace of pulse trace measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LEFT

Moves the selected marker to the next peak to the left on the pulse trace.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 602)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCulate:PULSe:TRACe:MEASview1:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace of pulse trace measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LOWer

Moves the selected marker to the next peak lower in amplitude on the pulse trace.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 600)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCulate:PULSe:TRACe:MEASview1:MARKER1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace of pulse trace measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:RIGHt

Moves the selected marker to the next peak to the right on the pulse trace.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 601)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

`CALCulate:PULSe:TRACe:MEASview1:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the left on the trace of pulse trace measurement view 1.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:Y? (on page 603)

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker.

NOTE: To set the horizontal position, the marker must be on the trace of the pulse selected using the DISPlay:PULSe:SELect:NUMBer command. You cannot put the marker out of the horizontal range of the pulse.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

`<NRf>`

Examples

`CALCulate:PULSe:TRACe:MEASview1:MARKer1:X 1.5 µs` places Marker 1 (M1) at 1.5 µs on the trace.

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:Y

Queries the marker amplitude of the selected marker in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:PULSe:TRACe[:MEASview<y>]:MARKer<x>:X? (on page 602)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Returns

`<NRf>` Marker amplitude of the selected marker.

Examples

`CALCulate:PULSe:TRACe:MEASview1:MARKer1:Y?` might return –28.86, indicating Marker 1 (M1) is at -28.86 dBm on the trace of pulse trace measurement view 1.

CALCulate:SEARch:LIMit:FAIL? (Query Only)

Queries whether the waveform cuts across the limit in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:FAIL?
```

Arguments

None

Returns

{ 0 | 1 }

0 represents Pass, indicating that the waveform does not cut across the limit.

1 represents Fail, indicating that the waveform cuts across the limit.

Examples

`CALCULATE:SEARCH:LIMIT:FAIL?` might return 1, indicating that the waveform cuts across the limit (Fail).

CALCulate:SEARch:LIMit:MATCh:BEEP[:STATe]

Determines whether or not to beep on match during run or replay in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:MATCh:BEEP[:STATe] { OFF | ON | 0 | 1 }
CALCulate:SEARch:LIMit:MATCh:BEEP[:STATe]?
```

Arguments

`OFF` or 0 disables to beep on match.

`ON` or 1 enables to beep on match.

Examples

`CALCULATE:SEARCH:LIMIT:MATCH:BEEP:STATE ON` enables to beep on match.

CALCulate:SEARch:LIMit:MATCh:SACQuire[:STATe]

Determines whether or not to stop acquiring data on match during run or replay in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:MATCh:SACQuire[:STATe] { OFF | ON | 0 | 1 }
CALCulate:SEARch:LIMit:MATCh:SACQuire[:STATe]?
```

Arguments

`OFF` or 0 disables to stop acquiring data on match.

`ON` or 1 enables to stop acquiring data on match.

Examples

`CALCULATE:SEARCH:LIMIT:MATCH:SACQUIRE:STATE ON` enables to stop acquiring data on match.

CALCulate:SEARch:LIMit:MATCh:SDATa[:STATe]

Determines whether or not to save automatically (AutoSave) acquisition data on match during run in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:MATCh:SDATa[:STATe] { OFF | ON | 0 | 1 }
CALCulate:SEARch:LIMit:MATCh:SDATa[:STATe]?
```

Arguments

`OFF` or 0 disables the AutoSave.

`ON` or 1 enables to save acquisition data automatically on match.

The data is saved to a file with the name:

name-yyyy.mm.dd.hh.mm.ss.sss.tiq

Where

name is the file name that was last specified.

yyyy.mm.dd and hh.mm.ss.sss represent date and 24 hour time.

The file extension is .tiq.

Example: SAVED-2007.03.20.12.34.567.tiq

For the directory of file, refer to Specifying the File (on page 245) in the MMEMory command section.

Examples

`CALCULATE:SEARCH:LIMIT:MATCH:SDATA:STATE ON` enables to save acquisition data automatically on match.

CALCulate:SEARch:LIMit:MATCh:SPICture[:STATe]

Determines whether or not to save automatically (AutoSave) the whole screen

on match during run in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:MATCh:SPICture[:STATe] { OFF | ON | 0 | 1 }
CALCulate:SEARch:LIMit:MATCh:SPICture[:STATe]?
```

Arguments

`OFF` or 0 disables the AutoSave.

`ON` or 1 enables to save the whole screen automatically on match.

The picture is saved to a file with the name:

name-yyyy.mm.dd.hh.mm.ss.sss.png

Where

name is the file name that was last specified.

yyyy.mm.dd and hh.mm.ss.sss represent date and 24 hour time.

The file extension is .png.

Example: SAVED-2007.03.20.12.34.567.png

For the directory of file, refer to Specifying the File (on page 245) in the MMEMory command section.

Examples

`CALCULATE:SEARCH:LIMIT:MATCH:SPICTURE:STATE ON` enables to save the whole screen automatically on match.

CALCulate:SEARch:LIMit:MATCh:STRace[:STATe]

Determines whether or not to save automatically (AutoSave) the spectrum trace on match during run in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:MATCh:STRace[:STATe] { OFF | ON | 0 | 1 }
CALCulate:SEARch:LIMit:MATCh:STRace[:STATe]?
```

Arguments

`OFF` or 0 disables the AutoSave.

`ON` or 1 enables to save the spectrum trace automatically on match.

The trace is saved to a file with the name:

name-yyyy.mm.dd.hh.mm.ss.sss.Specan

Where

name is the file name that was last specified.

yyyy.mm.dd and hh.mm.ss.sss represent date and 24 hour time.

The file extension is .Specan.

Example: SAVED-2007.03.20.12.34.567.Specan

For the directory of file, refer to Specifying the File (on page 245) in the MMEMory command section.

Examples

`CALCULATE:SEARCH:LIMIT:MATCH:STRACE:STATE ON` enables to save the spectrum trace automatically on match.

CALCulate:SEARch:LIMit:OPERation

Sets or queries the search condition.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:OPERation { LT | GT | IMASk | OMASk }
CALCulate:SEARch:LIMit:OPERation?
```

Related Commands

CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation (on page 392)

Arguments

The following table lists the arguments.

Argument	Meaning
LT	The data is less than the limit value.
GT	The data is greater than the limit value.
IMASk	The data is inside the limit mask.
OMASk	The data is outside the limit mask.

You can select the data using the CALCulate:SEARch:LIMit:OPERation:FEED command.

You can set the limit value using the `CALCulate:[:SEARch|:TEST]:LIMit[:STATe]:MATCh:FILE:LOCation` command.

You can store and load the limit mask using the `CALCulate:SEARch:LIMit:OPERation:MASK:STORE` and `CALCulate:SEARch:LIMit:OPERation:MASK:LOAD` commands.

Examples

`CALCULATE:SEARCH:LIMIT:OPERATION GT` selects "the data is greater than the limit value" for the search condition.

CALCulate:SEARch:LIMit:OPERation:FEED

Sets or queries the data flow to be fed in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:OPERation:FEED <view>,<trace>
CALCulate:SEARch:LIMit:OPERation:FEED?
```

Arguments

`<view>::=<string>` and `<trace>::=<string>` are listed in the following table.

Source data of the search operation

<view>	<trace>	Meaning
"Spectrum"	"Trace 1" [1]	Trace 1 in the Spectrum view.
	"Trace 2" [1]	Trace 2 in the Spectrum view.
	"Trace 3" [1]	Trace 3 in the Spectrum view.
	"Math Trace"	Math trace in the Spectrum view.
	"Spectrogram Trace"	Spectrogram trace in the Spectrum view.

[1] There is a space character between Trace and the number.

Examples

`CALCULATE:SEARCH:LIMIT:OPERATION:FEED "Spectrum","Trace 1"` selects the Trace 1 in the Spectrum measurement view for the search operation.

`CALCULATE:SEARCH:LIMIT:OPERATION:FEED?` might return `"Spectrum","Math Trace"`, indicating that the math trace is used as the source data in the search operation.

CALCulate:SEARch:LIMit:OPERation:MASK:LOAD (No Query Form)

Loads the specified limit mask file for the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:OPERation:MASK:LOAD <file_name>
```

Arguments

<file_name>::=<string> specifies the file to load the limit mask from.The file extension is .lmt. You can omit the extension.

For the directory of file, refer to Specifying the File (on page 245) in the MMEMory command section.

Examples

CALCULATE:SEARCH:LIMIT:OPERATION:MASK:LOAD"Limit1" loads the limit mask from the Limit1.lmt file.

CALCulate:SEARch:LIMit:OPERation:MASK:STORE (No Query Form)

Stores the limit mask to a specified file in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:OPERation:MASK:STORE <file_name>
```

Arguments

<file_name>::=<string> specifies the file to store the limit mask to.The file extension is .lmt. You can omit the extension.

For the directory of file, refer to Specifying the File (on page 245) in the MMEMory command section.

Examples

CALCULATE:SEARCH:LIMIT:OPERATION:MASK:STORE "Limit1" stores the limit mask to the Limit1.lmt file.

CALCulate:SEARch:LIMit:OPERation:SLIMit

Sets or queries the limit value (in dB) in the search operation.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:OPERation:SLIMit <value>
CALCulate:SEARch:LIMit:OPERation:SLIMit?
```

Related Commands

CALCulate:SEARch:LIMit:OPERation (on page 607)

Arguments

<value>::=<NRf> specifies the limit value in the search operation.Range: -100 to +100 dBm.

Examples

CALCULATE:SEARCH:LIMIT:OPERATION:SLIMIT -20 sets the limit value to -20 dBm.

CALCulate:SEARch:LIMit:REPort:DATA? (Query Only)

Returns the frequency range(s) that satisfy the search condition.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

`CALCulate:SEARch:LIMit:REPort:DATA?`

Arguments

None

Returns

`<num_range>,<range(1)>,<range(2)>,...,<range(n)>`

Where

`<num_range>::=<NR1>` is the number of ranges that satisfy the condition.

`<range(n)>::="<lower_freq(n)>, <upper_freq(n)>"` (string) represents the nth frequency range that satisfy the search condition in ascending order.

`<lower_freq(n)>` and `<upper_freq(n)>` are the lower and upper frequencies of the range #n, respectively.

Examples

`CALCULATE:SEARCH:LIMIT:REPORT:DATA?` might return 2,"1.4800E+9,1.5001E+9","1.5002E+9, 1.5200E+9", indicating that the search condition is satisfied in these two ranges 1.48 to 1.5001 GHz and 1.5002 to 1.52 GHz.

CALCulate:SEARch:LIMit:REPort:POINts? (Query Only)

Returns the number of frequency range(s) that satisfy the search condition.

Conditions

Measurement views: All

Group

Calculate commands

Syntax

`CALCulate:SEARch:LIMit:REPort:POINts?`

Arguments

None

Returns

`<number>::=<NR1>` represents the number of frequency range(s) that satisfy the search condition.

Examples

`CALCULATE:SEARCH:LIMIT:REPORT:POINTS?` might return 5, indicating that five ranges satisfy the search condition.

CALCulate:SEARch:LIMit:STATe

Sets or queries the search function (enabled or disabled).

Conditions

Measurement views: All

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe { OFF | ON | 0 | 1 }
CALCulate:SEARch:LIMit:STATe?
```

Arguments

`OFF` or 0 disables the search function.

`ON` or 1 enables the search function.

Examples

`CALCULATE:SEARCH:LIMIT:STATE ON` enables the search function.

CALCulate:SEARch:LIMit:STATe:MATCh:ACQuisition:FORMat

Sets and queries the format in which the acquisition data to be saved in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:ACQuisition:FORMat {TIQ | CSV | MAT}
CALCulate:SEARch:LIMit:STATe:MATCh:ACQuisition:FORMat?
```

Arguments

`TIQ` saves acquisition data in `.Tiq` file format.

`CSV` saves acquisition data in `.csv` file format.

`MAT` saves acquisition data in `.Mat` file format.

Returns

`<String>` Either TIQ , CSV or MAT

Examples

`CALCULATE:SEARCH:LIMIT:STATE:MATCH:ACQUISITION:FORMAT` might return CSV, indicating that the acquisition data is saved in .csv file format.

CALCulate:SEARch:LIMit:STATe:MATCh:BEEP:STATe

Determines the enabling and disabling of Beep check box in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:BEEP:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:MATCh:BEEP:STATe?
```

Arguments

`0` or OFF disables the Beep check box

`1` or ON enables the Beep check box

Returns

<Boolean> 0,1

Examples

`CALCULATE:SEARCH:LIMIT:STATE:MATCH:BEEP:STATE` might return 0, indicating that the Beep check box is disabled.

CALCulate:SEARch:LIMit:STATe:MATCh:COUNt:STATe

Determines the enabling and disabling of Max files check box in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:COUNt:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:MATCh:COUNt:STATe?
```

Arguments

`0` or `OFF` disables the Max files check box

`1` or `ON` enables the Max files check box

Returns

`<Boolean>` 0,1

Examples

`CALCULATE:SEARCH:LIMIT:STATE:MATCH:COUNT:STATE` might return 0 indicating that the Max files check box is disabled.

CALCulate:SEARch:LIMit:STATe:MATCh:COUNt:STATe:MAXimum

Sets or queries the Max files value in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:COUNt:STATe:MAXimum<value>
CALCulate:SEARch:LIMit:STATe:MATCh:COUNt:STATe:MAXimum?
```

Arguments

`<value> = <NR1>` Range is 1 to 10000

Returns

`<NR1>`

Examples

`CALCULATE:SEARCH:LIMIT:STATE:MATCH:COUNT:STATE:MAXIMUM` might return 250 indicating the value of max files given is 250.

CALCulate:SEARch:LIMit:STATe:MATCh:FILE:LOCation

Sets or queries the location of the file in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:FILE:LOCation <file_name>
CALCulate:SEARch:LIMit:STATe:MATCh:FILE:LOCation?
```

Arguments

`<file_name> = <String>` Specifies the location of the file

Returns

`<String>`

Examples

`CALCULATE:SEARCH:LIMIT:STATE:MATCH:FILE:LOCATION` might return `"C:\SignalVu-PC Files"`, indicating the location of the file is `"C:\SignalVu-PC Files"`.

CALCulate:SEARch:LIMit:STATe:MATCh:FILE:NAME:BASE

Sets and queries the file name in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:FILE:NAME:BASE <file_name>
CALCulate:SEARch:LIMit:STATe:MATCh:FILE:NAME:BASE?
```

Arguments

`<file_name> = <String>` Specifies the name of the file

Returns

`<String>`

Examples

`CALCULATE:SEARCH:LIMIT:STATE:MATCH:FILE:NAME:BASE` might return `"Sample1"`, indicating the name of the file is `"Sample1"`.

CALCulate:SEARch:LIMit:STATe:MATCh:PICTure:FORMat

Sets and queries the format in which the picture to be saved in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:PICTure:FORMat {PNG | JPG | BMP}
CALCulate:SEARch:LIMit:STATe:MATCh:PICTure:FORMat?
```

Arguments

`PNG` saves picture in png format.

`JPG` saves picture in jpg format.

`BMP` saves picture in bmp format.

Returns

`<String>` Either PNG, JPG or BMP

Examples

`CALCULATE:SEARCH:LIMIT:STATE:MATCH:PICTURE:FORMAT` might return `JPG`, indicating that the Picture is saved in jpg format.

CALCulate:SEARch:LIMit:STATe:MATCh:SACQuire:STATe

Determines the enabling and disabling of Stop check box in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:SACQuire:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:MATCh:SACQuire:STATe?
```

Arguments

0 or OFF disables the stop check box

1 or ON enables the stop check box

Returns

<Boolean> 0,1

Examples

CALCULATE:SEARCH:LIMIT:STATE:MATCH:SACQUIRE:STATE might return 1,indicating that the stop check box is enabled.

CALCulate:SEARch:LIMit:STATe:MATCh:SDATa:STATe

Determines the enabling and disabling of Save acquisition data check box in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:SDATa:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:MATCh:SDATa:STATe?
```

Arguments

0 or OFF disables the Save acquisition data check box

1 or ON enables the Save acquisition data check box

Returns

<Boolean> 0,1

Examples

CALCULATE:SEARCH:LIMIT:STATE:MATCH:SDATA:STATE might return 1, indicating that the Save acquisition data check box is enabled.

CALCulate:SEARch:LIMit:STATe:MATCh:SPICture:STATe

Determines the enabling and disabling of Save picture check box in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:SPICture:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:MATCh:SPICture:STATe?
```

Arguments

0 or OFF disables the Save picture check box

1 or ON enables the Save picture check box

Returns

<Boolean> 0,1

Examples

CALCULATE:SEARCH:LIMIT:STATE:MATCH:SPICTURE:STATE might return 1, indicating that the Save picture check box is enabled.

CALCulate:SEARch:LIMit:STATe:MATCh:STRace:STATe

Determines the enabling and disabling of Save trace check box in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:MATCh:STRace:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:MATCh:STRace:STATe?
```

Arguments

0 or OFF disables the Save trace check box

1 or ON enables the Save trace check box

Returns

<Boolean> 0,1

Examples

CALCULATE:SEARCH:LIMIT:STATE:MATCH:STRACE:STATE might return 0, indicating that the Save trace check box is disabled.

CALCulate:SEARch:LIMit:STATe:OPERation

Sets or queries the region in which the test should be performed in mask test xcontrol settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:OPERation {GT | LT | OMAS | IMAS}
CALCulate:SEARch:LIMit:STATe:OPERation ?
```

Arguments

`GT` selects “Is greater than” as the region for the test to be performed

`LT` selects “Is less than” as the region for the test to be performed

`OMAS` selects “Is Outside mask” as the region for the test to be performed

`IMAS` selects “Is inside mask” as the region for the test to be performed

Returns

`<String>` Either GT , LT , OMAS or IMAS

Examples

`CALCULATE:SEARCH:LIMIT:STATE:OPERATION` might return LT, indicating “Is less than” is selected as the region for the test to be performed.

CALCulate:SEARch:LIMit:STATe:OPERation:FEED

Sets and queries the trace to which the test should be performed in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:OPERation:FEED <Arg>
CALCulate:SEARch:LIMit:STATe:OPERation:FEED?
```

Arguments

`<Arg>` =

`"Spectrum","Trace 1"` selects Trace 1 in spectrum

`"Spectrum","Trace 2"` selects Trace 2 in spectrum

`"Spectrum","Trace 3"` selects Trace 3 in spectrum

`"Spectrum","Math Trace"` selects math trace in spectrum

`"Spectrum","Spectrogram Trace"` selects Spectrogram trace in spectrum

Returns

`<String>` See Arguments

Examples

CALCULATE:SEARCH:LIMIT:STATE:OPERATION:FEED might return "Spectrum","Trace 1", indicating that the test should be performed on "Spectrum","Trace 1".

CALCulate:SEARch:LIMit:STATe:OPERation:MASK:LOAD (No Query Form)

Sets the location of the file which has to be loaded in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:OPERation:MASK:LOAD <file_name>
```

Arguments

<file_name> = <String> Specifies the location of the file

Returns

None

Examples

CALCULATE:SEARCH:LIMIT:STATE:OPERATION:MASK:LOAD "C:\SignalVu-PC Files" loads the data from the file "C:\SignalVu-PC Files".

CALCulate:SEARch:LIMit:STATe:OPERation:MASK:LOWer:STATe

Determines the enabling and disabling of Lower mask check box in mask test editor tab of mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:OPERation:MASK:LOWer:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:OPERation:MASK:LOWer:STATe?
```

Arguments

0 or OFF disables the Lower mask check box

1 or ON enables the Lower mask check box

Returns

<Boolean> 0,1

Examples

CALCULATE:SEARCH:LIMIT:STATE:OPERATION:MASK:LOWER:STATE might return 0, indicating that the Lower mask check box is disabled.

CALCulate:SEARch:LIMit:STATe:OPERation:MASK:NEW:AUTO (No Query Form)

Draws a new frequency mask automatically based on a reference trace.

Conditions

Measurement view: Spectrum, DPX, Spectrum

Group

Calculate commands

Syntax

CALCulate:SEARch:LIMit:STATe:OPERation:MASK:NEW:AUTO

Arguments

<x_margin>::<NRf> specifies the X margin (horizontal offset from the reference trace) in Hz.

<y_margin>::<NRf> specifies the Y margin (vertical offset from the reference trace) in dB.

<meas_ID>::<string> specifies the measurement view.

<trace_ID> specifies the reference trace.

The values for the above arguments are listed in the following table for each possible measurement view.

Measurement view	<meas_ID>	<trace_ID>
Spectrum	“specan”	TRACE1 (Trace 1)
		TRACE2 (Trace 2)
		TRACE3 (Trace 3)
		TRACE4 (Math trace
		TRACE5 (Spectrogram trace)
DPX, Spectrum	DPX	TRACE1 (+Peak trace)
		TRACE2 (–Peak trace)
		TRACE3 (Avg trace)
		TRACE4 (Math trace)

Examples

CALCULATE:SEARCH:LIMIT:STATE:OPERATION:MASK:NEW:AUTO "specan",TRACE1 ,7E+6,5 automatically draws a new frequency mask in the Spectrum view based on Trace 1 with a horizontal margin of 7 MHz and a vertical margin of 5 dB.

CALCulate:SEARch:LIMit:STATe:OPERation:MASK:STORE (No Query Form)

Sets the location of the file to which data has to be saved in mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:OPERation:MASK:STORE <file_name>
```

Arguments

`<file_name> = <String>` Specifies the location of the file

Returns

None

Examples

`CALCULATE:SEARCH:LIMIT:STATE:OPERATION:MASK:STORE "C:\SignalVu-PC Files"` saves the data to the file `"C:\SignalVu-PC Files"`.

CALCulate:SEARch:LIMit:STATe:OPERation:MASK:UPPer:STATe

Determines the enabling and disabling of Upper mask check box in mask test editor tab of mask test control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe:OPERation:MASK:UPPer:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe:OPERation:MASK:UPPer:STATe?
```

Arguments

`0` or `OFF` disables the Upper mask check box

`1` or `ON` enables the Upper mask check box

Returns

`<Boolean>` 0,1

Examples

`CALCULATE:SEARCH:LIMIT:STATE:OPERATION:MASK:UPPER:STATE` might return 0, indicating that the Upper mask check box is disabled.

CALCulate:SEARch:LIMit:STATe

Determines the enabling and disabling of Enable test check box in mask test

control settings.

Conditions

Measurement view: Spectrum

Group

Calculate commands

Syntax

```
CALCulate:SEARch:LIMit:STATe {0 | OFF | 1 | ON}
CALCulate:SEARch:LIMit:STATe?
```

Arguments

`0` or `OFF` disables the Enable test check box

`1` or `ON` enables the Enable test check box

Returns

<Boolean> 0,1

Examples

`CALCULATE:SEARCH:LIMIT:STATE` might return 1, indicating that the Enable test check box is enabled.

CALCulate:SEM:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker on the Spectral Emissions Mask trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

```
CALCulate:SEM:MARKer<x>:DELTa:X?
```

Arguments

None

Returns

`<NRf>` Delta marker frequency for the selected marker.

Examples

`CALCulate:SEM:MARKer1:DELTa:X?` might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz.

CALCulate:SEM:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the Spectral Emissions Mask trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

`CALCulate:SEM:MARKer<x>:DELTa:Y?`

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker.

Examples

`CALCulate:SEM:MARKer1:DELTa:Y?` might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:SEM:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the Spectral Emissions Mask trace.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

`CALCulate:SEM:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCulate:SEM:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:SEM:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the Spectral Emissions Mask trace.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

`CALCulate:SEM:MARKer<x>:PEAK:HIGHer`

Arguments

None

Examples

`CALCulate:SEM:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:SEM:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the Spectral Emissions Mask trace.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

`CALCulate:SEM:MARKer<x>:PEAK:LEFT`

Arguments

None

Examples

`CALCulate:SEM:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:SEM:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the Spectral Emissions Mask trace.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

`CALCulate:SEM:MARKer<x>:PEAK:LOWer`

Arguments

None

Examples

`CALCulate:SEM:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:SEM:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the Spectral Emissions Mask trace.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

```
CALCulate:SEM:MARKer<x>:PEAK:RIGHt
```

Arguments

None

Examples

`CALCulate:SEM:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:SEM:MARKer<x>[:SET]:CENTer (No Query Form)

Moves the specified marker to the center frequency.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

```
CALCulate:SEM:MARKer<x>[:SET]:CENTer
```

Arguments

None

Examples

`CALCulate:SEM:MARKer1[:SET]:CENTer` moves Marker 1 (M1) to the center frequency.

CALCulate:SEM:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the Spectral Emissions Mask trace.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

```
CALCulate:SEM:MARKer<x>:X <value>
```

Arguments

<value>::=<NRf> specifies the horizontal position of the marker.

Examples

CALCULATE:SEM:MARKER1:X 800MHz places Marker 1 (M1) at 800 MHz on the spectrum trace.

CALCulate:SEM:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker on the Spectral Emissions Mask trace.

Conditions

Measurement views: Spectral Emissions Mask

Group

Calculate commands

Syntax

CALCulate:SEM:MARKer<x>:Y?

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker.

Examples

CALCULATE:SEM:MARKER1:Y? might return -34.28, indicating Marker 1 (M1) is at -34.28 dBm.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:X:FREQuency

Returns the delta marker frequency for the selected marker in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:X:FREQuency?

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 626)

Arguments

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Delta marker frequency for the selected marker.

Examples

CALCulate:SGRam:MEASview1:MARKer1:DELTa:X:FREQuency? might return 5.95E+6,indicating that the delta marker frequency is 5.95 MHz.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME] (Query Only)

Returns the delta marker time for the selected marker in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]?

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 626)

Arguments

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCulate:SGRam:MEASview1:MARKer1:DELTa:X:TIME? might return -1.84E-3,indicating that the delta marker time is -1.84 ms.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:Y (Query Only)

Returns the delta marker amplitude for the selected marker in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME] (on page 626)

Arguments

<x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCulate:SGRam:MEASview1:MARKer1:DELTa:Y? might return -8.45, indicating that the delta marker amplitude is -8.45 dB.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on a line in the spectrogram. The line is selected using the TRACe:SGRam:SELect:LINE command.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:MAXimum

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

CALCulate:SGRam:MEASview1:MARKer1:MAXimum moves Marker 1 (M1) to the highest peak on the line.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on a line in the spectrogram. The line is selected using the TRACe:SGRam:SELect:LINE command.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

```
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 628)

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

`CALCulate:SGRam:MEASview1:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the line.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on a line in the spectrogram.The line is selected using the TRACe:SGRam:SELect:LINE command.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

```
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 629)

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

`CALCulate:SGRam:MEASview1:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace of Spectrum Measurement View 1.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on a line in the spectrogram. The line is selected using the `TRACe:SGRam:SELect:LINE` command.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

`CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 627)

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

`CALCulate:SGRam:MEASview1:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the line.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on a line in the spectrogram.The line is selected using the TRACe:SGRam:SELect:LINE command.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

`CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 628)

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

`CALCulate:SGRam:MEASview1:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace of Spectrogram Measurement View 1.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>[:SET]:CENTer (No Query Form)

Sets the center frequency to the marker frequency in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

```
CALCulate:SGRam[:MEASview<y>]:MARKer<x>[:SET]:CENTer
```

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

`CALCulate:SGRam:MEASview1:MARKer1:SET:CENTER` sets the center frequency to the Marker 1 frequency in the spectrogram.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X:FREQuency

Sets or queries the marker frequency in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

```
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X:FREQuency <value>
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X:FREQuency?
```

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:Y (on page 631)

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value>::=<NRf>` specifies the marker frequency.Range: (center frequency) ± (span)/2.

Returns

<NRf> specifies the marker frequency.

Examples

`CALCulate:SGRam:MEASview1:MARKer1:X:FREQuency 800MHz` places Marker 1 (M1) at 800 MHz on the trace.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X[:TIME]

Sets or queries the marker time in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

```
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X[:TIME] <value>
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:X[:TIME]?
```

Related Commands

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:Y? (on page 631)

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value>::=<NRf>` specifies the marker time.

Returns

<NRf> specifies the marker time.

Examples

`CALCulate:SGRam:MEASview1:MARKer1:X:TIME -234.5us` places Marker 1 (M1) at -234.5 µs on the trace.

CALCulate:SGRam[:MEASview<y>]:MARKer<x>:Y (Query Only)

Queries the marker amplitude in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Calculate commands

Syntax

```
CALCulate:SGRam[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:SGRam[:MEASview<x>]:MARKer<y>:X:TIME (on page 631)

Arguments

<x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> Marker amplitude of the selected marker.

Examples

CALCulate:SGRam:MEASview1:MARKer1:Y? might return -34.28, indicating Marker 1 (M1) is at -34.28 dBm.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker on the spectrum trace.

Conditions

Measurement views: Spectrum with the specified Measurement View Number.

The parameter <x> = 1 to 4.

Group

Calculate commands

Syntax

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:DELTa:X? (QUERY)

Arguments

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf> Delta marker frequency for the selected marker.

Examples

CALCulate:SPECtrum:MEASview1:MARKer1:DELTa:X? might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the spectrum trace.

Conditions

Measurement views: Spectrum with the specified Measurement View Number

Group

Calculate commands

Syntax

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:DELTa:Y? (QUERY)

Arguments

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCulate:SPECtrum:MEASview1:MARKer1:DELTa:Y? might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:MAXimum

Moves the selected marker to the highest peak on the spectrum trace.

Conditions

Measurement view: Spectrum with the specified Measurement View Number

Group

Calculate commands

Syntax

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:MAXimum

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

CALCulate:SPECtrum:MEASview1:MARKer1:MAXimum moves Marker 1 (M1) to the highest peak on the trace of Spectrum Measurement View 1.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the spectrum trace.

Conditions

Measurement views: Spectrum with the specified Measurement View Number.

Group

Calculate commands

Syntax

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:HIGHer

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

CALCulate:SPECtrum:MEASview1:MARKer1:PEAK:HIGHer moves Marker 1 (M1) to the next higher peak in amplitude on the trace of Spectrum Measurement View 1

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the spectrum trace.

Conditions

Measurement views: Spectrum with the specified Measurement View Number.

Group

Calculate commands

Syntax

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:LEFT

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

CALCulate:SPECtrum:MEASview1:MARKer1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the right on the trace of Spectrum Measurement View 1.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the spectrum trace.

Conditions

Measurement views: Spectrum with the specified Measurement View Number.

Group

Calculate commands.

Syntax

`CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next lower peak in amplitude on the trace of Spectrum Measurement View 1.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the spectrum trace.

Conditions

Measurement views: Spectrum with the specified Measurement View Number

Group

Calculate commands

Syntax

`CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace of Spectrum Measurement View 1.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:DENSity? (Query Only)

Returns the power density of the specified marker in the Spectrum measurement.

Conditions

Measurement view: Spectrum with the specified Measurement View Number

The parameter <x> = 0 to 4.

Group

Calculate commands

Syntax

`CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:DENsity? (QUERY)`

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NR2>` = a floating point value without exponents. It is the power density of the selected marker in dBm/Hz.

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:POWer:DENsity?` might return `-80.2412563552`, indicating that the power density is -80.24 dBm/Hz.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:IDENSity?

Returns the integrated power density reading between the MR (reference marker) and the selected marker in the Spectrum measurement.

Conditions

Measurement view: Spectrum with the specified Measurement View Number.

The parameter <x> = 0 to 4.

Group

Calculate commands

Syntax

`CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:IDENSity? <QUERY>`

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NR2>` = a floating point value without exponents. It is the integrated power density reading between MR (reference marker) and the selected marker in dBm/Hz.

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:POWer:IDENSity?` might return `-78.5625446112`, indicating that the integrated power density is -78.56 dBm/Hz.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:INTEgrated? (Query Only)

Returns the integrated power reading between the MR (reference marker) and the selected marker in the Spectrum measurement.

Conditions

Measurement view: Spectrum with the specified Measurement View Number.

The parameter <x> = 0 to 4.

Group

Calculate commands

Syntax

```
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:POWer:INTEgrated? (QUERY)
```

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NR2>` = a floating point value without exponents. It is the integrated power reading between MR (reference marker) and the selected marker in dBm.

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:POWer:INTEgrated?` might return -12.4462022781, indicating the integrated power is -12.45 dBm.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>[:SET]:CENTer (No Query Form)

Sets the center frequency to the marker frequency in the spectrum measurement.

Conditions

Measurement views: Spectrum with the specified Measurement View Number

Group

Calculate commands

Syntax

```
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>[:SET]:CENTer
```

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:SET:CENTER` sets the center frequency to the marker frequency in the Spectrum Measurement View 1

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:TRACe

Sets or queries the trace on which the specified marker is placed in the spectrum measurement.

Conditions

Measurement views: Spectrum with specified Measurement View

Group

Calculate commands

Syntax

```
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:TRACe { TRACE1 | TRACE2 | TRACE3 | TRACE4 | TRACE5 }
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:TRACe? (QUERY)
```

Arguments

`TRACE1` places the specified marker on Trace 1.

`TRACE2` places the specified marker on Trace 2.

`TRACE3` places the specified marker on n Trace 3.

`TRACE4` places the specified marker on Trace 4 (math trace).

`TRACE5` places the specified marker on Trace 5 (spectrogram).

Trace 1 to 3 can be defined as Normal, Average, Max Hold or Min Hold using the command.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:TRACe TRACe1` places Marker 1 (M1) on Trace 1 of Spectrum Measurement View.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the spectrum trace.

Conditions

Measurement views: Spectrum with the specified Measurement View Number.

Group

Calculate commands

Syntax

```
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:X? <QUERY>
```

Arguments

`<value>`

Range : Start to Stop frequency (left to right edge of the horizontal axis).

Using an out-of-range value causes an execution error (-222, "Data out of range").

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:X 1GHz` places Marker 1 (M1) at 1 GHz on the trace of Spectrum Measurement View 1.

CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the spectrum trace

Conditions

Measurement views: Spectrum with the specified Measurement View Number

Group

Calculate commands

Syntax

```
CALCulate:SPECtrum[:MEASview<y>]:MARKer<x>:DELTa:Y? (QUERY)
```

Related Commands

CALCulate:SPECtrum:MARKer<x>:X (on page 638)

Arguments

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NRf>` Delta marker amplitude for the selected marker.

Examples

`CALCulate:SPECtrum:MEASview1:MARKer1:DELTa:Y?` might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:SPURious:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the selected marker on the spectrum trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

```
CALCulate:SPURious:MARKer<x>:DELTa:X?
```

Arguments

None

Returns

`<NRf>` Delta marker frequency for the selected marker.

Examples

`CALCULATE:SPURIOUS:MARKER1:DELTA:X?` might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz.

CALCulate:SPURious:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the spectrum trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

```
CALCulate:SPURious:MARKer<x>:DELTa:Y?
```

Arguments

None

Returns

`<NRf>` Delta marker amplitude for the selected marker.

Examples

`CALCULATE:SPURIOUS:MARKER1:DELTA:Y?` might return 23.45, indicating that the delta marker amplitude is 23.45 dB.

CALCulate:SPURious:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the spectrum trace.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

`CALCulate:SPURious:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALCULATE:SPURIOUS:MARKER1:MAXIMUM` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:SPURious:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the spectrum trace.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

`CALCulate:SPURious:MARKer<x>:PEAK:HIGHer`

Arguments

None

Examples

`CALCULATE:SPURIOUS:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:SPURious:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the spectrum trace.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

`CALCulate:SPURious:MARKer<x>:PEAK:LEFT`

Arguments

None

Examples

`CALCULATE:SPURIOUS:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:SPURious:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the spectrum trace.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

`CALCulate:SPURious:MARKer<x>:PEAK:LOWer`

Arguments

None

Examples

`CALCULATE:SPURIOUS:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:SPURious:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the spectrum trace.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

`CALCulate:SPURious:MARKer<x>:PEAK:RIGHt`

Arguments

None

Examples

`CALCULATE:SPURIOUS:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:SPURious:MARKer<x>[:SET]:CENTer (No Query Form)

Sets the center frequency to the marker frequency in the Spurious measurement.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

```
CALCulate:SPURious:MARKer<x>[:SET]:CENTer
```

Arguments

None

Examples

`CALCULATE:SPURIOUS:MARKER1:SET:CENTER` sets the center frequency to the value at Marker 1.

CALCulate:SPURious:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the spectrum trace.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

```
CALCulate:SPURious:MARKer<x>:X <value>
CALCulate:SPURious:MARKer<x>:X?
```

Arguments

`<value>::=<NRf>` specifies the horizontal position of the marker.

Range: Start to Stop frequency (left to right edge of the horizontal axis).

The start and stop frequencies are set using the `DISPlay:SPURious:X[:SCALe]:STARt` and `DISPlay:SPURious:X[:SCALe]:STOP` commands.

Examples

`CALCULATE:SPURIOUS:MARKER1:X 800MHz` places Marker 1 (M1) at 800 MHz on the spectrum trace.

CALCulate:SPURious:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker on the spectrum trace.

Conditions

Measurement views: Spurious

Group

Calculate commands

Syntax

```
CALCulate:SPURious:MARKer<x>:Y?
```

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker.

Examples

CALCULATE:SPURIOUS:MARKER1:Y? might return -34.28, indicating Marker 1 (M1) is at -34.28 dBm.

CALCulate:SYNC:MARKer<x>:MEASurement

Sets or queries the selected measurement to which the specified marker will be snapped to the peak of the measurement trace.

Conditions

Measurement views: General signal viewing

Group

Calculate commands

Syntax

```
CALCulate:SYNC:MARKer<x>:MEASurement <value>
CALCulate:SYNC:MARKer<x>:MEASurement?
```

Arguments

<x> parameter : 0 to 4; The specified marker must be activated using the CALCulate:MARKer:ADD command.

where

<value> :: {Spectrum : Source 1 : Meas1 | Time Overview : Source 1 : Meas1} etc.

Examples

CALCulate:SYNC:MARKer0:MEASurement? queries the Selected measurement for Auto Sync MR.

CALCulate:SYNC:MARKer1:MEASurement "Time Overview : Source 1 : Meas1" sets the M1 to snap to peak of Time Overview Source 1 Measurement.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (Query only)

Returns the delta marker time for the selected marker on the Trellis diagram trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]?

Related Commands

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 645)

Arguments

None

Returns

<NRf> Delta marker time for the selected marker.

Use the [SENSe]:DDEMod:TIMe:UNITs command to select the time unit: symbols (default) or seconds.

Examples

CALCulate:TDIagram:MEASview2:MARKer1:DELTa:X:TIME? might return 62.75,indicating that the delta marker time is 62.75 symbols.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query only)

Returns the delta marker amplitude for the selected marker on the Trellis diagram trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:DELTa:X[:TIME]? (on page 644)

Arguments

None

Returns

<NRf> Delta marker amplitude for the selected marker in degrees.

Examples

CALCulate:TDIagram:MEASview2:MARKer1:DELTa:Y? might return -48.26, indicating that the delta marker amplitude is -48.26°.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:MAXimum (No query form)

Moves the selected marker to the highest peak on the Trellis diagram trace.

The parameter <x> = 0 to 4. The specified marker must be activated using `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

```
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:MAXimum
```

Arguments

None

Examples

`CALCulate:TDIagram:MEASview1:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No query form)

Moves the selected marker to the next peak higher in amplitude on the Trellis diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram)

Group

Calculate commands

Syntax

```
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 647)

Arguments

None

Examples

`CALCulate:TDIagram:MEASview2:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No query form)

Moves the selected marker to the next peak to the left on the Trellis diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

`CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:LEFT`

Related Commands

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 648)

Arguments

None

Examples

`CALCulate:TDIagram:MEASview2:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No query form)

Moves the selected marker to the next peak lower in amplitude on the Trellis diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

`CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:LOWer`

Related Commands

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 646)

Arguments

None

Examples

`CALCulate:TDIagram:MEASview2:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No query form)

Moves the selected marker to the next peak to the right on the Trellis diagram trace.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the `CALCulate:MARKer:ADD` command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

`CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:PEAK:RIGHt`

Related Commands

CALCulate:TDIagram [:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 647)

Arguments

None

Examples

`CALCulate:TDIagram:MEASview2:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:X[:TIME]

Sets or queries the horizontal position (time) of the selected marker in the Trellis diagram measurement.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

```
CALCulate:TDIagram [:MEASview<y>]:MARKer<x>:X[:TIME] <value>
CALCulate:TDIagram:MARKer<x>:X[:TIME]?
```

Related Commands

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:Y? (on page 649)

Arguments

<value>::=<NRf> specifies the horizontal position (time) of the marker. Use the [SENSe]:DDEMod:TIMe:UNITs command to select the time unit as symbols (default) or seconds.

Examples

CALCulate:TDIagram:MEASview2:MARKer1:X:TIME 38.5 places Marker 1 (M1) at 38.5 symbols on the trace.

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:Y? (Query only)

Queries the vertical position of the selected marker in the Trellis diagram measurement.

The parameter <x> = Marker 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Calculate commands

Syntax

```
CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:TDIagram[:MEASview<y>]:MARKer<x>:X[:TIME] (on page 648)

Arguments

None

Returns

<NRf> Marker amplitude of the selected marker in degrees.

Examples

CALCulate:TDIagram:MEASview2:MARKer1:Y? might return 212.3, indicating Marker 1 (M1) is at 212.3 °.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker time for the selected marker on the time overview trace.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:X?

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:Y? (on page 650)

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 1 to 4.

Returns

<NRf> Delta marker time for the selected marker.

Examples

CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:DELTA:X? might return 38.0E-9, indicating that the delta marker time is 38.0 ns.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the selected marker on the time overview trace.

The parameter <x> = 1 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:Y?

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:DELTa:X? (on page 650)

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 1 to 4.

Returns

<NRf> Delta marker amplitude for the selected marker.

Examples

CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:DELTA:Y? might return 23.45, indicating that the delta marker amplitude is 23.45 dB on the trace of Time overview Measurement View 1.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:MAXimum (No Query Form)

Moves the selected marker to the highest peak on the time overview trace.

Conditions

Measurement views: Time overview displays with specified Measurement view number

Group

Calculate commands

Syntax

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:MAXimum

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Examples

CALCULATE:TOVERVIEW:MEASview1:MARKer1:MARKER1:MAXIMUM moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the time overview trace.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:LOWer (on page 652)

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Examples

`CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:PEAK:HIGHER` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next peak to the left on the time overview trace.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (on page 653)

Arguments

None

Examples

`CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:PEAK:LEFT` moves Marker 1 (M1) to the next peak to the left on the trace.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the time overview trace.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:HIGHer (on page 651)

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Examples

`CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:PEAK:LOWER` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next peak to the right on the time overview trace.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:PEAK:LEFT (on page 652)

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Examples

`CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:PEAK:RIGHT` moves Marker 1 (M1) to the next peak to the right on the trace.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:X

Sets or queries the horizontal position of the selected marker on the time overview trace.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:X <value>
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:X?
```

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:Y? (on page 654)

Arguments

`<value>::=<NRf>` specifies the horizontal position of the specified marker.

Range: (analysis offset) to [(analysis offset) + (analysis length)].

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Returns

`<NRf>` is a floating point number that is the horizontal position of the specified marker.

Examples

`CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:X 1.5us` places Marker 1 (M1) at 1.5 µs on the trace.

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the selected marker in the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Calculate commands

Syntax

```
CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:Y?
```

Related Commands

CALCulate:TOVerview[:MEASview<y>]:MARKer<x>:X (on page 653)

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Returns

`<NRf>` Marker amplitude of the selected marker.

Examples

`CALCULATE:TOVERVIEW:MEASVIEW1:MARKER1:Y?` might return `-34.28`, indicating Marker 1 (M1) is at −34.28 dBm.

CALculate:TXGain:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker frequency for the specified marker on the trace.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 1, 2, 3, 4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

`CALculate:TXGain:MARKer<x>:DELTa:X?`

Returns

`<NRf>` is the delta marker frequency for the specified marker.

Examples

`CALculate:TXGain:MARKer1:DELTa:X?` might return 1.28E+6, indicating that the delta marker frequency is 1.28 MHz.

CALculate:TXGain:MARKer<x>:DELTa:Y? (Query Only)

Returns the delta marker amplitude for the specified marker on the trace.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 1 to 4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

`CALculate:TXGain:MARKer<x>:DELTa:Y?`

Returns

`<NRf>` is the delta marker amplitude for the specified marker.

Examples

`CALculate:TXGain:MARKer1:DELTa:Y?` might return `23.45`, indicating that the delta marker amplitude for Marker 1 (M1) is 23.45 dB.

CALculate:TXGain:MARKer<x>:MAXimum (No Query Form)

Moves the specified marker to the highest peak on the trace.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

`CALculate:TXGain:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALculate:TXGain:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak on the trace.

CALculate:TXGain:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the specified marker to the next peak higher in amplitude on the trace.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

`CALculate:TXGain:MARKer<x>:PEAK:HIGHer`

Arguments

None

Examples

`CALculate:TXGain:MARKer1:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALculate:TXGain:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the specified marker to the next peak to the left on the trace.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax
CALculate:TXGain:MARKer<x>:PEAK:LEFT

Arguments
None

Examples
CALculate:TXGain:MARKer1:PEAK:LEFT moves Marker 1 (M1) to the next peak to the left on the trace.

CALculate:TXGain:MARKer<x>:PEAK:LOWer (No Query Form)
-Moves the specified marker to the next peak lower in amplitude on the trace.

Conditions
Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group
Calculate commands

Syntax
CALculate:TXGain:MARKer<x>:PEAK:LOWer

Arguments
None

Examples
CALculate:TXGain:MARKer1:PEAK:LOWer moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALculate:TXGain:MARKer<x>:PEAK:RIGHt (No Query Form)
Moves the specified marker to the next peak to the right on the trace.

Conditions
Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group
Calculate commands

Syntax
CALculate:TXGain:MARKer<x>:PEAK:RIGHt

Arguments
None

Examples
CALculate:TXGain:MARKer1:PEAK:RIGHt moves Marker 1 (M1) to the next peak to the right on the trace.

CALculate:TXGain:MARKer<x>:TRACe

Sets or queries the trace on which the specified marker is placed in the Transmission Gain display.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

```
CALculate:TXGain:MARKer<x>:TRACe { TRACE1 | TRACE2 | TRACE3 }
CALculate:TXGain:MARKer<x>:TRACe?
```

Arguments

`TRACE1` places the specified marker on Trace 1.

`TRACE2` places the specified marker on Trace 2.

`TRACE3` places the specified marker on Trace 3.

Returns

See Arguments.

Examples

`CALculate:TXGain:MARKer1:TRACe TRACE1` places Marker 1 (M1) on Trace 1.

CALculate:TXGain:MARKer<x>:X

Sets or queries the horizontal position for the specified marker on the trace.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

```
CALculate:TXGain:MARKer<x>:X <value>
CALculate:TXGain:MARKer<x>:X ?
```

Arguments

`<value>::=<NRf>` specifies the horizontal position of the specified marker.

Range: Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Returns

<NRf> is the horizontal position of the specified marker.

Examples

CALculate:TXGain:MARKer1:X 800E+6 places Marker 1 (M1) at 800 MHz on the trace.

CALculate:TXGain:MARKer<x>:Y? (Query Only)

Queries the marker amplitude of the specified marker on the trace.

Conditions

Measurement view: Transmission Gain

The parameter <x> = 0,1,2,3,4 is the marker. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Group

Calculate commands

Syntax

CALculate:TXGain:MARKer<x>:Y?

Returns

<NRf> is the amplitude at the specified marker position in dB.

Examples

CALculate:TXGain:MARKer1:Y might return -23.45, indicating that the marker amplitude is -23.45 dB.

CALCulate:WLAN:AD:CONSte:MARKer<x>:DELTa:X[:TIME]? (Query Only)

Returns the time of the specified delta marker on the trace in the Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Calculate commands

Syntax

CALCulate:WLAN:AD:CONSte:MARKer<x>:DELTa:X[:TIME]?

Arguments

<x> = 1,2,3,4 is the marker.

Returns

<NR3>

Examples

CALCulate:WLAN:AD:CONSte:MARKer1:DELTa:X:TIME? might return 3.1494-6, indicating that the frequency of the specified delta between Marker (M1) and MR is 3.1494-6.

CALCulate:WLAN:AD:CONSte:MARKer<x>:MAGNitude? (Query Only)

Queries the marker magnitude of the specified marker in the Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:CONSte:MARKer<x>:MAGNitude?`

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

`<NRf>` The magnitude for the selected marker

Examples

`CALCulate:WLAN:AD:CONSte:MARKer1:MAGNitude?` might return 6.261E-3, indicating the magnitude of Marker 1(M1) is 6.261E-3.

CALCulate:WLAN:AD:CONSte:MARKer<x>:PHASe? (Query Only)

Queries the phase readout of the specified marker in the Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:CONSte:MARKer<x>:PHASe?`

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

`<NRf>` The phase readout for the selected marker

Examples

`CALCulate:WLAN:AD:CONSte:MARKer1:PHASe?` might return 9.690, indicating the phase readout of Marker 1 (M1) is 9.7°.

CALCulate:WLAN:AD:CONSte:MARKer<x>:SYMBol? (Query Only)

Queries the symbol of the specified marker in Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:CONSte:MARKer<x>:SYMBol?`

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

`<NR3>` = the symbol of the selected marker

Examples

`CALCulate:WLAN:AD:CONSte:MARKer1:SYMBol?` might return 3.369E+3, indicating the symbol value of the Marker 1 (M1) is 3.369E+3.

CALCulate:WLAN:AD:CONSte:MARKer<x>:TYPE? (Query Only)

Queries the data type of the specified marker in Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:CONSte:MARKer<x>:TYPE?`

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

`<String>`

Either (Preamble | Header | Data | Guard)

Examples

`CALCulate:WLAN:AD:CONSte:MARKer1:TYPE?` might return `"Preamble"`, indicating the data type of the selected marker is “Preamble".

CALCulate:WLAN:AD:CONSte:MARKer<x>:VALue? (Query Only)

Queries the value of the selected marker in Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AD:CONSte:MARKer<x>:VALue?
```

Arguments

<x> = 0,1,2,3,4 is the marker.

Returns

<NR1> = the value of the selected marker

Examples

CALCulate:WLAN:AD:CONSte:MARKer1:VALue? might return "+1", indicating the value of the Marker 1 (M1) is "+1".

CALCulate:WLAN:AD:CONSte:MARKer<x>:X

Sets or queries the horizontal position of the specified marker on the trace in the 802.11ad Constellation display.

Conditions

Measurement view: 802.11ad Constellation

<x> = 0,1,2,3,4 is the marker.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AD:CONSte:MARKer<x>:X <value>
CALCulate:WLAN:AD:CONSte:MARKer<x>:X?
```

Arguments

<value>=<NRf> specifies the horizontal position of the marker

Returns

<NRf>

Examples

CALCulate:WLAN:AD:CONSte:MARKer1:X 9.5409090173E-6 places Marker 1 (M1) at 9.540E−6 on the trace.

CALCulate:WLAN:AD:EVM:MARKer<x>:DELTa:X? (Query Only)

Returns the delta marker time for the selected marker on the EVM trace.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Calculate commands

Syntax
`CALCulate:WLAN:AD:EVM:MARKer<x>:DELTa:X?`

Arguments
`<x>` = 1,2,3,4 is the marker.

Returns
`<NRf>` Delta marker time

Examples
`CALCulate:WLAN:AD:EVM:MARKer1:DELTa:X?` might return `1.28E-9`, indicating that the delta marker time for Marker 1 (M1) is 1.28E-9 s.

CALCulate:WLAN:AD:EVM:MARKer<x>:DELTa:Y? (Query Only)
Returns the delta marker amplitude for the selected marker on the EVM trace.

Conditions
Measurement views: 802.11ad EVM vs Time

Group
Calculate commands

Syntax
`CALCulate:WLAN:AD:EVM:MARKer<x>:DELTa:Y?`

Arguments
`<x>` = 1,2,3,4 is the marker.

Returns
`<NRf>` = Delta marker amplitude

Examples
`CALCulate:WLAN:AD:EVM:MARKer<x>:DELTa:Y?` might return 23.45, indicating that the delta marker amplitude for Marker 1 (M1) is 23.45 dB.

CALCulate:WLAN:AD:EVM:MARKer<x>:MAXimum (No Query Form)
Moves the selected marker to the highest peak on the trace in the EVM measurement.

Conditions
Measurement views: 802.11ad EVM vs Time

Group
Calculate commands

Syntax
`CALCulate:WLAN:AD:EVM:MARKer<x>:MAXimum`

Arguments

<x> = 0,1,2,3,4 is the marker.

Returns

None

Examples

`CALCulate:WLAN:AD:EVM:MARKer1:MAXimum` moves Marker 1 (M1) to the highest peak on the trace.

CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the selected marker to the next peak higher in amplitude on the EVM trace.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:HIGHer`

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

None

Examples

`CALCulate:WLAN:AD:EVM:MARKer1:PEAK:HIGHer` moves Marker 1 (M1) to the next peak higher in amplitude on the trace.

CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the selected marker to the next significant peak found to the left of the current marker position.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:LEFT`

Arguments

`<x>`= 0, 1,2,3,4 is the marker

Returns

None

Examples

`CALCulate:WLAN:AD:EVM:MARKer1:PEAK:LEFT` moves Marker 1 (M1) to the next peak found on the left side of the trace.

CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the selected marker to the next peak lower in amplitude on the EVM trace.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:LOWer`

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

None

Examples

`CALCulate:WLAN:AD:EVM:MARKer1:PEAK:LOWer` moves Marker 1 (M1) to the next peak lower in amplitude on the trace.

CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the selected marker to the next significant peak found to the right of the current marker position.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Calculate commands

Syntax

`CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:RIGHt`

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

None

Examples

`CALCulate:WLAN:AD:EVM:MARKer1:PEAK:RIGHt` moves Marker 1 (M1) to the next peak found on the right side of the trace.

CALCulate:WLAN:AD:EVM:MARKer<x>:X

Sets or queries the horizontal (time) stamp of the selected marker on the EVM trace.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AD:EVM:MARKer<x>:X <value>
CALCulate:WLAN:AD:EVM:MARKer<x>:X?
```

Arguments

where

`<x>` = 0,1,2,3,4 is the marker.

`<value>= <NRf>`

Returns

`<NRf>`

Examples

`CALCulate:WLAN:AD:EVM:MARKer<x>:PEAK:LOWer 5.36` places Marker 1 (M1) at 5.36 µs on the EVM trace.

CALCulate:WLAN:AD:EVM:MARKer<x>:Y? (Query Only)

Queries the vertical position of the selected marker on the EVM trace.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AD:EVM:MARKer<x>:Y?
```

Arguments

`<x>` = 0,1,2,3,4 is the marker.

Returns

`<NRf>` Vertical position of marker

Examples

CALCulate:WLAN:AD:EVM:MARKer1:Y? might return -34.28, indicating the vertical position of Marker 1 (M1) is -34.28 dBm on the EVM trace.

CALCulate:WLAN:AY:CONSte:MARKer<x>:DELTa:X:[:TIME]? (Query Only)

Query the value of the specified delta marker on the trace in the Constellation display.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Conditions

Measurement view: 802.11ay Analysis Constellation

<x> = 1 to 4.

Group

Calculate commands

Syntax

CALCulate:WLAN:AY:CONSte:MARKer<x>:DELTa:X:[:TIME]?

Returns

<NRf>

Units: s (seconds)

Examples

CALC:WLAN:AY:CONS:MARK1:DELT:X:TIME? may return -1.772e-6, indicating that -1.772e-6 seconds is value of the specified delta marker between Marker 1 and the Reference Marker.

CALCulate:WLAN:AY:CONSte:MARKer<x>:MAGNitude? (Query Only)

Query the marker magnitude of the specified marker in the Constellation display.

Conditions

Measurement view: 802.11ay Analysis Constellation

<x> = 0 to 4.

Group

Calculate commands

Syntax

CALCulate:WLAN:AY:CONSte:MARKer<x>:MAGNitude?

Returns

<NRf> is the magnitude for the specified delta marker.

Examples

CALC:WLAN:AY:CONS:MARK2:MAGN? may return 6.261e-3, indicating that the magnitude for Marker 2 is 6.261e-3.

CALCulate:WLAN:AY:CONSte:MARKer<x>:PHASe? (Query Only)

Query the phase readout of the specified marker in the Constellation display.

Conditions

Measurement view: 802.11ay Analysis Constellation

<x> = 0 to 4.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:CONSte:MARKer<x>:PHASe?
```

Returns

<NRf> is the phase readout for the specified marker.Units: degrees

Examples

CALC:WLAN:AY:CONS:MARK3:PHAS? may return 9.690, indicating that the phase readout for Marker 3 is 9.7° degrees.

CALCulate:WLAN:AY:CONSte:MARKer<x>:SYMBol? (Query Only)

Query the Symbol value at which the specified marker is placed.

Conditions

Measurement view: 802.11ay Analysis Constellation

<x> = 0 to 4.

Group

Calculate commands.

Syntax

```
CALCulate:WLAN:AY:CONSte:MARKer<x>:SYMBol?
```

Returns

<NR1>

Examples

CALC:WLAN:AY:CONS:MARK1:SYMB? may return 3.369e+3, indicating that the symbol value at which Marker 1 is placed is 3.369e+3.

CALCulate:WLAN:AY:CONSte:MARKer<x>:TYPE? (Query Only)

Query the data type of the specified marker in the Constellation display.

The data type can be Preamble, Header, Data, or Guard, based on the marker position selection in the region.

Conditions

Measurement view: 802.11ay Analysis Constellation

<x> = 0 to 4.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:CONSte:MARKer<x>:TYPE?
```

Returns

<string>

Examples

CALC:WLAN:AY:CONS:MARK1:TYPE? may return Preamble, indicating that the data type for Marker 1 is Preamble.

CALCulate:WLAN:AY:CONSte:MARKer<x>:VALue? (Query Only)

Query the symbol value at which the marker is placed.

Conditions

Measurement view: 802.11ay Analysis Constellation

<x> = 0 to 4.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:CONSte:MARKer<x>:VALue?
```

Returns

<string>

Examples

CALC:WLAN:AY:CONS:MARK1:VAL? may return +1, which indicates the symbol value at which Marker 1 is placed.

CALCulate:WLAN:AY:CONSte:MARKer<x>:X

Set or query the horizontal position of the specified marker on the trace in the Constellation display.

Conditions

Measurement view: 802.11ay Analysis Constellation

<x> = 0 to 4.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:CONSte:MARKer<x>:X <value>
CALCulate:WLAN:AY:CONSte:MARKer<x>:X?
```

Arguments

<value>::=<NRf> specifies the horizontal position of the specified marker.

Range: 0.1 to 10 s (seconds)

Returns

<NRf>

Examples

CALC:WLAN:AY:CONS:MARK1:X 9.5409090173e-6 places the horizontal position of Marker 1 at 9.540e-6 on the trace.

CALC:WLAN:AY:CONS:MARK2:X? may return 9.540e-6, which is the horizontal position of Marker 2 on the trace.

CALCulate:WLAN:AY:EVM:MARKer<x>:DELTa:X

Set or query the delta marker value for the specified marker on the EVM trace.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 1 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:DELTa:X <NRf>
CALCulate:WLAN:AY:EVM:MARKer<x>:DELTa:X?
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

<NRf> is the delta marker value for the specified marker.

Units: s (seconds)

Returns

<NRf>

Examples

CALC:WLAN:AY:EVM:MARK1:DELT:X 1.28e-9 sets the delta marker value for Marker 1 to 1.28e-9 s.

CALC:WLAN:AY:EVM:MARK2:DELT:X? may return 1.28e-9, indicating that the delta marker value for Marker 2 is 1.28e-9 s.

CALCulate:WLAN:AY:EVM:MARKer<x>:DELTa:Y

Set or query the delta marker amplitude for the specified marker on the EVM trace.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 1 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:DELTa:Y <NRf>
CALCulate:WLAN:AY:EVM:MARKer<x>:DELTa:Y?
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

<NRf> is the delta marker amplitude for the specified marker.

Units: dB

Returns

<NRf>

Examples

CALC:WLAN:AY:EVM:MARK1:DELT:Y 23.45 sets the delta marker amplitude of Marker 1 to 23.45 dB.

CALC:WLAN:AY:EVM:MARK2:DELT:Y? may return 23.45, which means the marker amplitude of Marker 2 is 23.45 dB.

CALCulate:WLAN:AY:EVM:MARKer<x>:MAXimum (No Query Form)

Move the specified marker to the highest peak on the trace in the EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 0 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:MAXimum
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

None

Examples

CALC:WLAN:AY:EVM:MARK1:MAX moves Marker 1 to the highest peak on the trace.

CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:HIGHer (No Query Form)

Move the specified marker to the next peak higher in amplitude on the EVM trace.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 0 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:HIGHer
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

None

Examples

`CALC:WLAN:AY:EVM:MARK1:PEAK:HIGH` moves Marker 1 to the next peak higher in amplitude on the trace.

CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:LEFT (No Query Form)

-Move the specified marker to the next significant peak found to the left of the current marker position.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 0 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:LEFT
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

None

Examples

`CALC:WLAN:AY:EVM:MARK4:PEAK:LEFT` moves Marker 4 to the next peak to the left on the trace.

CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:LOWer (No Query Form)

Move the specified marker to the next peak lower in amplitude on the EVM trace.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 0 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:LOWer
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

None

Examples

`CALC:WLAN:AY:EVM:MARK2:PEAK:LOW` moves Marker 2 to the next peak lower in amplitude on the trace.

CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:RIGHt (No Query Form)

Move the specified marker to the next significant peak found to the right of the current marker position.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 0 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:PEAK:RIGHt
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

None

Examples

CALC:WLAN:AY:EVM:MARK1:PEAK:RIGH moves Marker 1 to the next peak to the right on the trace.

CALCulate:WLAN:AY:EVM:MARKer<x>:X

Set or query the horizontal (time) stamp of the specified marker on the EVM trace.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 0 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:X <value>
CALCulate:WLAN:AY:EVM:MARKer<x>:X?
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

<value>::=<NRf> is the specified marker.

Units: µs

Returns

<NRf>

Examples

CALC:WLAN:AY:EVM:MARK1:X 5e-6 places Marker 1 at 5 µs on the EVM trace.

CALC:WLAN:AY:EVM:MARK2:X? may return 5e-6, which means Marker 2 is placed at 5 µs on the EVM trace.

CALCulate:WLAN:AY:EVM:MARKer<x>:Y

Set or query the vertical (EVM) position of the specified marker on the EVM trace.

Conditions

Measurement views: 802.11ay Analysis EVM

<x> = 0 to 4.

You must activate the specified marker by using CALCulate:MARKer:ADD.

Group

Calculate commands

Syntax

```
CALCulate:WLAN:AY:EVM:MARKer<x>:Y <NRf>
CALCulate:WLAN:AY:EVM:MARKer<x>:Y?
```

Related Commands

CALCulate:MARKer:ADD (on page 507)

Arguments

<NRf> is the marker amplitude of the specified marker.

Units: dB

Returns

<NRf>

Examples

CALC:WLAN:AY:EVM:MARK1:Y -34.28 sets the position of Marker 1 at –34.28 dB on the EVM trace.

CALC:WLAN:AY:EVM:MARK2:Y? may return -34.28, indicating that Marker 2 is at –34.28 dB on the EVM trace.

CALCulate:WLAN:CONSte:MARKer<x>:FREQuency

Sets or queries the frequency value of the marker on the WLAN Constellation display. The units are either Frequency in Hz or Subcarrier number. To set the units, use the command [SENSe]:WLAN:UNIT:FREQuency.

Note that FREQuency is not an actual measurement of frequency, but is the subcarrier offset within the analyzed packet burst.

<x>, which is optional, is the desired marker to use. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Commanding a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:CONSte:MARKer<x>:FREQuency <NRf>
CALCulate:WLAN:CONSte:MARKer<x>:FREQuency?
```

Arguments

Floating point number that indicates the desired subcarrier to which the marker should be moved. Subcarriers are traditionally numbered with both positive and negative offsets from the CF for the modulation scheme. Valid integral values range from –maxsubcarrier to maxsubcarrier, where the actual values depend on the modulation standard. Specifying a value of <NRf> outside of the range of subcarriers present in the burst selects the nearest valid subcarrier. Subcarriers can also be specified by frequency (also determined by modulation standard).

Returns

Returns a unitless number representing the subcarrier number.

Examples

CALC:WLAN:CONST:MARK2:FREQ 2.0000 sets the position of Marker 2 (M2) to Subcarrier 2 (assuming the units have been set to Subcarrier).

`CALC:WLAN:CONST:MARK2:FREQ?` might return 2.41575E+9, indicating that Marker 2 (M2) is positioned at 2.41575 MHz.

CALCulate:WLAN:CONSte:MARKer<x>:MAGNitude? (Query Only)

Returns the magnitude value at the indicated marker position on the WLAN Constellation display.

<x> is optional. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CONSte:MARKer<x>:MAGNitude?`

Returns

Returns a unitless floating point number indicating the magnitude at the selected marker position on the WLAN Constellation display.

Examples

`CALC:WLAN:CONS:MARK1:MAGN?` might return 35 indicating the magnitude at Marker 1 (M1) is 35.

CALCulate:WLAN:CONSte:MARKer<x>:PHASe? (Query Only)

Returns the phase value at the indicated marker position on the WLAN Constellation display, in degrees.

<x>, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CONSte:MARKer<x>:PHASe?`

Returns

Phase value of the signal in degrees between -180 and +180 as an **ASCII** encoded floating point number in standard engineering notation.

Examples

`CALC:WLAN:CONS:MARK1:PHAS?` might return 35.74, indicating the phase readout of Marker 1 (M1) is 35.74°.

CALCulate:WLAN:CONSte:MARKer<x>:TIME

Sets the time offset value at the selected marker position on the points trace on the WLAN Constellation display. The units are either Symbols or Seconds. To set/query the units, use the command [SENSe]:WLAN:UNIT:TIME.

Note that TIME is a measurement of neither absolute nor elapsed time, but symbol offset within the analyzed packet burst.

<x>, which is optional, is the desired marker. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Commanding a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:CONSte:MARKer<x>:TIME <NRf>
CALCulate:WLAN:CONSte:MARKer<x>:TIME?
```

Arguments

Floating point number that indicates the 0 based symbol or time offset from the start of packet burst. Valid integral values range from 0 to the number of symbols in the burst. Specifying a value outside of the range of symbols present in the burst selects the nearest valid symbol.

Returns

Returns a unitless integer value in floating point format that represents the symbol associated with the position of the indicated marker, or the time offset.

Examples

`CALC:WLAN:CONST:MARK3:TIME -234.5` moves Marker 3 (M3) to the 362.42 µs position on the trace (assuming the units have been set to Seconds).

`CALC:WLAN:CONST:MARK3:TIME?` might return 5.0000 indicating that Marker 3 is located at symbol 5 (assuming units have been set to Symbols).

CALCulate:WLAN:CONSte:MARKer<x>:TYPE? (Query Only)

Returns the data type of the subcarrier for data at the indicated marker position - either pilot or data.

<x>, which is optional, is the desired marker. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CONSte:MARKer<x>:TYPE?`

Returns

Returns the decoded value of the subcarrier type to which the marker is attached as an **ASCII** encoded floating point number in standard engineering notation.

Values are:

1.000 if the marker type is a pilot marker.

2.000 if the marker type is a data marker.

Examples

`CALC:WLAN:CONS:MARK2:TYPE?` might return `1.000` indicating Marker 2 (M2) is a pilot marker.

CALCulate:WLAN:CONSte:MARKer<x>:VALue? (Query Only)

Queries the value readout at the selected marker position on the points trace of the WLAN Constellation display.

<x>, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CONSte:MARKer<x>:VALue?`

Returns

Floating point number that represents the value readout at the selected marker position.

Examples

`CALC:WLAN:CONS:MARK1:VAL?` might return 2.00, indicating the value readout at Marker 1 (M1) is 2.

CALCulate:WLAN:CRESponse:MARKer<x>:DELTa:X? (Query Only)

Queries the delta Subcarrier or frequency value (depending on which units have been set) at the selected marker position on the WLAN Channel Response display.

Use the command [SENSe]:WLAN:UNIT:FREQuency to set the units.

<x> is the desired marker to query. Marker 0 is not valid for the DELTa queries. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CRESponse:MARKer<x>:DELTa:X?`

Returns

Floating point number that represents the delta frequency value at the selected marker position.

Examples

`CALC:WLAN:CRES:MARK2:DELT:X?` might return 1.28E+6 indicating that the delta frequency value for Marker 2 (M2) is 1.28 MHz.

CALCulate:WLAN:CRESponse:MARKer<x>:DELTa:Y? (Query Only)

Queries the vertical delta value for the points trace at the selected marker position on the WLAN Channel Response display, in dB or degree.

`<x>` is the desired marker to query. Marker 0 is not valid for the DELTa queries. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Marker 0 and the selected marker must be on the same plot (magnitude or phase); otherwise, it will result in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CRESponse:MARKer<x>:DELTa:Y?`

Returns

Returns the vertical delta value for the points trace in dB or degree at the selected marker position.

Examples

`CALC:WLAN:CRES:MARK3:DELT:Y?` might return `-30`, indicating a vertical delta value of −30 dB at the Marker 3 (M3) position.

CALCulate:WLAN:CRESponse:MARKer<x>:MAXimum (No Query Form)

Moves the marker to the highest peak on the trace on the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CRESponse:MARKer<x>:MAXimum`

Arguments

None

Examples

`CALC:WLAN:CRES:MARK2:MAX` moves the marker to the highest peak on the trace on the WLAN Channel Response display.

CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:HIGHer (No Query Form)

Moves the marker to the next peak higher in amplitude on the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:HIGHer`

Arguments

None

Examples

`CALC:WLAN:CRES:MARK2:PEAK:HIGHer` moves Marker 2 (M2) to the next peak higher in amplitude on the trace.

CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the marker to the next peak on the left on the trace in the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:LEFT

Arguments

Examples

CALC:WLAN:CRES:MARK2:PEAK:LEFT moves Marker 2 (M2) to the next peak on the left on the trace in the WLAN Channel Response display.

CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the marker to the next peak lower in amplitude on the trace on the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:LOWer

Arguments

None

Examples

CALC:WLAN:CRES:MARK2:PEAK:LOW moves Marker 2 (M2) to the next peak lower on the trace.

CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the marker to the next peak to the right on the trace on the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

CALCulate:WLAN:CRESponse:MARKer<x>:PEAK:RIGHt

Arguments

None

Examples

`CALC:WLAN:CRES:MARK2:PEAK:RIGH` moves Marker 2 (M2) to the next peak to the next peak on the right on the trace.

CALCulate:WLAN:CRESponse:MARKer<x>:X

Sets or queries the value of the horizontal position (units in Frequency or Subcarrier) for the selected marker on the points trace in the WLAN Channel Response display.

To set the units, use the command [SENSe]:WLAN:UNIT:FREQuency.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:CRESponse:MARKer<x>:X <NRf>
CALCulate:WLAN:CRESponse:MARKer<x>:X?
```

Arguments

Floating point number that specifies the value of the horizontal position of the marker. Range: Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, “Data out of range”).

Examples

`CALC:WLAN:CRES:MARK3:X 22` places Marker 3 at 22 Subcarrier on the trace (assuming the units have been set to Subcarrier).

CALCulate:WLAN:CRESponse:MARKer<x>:Y? (Query Only)

Returns the value of the amplitude at the selected marker position in the WLAN Channel Response measurement.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:CRESponse:MARKer<x>:Y?
```

Returns

Floating point number that indicates the amplitude value at the selected marker position in dB or degrees.

Examples

`CALC:WLAN:CRES:MARK1:Y?` might return `33.393856E-3` indicating the amplitude of Marker 1 is 0.033 dB.

CALCulate:WLAN:EVM:MARKer<x>:AVERage:SUBCarrier? (Query Only)

Queries the EVM value at the selected marker position on the average trace on the WLAN EVM display subcarrier graph.

To query the marker value of the points trace, use the query.

<x>, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:EVM:MARKer<x>:AVERage:SUBCarrier?
```

Returns

Returns a floating point number that represents the EVM value at the selected marker position on the average trace on the WLAN EVM display subcarrier graph.

Examples

`CALC:WLAN:EVM:MARK3:AVER:SUBC?` might return 16.4, indicating an EVM value of 16.4 percent at the Marker 3 (M3) position on the average trace on the WLAN EVM display subcarrier graph.

CALCulate:WLAN:EVM:MARKer<x>:AVERage:SYMBol? (Query Only)

Queries the EVM value at the selected marker position on the average trace on the WLAN EVM display symbol graph.

To query the marker value of the points trace, use the query.

<x>, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:EVM:MARKer<x>:AVERage:SYMBol?
```

Returns

Returns a floating point number that represents the EVM value at the selected marker position on the average trace on the WLAN EVM display symbol graph.

Examples

`CALC:WLAN:EVM:MARK3:AVER:SYMB?` might return `14.5`, indicating an EVM value of 14.5 percent at the Marker 3 (M3) position on the average trace on the WLAN EVM display symbol graph.

CALCulate:WLAN:EVM:MARKer<x>:DELTa:SUBCarrier? (Query Only)

Queries the delta Subcarrier or frequency value (depending on which units have been set) at the selected marker position on the WLAN EVM display.

Use the command [SENSe]:WLAN:UNIT:FREQuency to set the units.

<x>, which is optional, is the desired marker to query. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Marker 0 is not valid for the DELTa queries. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:EVM:MARKer<x>:DELTa:SUBCarrier?`

Returns

Returns a floating point number that represents the delta subcarrier or frequency value at the selected marker position on the WLAN EVM display.

Examples

`CALC:WLAN:EVM:MARK3:DELTa:SUBCarrier?` might return `9.375 MHz`, indicating a delta frequency value of 9.375 MHz at the Marker 3 (M3) position.

CALCulate:WLAN:EVM:MARKer<x>:DELTa:SYMBol? (Query Only)

Queries the delta time value in seconds or symbols (depending on which units have been set) at the selected marker position on the WLAN EVM display.

Use the command [SENSe]:WLAN:UNIT:TIME to set the units.

<x>, which is optional, is the desired marker to query. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Marker 0 is not valid for the DELTa queries. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:EVM:MARKer<x>:DELTa:SYMBol?`

Returns

Returns the delta time value at the selected marker position on the WLAN EVM display.

Examples

`CALC:WLAN:EVM:MARK3:DELTa:SYMB?` might return `4.0E-6 µs`, indicating a delta time value of 4 µs at the Marker 3 (M3) position (assuming the units have been set to Seconds).

CALCulate:WLAN:EVM:MARKer<x>:DELTa:Y? (Query Only)

Queries the vertical delta value for the points trace at the selected marker position on the WLAN EVM display.

`<x>`, which is optional, is the desired marker to query. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Marker 0 is not valid for the DELTa queries. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:EVM:MARKer<x>:DELTa:Y?`

Returns

Returns the vertical delta value for the points trace at the selected marker position.

Examples

`CALC:WLAN:EVM:MARK3:DELTa:Y?` might return `-212.91`, indicating a vertical delta value of –212.91 percent at the Marker 3 (M3) position.

CALCulate:WLAN:EVM:MARKer<x>:FREQuency

Sets or queries the frequency value of the marker on the WLAN EVM display. The units are either Frequency in Hz or Subcarrier number. To set the units, use the command [SENSe]:WLAN:UNIT:FREQuency.

Note that FREQuency is not an actual measurement of frequency, but is the subcarrier offset within the analyzed packet burst.

`<x>`, which is optional, is the desired marker to use. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Commanding a marker which does not exist results in an execution error.

Conditions

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:EVM:MARKer<x>:FREQuency <NRf>
CALCulate:WLAN:EVM:MARKer<x>:FREQuency?
```

Arguments

Floating point number that indicates the desired subcarrier or frequency to which the marker should be moved. Subcarriers are traditionally numbered with both positive and negative offsets from the CF for the modulation scheme. Valid integral values range from –maxsubcarrier to maxsubcarrier, where the actual values depend on the modulation standard. Specifying a value of <NRf> outside of the range of subcarriers present in the burst selects the nearest valid subcarrier. Subcarriers can also be specified by frequency (also determined by modulation standard).

Returns

Returns a unitless number representing the subcarrier number or frequency in Hz.

Examples

`CALC:WLAN:EVM:MARK2:FREQ 2.0000` sets the position of Marker 2 (M2) to Subcarrier 2 (assuming the units have been set to Subcarrier).

`CALC:WLAN:EVM:MARK2:FREQ?` might return `2.41575E+9`, indicating that Marker 2 (M2) is positioned at 2.41575 MHz.

CALCulate:WLAN:EVM:MARKer<x>:TIME

Sets the vertical marker value of the points trace on the WLAN EVM display. The units are either Symbols or Seconds. To set/query the units, use the command [SENSe]:WLAN:UNIT:TIME.

Note that TIME is a measurement of neither absolute nor elapsed time, but symbol offset within the analyzed packet burst.

`<x>`, which is optional, is the desired marker to use. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Commanding a marker which does not exist results in an execution error.

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:EVM:MARKer<x>:TIME <NRf>
CALCulate:WLAN:EVM:MARKer<x>:TIME?
```

Arguments

Floating point number that indicates the 0 based symbol or time offset from the start of packet burst. Valid integral values range from 0 to the number of symbols in the burst. Specifying a value outside of the range of symbols present in the burst selects the nearest valid symbol.

Returns

Returns a unitless integer value in floating point format that represents the symbol associated with the position of the indicated marker, or the time offset.

Examples

`CALC:WLAN:EVM:MARK3:TIME 362.42E-6` moves Marker 3 (M3) to the `362.42 µs` position on the trace (assuming the units have been set to Seconds).

`CALC:WLAN:EVM:MARK3:TIME?` might return 5.0000 indicating that Marker 3 is located at symbol 5 (assuming units have been set to Symbols).

CALCulate:WLAN:EVM:MARKer<x>:VALue? (Query Only)

Queries the EVM value at the selected marker position on the points trace of the WLAN EVM display.

The EVM value of a marker on the average trace is queried by using the and CALCulate:WLAN:EVM:MARKer<x>:AVERage:SYMBol? queries.

`<x>`, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:FLATness:MARKer<x>:X <NRf>
CALCulate:WLAN:FLATness:MARKer<x>:X?
```

Arguments

Floating point number that specifies the horizontal position of the marker. Range:

Start to Stop frequency (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, “Data out of range”).

Examples

`CALC:WLAN:FLAT:MARK3:X 22` places Marker 3 at 22 Subcarrier on the trace (assuming the units have been set to Subcarrier).

CALCulate:WLAN:FLATness:MARKer<x>:Y? (Query Only)

Returns the value of the amplitude (vertical position) at the selected marker position in the WLAN Spectral Flatness measurement.

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:FLATness:MARKer<x>:Y?
```

Returns

Floating point number that indicates the amplitude at the selected marker position in dB.

Examples

`CALC:WLAN:FLAT:MARK1:Y?` might return 33.393856E-3 indicating the amplitude of Marker 1 is 0.033 dB.

CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SUBCarrier? (Query Only)

Queries the value readout at the selected marker position on the average trace on the WLAN Magnitude Error display.

To query the value readout on the symbol graph, use `CALCulate:WLAN: MERRor:MARKer<x>:AVERage:SYMBol?`

`<x>`, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SUBCarrier?`

Returns

Returns a floating point number that represents the value readout at the selected marker position on the average trace on the WLAN Magnitude Error display subcarrier graph.

Examples

`CALC:WLAN:MERR:MARK2:AVERAGE:SUBC?` might return 16.4, indicating a value readout of 16.4 percent at the Marker 3 (M3) position on the average trace on the WLAN Magnitude Error display subcarrier graph.

CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SYMBol? (Query Only)

Queries the value readout at the selected marker position on the average trace on the WLAN Magnitude Error display.

To query the value readout on the subcarrier graph, use `CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SUBCarrier?`

`<x>`, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Group

Calculate commands

Syntax

`CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SYMBol?`

Returns

Returns a floating point number that represents the value readout at the selected marker position on the average trace on the WLAN Magnitude Error display symbol graph.

Examples

`CALC:WLAN:MERR:MARK2:AVERAGE:SUBC?` might return `14.5`, indicating a Magnitude Error value of 14.5 percent at the Marker 3 (M3) position on the average trace on the WLAN Magnitude Error display.

CALCulate:WLAN:MERRor:MARKer<x>:DELTa:SUBCarrier? (Query Only)

Queries the delta Subcarrier or frequency value (depending on which units have been set) at the selected marker position on the WLAN Magnitude Error display.

Use the command [SENSe]:WLAN:UNIT:FREQuency to set the units.

`<x>`, which is optional, is the desired marker to query. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Marker 0 is not valid for the DELTa queries. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:MERRor:MARKer<x>:DELTa:SUBCarrier?`

Returns

Returns a floating point number that represents the delta subcarrier or frequency value at the selected marker position on the WLAN Magnitude Error display.

Examples

`CAL:WLAN:MERR:MARK2:DELTA:SUBC?` might return `9.375 MHz`, indicating a delta frequency value of 9.375 MHz at the Marker 3 (M3) position.

CALCulate:WLAN:MERRor:MARKer<x>:DELTa:SYMBol? (Query Only)

Queries the delta time value in seconds or symbols (depending on which units have been set) at the selected marker position on the WLAN Magnitude Error display.

Use the command `[SENSe]:WLAN:UNIT:TIME` to set the units.

<x>, which is optional, is the desired marker to query. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Marker 0 is not valid for the DELTa queries. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:MERRor:MARKer<x>:DELTa:SYMBol?
```

Returns

Returns the delta time value at the selected marker position on the WLAN Magnitude Error display.

Examples

`CALC:WLAN:MERR:MARK3:DELTa:SYMB?` might return `4.0E-6 µs`, indicating a delta time value of 4 µs at the Marker 3 (M3) position (assuming the units have been set to Seconds).

CALCulate:WLAN:MERRor:MARKer<x>:DELTa:Y? (Query Only)

Queries the vertical delta value for the points trace at the selected marker position on the WLAN Magnitude Error display.

<x>, which is optional, is the desired marker to query. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. Marker 0 is not valid for the DELTa queries. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 1 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:MERRor:MARKer<x>:DELTa:Y?
```

Returns

Returns the vertical delta value for the points trace at the selected marker position.

Examples

`CALC:WLAN:MERR:MARK3:DELTa:Y?` might return `-212.91`, indicating a vertical delta value of −212.91 percent at the Marker 3 (M3) position.

CALCulate:WLAN:MERRor:MARKer<x>:FREQuency

Sets or queries the frequency value of the marker on the WLAN Magnitude Error display. The units are either Frequency in Hz or Subcarrier number. To set the units, use the command `[SENSe]:WLAN:UNIT:FREQuency`.

Note that FREQuency is not an actual measurement of frequency, but is the subcarrier offset within the analyzed packet burst.

`<x>`, which is optional, is the desired marker to use. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Commanding a marker which does not exist results in an execution error.

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:MERRor:MARKer<x>:FREQuency <NRf>
CALCulate:WLAN:MERRor:MARKer<x>:FREQuency?
```

Arguments

Floating point number that indicates the desired subcarrier or frequency to which the marker should be moved. Subcarriers are traditionally numbered with both positive and negative offsets from the CF for the modulation scheme. Valid integral values range from –maxsubcarrier to maxsubcarrier, where the actual values depend on the modulation standard. Specifying a value of `<NRf>` outside of the range of subcarriers present in the burst selects the nearest valid subcarrier. Subcarriers can also be specified by frequency (also determined by modulation standard).

Returns

Returns a unitless number representing the subcarrier number or frequency value in Hz.

Examples

`CALC:WLAN:MERR:MARK2:FREQ 2.0000` sets the position of Marker 2 (M2) to Subcarrier 2 (assuming the units have been set to Subcarrier).

`CALC:WLAN:MERR:MARK2:FREQ?` might return `2.41575E+9`, indicating that Marker 2 (M2) is positioned at 2.41575 MHz.

CALCulate:WLAN:MERRor:MARKer<x>:TIME

Sets the time offset value at the selected marker position on the points trace on the WLAN Magnitude Error display. The units are either Symbols or Seconds. To set/query the units, use the command `[SENSe]:WLAN:UNIT:TIME`.

Note that TIME is a measurement of neither absolute nor elapsed time, but symbol offset within the analyzed packet burst.

`<x>`, which is optional, is the desired marker. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If `<x>` is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Commanding a marker which does not exist results in an execution error.

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:MERRor:MARKer<x>:TIME <NRf>
CALCulate:WLAN:MERRor:MARKer<x>:TIME?
```

Arguments

Floating point number that indicates the 0 based symbol or time offset from the start of packet burst. Valid integral values range from 0 to the number of symbols in the burst. Specifying a value outside of the range of symbols present in the burst selects the nearest valid symbol.

Returns

Returns a unitless integer value in floating point format that represents the time associated with the position of the indicated marker, or the time offset.

Examples

`CALC:WLAN:MERR:MARK3:TIME 362.42E-6` moves Marker 3 (M3) to the 362 42 µs position on the trace (assuming the units have been set to Seconds).

`CALC:WLAN:MERR:MARK3:TIME?` might return 5.0000 indicating that Marker 3 is located at symbol 5 (assuming units have been set to Symbols).

CALCulate:WLAN:MERRor:MARKer<x>:VALue? (Query Only)

Queries the value readout at the selected marker position on the points trace of the WLAN Magnitude Error display.

The value readout of a marker on the average trace is queried by using the and CALCulate:WLAN:MERRor:MARKer<x>:AVERage:SYMBol? queries.

<x>, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:MERRor:MARKer<x>:VALue?
```

Returns

Returns the decoded symbol value at the selected marker position on the WLAN Magnitude Error display.

Examples

`CALC:WLAN:MERR:MARK3:VAL?` might return 11.9, indicating a value readout of 11.9 for Marker 3 (M3).

CALCulate:WLAN:PERRor:MARKer<x>:AVERage:SUBCarrier? (Query Only)

Queries the Phase Error value at the selected marker position on the average trace on the WLAN Phase Error display subcarrier graph.

To query the marker value of the points trace, use the query.

<x>, which is optional, is the desired marker to query. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:PVTime:MARKer<x>:PEAK:HIGHer`

Arguments

None

Examples

`CALC:WLAN:PVT:MARK2:PEAK:HIGHer` moves Marker 2 (M2) to the next peak higher in amplitude on the trace.

CALCulate:WLAN:PVTime:MARKer<x>:PEAK:LEFT (No Query Form)

Moves the specified marker to the next peak on the left on the trace in the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:PVTime:MARKer<x>:PEAK:LEFT`

Arguments

None

Examples

`CALC:WLAN:PVT:MARK2:PEAK:LEFT` moves Marker 2 (M2) to the next peak on the left on the trace in the WLAN Power vs. Time display.

CALCulate:WLAN:PVTime:MARKer<x>:PEAK:LOWer (No Query Form)

Moves the marker to the next peak lower in amplitude on the trace on the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:PVTime:MARKer<x>:PEAK:LOWer`

Arguments

None

Examples

`CALC:WLAN:PVT:MARK2:PEAK:LOW` moves Marker 2 (M2) to the next peak lower on the trace.

CALCulate:WLAN:PVTime:MARKer<x>:PEAK:RIGHt (No Query Form)

Moves the marker to the next peak to the right on the trace on the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

`CALCulate:WLAN:PVTime:MARKer<x>:PEAK:RIGHt`

Arguments

None

Examples

`CALC:WLAN:PVT:MARK2:PEAK:RIGH` moves Marker 2 (M2) to the next peak on the right on the trace.

CALCulate:WLAN:PVTime:MARKer<x>:X

Sets or queries the value of the horizontal position (in seconds) for the selected marker on the points trace in the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:PVTime:MARKer<x>:X <NRf>
CALCulate:WLAN:PVTime:MARKer<x>:X?
```

Arguments

Floating point number that specifies the value of the horizontal position of the marker. Range: Start to Stop time (left to right edge of the horizontal axis). Using an out-of-range value causes an execution error (-222, "Data out of range").

Examples

`CALC:WLAN:PVT:MARK3:X 1E-6` places Marker 3 at 1 µs on the trace.

CALCulate:WLAN:PVTime:MARKer<x>:Y? (Query Only)

Returns the amplitude (vertical position) at the selected marker position in the WLAN Power vs. Time display, using the currently selected Amplitude units. You can set/query the Amplitude units with the command `SENSe:POWer:UNITs`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:PVTime:MARKer<x>:Y?
```

Returns

Floating point number that indicates the amplitude at the selected marker position in the currently selected Amplitude units.

Examples

`CALC:WLAN:PVT:MARK1:Y?` might return `33.393856E-3` indicating the amplitude at the Marker 1 position is 0.033 dBm.

CALCulate:WLAN:TABLe:MARKer<x>:FREQuency

Assigns or queries the frequency value of the marker in the WLAN Symbol Table. The units are either Frequency in Hz or Subcarrier number. To set the units, use the command [SENSe]:WLAN:UNIT:FREQuency.

Note that FREQuency is not an actual measurement of frequency, but is the subcarrier offset within the analyzed packet burst.

<x>, which is optional, is the desired marker to assign. 0 indicates MR, the reference marker. 1, 2, 3, etc. indicate markers M1, M2, M3, etc. If <x> is not supplied, the command works on the currently selected marker. Valid integral values range from 0 to the number of markers active for the display. Querying a marker which does not exist results in an execution error.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commandsCALCulate:WLAN:AY:CONSte:MARKer<x>:DELTa:X:[:TIME]? (Query Only)

Syntax

```
CALCulate:WLAN:TABLe:MARKer<x>:FREQuency <NRf>
CALCulate:WLAN:TABLe:MARKer<x>:FREQuency?
```

Arguments

Floating point number that indicates the desired subcarrier or frequency to which the marker should be assigned. Subcarriers are traditionally numbered with both positive and negative offsets from the CF for the modulation scheme.Valid integral values range from –maxsubcarrier to maxsubcarrier, where the actual values depend on the modulation standard. Specifying a value of `<NRf>` outside of the range of subcarriers present in the burst selects the nearest valid subcarrier. Subcarriers can also be specified by frequency (also determined by modulation standard).

Returns

Returns a unitless number representing the subcarrier number or frequency in Hz.

Examples

`CALC:WLAN:TABLE:MARK3:FREQ 2.0000` assigns Subcarrier 2 to Marker 3 (M3) (assuming the units have been set to Subcarrier).

`CALC:WLAN:TABLEM:MARK2:FREQ?` might return `2.00000E+9`, indicating that Marker 2 (M2) is assigned 2.00 MHz.

CALCulate:WLAN:TABLe:MARKer<x>:TIME

Sets or queries the vertical value at the selected marker position on the WLAN Symbol Table. The units are either Symbols or Seconds. To set/query the units, use the command `[SENSe]:WLAN:UNIT:TIME`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Calculate commands

Syntax

```
CALCulate:WLAN:TABLe:MARKer<x>:TIME <NRf>

`CALCulate:WLAN:TABLe:MARKer<x>:VALue?`

Returns

Returns the decoded symbol value at the selected marker position on the WLAN Symbol Table display.

Examples

`CALC:WLAN:MERR:MARK3:VAL?` might return `11.9`, indicating a decoded symbol value of 11.9 for Marker 3 (M3).

Calibration commands

CALibration:ABORt (No query form)

Aborts any actions related to the alignments in progress.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

`CALibration:ABORt`

Arguments

None

Examples

`CALibration:ABORt` aborts any actions related to the alignments in progress.

CALibration:AUTO

Sets or queries whether or not to run alignments automatically.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:AUTO { OFF | ON | 0 | 1 }
CALibration:AUTO?
```

Arguments

`OFF` or 0 runs alignments on user request.

Use the `*CAL` command to perform alignments.

`ON` or 1 runs alignments as needed without user intervention.

You have to restart measurement if interrupted.

Examples

`CALibration:AUTO ON` runs alignments automatically as needed.

CALibration:CORRection:EXTernal:EDIT<x>:LABel

Sets or queries the name of the external loss table.

The parameter <x> = 1 to 3 represent the External Loss Table 1 to 3, respectively.

NOTE: This command has been replaced with `INPut:CORRection:EXTernal:EDIT<x>:LABel`.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:CORRection:EXTernal:EDIT<x>:LABel name
CALibration:CORRection:EXTernal:EDIT<x>:LABel?
```

Arguments

name`::=<string>` specifies the name of the external loss table.

Examples

`CALibration:CORRection:EXTernal:EDIT<x>:LABel? 'Sample Table 1'` names the External Loss Table 1 "Sample Table 1".

CALibration:CORRection:EXTernal:EDIT<x>:NEW (No query form)

Creates a new external loss table.

The parameter <x> = 1 to 3 represent the External Loss Table 1 to 3, respectively.

NOTE: This command has been replaced with `INPut:CORRection:EXTernal:EDIT<x>:NEW`.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:CORRection:EXTernal:EDIT<x>:NEW
<freq(1)>,<loss(1)>,<freq(2)>,<loss(2)>,...,<freq(n)>,<loss(n)>
```

Arguments

`<freq(n)>,<loss(n)>` specifies a pair of frequency (`<NR3>` in Hz) and loss (`<NR3>` in dB) in the external loss table.

The setting range is:

- RSA5103B – 0 to 3 GHz
- RSA5115B – 0 to 15 GHz
- RSA5126B – 0 to 26.5 GHz

Loss: -50 to +80 dB. (A negative value means a gain.)

Examples

`CALibration:CORRection:EXTernal:EDIT<x>:NEW 1.0E+9,2.2, 1.5E+9,2.3` creates the External Loss Table 1 specifying the loss of 2.2 dB and 2.3 dB at the frequency of 1 GHz and 1.5 GHz, respectively.

CALibration:CORRection:EXTernal:EDIT<x>:STATe

Determines whether to enable or disable the external loss table.

The parameter <x> = 1 to 3 represent the External Loss Table 1 to 3, respectively.

NOTE: This command has been replaced with `INPut:CORRection:EXTernal:EDIT<x>:STATe`.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:CORRection:EXTernal:EDIT<x>:STATe { OFF | ON | 0 | 1 }
CALibration:CORRection:EXTernal:EDIT<x>:STATe?
```

Arguments

`OFF` or 0 disables the external loss table.

`ON` or 1 enables the external loss table.

NOTE: You can enable one or more tables at the same time.

Examples

CALibration:CORRection:EXTernal:EDIT<x>:STATe? ON enables the External Loss Table 3.

CALibration:CORRection:EXTernal:GAIN[:MAGNitude]

Sets or queries the external gain value. It can be enabled or disabled using the INPut:CORRection:EXTernal:GAIN:STATe command.

NOTE: This command has been replaced with INPut:CORRection:EXTernal:GAIN[:MAGNitude].

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:CORRection:EXTernal:GAIN[:MAGNitude] <value>
CALibration:CORRection:EXTernal:GAIN[:MAGNitude]?
```

Arguments

<value>::=<NRf> specifies the external gain value.

Range: -50 to +30 dB.

Examples

CALibration:CORRection:EXTernal:GAIN[:MAGNitude]? -10 sets the external gain to -10 dB.

CALibration:CORRection:EXTernal:GAIN:STATe

Determines whether to enable or disable the external gain value.

NOTE: This command has been replaced with INPut:CORRection:EXTernal:GAIN[:MAGNitude].

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:CORRection:EXTernal:GAIN:STATe { OFF | ON | 0 | 1 }
CALibration:CORRection:EXTernal:GAIN:STATe?
```

Related Commands

INPut:CORRection:EXTernal:GAIN[:MAGNitude] (on page 709)

Arguments

OFF or 0 disables the external gain value.

ON or 1 enables the external gain value.

Examples

`CALibration:CORRection:EXTernal:GAIN:STATe ON` enables the external gain value.

CALibration:CORRection:EXTernal:PROBe:CONNect? (Query only)

Queries whether the external probe is connected to the analyzer or not.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

`CALibration:CORRection:EXTernal:PROBe:CONNect?`

Arguments

None

Returns

`{ 0 | 1 }`

`0` indicates that the external probe is not connected to the analyzer.

`1` indicates that the external probe is connected to the analyzer.

Examples

`CALibration:CORRection:EXTernal:PROBe:CONNect?` might return ON, indicating that the external probe is connected to the analyzer.

CALibration:CORRection:EXTernal:PROBe[:MAGNitude]? (Query only)

Queries the external probe attenuation.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

`CALibration:CORRection:EXTernal:PROBe[:MAGNitude]?`

Arguments

None

Returns

`<attenuation>::=<NRf>` The probe attenuation value in dB.

Examples

CALibration:CORRection:EXTernal:PROBe[:MAGNitude]? might return 10, indicating that the probe attenuation is 10 dB.

CALibration:CORRection:EXTernal:PROBe:STATe

Determines whether or not to correct data for the external probe attenuation.

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:CORRection:EXTernal:PROBe:STATe { OFF | ON | 0 | 1 }
CALibration:CORRection:EXTernal:PROBe:STATe?
```

Arguments

OFF or 0 does not correct data for the external probe attenuation.

ON or 1 corrects data for the external probe attenuation.

Examples

CALibration:CORRection:EXTernal:PROBe:STATe ON corrects data for the external probe attenuation.

CALibration:CORRection:EXTernal:TYPE

Sets or queries the data type to apply the external loss table corrections.

NOTE: This command has replaced with INPut:CORRection:EXTernal:TYPE

Conditions

Measurement views: All

Group

Calibration commands

Syntax

```
CALibration:CORRection:EXTernal:TYPE { TRACe | DATA }
CALibration:CORRection:EXTernal:TYPE
```

Related Commands

INPut:CORRection:EXTernal:GAIN:STATe (on page 1535)

Arguments

TRACe selects traces in the Spectrum, Spectrogram, Spurious, and Amplitude versus Time views. Selecting TRACe disables the CALibration:CORRection:EXTernal:GAIN:STATe command.

DATA selects all acquired data. Selecting DATA enables the CALibration:CORRection:EXTernal:GAIN:STATe command.

Examples

`CALibration:CORRection:EXTernal:TYPE TRACe` selects traces to apply the external loss table corrections.

CALibration:TXGain:ABORt (No query form)

Cancels a calibration.

Conditions

Measurement view: Transmission Gain, Perform Calibration window

Group

Calibration commands

Syntax

`CALibration:TXGain:ABORt`

Arguments

None

Examples

`CALibration:TXGain:ABORt` cancels a calibration that is in process.

CALibration:TXGain[:ALL] (No query form)

Performs a calibration using the current settings.

Conditions

Measurement view: Transmission Gain, Perform Calibration window

Group

Calibration commands

Syntax

`CALibration:TXGain[:ALL]`

Arguments

None

Examples

`CALibration:TXGain[:ALL]` performs a calibration using the current settings.

CALibration:TXGain:FINish? (Query only)

Queries whether or not the calibration is completed.

Conditions

Measurement view: Transmission Gain, Perform Calibration window

Group

Calibration commands

Syntax

`CALibration:TXGain:FINish?`

Returns

`0` indicates calibration is in progress.

`1` indicates calibration is completed.

Examples

`CALibration:TXGain:FINish?` might return 1, indicating that the calibration is completed.

CALibration:TXGain:STATe? (Query only)

Queries the calibration state for the Transmission Gain measurement.

Conditions

Measurement view: Transmission Gain

Group

Calibration commands

Syntax

`CALibration:TXGain:STATe?`

Returns

`CALIBRATED` means that the unit has been calibrated and is making measurements at the same frequencies at which it was calibrated.

`CALIBRATED?` means that the unit has been calibrated, but one or more of the operating conditions has changed. Operating conditions are Tracking Generator Output Power, Reference Level, Preamp On/Off, RF Attenuation, or Temperature (>5 °C from the calibrated temperature).

`INTERPOLATED` means that the unit has been calibrated, but is making measurements at frequencies other than the calibration points and is interpolating the calibration between points.

Examples

`CALibration:TXGain:STATe?` might return CALIBRATED, indicating that the measurement has been calibrated with the current settings.

*CLS (No Query Form)

Clears the analyzer status data structures. Refer to Section 3, *Status and Events*, for the register information.

The *CLS command clears the following

- the Event Queue
- the Standard Event Status Register (SESR)
- the Status Byte Register (except the MAV bit; see below)

If the *CLS command immediately follows an <EOI>, the Output Queue and MAV bit (Status Byte Register bit 4) are also cleared. MAV indicates information is in the output queue. The device clear (DCL) GPIB control message will clear the output queue and thus MAV. *CLS does not clear the output queue or MAV. (A complete discussion of these registers and bits, and of event handling in general is described in the *Status and Events* section)

*CLS can suppress a Service Request that is to be generated by an *OPC. This will happen if a hardcopy output or single sequence acquisition operation is still being processed when the *CLS command is executed.

Conditions

Measurement views: All

Group

IEEE common commands

Syntax

```
*CLS
```

Related Commands

*ESE (on page 1109)

*ESR? (on page 1109)

*SRE (on page 2531)

*STB? (on page 2532)

Arguments

None

Examples

`*CLS` clears the analyzer status data structures.

Display commands

DISPlay:ACPower:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the Channel power and ACPR view.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:ACPower:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the graph.

`ON` or 1 shows the readout for the selected marker in the graph.

Examples

`DISPLAY:ACPOWER:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:ACPower:PLEVel:SHOW:STATe

Determines whether to show or hide the power levels in the Channel power and ACPR view.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:PLEVel:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:ACPower:PLEVel:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the power levels in the graph.

`ON` or 1 shows the power levels in the graph.

Examples

`DISPLAY:ACPOWER:PLEVEL:SHOW:STATE ON` shows the power levels in the graph.

DISPlay:ACPower:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale to the default values described below in the Channel power and ACPR view.

Vertical offset = Reference level, Vertical scale = 100 dB,

Horizontal offset = Center frequency, and Horizontal scale = Default span

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:RESet:SCALe
```

Arguments

None

Examples

`DISPLAY:ACPOWER:RESET:SCALE` resets the horizontal and vertical scale to the default values.

DISPlay:ACPower:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:ACPower:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Examples

`DISPLAY:ACPOWER:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen.

DISPlay:ACPower:X[:SCALe]

Sets or queries the horizontal range of the Channel power and ACPR graph.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:X[:SCALe] <value>
DISPlay:ACPower:X[:SCALe]?
```

Related Commands

DISPlay:ACPower:X[:SCALe]:OFFSet (on page 717)

Arguments

`<value>::=<NRf>` specifies the horizontal range.

Range:

- RSA5103B – 1 to 3 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5115B – 1 to 15 GHz
- RSA5126B – 1 to 26.5 GHz

Examples

`DISPLAY:ACPOWER:X:SCALE 10MHz` sets the horizontal range to 10 MHz.

DISPlay:ACPower:X[:SCALe]:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the Channel power and ACPR view.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:ACPOWER:X:SCALE:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:ACPower:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the Channel power and ACPR graph.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:X[:SCALe]:OFFSet <value>
DISPlay:ACPower:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:ACPower:X[:SCALe] (on page 716)

Arguments

`<value>::=<NRf>` specifies the minimum horizontal value.

Range: [(center frequency) - (X scale) × 0.9] to [(center frequency) + (X scale) × 0.9]

Examples

`DISPlay:ACPower:X:SCALe:OFFSet 1.45GHz` sets the minimum horizontal value to 1.45 GHz in the Channel power and ACPR graph.

DISPlay:ACPower:Y[:SCALe]

Sets or queries the vertical range of the channel power and ACPR graph.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:Y[:SCALe] <value>
DISPlay:ACPower:Y[:SCALe]?
```

Related Commands

DISPlay:ACPower:Y[:SCALe]:OFFSet (on page 718)

Arguments

<value>::=<NRf> specifies the vertical range. Range: 0.1 to 200 dB.

Examples

DISPLAY:ACPOWER:Y:SCALE 100 sets the vertical range to 100 dB in the Channel power and ACPR graph.

DISPlay:ACPower:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the Channel power and ACPR view.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:Y[:SCALe]:AUTO
```

Arguments

None

Examples

DISPLAY:ACPOWER:Y:SCALE:AUTO rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:ACPower:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) in the Channel power and ACPR graph.

Conditions

Measurement views: Channel power and ACPR

Group

Display commands

Syntax

```
DISPlay:ACPower:Y[:SCALe]:OFFSet <value>
DISPlay:ACPower:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:ACPower:Y[:SCALe] (on page 717)

Arguments

<value>::=<NRf> specifies the vertical offset. Range: -170 to +50 dBm.

Examples

DISPLAY:ACPOWER:Y:SCALE:OFFSET -12.5 sets the vertical offset to −12.5 dBm in the Channel power and ACPR graph.

DISPlay:ADEMod:MEASview:DELete (No Query Form)

Deletes the measurement view in the general purpose analog demodulation measurements.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:ADEMod:MEASview:DELete { AM | FM | PM }
```

Arguments

The following table lists the arguments.

Analog demodulation measurement views

Argument	View
AM	AM measurement (modulation factor versus time)
FM	FM measurement (frequency deviation versus time)
PM	PM measurement (phase deviation versus time)

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement is not running") will be returned.

Examples

`DISPLAY:ADEMOD:MEASVIEW:DELETEAM` deletes the AM measurement view.

DISPlay:ADEMod:MEASview:NEW (No Query Form)

Displays a new measurement view in the general purpose analog demodulation measurements.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:ADEMod:MEASview:NEW { AM | FM | PM }
```

Arguments

The following table lists the arguments.

Analog demodulation measurement views

Argument	View
AM	AM measurement (modulation factor versus time)

Argument	View
FM	FM measurement (frequency deviation versus time)
PM	PM measurement (phase deviation versus time)

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

`DISPLAY:ADEMOD:MEASVIEW:NEWAM` creates the AM measurement view.

DISPlay:ADEMod:MEASview:SELect

Selects a measurement view on the screen in the general purpose analog demodulation measurements. The query command returns the currently selected view.

Selecting a measurement optimizes it. Other measurements may be optimized as a side effect. Refer to the `DISPlay:WINDow:OPTimized:MEASurement?` query.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:ADEMod:MEASview:SELect { AM | FM | PM }
DISPlay:ADEMod:MEASview:SELect?
```

Arguments

The following table lists the arguments.

Analog demodulation measurement views

Argument	View
AM	AM measurement (modulation factor versus time)
FM	FM measurement (frequency deviation versus time)
PM	PM measurement (phase deviation versus time)

If you attempt to select a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Examples

`DISPLAY:ADEMOD:MEASVIEW:SELECT AM` selects the AM measurement view.

DISPlay:{AM|FM|PM}:MARKer:SHOW:STATe

Determines whether to show or hide the marker readout in the AM/FM/PM measurement view.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:{AM|FM|PM}:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:{AM|FM|PM}:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the marker readout on the screen.

`ON` or 1 shows the marker readout on the screen.

Examples

`DISPLAY:AM:MARKER:SHOW:STATE ON` shows the marker readout in the AM measurement view.

DISPlay:{AM|FM|PM}:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:{AM|FM|PM}:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:{AM|FM|PM}:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Examples

`DISPLAY:AM:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the AM measurement view.

DISPlay:{AM|FM|PM}:X:RSCale (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the AM/FM/PM measurement display.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:{AM|FM|PM}:X:RSCale
```

Arguments

None

Examples

`DISPLAY:AM:X:RSCALE` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:{AM|FM|PM}:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale automatically to fit the waveform to the screen in the AM/FM/PM measurement display.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

`DISPlay:{AM|FM|PM}:X[:SCALe]:AUTO`

Arguments

None

Examples

`DISPLAY:AM:X:SCALE:AUTO` sets the horizontal scale automatically to fit the waveform to the screen in the AM/FM/PM measurement display.

DISPlay:{AM|FM|PM}:X[:SCALe]:FULL

Sets or queries the horizontal scale (full-scale time) of the AM/FM/PM measurement graph.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

`DISPlay:{AM|FM|PM}:X[:SCALe]:FULL <value>`
`DISPlay:{AM|FM|PM}:X[:SCALe]:FULL?`

Arguments

`<value>::=<NRf>` specifies the horizontal scale in full-scale time.

Range: 0 to 1027 s.

Examples

`DISPlay:AM:X:SCALe:FULL 35us` sets the horizontal scale to 35 µs in the AM measurement.

DISPlay:{AM|FM|PM}:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the AM/FM/PM measurement graph.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:{AM|FM|PM}:X[:SCALe]:OFFSet <value>
DISPlay:{AM|FM|PM}:X[:SCALe]:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the minimum horizontal value.

Range: −0.9×(horizontal scale) to +0.9×(horizontal scale)

Examples

`DISPLAY:AM:X:SCALE:OFFSET 20.075us` sets the minimum horizontal value to 20.075 µs.

DISPlay:{AM|FM|PM}:Y:RSCale (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the AM/FM/PM measurement display.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:{AM|FM|PM}:Y:RSCale
```

Arguments

None

Examples

`DISPLAY:AM:Y:RSCALE` rescales the vertical scale automatically to fit the waveform to the screen in the AM measurement.

DISPlay:{AM|FM|PM}:Y[:SCALe]

Sets or queries the vertical range of the AM/FM/PM measurement graph.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:{AM|FM|PM}:Y[:SCALe] <value>
DISPlay:{AM|FM|PM}:Y[:SCALe]?
```

Arguments

`<value>::=<NRf>` specifies the vertical range.

The setting range depends on measurements as shown in the following table.

Setting range

Measurement	Setting range
AM	1% to 500%
FM	10 Hz to 120 MHz
PM	10° to 400°

Examples

`DISPLAY:AM:Y:SCALE 75` sets the vertical range to 75% in the AM measurement graph.

DISPlay:{AM|FM|PM}:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (center point of the vertical axis) in the AM/FM/PM measurement graph.

Conditions

Measurement views: General purpose analog demodulation

Group

Display commands

Syntax

```
DISPlay:{AM|FM|PM}:Y[:SCALe]:OFFSet <value>
DISPlay:{AM|FM|PM}:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the vertical offset.

The setting range depends on measurements as shown in the following table.

Setting range

Measurement	Setting range
AM	−500% to +500%
FM	–(maxVertScale * (1 + 1.1) * 0.5) to +(maxVertScale * (1 + 1.1) * 0.5)
PM	−180° to +180°

Examples

`DISPLAY:AM:Y:SCALE:OFFSET -12.5` sets the vertical offset to −12.5% in the AM measurement graph.

DISPlay:ANTenna:AZIMuth:SHOW:STATe

The command checks the Show Compass box in the UI to display the compass. The query form returns whether or not the Show Compass box is checked.

Group

Display commands

Syntax

```
DISPlay:ANTenna:AZIMuth:SHOW:STATe { 1 | 0 | ON | OFF }
DISPlay:ANTenna:AZIMuth:SHOW:STATe?
```

Arguments

1 or ON sets compass to show.

0 or OFF sets compass to hide.

Returns

1 or ON means compass is set to show.

0 or OFF means compass is set to hide.

DISPlay:AUDio:MEASview:DELete (No Query Form)

Deletes the specified audio analysis view.

Conditions

Measurement views: Audio Spectrum, Audio Summary

Group

Display commands

Syntax

```
DISPlay:AUDio:MEASview:DELete { SPECtrum | SUMMary }
```

Arguments

`SPECtrum` deletes the Audio Spectrum view.

`SUMMary` deletes the Audio Summary view.

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Examples

`DISPLAY:AUDIO:MEASVIEW:DELETE SUMMary` deletes the Audio Summary view.

DISPlay:AUDio:MEASview:NEW (No Query Form)

Displays a new audio analysis view.

Conditions

Measurement views: Audio Spectrum, Audio Summary

Group

Display commands

```
Syntax
DISPlay:AUDio:MEASview:NEW { SPECtrum | SUMMary }
```

Arguments

`SPECtrum` creates a new Audio Spectrum view.

`SUMMary` creates a new Audio Summary view.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

`DISPLAY:AUDIO:MEASVIEW:NEW SUMMary` creates a new Audio Summary view.

DISPlay:AUDio:MEASview:SELect

Selects an audio analysis view on the screen. The query returns the currently selected view.

Selecting a measurement optimizes it. Other measurements may be optimized as a side effect. Refer to the `DISPlay:WINDow:OPTimized:MEASurement?` query.

Conditions

Measurement views: Audio Spectrum, Audio Summary

Group

Display commands

Syntax

```
DISPlay:AUDio:MEASview:SELect { SPECtrum | SUMMary }
DISPlay:AUDio:MEASview:SELect?
```

Arguments

`SPECtrum` creates a new Audio Spectrum view.

`SUMMary` creates a new Audio Summary view.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

`DISPLAY:AUDIO:MEASVIEW:SELECT SPECTrum` selects the Audio Spectrum

display.

DISPlay:AUDio:SPECtrum:FREQuency:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:FREQuency:AUTO
```

Arguments

None

Examples

`DISPLAY:AUDIO:SPECTRUM:FREQUENCY:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STARt

Sets or queries the start frequency (left edge) of the audio spectrum graph.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STARt <value>
DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STARt?
```

Related Commands

DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STOP (on page 727)

Arguments

`<value> ::= <NRf>` specifies the start frequency.

Examples

`DISPLAY:AUDIO:SPECTRUM:FREQUENCY:[SCALE]:START 0` sets the start frequency to 0 Hz.

DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STOP

Sets or queries the stop frequency (right edge) of the audio spectrum graph.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STOP <value>
DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STOP?
```

Related Commands

DISPlay:AUDio:SPECtrum:FREQuency:[SCALe]:STARt (on page 727)

Arguments

<value> ::= <NRf> specifies the stop frequency.

Examples

DISPLAY:AUDIO:SPECTRUM:FREQUENCY:[SCALE]:STOP 20E+3 sets the stop frequency to 20 kHz.

DISPlay:AUDio:SPECtrum:MARKer:SHOW:STATe

Determines whether to show or hide the readouts for the selected marker in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:AUDio:SPECtrum:MARKer:SHOW:STATe
```

Arguments

OFF or 0 hides the readout for the selected marker in the view.

ON or 1 shows the readout for the selected marker in the view.

Examples

DISPLAY:AUDIO:SPECTRUM:MARKER:SHOW:STATE ON shows the readout for the selected marker in the audio spectrum view.

DISPlay:AUDio:SPECtrum:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scales in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:RESet:SCALe
```

Arguments

None

Examples

DISPLAY:AUDIO:SPECTRUM:RESET:SCALE resets the horizontal and vertical scales.

DISPlay:AUDio:SPECtrum:SCALe:LOG:STATe

Determines whether or not to set the horizontal axis logarithmic in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:SCALe:LOG:STATe { OFF | ON | 0 | 1 }
DISPlay:AUDio:SPECtrum:SCALe:LOG:STATe?
```

Arguments

`OFF` or 0 sets the horizontal axis linear.

`ON` or 1 sets the horizontal axis logarithmic.

Examples

`DISPLAY:AUDIO:SPECTRUM:SCALE:LOG:STATE ON` sets the horizontal axis logarithmic in the audio spectrum view.

DISPlay:AUDio:SPECtrum:SHOW:NHARmonic:THReshold

Sets or queries the appearance of the non-harmonic threshold in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:SHOW:NHARmonic:THReshold { SHADed | LINE | OFF }
DISPlay:AUDio:SPECtrum:SHOW:NHARmonic:THReshold?
```

Arguments

`SHADed` uses shading for the non-harmonic threshold area in the display.

`LINE` uses a line for the non-harmonic threshold area.

`OFF` turns off the non-harmonic threshold in the display.

Examples

`DISPLAY:AUDIO:SPECTRUM:SHOW:NHARMONIC:THRESHOLD SHADed` uses shading to identify the non-harmonic threshold area in the audio spectrum view.

DISPlay:AUDio:SPECtrum:TABLe:SHOW:STATe

Determines whether to show or hide the results table in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:TABLe:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:AUDio:SPECtrum:TABLe:SHOW:STATe?
```

Arguments

`OFF` or 0 disables (hides) the results table in the audio spectrum view.

`ON` or 1 shows the results table in the audio spectrum view.

Examples

`DISPLAY:AUDIO:SPECTRUM:TABLE:SHOW:STATE OFF` hides the results table in the audio spectrum view.

DISPlay:AUDio:SPECtrum:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:AUDio:SPECtrum:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Examples

`DISPLAY:AUDIO:SPECTRUM:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` hides the graticule grid on the screen.

DISPlay:AUDio:SPECtrum:Y:[SCALe]

Sets or queries the vertical scale in the audio spectrum view. The range of the scale is from 0.1 dB to 200 dB.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:Y:[SCALe] <value>
DISPlay:AUDio:SPECtrum:Y:[SCALe]?
```

Arguments

`<value> ::= <NRf>` specifies the vertical scale value in dB.

Examples

`DISPLAY:AUDIO:SPECTRUM:Y:[SCALE] 100` sets the vertical scale to 100 dB.

DISPlay:AUDio:SPECtrum:Y:[SCALe]:AUTO (No Query Form)

Rescales the vertical axis automatically in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:Y:[SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:AUDIO:SPECTRUM:Y:[SCALE]:AUTO` rescales the vertical axis automatically.

DISPlay:AUDio:SPECtrum:Y:[SCALe]:OFFSet

Sets or queries the vertical position (offset) in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Display commands

Syntax

```
DISPlay:AUDio:SPECtrum:Y:[SCALe]:OFFSet <value>
DISPlay:AUDio:SPECtrum:Y:[SCALe]:OFFSet?
```

Arguments

`<value> ::= <NRf>` specifies the vertical offset in dBm.

Examples

`DISPLAY:AUDIO:SPECTRUM:Y:[SCALE]:OFFSET 150` sets the vertical offset to 150 dBM.

DISPlay:AVTime[:MEASview<y>]:LEGend:STATe

Determines whether to show or hide the trace legend in the amplitude versus time view. The legend indicates the trace detection and function on the screen for each displayed trace.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:AVTime[:MEASview<y>]:LEGend:STATe?
```

Arguments

OFF or 0 hides the trace legend.

ON or 1 shows the trace legend.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

DISPLAY:AVTIME:MEASVIEW1:LEGEND:STATE ON shows the trace legend on the screen.

DISPlay:AVTime[:MEASview<y>]:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker on the screen in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:AVTime[:MEASview<y>]:MARKer:SHOW:STATe?
```

Arguments

OFF or 0 hides the readout for the selected marker on screen.

ON or 1 shows the readout for the selected marker on screen.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

DISPLAY:AVTIME:MEASVIEW1:MARKER:SHOW:STATE ON shows the readout for the selected marker on screen in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:SELect:FIRSt

Queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.

All traces are valid.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
:DISPlay:AVTime[:MEASview<y>]:SELect:FIRSt
```

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

```
{ 0 | 1 }
```

0 indicates that the results are not being displayed in the readout for the first trace.

1 indicates that the results are being displayed in the readout for the first trace.

Examples

DISPLAY:AVTIME:MEASVIEW1:SELECT:FIRST? might return 1, indicating that the results are being displayed in the readout for Trace 1 in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:SELect:SECond

Sets or queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.

All traces are valid.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
:DISPlay:AVTime[:MEASview<y>]:SELect:SECond
```

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

```
{ 0 | 1 }
```

0 indicates that the results are not being displayed in the readout for the first trace.

1 indicates that the results are being displayed in the readout for the first trace.

Examples

DISPLAY:AVTIME:MEASVIEW1:SELECT:FIRST? might return 1, indicating that the results are being displayed in the readout for Trace 2 in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:SELect:THIRd

Queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.

All traces are valid.

Conditions

Measurement views: Amplitude versus Time

Group

Trace commands

Syntax

```
:DISPlay:AVTime[:MEASview<y>]:SELect:THIRd
```

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

```
{ 0 | 1 }
```

0 indicates that the results are not being displayed in the readout for the first trace.

1 indicates that the results are being displayed in the readout for the first trace.

Examples

DISPLAY:AVTIME:MEASVIEW1:SELECT:FIRST? might return 1, indicating that the results are being displayed in the readout for Trace 3 in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:SELect:FOURth

Queries the trace whose measurement results are being displayed in the readout on the top and bottom of the view.

All traces are valid.

Conditions

Measurement views: Amplitude versus Time

Group

Trace commands

Syntax

```
:DISPlay:AVTime[:MEASview<y>]:SELect:FOURth
```

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

```
{ 0 | 1 }
```

0 indicates that the results are not being displayed in the readout for the first trace.

1 indicates that the results are being displayed in the readout for the first trace.

Examples

DISPLAY:AVTIME:MEASVIEW1:SELECT:FOUR? might return 1, indicating that the results are being displayed in the readout for Trace 4 in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:SELect:TIMestamp

Sets or queries the display of the time stamp in the ogram plot.

Conditions

Applicable measurement view must be active.

Group

Display commands

Syntax

`DISPlay:AVTime[:MEASview<y>]:SELect:TIMestamp {OFF | ON | 0 | 1}`

`DISPlay:AVTime[:MEASview<y>]:SELect:TIMestamp?`

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional. By default y is 1.

`OFF` or `0` removes or turns off the time stamp.

`ON` or `1` displays or turns on the time stamp.

Returns

`{OFF | ON | 0 | 1}`

Examples

`DISPlay:AVTime:MEASview1:SELect:TIMestamp?` queries the display status of the time stamp in the ogram plot view 1.

DISPlay:AVTime[:MEASview<y>]:READout[:STATe]

Determines whether to show or hide the measurement parameter readouts in the Amplitude versus Time view.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

`DISPlay:AVTime[:MEASview<y>]:READout[:STATe] {OFF | ON | 0 | 1}`

`DISPlay:AVTime[:MEASview<y>]:READout[:STATe]?`

Arguments

`OFF` or `0` hides the parameter readouts.

`ON` or `1` shows the parameter readouts.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1.

Examples

`DISPLAY:AVTIME:MEASVIEW1:READOUT:STATE ON` shows the parameter readouts on the screen.

DISPlay:AVTime[:MEASview<y>]:RESet (No Query Form)

Resets the horizontal and vertical scale to the default values described below in the Amplitude versus Time view.

Vertical offset = Reference level, Vertical scale = 100 dB,

Horizontal offset = Analysis offset, and Horizontal scale = Analysis length

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:RESet
```

Arguments

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPLAY:AVTIME:MEASVIEW1:RESET` resets the horizontal and vertical scale to the default values in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:TRIGger:LEVel:STATe

Determines whether to show or hide the power trigger level line on the screen in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:TRIGger:LEVel:STATe { OFF | ON | 0 | 1 }
DISPlay:AVTime[:MEASview<y>]:TRIGger:LEVel:STATe?
```

Arguments

`OFF` or 0 hides the power trigger level line.

`ON` or 1 shows the power trigger level line.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

See Arguments.

Examples

`DISPLAY:AVTIME:MEASVIEW1:TRIGGER:LEVEL:STATE ON` shows the power trigger level line on the screen in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON| 0 | 1 }
DISPlay:AVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

See Arguments.

Examples

`DISPLAY:AVTIME:MEASVIEW1:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:X:RSCale (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the Amplitude versus Time display.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:X:RSCale
```

Arguments

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

DISPLAY:AVTIME:MEASVIEW1:X:RSCALE rescales the horizontal scale automatically to fit the waveform to the screen in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale automatically to fit the waveform to the screen in the Amplitude versus Time view. Executing this command sets DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe ON.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO
```

Related Commands

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 738)

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

DISPlay:AVTime:MEASview<y>:X:SCALe:AUTO sets the horizontal scale automatically to fit the waveform to the screen in the Amplitude versus Time Measurement View 1 graph.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe

Determines whether to set the horizontal scale automatically or manually.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe?
```

Arguments

OFF or 0 specifies that the horizontal scale is set manually. To set it, use the DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:FULL (on page 739) and DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 740) commands.

ON or 1 specifies that the horizontal scale is set automatically.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

See Arguments.

Examples

`DISPLAY:AVTIME:MEASVIEW1:X:SCALE:AUTO:STATE ON` specifies that the horizontal scale is set automatically in the Amplitude versus Time Measurement View 1 graph.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:FULL

Sets or queries the horizontal scale (full-scale time) of the Amplitude versus Time graph. Programming a specified scale sets `DISPlay:AVTime[:MEASview<y>]:X[:SCALe] AUTO:STATe OFF`.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:FULL <value>
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:FULL?
```

Related Commands

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 738)

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 740)

Arguments

`<value>::=<NRf>` specifies the horizontal scale in full-scale time. Use the DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 739) and DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MINimum? (on page 740) queries to get the upper and lower limits of the setting range.

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NRf>`

Examples

`DISPLAY:AVTIME:MEASVIEW1:X:SCALE:FULL 25.6us` sets the horizontal scale to 25.6 µs in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (Query Only)

Queries the upper limit of the horizontal scale setting range.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

`DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MAXimum?`

Related Commands

DISPlay:AVTime[:MEASview<y>:]X[:SCALe]:FULL (on page 739)

Arguments

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NRf>` The upper limit of the horizontal scale setting range.

Examples

`DISPLAY:AVTIME:MEASVIEW1:X:SCALE:MAXIMUM?` might return `18.135E-3`, indicating that the upper limit of the horizontal scale setting range is 18.135 ms in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MINimum? (Query Only)

Queries the lower limit of the horizontal scale setting range.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

`DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:MINimum?`

Related Commands

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:FULL (on page 739)

Arguments

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NRf>` The lower limit of the horizontal scale setting range.

Examples

`DISPLAY:AVTIME:MEASVIEW1:X:SCALE:MINIMUM?` might return `10.0E-9`, indicating that the lower limit of the horizontal scale setting range is 10.0 ns in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the Amplitude versus Time graph. Programming a specified offset sets `DISPlay:AVTime[:MEASview<y>]:X[:SCALe] AUTO:STATe OFF`.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet <value>
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 738)

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:FULL (on page 739)

Arguments

`<value>::=<NRf>` specifies the minimum horizontal value. Use the DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 741) and DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 742) queries to get the upper and lower limits of the setting range.

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<NRf>`

Examples

`DISPLAY:AVTIME:MEASVIEW1:X:SCALE:OFFSET 800ns` sets the minimum horizontal value to 800 ns in the Amplitude versus Time Measurement View 1 graph.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (Query Only)

Queries the upper limit of the horizontal offset setting range.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum?
```

Related Commands

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 740)

Arguments

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf> The upper limit of the horizontal offset setting range.

Examples

DISPLAY:AVTIME:MEASVIEW1:X:SCALE:OFFSET:MAXIMUM? might return -1.812E-3, indicating that the upper limit of the horizontal offset setting range is -1.812 ms in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (Query Only)

Queries the lower limit of the horizontal offset setting range.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum?

Related Commands

DISPlay:AVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 740)

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf> The lower limit of the horizontal offset setting range.

Examples

DISPLAY:AVTIME:MEASVIEW1:X:SCALE:OFFSET:MINIMUM? might return -16.28E-3, indicating that the lower limit of the horizontal offset setting range is -16.28 ms in the Amplitude versus Time Measurement View 1.

DISPlay:AVTime[:MEASview<y>]:Y:RSCale (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the Amplitude versus Time display.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

DISPlay:AVTime[:MEASview<y>]:Y:RSCale

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

DISPLAY:AVTIME:MEASVIEW1:Y:RSCALE rescales the vertical scale automatically to fit the waveform to the screen in the Amplitude versus Time Measurement View 1 graph.

DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:FULL

Sets or queries the vertical range of the Amplitude versus Time graph.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:FULL <value>
DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:FULL?
```

Related Commands

DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 743)

Arguments

<value>::=<NRf> specifies the vertical range. Range: 0.1 to 200 dB.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

DISPLAY:AVTIME:MEASVIEW1:Y:SCALE:FULL 100 sets the vertical range to 100 dB in the Amplitude versus Time Measurement View 1 graph.

DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) in the Amplitude versus Time graph.

Conditions

Measurement views: Amplitude versus Time

Group

Display commands

Syntax

```
DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:AVTime[:MEASview<y>]:Y[:SCALe]:FULL (on page 743)

Arguments

<value>::=<NRf> specifies the vertical offset. Range: -170 to +50 dBm.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<NRf>

Examples

DISPLAY:AVTIME:MEASVIEW1:Y:SCALE:OFFSET -12.5 sets the vertical offset to -12.5 dBm in the Amplitude versus Time Measurement View 1 graph.

DISPlay:BIBEmissions:MARKer<x>:SHOW:STATe

Sets or queries to show or hide the readout for the selected marker Bluetooth InBand Emission view.

The parameter <x> = 0 to 4. The specified marker must be activated using the CALCulate:MARKer:ADD command.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:MARKer<x>:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:BIBEmissions:MARKer<x>:SHOW:STATe?
```

Arguments

OFF or 0 hides the readout for the selected marker in the graph.

ON or 1 shows the readout for the selected marker in the graph.

Returns

See Arguments.

Examples

DISPLAY:BIBEMISSIONS:MARKER1:SHOW:STATE ON shows the readout for the Marker1 (M1) in the graph.

DISPlay:BIBEmissions:PLEVel:SHOW:STATe

Determines whether to show or hide the power levels in the Bluetooth InBand Emission view.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:PLEVel:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:BIBEmissions:PLEVel:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the power levels in the graph.

`ON` or 1 shows the power levels in the graph.

Returns

See Arguments.

Examples

`DISPLAY:BIBEMISSIONS:PLEVEL:SHOW:STATE ON` shows the power levels in the graph.

DISPlay:BIBEmissions:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale to the default values in the Bluetooth InBand Emission view.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:RESet:SCALe
```

Arguments

None

Examples

`DISPLAY:BIBEMISSIONS:RESET:SCALE` resets the horizontal and vertical scale to the default values.

DISPlay:BIBEmissions:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule hidden or showing state.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:WINDow:TRACe:GRATicule:GRID:STATe { OFF| ON | 0 | }
DISPlay:BIBEmissions:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPLAY:BIBEMISSIONS:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen.

DISPlay:BIBEmissions:X[:SCALe]

Sets or queries the horizontal range of the Bluetooth InBand Emission graph.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:X[:SCALe] <value>
DISPlay:BIBEmissions:X[:SCALe]?
```

Related Commands

DISPlay:BIBEmissions:Y[:SCALe]:OFFSet (on page 748)

Arguments

`<value>::=<NRf>` specifies the horizontal range.

Returns

`<NRf>`

Examples

`DISPLAY:BIBEMISSIONS:X:SCALE 10MHZ` sets the horizontal range to 10 MHz.

DISPlay:BIBEmissions:X[:SCALe]:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the Bluetooth InBand Emission view.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:BIBEMISSIONS:X:SCALE:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:BIBEmissions:X[:SCALe]:OFFSet

Sets or queries the center frequency of the Bluetooth InBand Emission graph.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:X[:SCALe]:OFFSet <value>
DISPlay:BIBEmissions:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:BIBEmissions:X[:SCALe] (on page 746)

Arguments

`<value> ::= <NRf>` specifies the minimum horizontal value.

Returns

`<NRf>`

Examples

`DISPLAY:BIBEMISSIONS:X:SCALE:OFFSET 1.45GHZ` sets the center frequency to 1.45 GHz.

DISPlay:BIBEmissions:Y[:SCALe]

Sets or queries the vertical range of the Bluetooth InBand Emission graph.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:Y[:SCALe] <value>
DISPlay:BIBEmissions:Y[:SCALe]?
```

Related Commands

DISPlay:BIBEmissions:Y[:SCALe]:OFFSet (on page 748)

Arguments

`<value> ::= <NRf>` specifies the vertical range. Range: 0.1 to 200 dB.

Returns

`<NRf>`

Examples

`DISPLAY:BIBEMISSIONS:Y:SCALE 100` sets the vertical range to 100 dB.

DISPlay:BIBEmissions:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the Bluetooth InBand Emission view.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:BIBEMISSIONS:Y:SCALE:AUTO` rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:BIBEmissions:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) in the Bluetooth InBand Emission graph.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Display commands

Syntax

```
DISPlay:BIBEmissions:Y[:SCALe]:OFFSet <value>
DISPlay:BIBEmissions:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:BIBEmissions:Y[:SCALe] (on page 747)

Arguments

`<value> ::= <NRf>` specifies the vertical offset. Range: -170 to +50 dBm.

Returns

`<NRf>`

Examples

`DISPLAY:BIBEMISSIONS:Y:SCALE:OFFSET -12.5` sets the vertical offset to -12.5 dBm.

DISPlay:BLUEtooth:CONSte:TRACe:GRATicule:GRID:STATe

Sets or queries the display state of Constellation graticule grid.

Conditions

Measurement views: Bluetooth Constellation

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:CONSte:TRACe:GRATicule:GRID:STATe { 0 | 1 | OFF | ON }
DISPlay:BLUEtooth:CONSte:TRACe:GRATicule:GRID:STATe?
```

Arguments

`ON` or 1 turns on the grid.

`OFF` or 0 turns off the grid.

Returns

See Arguments.

Examples

`DISPlay:BLUEtooth:CONSte:TRACe:GRATicule:GRID:STATe 1` turns on the grid in the Constellation plot.

DISPlay:BLUEtooth:CONSte:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries whether to show or hide the graticule grid on the screen in the Bluetooth Constellation display.

Conditions

Measurement views: Bluetooth Constellation

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:CONSte:WINDow:TRACe:GRATicule:GRID:STATe STATe { OFF | ON | 0 | 1 }
DISPlay:BLUEtooth:CONSte:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPlay:BLUEtooth:CONSte:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the screen.

DISPlay:BLUEtooth:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries graticule grid hidden or showing state in the Bluetooth eye diagram display.

Conditions

Measurement views: Bluetooth Eye diagram

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe { 0 | 1 | OFF | ON }
DISPlay:BLUEtooth:EDIagram:WINDow:TRACe:GRATicule:GRID: STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPLAY:BLUETOOTH:EDIAGRAM:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid in the eye diagram.

DISPlay:BLUEtooth:EDIagram:Y[:SCALe]

Sets or queries the vertical range of the Bluetooth eye diagram.

Conditions

Measurement views: Bluetooth Eye diagram

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:EDIagram:Y[:SCALe] <value>
DISPlay:BLUEtooth:EDIagram:Y[:SCALe]?
```

Arguments

`<value> ::= <NRf>` the vertical range (1 to 100)

Returns

`<NRf>`

Examples

`DISPlay:BLUEtooth:EDIagram:Y:SCALe 2.5` sets the vertical range to 2.5 in the eye diagram.

DISPlay:BLUEtooth:EDIagram:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale automatically to fit the waveform in the Bluetooth eye diagram.

Conditions

Measurement views: Bluetooth Eye diagram

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:EDIagram:Y[:SCALe]:AUTO
```

Arguments

None

Returns

`DISPLAY:BLUETOOTH:EDIAGRAM:Y:SCALE:AUTO` sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:BLUEtooth:EDIagram:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (center point of the vertical axis) of the Bluetooth eye diagram.

Conditions

Measurement views: Bluetooth Eye diagram

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:EDIagram:Y[:SCALe]:OFFSet <value>
DISPlay:BLUEtooth:EDIagram:Y[:SCALe]:OFFSet?
```

Arguments

`<value> ::= <NRf>` the minimum vertical scale offset, range (-50 to +50).

Returns

`<NRf>`

Examples

`DISPlay:BLUEtooth:EDIagram:Y:SCALe:OFFSet -0.5` sets the vertical offset to −0.5.

DISPlay:BLUEtooth:FDVTime:WINDow:TRACe:GRATicule:GRID:STATe

Shows or hides the graticule grid in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:FDVTime:WINDow:TRACe:GRATicule:GRID:STATe{OFF | ON | 0 | 1}
DISPlay:BLUEtooth:FDVTime:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPlay:BLUEtooth:FDVTime:WINDow:TRACe:GRATicule:GRID:STATe ON` specifies to show the graticule grid.

DISPlay:BLUEtooth:FDVTime:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform to the screen in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:FDVTime:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPlay:BLUEtooth:FDVTime:Y:SCALe:AUTO` rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:BLUEtooth:FDVTime:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (center point of the vertical axis) in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:FDVTime:Y[:SCALe]:OFFSet <value>
DISPlay:BLUEtooth:FDVTime:Y[:SCALe]:OFFSet?
```

Arguments

<value> ::= <NRf> the vertical offset. Range: -60 MHz to +60 MHz.

Returns

<NRf>

Examples

DISPlay:BLUEtooth:FDVTime:Y:SCALe:OFFSet -14.5E+3 sets the vertical offset to -14.5 kHz.

DISPlay:BLUEtooth:MEASview:DELete (No Query Form)

Deletes the specified Bluetooth analysis view.

Conditions

Measurement views: All.

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:MEASview:DELete
{CONS|SUMM|FDVT|EDI|BOBW|STAB|BIBE|DRIF}
```

Related Commands

DISPlay:BLUEtooth:MEASview:NEW (on page 753)

DISPlay:BLUEtooth:MEASview:SELect (on page 754)

Arguments

CONS deletes the BT Constellation view.

SUMM deletes the BT Summary view.

FDVT deletes the BT Freq Dev vs. Time view. EDI deletes the BT Eye Diagram view.

BOBW deletes the BT 20dB BW view. STAB deletes the BT Symbol Table view. BIBE deletes the BT InBand Emission view. DRIF deletes the BT Drift Table view.

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running" will be returned.

Examples

DISPLAY:BLUETOOTH:MEASVIEW:DELETE CONS deletes the BT Constellation view.

DISPlay:BLUEtooth:MEASview:NEW (No Query Form)

Displays a new measurement view for Bluetooth measurements.

Conditions

Measurement views: Bluetooth measurements.

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:MEASview:NEW
{CONS|SUMM|FDVT|EDI|BOBW|STAB|BIBE|DRIF}
```

Arguments

`CONS` creates a new BT Constellation view.

`SUMM` creates a new BT Summary view.

`FDVT` creates a new BT Freq Dev vs. Time view.

`EDI` creates a new BT Eye Diagram view.

`BOBW` creates a new BT 20dB BW view.

`STAB` creates a new BT Symbol Table view.

`BIBE` creates a new BT InBand Emission view.

`DRIF` creates a new BT Drift Table view.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

`DISPLAY:BLUETOOTH:MEASVIEW:NEW CONS` creates a new Bluetooth Constellation view.

DISPlay:BLUEtooth:MEASview:SELect

Selects a measurement view on the screen in the Bluetooth measurements. The query command returns the currently selected view.

Conditions

Measurement views: Bluetooth measurements.

Group

Display commands

Syntax

```
DISPlay:BLUEtooth:MEASview:SELect
{CONS|SUMM|FDVT|EDI|BOBW|STAB|BIBE|DRIF}
DISPlay:BLUEtooth:MEASview:SELect?
```

Arguments

`CONS` selects the BT Constellation view.

`SUMM` selects the BT Summary view.

`FDVT` selects the BT Freq Dev vs. Time view.

`EDI` selects the BT Eye Diagram view.

`BOBW` selects the BT 20dB BW view.

`STAB` selects the BT Symbol Table view.

`BIBE` selects the BT InBand Emission view.

`DRIF` selects the BT Drift Table view.

If you attempt to selects a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running" will be returned.

Returns

See Arguments.

Examples

`DISPLAY:BLUETOOTH:MEASVIEW:SELECT EDI` selects the Bluetooth Eye Diagram view.

DISPlay:BOBW:SELected:BANDwidth

Sets or queries the bandwidth to measure in the Bluetooth 20 dB BW view.

Conditions

Measurement views: Bluetooth 20 dB BW

Group

Display commands

Syntax

```
DISPlay:BOBW:SELected:BANDwidth { XDBM | XDB }
DISPlay:BOBW:SELected:BANDwidth?
```

Arguments

`XDBM` selects the x dB bandwith to measrure.

`XDB` selects the x dB bandwith to measrure.

Returns

See Arguments.

Examples

`DISPlay:BOBW:SELected:BANDwidth XDB` selects the x dB bandwidth to measure.

DISPlay:CCDF:LEGend:STATe

Determines whether to show or hide the trace legend in the CCDF view. The legend indicates the trace detection and function on the screen for each displayed CCDF trace.

Conditions

Measurement views: CCDF

Group

Display commands

Syntax

```
DISPlay:CCDF:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:CCDF:LEGend:STATe?
```

Arguments

`OFF` or 0 hides the trace legend.

`ON` or 1 shows the trace legend.

Returns

See Arguments.

Examples

`DISPlay:CCDF:LEGend:STATe ON` shows the trace legend on the screen.

DISPlay:CCDF:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: CCDF

Group

Display commands

Syntax

```
DISPlay:CCDF:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:CCDF:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPlay:CCDF:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the screen in the CCDF view.

DISPlay:CONSte[:MEASview<y>]:MPHase

Sets or queries the multiplication constant of the phase multiplication constellation display for a CPM signal. This command is valid when `[SENSe]:DDEMod:MODulation:TYPE` is set to CPM.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Display commands

Syntax

```
DISPlay:CONSte[:MEASview<y>]:MPHase { P1 | P2 | P4 | P8 | P16 | P32 }
DISPlay:CONSte[:MEASview<y>]:MPHase?
```

Arguments

The following table shows the arguments and phase multiplier.

Phase multiplication

Argument	Phase multiplier
P1	1
P2	2
P4	4
P8	8
P16	16
P32	32

Returns

See Arguments.

Examples

`DISPlay:CONSte[:MEASview<y>]:MPHase P8` sets the phase multiplier to 8 for measview 2 of constellation.

DISPlay:CONSte[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Display commands

Syntax

```
DISPlay:CONSte[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:CONSte[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPlay:CONSte:MEASview2:WINDow:TRACe:GRATicule:GRID:STATE ON` shows the graticule grid on the screen for measview 2 of constellation.

DISPlay:DDEMod[:MEASview<y>]:DELete (No query form)

Deletes the measurement view in the general purpose digital modulation measurements.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: General purpose digital modulation

Group

Display commands

Syntax

```
DISPlay:DDEMod[:MEASview<y>]:DELete { CONSte | DIQVtime | EDIagram | EVM | FDVTime | MERRor |
    PERRor | SIGNalqual | STABle | TDIagram }
```

Arguments

The following table lists the arguments. The arguments are the string type.

Modulation measurement views

Argument	View
CONSte	Constellation
DIQVtime	Demodulated I&Q versus Time
EDIagram	Eye diagram
EVM	EVM (Error Vector Magnitude) versus Time
FDVTime	Frequency deviation versus Time
MERRor	Magnitude error versus Time
PERRor	Phase error versus Time
SIGNalqual	Signal quality
STABle	Symbol table
TDIagram	Trellis diagram

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Examples

`DISPlay:DDEMod:MEASview1:DELete CONSte` deletes the constellation view with measurement view 1.

DISPlay:DDEMod:MEASview<y>[:SOURce<x>]:NEW (No query form)

Displays a new measurement view in the general purpose digital modulation measurements.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: General purpose digital modulation

Group

Display commands

Syntax

```
DISPlay:DDEMod:MEASview<y>[:SOURce<x>]:NEW { CONSte | DIQVtime | EDIagram | EVM | FDVTime | MERRor
    | PERRor | SIGNalqual | STABle | TDIagram }
```

Arguments

<x> = 1 to 8, representing Range of Source.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

`DISPLay:DDEMod:MEASview:SOURce1:NEW CONSte` creates the constellation view with measurement view 1 for source1.

DISPlay:DDEMod[:MEASview<y>]:SELect

Selects a measurement view in the general purpose digital modulation measurements on the screen. The query command returns the currently selected view.

Selecting a measurement optimizes it. Other measurements may be optimized as a side effect. Refer to `DISPlay:WINDow:OPTimized:MEASurement?` query.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Conditions

Measurement views: General purpose digital modulation

Group

Display commands

Syntax

```
DISPlay:DDEMod[:MEASview<y>]:SELect { CONSte | DIQVtime | EDIagram | EVM | FDVTime | MERRor |
    PERRor | SIGNalqual | STABle | TDIagram }
DISPlay:DDEMod[:MEASview<y>]:SELect?
```

Arguments

If you attempt to select a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Examples

`DISPlay:DDEModMEASview1:SELect CONSte` selects the constellation view with measurement view 1.

DISPlay:DDEMod[:SOURce<x>]:RADix

Sets or queries the base of symbols of the measurement source. This command is effective in the symbol table.

Conditions

Measurement views: Symbol table

Source keyword is optional, if not present Source 1 will be default source.

Group

Display commands

Syntax

```
DISPlay:DDEMod[:SOURce<x>]:RADix { BINary | HEXadecimal }
DISPlay:DDEMod[:SOURce<x>]:RADix?
```

Arguments

<x> = 1 to 8, representing Range of Source.

`BINary` selects binary notation.

`HEXadecimal` selects hexadecimal notation.

Examples

`DISPLay:DDEMod:SOURce1:RADix BINary` selects the binary notation of the measurement source symbol table.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]

Sets or queries the measurement source horizontal scale (full-scale time) for the time measurements in the general purpose digital modulation analysis. Programming a specified scale sets `DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe OFF`.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

```
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]<value>
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]?
```

Related Commands

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe (on page 761)

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet (on page 763)

Arguments

<x> = 1 to 8, representing Range of Source.

`<value>::=<NRf>` specifies the horizontal scale in full-scale time.

Use the DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:MAXimum and DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:MINimum? queries to get the upper and lower limits of the setting range. The unit can be changed by the [SENSe]:DDEMod[:SOURce<x>]:TIMe:UNITs command.

Returns

<NRf>

Examples

DISPlay:DDEMod:SOURce1:X:SCALe 1.5 µs, sets the horizontal scale of the measurement source to 1.5 µs.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO (No query form)

Sets the horizontal scale of the measurement source automatically to fit the waveform to the screen in the general purpose digital modulation analysis. Executing this command sets DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATeON.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO

Related Commands

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe (on page 761)

Arguments

<x> = 1 to 8, representing Range of Source.

Examples

DISPlay:DDEMod:SOURCE1:X:SCALe:AUTO sets the horizontal scale of the measurement source1 automatically to fit the waveform to the screen.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe

Determines whether to set the horizontal scale of the measurement source automatically or manually.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe?

Arguments

<x> = 1 to 8, representing Range of Source.

OFF or 0 specifies that the horizontal scale is set manually. To set it, use the DISPlay:DDEMod[:SOURce<x>]:X[:SCALe] and DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet commands.

ON or 1 specifies that the horizontal scale is set automatically.

Returns

ON or 1.

OFF or 0.

Examples

DISPlay:DDEMod:SOURce1:X:SCALe:AUTO:STATeON specifies that the horizontal scale of the measurement source1 is set automatically.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:MAXimum? (Query only)

Queries the upper limit of the measurement source horizontal scale setting range.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:MAXimum?

Returns

<NRf> The upper limit of the horizontal scale setting range.

The unit can be changed by the [SENSe]:DDEMod[:SOURce<x>]:TIMe:UNITs command.

Examples

DISPlay:DDEMod:SOURce1:X:SCALe:MAXimum? might return 18.135E-3, indicating that the upper limit of the measurement source1 horizontal scale setting range is 18.135 ms.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:MINimum? (Query only)

Queries the lower limit of the measurement source horizontal scale setting range.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

```
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:MINimum?
```

Returns

<NRf> The lower limit of the horizontal scale setting range.

The unit can be changed by the [SENSe]:DDEMod[:SOURce<x>]:TIMe:UNITs command.

Examples

DISPlay:DDEMod:SOURce1:X:SCALe:MINimum? might return 10.0E-9, indicating that the lower limit of the measurement source1 horizontal scale setting range is 10.0 ns.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]: OFFSet

Sets or queries the minimum horizontal value of the measurement source (left edge) for the time measurements in the general purpose digital modulation analysis.

Programming a specified offset sets DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe OFF.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Group

Display commands

Syntax

```
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet<value>
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:AUTO:STATe (on page 761)

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe] (on page 760)

Arguments

<x> = 1 to 8, representing Range of Source.

<value>::=<NRf> specifies the minimum horizontal value.

Use the DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet:MAXimum? and DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet:MINimum? queries to get the upper and lower limits of the setting range.

The unit can be changed by the [SENSe]:DDEMod[:SOURce<x>]:TIMe:UNITs command.

Returns

<NRf>

Examples

DISPlay:DDEMod:SOURce1:X:SCALe:OFFSet 20.075 µs, sets the minimum horizontal value of the measurement source to 20.075 µs.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet:MAXimum? (Query only)

Queries the measurement source upper limit of the horizontal offset setting range.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

`DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet:MAXimum?`

Returns

`<NRf>` The upper limit of the horizontal offset setting range. The unit can be changed by the `[SENSe]:DDEMod[:SOURce<x>]:TIMe:UNITs` command.

Examples

`DISPLay:DDEMod:SOURce1:X:SCALe:OFFSet:MAXimum?` might return -1.812E-3, indicating that the measurement source 1 upper limit of the horizontal offset setting range is -1.812 ms.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:OFFSet:MINimum? (Query only)

Queries the measurement source lower limit of the horizontal offset setting range.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

`DISPlay:DDEMod:X[:SCALe]:OFFSet:MINimum?`

Returns

`<NRf>` The lower limit of the horizontal offset setting range. The unit can be changed by the `[SENSe]:DDEMod[:SOURce<x>]:TIMe:UNITs` command.

Examples

`DISPLay:DDEMod:SOURCE1:X:SCALe:OFFSet:MINImum?` might return -16.28E-3, indicating that the measurement source1 lower limit of the horizontal offset setting range is -16.28 ms.

DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:RESet (No query form)

Presets the horizontal scale of the measurement source to the default value for the time measurements in the general purpose digital modulation analysis.

Conditions

Measurement views: EVM versus Time, Magnitude error versus Time, Phase error versus Time

Source keyword is optional, if not present Source1 will be default source.

Group

Display commands

Syntax

```
DISPlay:DDEMod[:SOURce<x>]:X[:SCALe]:RESet
```

Arguments

<x> = 1 to 8, representing Range of Source.

Examples

`DISPLay:DDEMod:SOURCE1:X:SCALe:RESet` presets the horizontal scale of the measurement source1 to the default value.

DISPlay:DIAGram:X[:SCALe]

Sets or queries the horizontal range for the eye and trellis diagrams in the general purpose digital modulation analysis.

Conditions

Measurement views: Eye diagram, Trellis diagram

Group

Display commands

Syntax

```
DISPlay:DIAGram:X[:SCALe] <value>
DISPlay:DIAGram:X[:SCALe]?
```

Arguments

`<value>::=<NR1>` specifies the horizontal range.

Range: 1 to 16 symbols.

Returns

`<NR1>`

Examples

`DISPLAY:DIAGRAM:X:SCALE 3` sets the horizontal range to 3 symbols in the eye and trellis diagrams.

DISPlay:DIAGram:X[:SCALe]:RESet (No Query Form)

Presets the horizontal scale to the default value for the eye and trellis diagrams in the general purpose digital modulation analysis.

Conditions

Measurement views: Eye diagram, Trellis diagram

Group

Display commands

Syntax

```
DISPlay:DIAGram:X[:SCALe]:RESet
```

Arguments

None

Examples

`DISPLAY:DIAGRAM:X:SCALE:RESET` presets the horizontal scale to the default value for the eye and trellis diagrams.

DISPlay:DIQVtime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Display commands

Syntax

```
DISPlay:DIQVtime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:DIQVtime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPlay:DIQVtime:MEASview1:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the screen in the Demodulated I&Q versus Time view 1.

DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the Demodulated I&Q versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Display commands

Syntax

```
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe] <value>
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]?
```

Arguments

`<value>::=<NRf>` specifies the vertical range. Range: 1 µV to 10 V.

Returns

`<NRf>`

Examples

`DISPlay:DIQVtime1:MEASview1:Y:SCALe 2.5` sets the vertical range to 2.5 V in the Demodulated I&Q versus Time measurement view 1.

DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]:AUTO (No query form)

Sets the vertical scale automatically to fit the waveform to the screen in the Demodulated I & Q versus Time display.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Display commands

Syntax

```
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPlay:DIQVtime:MEASview1:Y:SCALe:AUTO` sets the vertical scale automatically to fit the waveform to the screen measurement view 1.

DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (center point of the vertical axis) of the Demodulated I&Q versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demodulated I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Display commands

Syntax

```
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:DIQVtime[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the vertical offset. Range: -5 to +5 V.

Returns

`<NRf>`

Examples

`DISPlay:DIQVtime:MEASview1:Y:SCALe:OFFSet -0.5` sets the vertical offset to -0.5 V in the Demodulated I&Q versus Time measurement view 1.

DISPlay:DPX:DGRam:TIME[:SCALe]:OFFSet:DIVision

Sets or queries the DPXogram vertical time offset in divisions.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:DGRam:TIME[:SCALe]:OFFSet:DIVision <value>
DISPlay:DPX:DGRam:TIME[:SCALe]:OFFSet:DIVision?
```

Arguments

`<value> ::= <NRf>` vertical offset value in divisions.

Returns

<NRf>

Examples

`DISPLAY:DPX:DGRAM:TIME:SCALE:OFFSET:DIVISION 10` sets the vertical time off set to 10 divisions.

DISPlay:DPX:DGRam:TIME[:SCALe]:PDIVision

Sets or queries the DPXogram vertical time scale per division.

Conditions

MMeasurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:DGRam:TIME[:SCALe]:PDIVision <value>
DISPlay:DPX:DGRam:TIME[:SCALe]:PDIVision?
```

Arguments

`<value>::<NRf>` vertical value in divisions.

Returns

`<NRf>`

Examples

`DISPLAY:DPX:DGRAM:TIME:SCALE:PDIVISION 10` sets the vertical time scale to 10 seconds per division.

DISPlay:DPX:DGRam:TIME[:SCALe]:RESet (No Query Form)

Presets the time scale and offset to the default value for the DPXogram measurement.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:DGRam:TIME[:SCALe]:RESet
```

Arguments

None

Examples

`DISPLAY:DPX:DGRAM:TIME:SCALE:RESET` presets the time scale and offset to the default value.

DISPlay:DPX:DGRam:TSTamp:STATe

Determines whether to display the time stamp readout in the DPXogram display.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:DGRam:TSTamp:STATe { OFF | ON | 0 | 1 }
DISPlay:DPX:DGRam:TSTamp:STATe?
```

Arguments

OFF or 0 hides the time stamp readout.

ON or 1 shows the time stamp readout.

Returns

See Arguments.

Examples

DISPLAY:DPX:DGRAM:TSTAMP:STATE 0 hides the time stamp readout in the DPXogram display.

DISPlay:DPX:DGRam:Y[:SCALe]:AUTO (No Query Form)

Rescales the height axis automatically to fit the waveform to the screen in the DPXogram display.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

DISPlay:DPX:DGRam:Y[:SCALe]:AUTO

Arguments

None

Examples

DISPLAY:DPX:DGRAM:Y:AUTO rescales the height scale automatically to fit the waveform to the DPXogram display.

DISPlay:DPX:DGRam:Y[:SCALe]:RESet (No Query Form)

Resets the height scale of the DPXogram display to the default values: Height position = 0 dB and Height scale = 100 dB.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

DISPlay:DPX:DGRam:Y[:SCALe]:RESet

Arguments

None

Examples

DISPLAY:DPX:DGRAM:Y:RESET resets the height scale of the DPXogram display.

DISPlay:DPX:LEGend:STATe

Determines whether to show or hide the trace legend on the display. The legend indicates the trace detection and function on the screen for each displayed trace.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:DPX:LEGend:STATe?
```

Arguments

`OFF` or 0 hides the trace legend.

`ON` or 1 shows the trace legend.

Returns

See Arguments.

Examples

`DISPLAY:DPX:LEGEND:STATE ON` shows the trace legend on the screen.

DISPlay:DPX:PHASe:Y[:SCALe]:AXIS

Sets or queries the vertical axis representation.

Conditions

Measurement views: DPX Phase

Group

Display commands

Syntax

```
DISPlay:DPX:PHASe:Y[:SCALe]:AXIS { MODulopi | CONTinuous }
DISPlay:DPX:PHASe:Y[:SCALe]:AXIS?
```

Arguments

`MODulopi` (modulo π) shows the phase constrained within ±180° along the vertical axis.

`CONTinuous` shows the phase as continuous quantity along the vertical axis.

Returns

See Arguments.

Examples

`DISPLAY:DPX:PHASE:Y[:SCALE]:AXIS MODulopi` selects modulo π representation for the vertical axis.

DISPlay:DPX:PHASe:Y[:SCALe]:AXIS:OFFSet

Sets or queries the vertical offset in the DPX Phase view.

Conditions

Measurement views: DPX Phase

Group

Display commands

Syntax

```
DISPlay:DPX:PHASe:Y[:SCALe]:AXIS:OFFSet <value>
DISPlay:DPX:PHASe:Y[:SCALe]:AXIS:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: −180° to +180°.

Returns

`<NRf>`

Examples

`DISPLAY:DPX:PHASE:Y[:SCALE]:AXIS:OFFSET -158.5` sets the vertical offset to −158.5° in the view.

DISPlay:DPX:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:DPX:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPLAY:DPX:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen in the DPX spectrum view.

DISPlay:DPX:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) of the DPX spectrum view.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:Y[:SCALe]:OFFSet <value> DISPlay:DPX:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -270 to +150 dBm.

The amplitude unit is set by the [SENSe]:POWer:UNITs command (default: dBm).

You can omit the unit in the argument. When you include the unit in the argument, only dBm is allowed. For the other amplitude units, omit the unit in the argument.

Returns

`<NRf>`

Examples

`DISPLAY:DPX:Y[:SCALE]:OFFSET -12.5dBm` sets the vertical offset to -12.5 dBm.

DISPlay:DPX:Y[:SCALe]:PDIVision

Sets or queries the vertical scale (per division) in the DPX spectrum view.

Conditions

Measurement views: DPX spectrum

Group

Display commands

Syntax

```
DISPlay:DPX:Y[:SCALe]:PDIVision <value>
DISPlay:DPX:Y[:SCALe]:PDIVision?
```

Related Commands

[SENSe]:POWer:UNITs (on page 2319)

Arguments

`<value>::<NRf>` specifies the vertical scale (per division).

Range: 2 to 20 dB/div.

Returns

`<NRf>`

Examples

`DISP:DPX:Y:SCAL:PDIV 0.5` sets the vertical scale to 0.5 dB/div.

DISPlay:EDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen in the eye diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Display commands

Syntax

```
DISPlay:EDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:EDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPlay:EDIagram:MEASview2:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the screen in the eye diagram for measview2.

DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the Eye diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Display commands

Syntax

```
DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]<value>
```

DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]?

Arguments

<value>::<NRf> specifies the vertical range. Range: 1 µ to 100 (unitless).

Returns

<NRf>

Examples

DISPlay:EDIagram:MEASview2:Y:SCALe 2.5 sets the vertical range to 2.5 in the eye diagram for measview2.

DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]:AUTO (No query form)

Sets the vertical scale automatically to fit the waveform to the screen in the eye diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Display commands

Syntax

DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]:AUTO

Arguments

None

Examples

DISPLay:EDIagram:MEASview2:Y:SCALe:AUTO sets the vertical scale automatically to fit the waveform to the screen for measview2 of the Eye diagram.

DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (center point of the vertical axis) of the eye diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Display commands

Syntax

```
DISPlay:EDIagram[:MEASview<y>]:Y[:SCALe]:OFFSet<value>
DISPlay:EDIagram[:MEASview<y>]Y[:SCALe]:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the minimum vertical value.

Range: -50 to +50 (unitless).

Returns

<NRf>

Examples

`DISPLay:EDIagram:MEASview2:Y:SCALe:OFFSet -0.5` sets the vertical offset to -0.5 in the eye diagram measview2.

DISPlay:EMC:INCLude:MARGin

Sets or queries to display or hide the Margin by enabling or disabling the check box in the Prefs tab of the EMC Settings control panel.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:INCLude:MARGin { 0 | OFF | 1 | ON}
DISPlay:EMC:INCLude:MARGin?
```

Arguments

`0` or OFF hides the Margin

`1` or ON displays the margin

Returns

<Boolean> 0, 1

Examples

`DISPLAY:EMC:INCLUDE:MARGIN` returns 1, indicating that the Margin is displayed.

DISPlay:EMC:MARKer:SHOW:STATe

Sets or queries to show or hide the marker readout in the EMC view.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:MARKer:SHOW:STATe { 0 | 1 | ON | OFF }
DISPlay:EMC:MARKer:SHOW:STATe?
```

Arguments

`OFF` or `0` hides the marker readout

`1` or `ON` shows the marker readout

Returns

<Boolean> 0, 1

Examples

`DISPLAY:EMC:MARKER:SHOW:STATE ON` shows the readout for the marker on the display.

DISPlay:EMC:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale to the default values in the EMC view.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:RESet:SCALe
```

Arguments

None

Returns

None

Examples

`DISPLAY:EMC:RESET:SCALE` resets the horizontal and vertical scale to the default values.

DISPlay:EMC:SCALe:LOG:STATe

Determines whether or not to set the horizontal axis logarithmic in the EMC view.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:SCALe:LOG:STATe { 0 | OFF | 1 | ON}
DISPlay:EMC:SCALe:LOG:STATe?
```

Arguments

OFF or 0 sets the horizontal axis linear (default).

ON or 1 sets the horizontal axis logarithmic.

Returns

<Boolean> 0, 1

Examples

DISPLAY:EMC:SCALE:LOG:STATE ON sets the horizontal axis logarithmic in the EMC view.

DISPlay:EMC:SELect:SPOT:NUMBer

Sets or queries the status of current spot number in the EMC view.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:SELect:SPOT:NUMBer <value>
DISPlay:EMC:SELect:SPOT:NUMBer?
```

Arguments

<value> = <NR1>

Returns

<NR1>

Examples

DISPLAY:EMC:SELECT:SPOT:NUMBER might return +2, indicating that spot 2 is made current spot and it is enabled. (+ represents enabling and – represents disabling.)

DISPlay:EMC:SHOW:LIMit

Sets or queries the displayed limit format in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:SHOW:LIMit {LINE|SHAD|OFF}
DISPlay:EMC:SHOW:LIMit?
```

Arguments

LINE – Sets the limit in Line format

SHAD – Sets the limit in Shaded format

OFF – Hides the Limit

Returns

<String> Either LINE or SHAD or OFF

Examples

DISPLAY:EMC:SHOW:LIMIT might return LINE, indicating that the limit is displayed in line format.

DISPlay:EMC:SHOW:LIMit:LEGend

Sets or queries to display or hide the limit legends and label on the plot by enabling or disabling the check box in the Prefs tab of the EMC Settings control panel.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:SHOW:LIMit:LEGend { 0 | OFF | 1 | ON}
DISPlay:EMC:SHOW:LIMit:LEGend?
```

Arguments

OFF or 0 hides the limit legends and label.

ON or 1 display the limit legends and label.

Returns

<Boolean> 0,1

Examples

DISPLAY:EMC:SHOW:LIMIT:LEGEND might return 0, indicating that the limit legends and label are hidden on the plot.

DISPlay:EMC:SHOW:SPOT:INDIcator

Sets or queries to display or hide the spots on the plot in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:SHOW:SPOT:INDIcator {0 | OFF | 1 | ON}
DISPlay:EMC:SHOW:SPOT:INDIcator?
```

Arguments

OFF or 0 hides the spots

ON or 1 display the spots

Returns

<Boolean> 0,1

Examples

DISPLAY:EMC:SHOW:SPOT:INDICATOR 1 displays the spots on the plot in EMC View.

DISPlay:EMC:SHOW:WIZArd

Sets or queries to display or hide the EMC wizard when EMCVu is launched by enabling or disabling the check box in the Prefs tab of the EMC Settings control panel.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:SHOW:WIZArd {0 | OFF | 1 | ON}
DISPlay:EMC:SHOW:WIZArd?
```

Arguments

OFF or 0 hides the EMC wizard

ON or 1 displays the EMC wizard

Returns

<Boolean> 0,1

Examples

DISPLAY:EMC:SHOW:WIZARD ON displays the EMC wizard when EMCVu is launched.

DISPlay:EMC:SPOT<x>:SELect

Sets or queries to enable or disable the selected spot in emission results of EMC view.

<x> = <NR1> Indicates the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:SPOT<x>:SELect { 0 | 1 | ON | OFF }
DISPlay:EMC:SPOT<x>:SELect ?
```

Arguments

OFF or 0 disables the spot

1 or ON enables the spot

Returns

<Boolean> 0,1

Examples

`DISPlay:EMC:SPOT:SELect?` might return 1, indicating that spot 2 is enabled.

DISPlay:EMC:TRACe:LEGEnd

Sets or queries to display or hide the trace legend by enabling or disabling the check box in the Prefs tab of the EMC Settings control panel.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:TRACe:LEGEnd { 0 | OFF | 1 | ON}
DISPlay:EMC:TRACe:LEGEnd?
```

Arguments

0 or OFF hides the Trace Legend

1 or ON display the Trace Legend

Returns

<Boolean> 0, 1

Examples

`DISPLAY:EMC:TRACE:LEGEND` returns `0`, indicating that the trace legend is hidden.

DISPlay:EMC:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries to display or hide the Graticule grid in the EMC view.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:WINDow:TRACe:GRATicule:GRID:STATe { 0 | 1 | ON | OFF }
DISPlay:EMC:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the Graticule grid in the graph 1 or

`ON` display the Graticule grid in the graph

Returns

<Boolean> 0, 1

Examples

`DISPLAY:EMC:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` hides the graticule grid in the EMC view.

DISPlay:EMC:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale automatically to fit the waveform to the complete screen in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:X[:SCALe]:AUTO
```

Arguments

None

Returns

None

Examples

`DISPLAY:EMC:X[:SCALE]:AUTO` sets the horizontal scale automatically to fit the waveform to the complete screen.

DISPlay:EMC:X[:SCALe]:STARt

Sets and queries the Zoom Start frequency in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:X[:SCALe]:STARt <value>
DISPlay:EMC:X[:SCALe]:STARt?
```

Arguments

<value> = <NRf>

Returns

`<NRf>`

Examples

`DISPLAY:EMC:X[:SCALE]:START` might return `64.29`, indicating that the zoom start frequency is 64.2 kHz.

DISPlay:EMC:X[:SCALe]:STOP

Sets and queries the Zoom stop frequency in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:X[:SCALe]:STOP <value>
DISPlay:EMC:X[:SCALe]:STOP?
```

Arguments

`<value> = <NRf>`

Returns

`<NRf>`

Examples

`DISPLAY:EMC:X[:SCALE]:STOP` might return `732.29`, indicating that the zoom stop frequency is 732.2 kHz.

DISPlay:EMC:Y[:SCALe]

Sets or queries the vertical scale value in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:Y[:SCALe] <value>
DISPlay:EMC:Y[:SCALe]?
```

Arguments

`<value> = <NRf>`

Returns

`<NRf>`

Examples

`DISPLAY:EMC:Y[:SCALE] 100` sets the vertical scale to 100 dB.

DISPlay:EMC:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale automatically to fit the waveform to the complete screen in the EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:Y[:SCALe]:AUTO
```

Arguments

None

Returns

None

Examples

`DISPLAY:EMC:Y[:SCALE]:AUTO` sets the vertical scale automatically to fit the waveform to the complete screen.

DISPlay:EMC:Y[:SCALe]:OFFSet

Sets or queries the vertical Position (offset) value in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Display commands

Syntax

```
DISPlay:EMC:Y[:SCALe]:OFFSet <value>
DISPlay:EMC:Y[:SCALe]:OFFSet?
```

Arguments

`<value> = <NRf>`

Returns

`<NRf>`

Examples

`DISPLAY:EMC:Y[:SCALE]:OFFSET` might return `45.74`, indicating the vertical Position (offset) value is 45.7 dBuV.

DISPlay:EVM[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule grid view state for the EVM view.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Display commands

Syntax

```
DISPlay:EVM:MEASview<y>:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:EVM:MEASview<y>:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

OFF or 0

ON or 1

Examples

`DISPlay:EVM:MEASview2:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the EVM Measview 2.

DISPlay:EVM[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the EVM versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Display commands

Syntax

```
DISPlay:EVM[:MEASview<y>]:Y[:SCALe]<value>
DISPlay:EVM[:MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:EVM:[MEASview1]:Y[:SCALe]:OFFSet (on page 786)

Arguments

`<value>::<NRf>` specifies the vertical range.

Range: 1 to 100%.

Returns

`<NRf>`

Examples

`DISPlay:EVM:MEASview1:Y:SCALe 50` sets the vertical range to 50% in the EVM versus Time display Measurement view 1.

DISPlay:EVM[:MEASview<y>]:Y[:SCALe]:AUTO (No query form)

Sets the vertical scale automatically to fit the waveform to the screen in the EVM versus Time display.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Display commands

Syntax

```
DISPlay:EVM[:MEASview<y>]:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPlay:EVM:MEASview2:Y:SCALe:AUTO` sets the vertical scale automatically to fit the waveform to the screen of EVM versus Time Measurement view 2.

DISPlay:EVM[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the minimum vertical value (bottom edge) of the EVM versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Display commands

Syntax

```
DISPlay:EVM[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:EVM[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:EVM[:MEASview<y>]:Y[:SCALe] (on page 785)

Arguments

<value>::<NRf> specifies the minimum vertical value.

Range: -100 to 100%.

Returns

<NRf>

Examples

DISPlay:EVM:MEASview2:Y:SCALe:OFFSet -9.5 sets the minimum vertical value to -9.5% in the EVM versus Time graph Measurement View 2.

DISPlay:FDVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule grid view state for the FDV view.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Display commands

Syntax

```
DISPlay:FDVTime:MEASview<y>:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:FDVTime:MEASview<y>:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticule grid.

ON or 1 shows the graticule grid.

Returns

OFF

ON

Examples

DISPlay:FDVTime:MEASview2:WINDow:TRACe:GRATicule:GRID:STATe ON shows the graticule grid on the Frequency deviation versus Time Measview 2.

DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the Frequency deviation versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Display commands

Syntax

```
DISPlay:FDVTime:[MEASview<y>]:Y[:SCALe]<value>
DISPlay:FDVTime:[MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 789)

Arguments

`<value>::<NRf>` specifies the vertical range.

Range: 10 Hz to 120 MHz.

Returns

`<NRf>`

Examples

`DISPlay:FDVTime:MEASview1:Y:SCALe 30 MHz` sets the vertical range to 30 MHz in the Frequency deviation versus Time display Measurement view 1.

DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]:AUTO (No query form)

Sets the vertical scale automatically to fit the waveform to the screen in the Frequency deviation versus Time display.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Display commands

Syntax

```
DISPlay:FDVTime:MEASview<y>:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPlay:FDVTime:MEASview2:Y:SCALe:AUTO` sets the vertical scale automatically to fit the waveform to the screen of Frequency deviation versus Time Measurement view 2.

DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the minimum vertical value (bottom edge) of the Frequency deviation versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Display commands

Syntax

```
DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]:OFFSet<value>
DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:FDVTime[:MEASview<y>]:Y[:SCALe] (on page 787)

Arguments

`<value>::<NRf>` specifies the vertical offset.

Range: -60 MHz to +60 MHz.

Returns

`<NRf>`

Examples

`DISPlay:FDVTime:MEASview2:Y:SCALe:OFFSet -14.5 MHz` sets the minimum vertical value to -14.5 MHz in the Frequency deviation versus Time graph Measurement View 2.

DISPlay:{FSETtling|PSETtling}:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the Frequency or Phase settling views.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:{FSETtling|PSETtling}:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the view.

`ON` or 1 shows the readout for the selected marker in the view.

Returns

See Arguments.

Examples

`DISPLAY:FSETTLING:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the view.

DISPlay:{FSETtling|PSETtling}:TIME:DECimal

Sets or queries the number of values to the right of the decimal point to include in the Settling Time and Settling Time from Trigger results.

Conditions

Measurement views: Frequency and Phase Settling Time

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:TIME:DECimal <value>
DISPlay:{FSETtling|PSETtling}:TIME:DECimal?
```

Arguments

`<value>::<NR1>` specifies the number digits to the right of the decimal point to include in Settling Time and Settling Time from Trigger results. Range: 0 to 6.

Returns

`<NR1>`

Examples

`DISPLAY:PSETTLING:TIME:DECIMAL 3` sets the number of values to the right of the decimal point to 3 for the Phase Settling time measurement.

DISPlay:{FSETtling|PSETtling}:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:WINDow:TRACe:GRATicule:GRID: STATe { OFF | ON | 0 | 1 }
DISPlay:{FSETtling|PSETtling}:WINDow:TRACe:GRATicule:GRID: STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPLAY:FSETTLING:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen for the Frequency Settling display.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]

Sets or queries the horizontal scale (full-scale time) of the Settling Time graph. Programming a specified scale sets `DISPlay:{FSETtling|PSETtling}:X[:SCALe] AUTO:STATe OFF`.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:X[:SCALe] <value>
DISPlay:{FSETtling|PSETtling}:X[:SCALe]?
```

Related Commands

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe (on page 792)

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet (on page 793)

Arguments

`<value>::={ <NRf> | MAXimum | MINimum }` specifies the horizontal scale in full-scale time. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively.

Use the DISPlay:{FSETtling|PSETtling}:X[:SCALe]:MAXimum? (on page 792) and DISPlay:{FSETtling|PSETtling}:X[:SCALe]:MINimum? (on page 793) queries to get the upper and lower limit values of the setting range.

Returns

See Arguments.

Examples

`DISPLAY:FSETTLING:X:SCALE 25.6us` sets the horizontal scale to 25.6 µs.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale automatically to fit the waveform to the screen in the Frequency and Phase Settling views. Executing this command sets `DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe ON`.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO
```

Related Commands

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe (on page 792)

Arguments

None

Examples

`DISPLAY:FSETTLING:X:SCALE:AUTO` sets the horizontal scale automatically to fit the waveform to the screen.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe

Determines whether to set the horizontal scale automatically or manually.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe?
```

Arguments

`OFF` or 0 specifies that the horizontal scale is set manually. To set it, use the DISPlay:{FSETtling|PSETtling}:X[:SCALe] (on page 791) and DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet (on page 793) commands.

`ON` or 1 specifies that the horizontal scale is set automatically.

Returns

See Arguments.

Examples

`DISPLAY:FSETTLING:X:SCALE:AUTO:STATE ON` specifies that the horizontal scale is set automatically.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:MAXimum? (Query Only)

Queries the upper limit of the horizontal scale setting range.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:MAXimum?
```

Related Commands

DISPlay:{FSETtling|PSETtling}:X[:SCALe] (on page 791)

Returns

<NRf> The upper limit of the horizontal scale setting range.

Examples

DISPLAY:FSETTLING:X:SCALE:MAXIMUM? might return 18.135E-3, indicating that the upper limit of the horizontal scale setting range is 18.135 ms.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:MINimum? (Query Only)

Queries the lower limit of the horizontal scale setting range.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:MINimum?

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe] (on page 798)

Returns

<NRf> The lower limit of the horizontal scale setting range.

Examples

DISPLAY:FSETTLING:X:SCALE:MINIMUM? might return 10.0E-9, indicating that the lower limit of the horizontal scale setting range is 10.0 ns.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the Frequency versus Time graph. Programming a specified offset sets DISPlay:{FSETtling|PSETtling}:X[:SCALe] AUTO:STATe OFF.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet <value>
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet?

Related Commands

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:AUTO:STATe (on page 792)

DISPlay:{FSETtling|PSETtling}:X[:SCALe] (on page 791)

Arguments

`<value>::={ <NRf> | MAXimum | MINimum }` specifies the horizontal offset. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively.

Use the DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MAXimum? (on page 792) and DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MINimum? (on page 793) queries to get the upper and lower limit values of the setting range.

Returns

See Arguments.

Examples

`DISPLAY:FSETTLING:X:SCALE:OFFSET 800ns` sets the minimum horizontal value to 800 ns in the Frequency Settling graph.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MAXimum? (Query Only)

Queries the upper limit of the horizontal offset setting range.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

`DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MAXimum?`

Related Commands

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet (on page 793)

Returns

`<NRf>` The upper limit of the horizontal offset setting range.

Examples

`DISPLAY:FSETTLING:X:SCALE:OFFSET:MAXIMUM?` might return `338.186000E-6`, indicating that the upper limit of the horizontal offset setting range is 338.186 µs.

DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MINimum? (Query Only)

Queries the lower limit of the horizontal offset setting range.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:X[:SCALe]:OFFSet:MINimum?
```

Related Commands

DISPlay:FVTime:X[:SCALe]:OFFSet (on page 801)

Returns

<NRf> The lower limit of the horizontal offset setting range.

Examples

DISPLAY:FSETTLING:X:SCALE:OFFSET:MINIMUM? might return –338.186000E–6, indicating that the lower limit of the horizontal offset setting range is -338.186 µs.

DISPlay:{FSETtling|PSETtling}:Y[:SCALe]

Sets or queries the vertical range of the Frequency versus Time graph.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:Y[:SCALe] <value>
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]?
```

Related Commands

DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:OFFSet (on page 796)

Arguments

<value>::<NRf> specifies the vertical range. Range: 10 Hz to 120 MHz.

Returns

<NRf>

Examples

DISPlay:FSETTLING:Y:SCALe 30E6 sets the vertical range to 30 MHz in the Frequency Settling graph.

DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale automatically to fit the waveform to the screen in the Frequency and Phase Settling views.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:FSETTLING:Y:SCALE:AUTO` sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the center of the vertical axis) in the Frequency and Phase Settling graphs.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:OFFSet <value>
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:{FSETtling|PSETtling}:Y[:SCALe] (on page 795)

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -60 MHz to +60 MHz.

Returns

`<NRf>`

Examples

`DISPLAY:FVTIME:Y:SCALE:OFFSET -14.5E6` sets the vertical offset to -14.5 MHz in the Frequency Settling graph.

DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:PDIVision

Sets or queries the vertical scale (per division) of the Frequency and Phase Settling graphs.

Conditions

Measurement views: Frequency and Phase Settling

Group

Display commands

Syntax

```
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:PDIVision <value>
DISPlay:{FSETtling|PSETtling}:Y[:SCALe]:PDIVision?
```

Arguments

<value>::<NRf> specifies the vertical scale (per division).

Range:

- Frequency Settling (Hz/div) : 500 to the Maximum bandwidth of instrument
- Phase Settling (degrees/div): 0.10 to X.

Returns

<NRf>

Examples

DISPLAY:PSETTLING:Y:SCALE:PDIVISION 2.7 sets the vertical scale to 27 degrees.

DISPlay:FVTime[:MEASview<y>]:READout[:STATe]

Determines whether to show or hide the measurement parameter readouts in the Frequency versus Time view.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

DISPlay:FVTime[:MEASview<y>]:READout[:STATe] { OFF | ON | 0 | 1 }

DISPlay:FVTime[:MEASview<y>]:READout[:STATe]?

Arguments

OFF or 0 hides the parameter readouts.

ON or 1 shows the parameter readouts.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. The default value is 1

Examples

DISPLAY:FVTIME:MEASVIEW1:READOUT:STATE ON shows the parameter readouts on the screen.

DISPlay:FVTime[:MEASview<y>]:SELected:TIMestamp

Sets or queries the display of the time stamp in the ogram plot.

Conditions

Applicable measurement view must be active.

Group

Display commands

Syntax

DISPlay:FVTime[:MEASview<y>]:SELected:TIMestamp {OFF | ON | 0 | 1}

DISPlay:FVTime[:MEASview<y>]:SELected:TIMestamp?

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional. By default y is 1.

`OFF` or `0` removes or turns off the time stamp.

`ON` or `1` displays or turns on the time stamp.

Returns

`{OFF | ON | 0 | 1}`

Examples

`DISPlay:FVTime:MEASview1:SELected:TIMestamp?` queries the display status of the time stamp in the ogram plot view 1.

DISPlay:FVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:FVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:FVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

See Arguments.

Examples

`DISPLAY:FVTIME:MEASview1:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the Frequency versus Time view.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]

Sets or queries the horizontal scale (full-scale time) of the Frequency versus Time graph. Programming a specified scale sets `DISPlay:FVTime[:MEASview<y>]:X[:SCALe]AUTO:STATe OFF`.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:FVTime[:MEASview<y>]:X[:SCALe] <value>
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]?
```

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 800)

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 801)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::={ <NRf> | MAXimum | MINimum } specifies the horizontal scale in full-scale time. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively.

Use the DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 800) and DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MINimum? (on page 801) queries to get the upper and lower limit values of the setting range.

Returns

See Arguments.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE 25.6us sets the horizontal scale to 25.6 µs.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale automatically to fit the waveform to the screen in the Frequency versus Time view. Executing this command sets DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe ON.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO
```

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 800)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE:AUTO sets the horizontal scale automatically to fit the waveform to the screen.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe

Determines whether to set the horizontal scale automatically or manually.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

OFF or 0 specifies that the horizontal scale is set manually. To set it, use the DISPlay:FVTime[:MEASview<y>]:X[:SCALe] (on page 798) and DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 801) commands.

ON or 1 specifies that the horizontal scale is set automatically.

Returns

See Arguments.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE:AUTO:STATE ON specifies that the horizontal scale is set automatically.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (Query Only)

Queries the upper limit of the horizontal scale setting range.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MAXimum?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe] (on page 798)

Returns

<NRf> The upper limit of the horizontal scale setting range.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE:MAXIMUM? might return 18.135E-3, indicating that the upper limit of the horizontal scale setting range is 18.135 ms.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MINimum? (Query Only)

Queries the lower limit of the horizontal scale setting range.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:MINimum?

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe] (on page 798)

Returns

<NRf> The lower limit of the horizontal scale setting range.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE:MINIMUM? might return 10.0E-9, indicating that the lower limit of the horizontal scale setting range is 10.0 ns.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the Frequency versus Time graph. Programming a specified offset sets DISPlay:FVTime[:MEASview<y>]:X[:SCALe]AUTO:STATe OFF.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet <value>
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet?

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 800)

DISPlay:FVTime[:MEASview<y>]:X[:SCALe] (on page 798)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::={ <NRf> | MAXimum | MINimum } specifies the horizontal offset. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively.

Use the DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 802) and DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 803) queries to get the upper and lower limit values of the setting range.

Returns

See Arguments.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE:OFFSET 800ns sets the minimum horizontal value to 800 ns in the Frequency versus Time graph.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (Query Only)

Queries the upper limit of the horizontal offset setting range.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum?

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 801)

Returns

<NRf> The upper limit of the horizontal offset setting range.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE:OFFSET:MAXIMUM? might return -1.812E-3, indicating that the upper limit of the horizontal offset setting range is -1.812 ms.

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (Query Only)

Queries the lower limit of the horizontal offset setting range.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Related Commands

DISPlay:FVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 804)

Returns

<NRf> The lower limit of the horizontal offset setting range.

Examples

DISPLAY:FVTIME:MEASview1:X:SCALE:OFFSET:MINIMUM? might return -16.28E-3, indicating that the lower limit of the horizontal offset setting range is -16.28 ms.

DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the Frequency versus Time graph.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

```
DISPlay:FVTime[:MEASview<y>]:Y[:SCALe] <value>
DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 804)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::<NRf> specifies the vertical range. Range: 10 Hz to 120 MHz.

Returns

<NRf>

Examples

DISPlay:FVTime:MEASview1:Y:SCALe 30MHz sets the vertical range to 30 MHz in the Frequency versus Time graph.

DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale automatically to fit the waveform to the screen in the Frequency versus Time view.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:AUTO

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

DISPLAY:FVTIME:MEASview1:Y:SCALE:AUTO sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the center of the vertical axis) in the Frequency versus Time graph.

Conditions

Measurement views: Frequency versus Time

Group

Display commands

Syntax

DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:FVTime[:MEASview<y>]:Y[:SCALe]:OFFSet?

Related Commands

DISPlay:FVTime[:MEASview<y>]:Y[:SCALe] (on page 803)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::<NRf> specifies the vertical offset. Range: -60 MHz to +60 MHz.

Returns

<NRf>

Examples

DISPLAY:FVTIME:MEASview1:Y:SCALE:OFFSET -14.5MHz sets the vertical offset to −14.5 MHz in the Frequency versus Time graph.

DISPlay:GENeral:MEASview<y>:DELete (No Query Form)

Deletes a measurement view in the general signal viewing.

Conditions

Measurement views: General signal viewing

Group

Display commands

Syntax

```
DISPlay:GENeral:MEASview<y>:DELete { SPECtrum | DPX | AVTime| FVTime | PHVTime | IQVTime | SGRam |
    TOVerview }
```

Arguments

The following table shows the view arguments. The arguments are the string type.

General signal viewing views

Argument	View
SPECtrum	Spectrum
DPX	DPX (Digital Phosphor) spectrum
AVTime	Amplitude versus Time
FVTime	Frequency versus Time
PHVTime	Phase versus Time
IQVTime	IQ versus Time
SGRam	Spectrogram
TOVerview	Time overview

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

DISPLAY:GENERAL:MEASVIEW1:DELETE DPX deletes the DPX spectrum view with Measurement View 1.

DISPlay:GENeral:MEASview<y>[:SOURce<x>]:NEW (No Query Form)

Displays a new measurement view in the general signal viewing.

Conditions

Measurement views: General signal viewing with specified Measurement view number.

Group

Display commands

Syntax

```
DISPlay:GENeral:MEASview<y>[:SOURce<x>]:NEW { SPECtrum | DPX | AVTime| FVTime | PHVTime | IQVTime |
    SGRam | TOVerview }
```

Arguments

The following table shows the view arguments. The arguments are the string type.

General signal viewing views

Argument	View
SPECtrum	Spectrum
DPX	DPX (Digital Phosphor) spectrum
AVTime	Amplitude versus Time
FVTime	Frequency versus Time
PHVTime	Phase versus Time
IQVTime	IQ versus Time
SGRam	Spectrogram
TOVerview	Time overview

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

<x> = 1 to 8, representing Range of Source.

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

`DISPlay:GENeral:MEASview1:SOURce1:NEW DPX` creates the DPX spectrum view for source1.

DISPlay:GENeral:MEASview<y>:SELect

Selects a measurement view in the general signal viewing on the screen. The query command returns the currently selected view.

Selecting a measurement optimizes it. Other measurements may be optimized as a side effect. Refer to the `DISPlay:WINDow:OPTimized:MEASurement?` query.

Conditions

Measurement views: General signal viewing

Group

Display commands

Syntax

```
DISPlay:GENeral:MEASview<y>:SELect { SPECtrum | DPX | AVTime| FVTime | PHVTime | IQVTime | SGRam |
    TOVerview }
DISPlay:GENeral:MEASview<y>:SELect?
```

Arguments

The following table shows the view arguments. The arguments are the string type.

General signal viewing views

Argument	View
SPECtrum	Spectrum
DPX	DPX (Digital Phosphor) spectrum
AVTime	Amplitude versus Time
FVTime	Frequency versus Time
PHVTime	Phase versus Time
IQVTime	IQ versus Time
SGRam	Spectrogram
TOVerview	Time overview

If you attempt to select a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

The time overview (TOVerview) cannot be selected as the primary measurement. If you select it, the error (-200, "Execution error; Time Overview cannot be Primary measurement") will be returned. If you use the DISPlay:GENeral MEASview:SELect? query with the time overview as the only measurement active, the error (-200, "Execution error; Analysis selected is not running") will be returned.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

See Arguments.

Examples

`DISPLAY:GENERAL:MEASVIEW1:SELECT DPX` selects the DPX spectrum view with Measurement view 1.

DISPlay:GPRF:MEASview:DELete (No Query Form)

Deletes a selected measurement view in the RF measurements.

Conditions

Measurement views: RF measurements

Group

Display commands

Syntax

```
DISPlay:GPRF:MEASview:DELete { AM | FM | PM | CCDF | ACPower | FSETtling | MCPower | OBW | PNOise |
    PSETtling | SPURious |SEM }
```

Arguments

`AM` deletes the AM view.

`FM` deletes the FM view.

`PM` deletes the PM view.

`CCDF` deletes the CCDF view.

`ACPower` deletes the Channel power and ACPR view.

`FSETtling` deletes the Frequency Settling view.

`MCPower` deletes the MCPR view.

`OBW` deletes the Occupied Bandwidth view.

`PNOise` deletes the Phase Noise view (Option 11 only).

`PSETtling` deletes the Phase Settling view.

`SPURious` deletes the Spurious view.

`SEM` deletes the Spectral Emissions Mask view.

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Examples

`DISPlay:GPRF:MEASview:DELete ACPower` deletes the Channel power and ACPR view.

DISPlay:GPRF:MEASview:NEW (No Query Form)

Displays a new measurement view in the RF measurements.

Conditions

Measurement views: RF measurements

Group

Display commands

Syntax

```
DISPlay:GPRF:MEASview:NEW { AM | FM | PM | CCDF | ACPower | FSETtling MCPower | OBW | PNOise |
    PSETtling | SPURious |SEM }
```

Arguments

`AM` opens the AM view.

`FM` opens the AM view.

PM opens the AM view.

CCDF opens the CCDF view.

ACPower opens the Channel power and ACPR view.

FSETtling opens the Frequency Settling view.

MCPower opens the MCPR view.

OBW opens the Occupied Bandwidth view.

PNOise opens the Phase Noise view (Option 11 only).

PSETtling opens the Phase Settling view.

SPURious opens the Spurious view.

SEM opens the Spectral Emissions Mask view.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

DISPlay:GPRF:MEASview:NEW ACPower creates the Channel power and ACPR view.

DISPlay:GPRF:MEASview:SELect

Selects a measurement view in the RF measurements on the screen. The query command returns the currently selected view.

Selecting a measurement optimizes it. Other measurements may be optimized as a side effect. Refer to the DISPlay:WINDow:OPTimized:MEASurement? query.

Conditions

Measurement views: RF measurements

Group

Display commands

Syntax

```
DISPlay:GPRF:MEASview:SELect { AM | FM | PM | CCDF | ACPower | FSETtling | MCPower | OBW | PNOise |
    PSETtling | SPURious |SEM }
DISPlay:GPRF:MEASview:SELect?
```

Arguments

AM selects the AM view.

FM selects the FM view.

PM selects the PM view.

CCDF selects the CCDF view.

ACPower selects the Channel power and ACPR view.

FSETtling selects the Frequency Settling view.

MCPower selects the MCPR view.

OBW selects the Occupied Bandwidth view.

PNOise selects the Phase Noise view (Option 11 only).

PSETtling selects the Phase Settling view.

SPURious selects the Spurious view.

SEM selects the Spectral Emissions Mask view.

If you attempt to select a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Returns

See Arguments.

Examples

DISPlay:GPRF:MEASview:SELect ACPower selects the Channel power and ACPR view.

DISPlay:IQVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

```
DISPlay:IQVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:IQVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

OFF or 0 hides the graticule grid.

ON or 1 shows the graticule grid.

Returns

See Arguments.

Examples

DISPLAY:IQVTIME:MEASview1:WINDOW:TRACE:GRATICULE:GRID:STATE ON shows the graticule grid on the RF I&Q versus Time view.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]

Sets or queries the horizontal scale (full-scale time) of the RF I&Q versus Time graph. Programming a specified scale sets DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] AUTO:STATe OFF.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

```
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] <value>
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]?
```

Related Commands

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 812)

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 813)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::={ <NRf> | MAXimum | MINimum } specifies the horizontal scale in full-scale time. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively. Use the DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 812) and DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MINimum? (on page 813) queries to get the upper and lower limit values of the setting range.

Returns

See Arguments.

Examples

DISPLAY:IQVTIME:MEASview<y>:X:SCALE 100us sets the horizontal scale to 100 µs.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale automatically to fit the waveform to the screen in the RF I&Q versus Time view. Executing this command sets DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe ON.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

```
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO
```

Related Commands

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] (on page 810)

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 812)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

DISPLAY:IQVTIME:MEASview1:X:SCALE:AUTO sets the horizontal scale automatically to fit the waveform to the screen.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe

Determines whether to set the horizontal scale automatically or manually.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

```
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

OFF or 0 specifies that the horizontal scale is set manually. To set it, use the DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] (on page 810) and DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 813) command.

ON or 1 specifies that the horizontal scale is set automatically.

Returns

See Arguments.

Examples

DISPLAY:IQVTIME:MEASview1:X:SCALE:AUTO:STATE ON specifies that the horizontal scale is set automatically.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (Query Only)

Queries the upper limit of the horizontal scale setting range.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

```
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MAXimum?
```

Related Commands

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] (on page 810)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<NRf> The upper limit of the horizontal scale setting range.

Examples

DISPLAY:IQVTIME:MEASview1:X:SCALE:MAXIMUM? might return 18.135E-3, indicating that the upper limit of the horizontal scale setting range is 18.135 ms.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MINimum? (Query Only)

Queries the lower limit of the horizontal scale setting range.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:MINimum?

Related Commands

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] (on page 810)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<NRf> The lower limit of the horizontal scale setting range.

Examples

DISPLAY:IQVTIME:MEASview1:X:SCALE:MINIMUM? might return 10.0E-9, indicating that the lower limit of the horizontal scale setting range is 10.0 ns.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the RF I&Q versus Time graph. Programming a specified offset sets DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]AUTO:STATe OFF.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet <value>
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet?

Related Commands

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 812)

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe] (on page 810)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::={ <NRf> | MAXimum | MINimum } specifies the horizontal offset. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively.

Use the DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 814) and DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 815) queries to get the upper and lower limit values of the setting range.

Returns

See Arguments.

Examples

DISPLAY:IQVTIME:MEASview1:X:SCALE:OFFSET 800ns sets the minimum horizontal value to 800 ns in the RF I&Q versus Time graph.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (Query Only)

Queries the upper limit of the horizontal offset setting range.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum?

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Related Commands

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 813)

Returns

<NRf> The upper limit of the horizontal offset setting range.

Examples

DISPLAY:IQVTIME:MEASview1:X:SCALE:OFFSET:MAXIMUM? might return -1.812E-3, indicating that the upper limit of the horizontal offset setting range is -1.812 ms.

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (Query Only)

Queries the lower limit of the horizontal offset setting range.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

```
DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum?
```

Related Commands

DISPlay:IQVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 813)

Returns

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<NRf> The lower limit of the horizontal offset setting range.

Examples

`DISPLAY:IQVTIME:MEASview1:X:SCALE:OFFSET:MINIMUM?` might return `-16.28E-3`, indicating that the lower limit of the horizontal offset setting range is -16.28 ms.

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the RF I&Q versus Time graph.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

```
DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe] <value>
DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 816)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::<NRf> specifies the vertical range. Range: 1µ to 10 V.

Returns

<NRf>

Examples

DISPLAY:IQVTIME:MEASview1:Y:SCALE 1.5 sets the vertical range to 1.5 V in the RF I&Q versus Time graph.

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale automatically to fit the waveform to the screen in the RF I&Q versus Time view.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:AUTO

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

DISPLAY:IQVTIME:MEASview1:Y:SCALE:AUTO sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the center of the vertical axis) in the RF I&Q versus Time graph.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:OFFSet?

Related Commands

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe] (on page 815)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::<NRf> specifies the vertical offset. Range: -5 to +5 V.

Returns

<NRf>

Examples

`DISPLAY:IQVTIME:MEASview1:Y:SCALE:OFFSET -82.75mV` sets the vertical offset to -82.75 mV in the RF I&Q versus Time graph.

DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:RESCale (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen.

Conditions

Measurement views: RF I&Q versus Time

Group

Display commands

Syntax

`DISPlay:IQVTime[:MEASview<y>]:Y[:SCALe]:RESCale`

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

`DISPLAY:IQVTIME:MEASview1:Y:SCALE:RESCALE` rescales the vertical axis automatically to fit the waveform to the screen.

DISPlay:LTE:ACLR:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the LTE ACLR display. It will enable or disable the checkbox in the Prefs tab of the LTE ACLR settings control panel. This command will not add the marker itself. It will only decide if the enabled marker readout is shown or hidden.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:MARKer:SHOW:STATe {OFF | ON | 1 | 0}
DISPlay:LTE:ACLR:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the LTE ACLR display.

`ON` or 1 shows the readout for the selected marker in the LTE ACLR display.

Returns

OFF or 0 means the readout for the selected marker in the LTE ACLR display is hidden.

ON or 1 means the readout for the selected marker in the LTE ACLR display is showing.

Examples

`DISPLAY:LTE:ACLR:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the display if the marker is enabled.

DISPlay:LTE:ACLR:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale of the LTE ACLR display graph to the default values.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:RESet:SCALe
```

Arguments

None

Examples

`DISPLAY:LTE:ACLR:RESET:SCALE` resets the horizontal and vertical scale of the graph to the default values.

DISPlay:LTE:ACLR:SHOW:LIMit

Sets or queries the appearance of the limits in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:SHOW:LIMit { SHADed | LINE | OFF }
DISPlay:LTE:ACLR:SHOW:LIMit?
```

Arguments

`SHADed`: denotes the limit area with shading.

`LINE`: delineates the limit area with a line.

`OFF`: turns off limits in the display.

Returns

SHADED: means that the limit area is denoted with shading.

LINE: means that the limit area is delineated with a line.

OFF: means that the display of limits is off.

Examples

DISPLAY:LTE:ACLR:SHOW:LIMIT SHAD sets the instrument to use shading to identify the limits of the graph in the display.

DISPlay:LTE:ACLR:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticules in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:WINDow:TRACe:GRATicule:GRID:STATe {OFF | ON | 1 | 0}
DISPlay:LTE:ACLR:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticules in the graph.

ON or 1 shows the graticules in the graph.

Returns

0 indicates that the graticules in the graph is hidden.

1 indicates that the graticules in the graph is showing.

Examples

DISPLAY:LTE:ACLR:WINDOW:TRACE:GRATICULE:GRID:STATE OFF hides the graticules in the graph.

DISPlay:LTE:ACLR:WINDow:TRACe:POWer:LEVEl:STATe

Determines whether to show or hide the power readout in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:WINDow:TRACe:POWer:LEVEl:STATe {OFF | ON | 1 | 0}
DISPlay:LTE:ACLR:WINDow:TRACe:POWer:LEVEl:STATe?
```

Arguments

OFF or 0 hides the power readout in the display.

ON or 1 shows the power readout in the display.

Returns

0 indicates that the power readout in the display is hidden.

1 indicates that the power readout in the display is showing.

Examples

DISPLAY:LTE:ACLR:WINDOW:TRACE:POWER:LEVEL:STATE? might return 1, indicating that the power readout in the display is showing.

DISPlay:LTE:ACLR:X:SCALe

Sets or queries the horizontal range of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:X:SCALe <value>
DISPlay:LTE:ACLR:X:SCALe?
```

Arguments

<value>::<NRf> specifies the horizontal range

Returns

<NR3>

Examples

DISPLAY:LTE:ACLR:X:SCALE 10.000000000E+6 sets the horizontal range to 10 MHz.

DISPLay:LTE:ACLR:X:SCALe:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPLay:LTE:ACLR:X:SCALe:AUTO
```

Arguments

None

Examples

DISPLAY:LTE:ACLR:X:SCALE:AUTO rescales the horizontal axis to fit the display screen.

DISPlay:LTE:ACLR:X:SCALe:OFFSet

Sets or queries the center frequency of the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:X:SCALe:OFFSet <value>
DISPlay:LTE:ACLR:X:SCALe:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the center frequency.

Returns

`<NR3>`

Examples

`DISPLAY:LTE:ACLR:X:SCAEL:OFFSET 1.450000000E+9` sets the center frequency to 1.45 GHz.

DISPlay:LTE:ACLR:Y:SCALe:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform on the screen in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:Y:SCALe:AUTO
```

Arguments

None

Examples

`DISPLAY:LTE:ACLR:Y:SCALE:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:LTE:ACLR:Y:SCALe:OFFSet

Sets or queries the vertical offset of the trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:Y:SCALe:OFFSet <value>
```

DISPlay:LTE:ACLR:Y:SCALe:OFFSet?

Arguments

<value>::=<NRf> specifies the vertical offset.

Returns

<NRf>

Examples

DISPLAY:LTE:ACLR:Y:SCALE:OFFSET 40 sets the vertical position of the trace to 40 dBm.

DISPlay:LTE:ACLR:Y:SCALe

Sets or queries the vertical range of the graph in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Display commands

Syntax

```
DISPlay:LTE:ACLR:Y:SCALe <value>
DISPlay:LTE:ACLR:Y:SCALe?
```

Arguments

<value>::=<NRf> specifies the vertical range.

Returns

<NRf>

Examples

DISPLAY:LTE:ACLR:Y:SCALE 100 sets the vertical range to 100 dB.

DISPlay:LTE:CHSPectrum:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the LTE Channel Spectrum display. It will enable or disable the checkbox in the Prefs tab of the LTE Channel Spectrum settings control panel. This command will not add the marker itself. It will only decide if the enabled marker readout is shown or hidden.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:MARKer:SHOW:STATe {OFF | ON | 1 | 0}
DISPlay:LTE:CHSPectrum:MARKer:SHOW:STATe?
```

Arguments

OFF or 0 hides the readout for the selected marker in the LTE Channel Spectrum display.

ON or 1 shows the readout for the selected marker in the LTE Channel Spectrum display.

Returns

OFF or 0 means the readout for the selected marker in the LTE Channel Spectrum display is hidden.

ON or 1 means the readout for the selected marker in the LTE Channel Spectrum display is showing.

Examples

DISPLAY:LTE:CHSPECTRUM:MARKER:SHOW:STATE ON shows the readout for the selected marker in the display if the marker is enabled.

DISPlay:LTE:CHSPectrum:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale of the LTE Channel Spectrum display graph to the default values.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:RESet:SCALe
```

Arguments

None

Examples

DISPLAY:LTE:CHSPECTRUM:RESET:SCALE resets the horizontal and vertical scale of the graph to the default values.

DISPlay:LTE:CHSPectrum:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:WINDow:TRACe:GRATicule:GRID:STATe {OFF | ON | 1 | 0}
DISPlay:LTE:CHSPectrum:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticule in the LTE Channel Spectrum display.

ON or 1 shows the graticule in the LTE Channel Spectrum display.

Returns

OFF or 0 means the graticule in the LTE Channel Spectrum display is hidden.

ON or 1 means the graticule in the LTE Channel Spectrum display is showing.

Examples

`DISPLAY:LTE:CHSPECTRUM:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` hides the graticules in the LTE Channel Spectrum display.

DISPlay:LTE:CHSPectrum:X:SCALe

Sets or queries the horizontal range of the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:X:SCALe <value>
DISPlay:LTE:CHSPectrum:X:SCALe?
```

Arguments

`<value>::<NRf>` specifies the horizontal range

Returns

`<NR3>`

Examples

`DISPLAY:LTE:CHSPECTRUM:X:SCALE 10.000000000E+6` sets the horizontal range to 10 MHz.

DISPLay:LTE:CHSpectrum:X:SCALe:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPLay:LTE:CHSpectrum:X:SCALe:AUTO
```

Arguments

None

Examples

`DISPLAY:LTE:CHSPECTRUM:X:SCALE:AUTO` rescales the horizontal axis to fit the display screen.

DISPlay:LTE:CHSPectrum:X:SCALe:OFFSet

Sets or queries the center frequency of the trace in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:X:SCALe:OFFSet <value>
DISPlay:LTE:CHSPectrum:X:SCALe:OFFSet?
```

Arguments

<value>::=<NRf> specifies the center frequency.

Returns

<NR3>

Examples

`DISPLAY:LTE:ACLR:X:SCAEL:OFFSET 1.450000000E+9` sets the center frequency to 1.45 GHz.

DISPlay:LTE:CHSPectrum:Y:SCALe

Sets or queries the vertical range of the graph in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:Y:SCALe <value>
DISPlay:LTE:CHSPectrum:Y:SCALe?
```

Arguments

`<value>::=<NRf>` specifies the vertical range.

Returns

`<NRf>`

Examples

`DISPLAY:LTE:CHSPECTRUM:Y:SCALE 100` sets the vertical range to 100 dB.

DISPlay:LTE:CHSPectrum:Y:SCALe:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform on the screen in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:Y:SCALe:AUTO
DISPlay:LTE:CHSPectrum:Y:SCALe:AUTO?
```

Arguments

None

Examples

`DISPLAY:LTE:CHSPECTRUM:Y:SCALE:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:LTE:CHSPectrum:Y:SCALe:OFFSet

Sets or queries the vertical offset of the trace in the LTE Channel Spectrum display.

Conditions

Measurement view: LTE Channel Spectrum

Group

Display commands

Syntax

```
DISPlay:LTE:CHSPectrum:Y:SCALe:OFFSet <value>
DISPlay:LTE:CHSPectrum:Y:SCALe:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the vertical offset.

Returns

`<NRf>`

Examples

`DISPLAY:LTE:CHSPECTRUM:Y:SCALE:OFFSET 40` sets the vertical position of the trace to 40 dBm.

DISPlay:LTE:CONSte:SCALe

Sets or queries the scale (zoom) in the LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Display commands

Syntax

```
DISPlay:LTE:CONSte:SCALe <value>
DISPlay:LTE:CONSte:SCALe?
```

Arguments

<value>::<NRf> specifies the scale (zoom)

Returns

<NRf>

Examples

DISPLAY:LTE:CONSTE:SCALE 5 zooms the display out by 5.

DISPlay:LTE:CONSte:X:OFFSet

Sets or queries the horizontal offset in the LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Display commands

Syntax

```
DISPlay:LTE:CONSte:X:OFFSet <value>
DISPlay:LTE:CONSte:X:OFFSet?
```

Arguments

<value>::<NRf> specifies the horizontal offset range.

Returns

<NRf>

Examples

DISPLAY:LTE:CONSTE:X:OFFSET 2.7 sets the horizontal offset to 2.7 units to the left.

DISPlay:LTE:CONSte:Y:OFFSet

Sets or queries the vertical offset in the LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Display commands

Syntax

```
DISPlay:LTE:CONSte:Y:OFFSet <value>
DISPlay:LTE:CONSte:Y:OFFSet?
```

Arguments

<value>::<NRf> specifies the vertical offset range. A positive value moves the offset up. A negative value moves the offset down and the display moves in the other direction.

Returns

<NRf>

Examples

DISPLAY:LTE:CONSTE:Y:OFFSET 2 sets the vertical offset to 2 units.

DISPlay:LTE:MEASview:DELete (No Query Form)

Closes the selected LTE measurement display in the application.

Conditions

Measurement view: Any LTE display

Group

Display commands

Syntax

DISPlay:LTE:MEASview:DELete { CONS | ACLR | CHSP | PVT }

Arguments

CONS closes the LTE Constellation display.

ACLR closes the LTE ACLR display.

CHSP closes the LTE Channel Spectrum display.

PVT closes the LTE Power vs Time display.

Examples

DISPLAY:LTE:MEASVIEW:DELETE ACLR closes the LTE ACLR display.

DISPlay:LTE:MEASview:NEW (No Query Form)

Opens a new LTE measurement display.

Conditions

Measurement view: Any LTE display

Group

Display commands

Syntax

DISPlay:LTE:MEASview:NEW { CONS | ACLR | CHSP | PVT }

Arguments

CONS opens the LTE Constellation display.

ACLR opens the LTE ACLR display.

CHSP opens the LTE Channel Spectrum display.

PVT opens the LTE Power vs Time display.

Examples

DISPLAY:LTE:MEASVIEW:NEW ACLR opens a new LTE ACLR display.

DISPlay:LTE:MEASview:SELect

Selects an LTE measurement display in the application. The query returns the currently selected display.

Conditions

Measurement view: Any LTE display

Group

Display commands

Syntax

```
DISPlay:LTE:MEASview:SELect { CONS | ACLR | CHSP | PVT }
DISPlay:LTE:MEASview:SELect?
```

Arguments

CONS selects the LTE Constellation display.

ACLR selects the LTE ACLR display.

CHSP selects the LTE Channel Spectrum display.

PVT selects the LTE Power vs Time display.

Returns

CONS means the LTE Constellation display is selected.

ACLR means the LTE ACLR display is selected.

CHSP means the LTE Channel Spectrum display is selected.

PVT means the LTE Power vs Time display is selected.

Examples

DISPLAY:LTE:MEASVIEW:SELECT ACLR selects the LTE ACLR display.

DISPlay:LTE:PVTime:MARKer:SHOW:STATe

Shows or hides the marker readout on the LTE Power vs. Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:MARKer:SHOW:STATe {OFF | ON | 0 | 1 }
DISPlay:LTE:PVTime:MARKer:SHOW:STATe?
```

Arguments

OFF or 0 hides the marker readout in the LTE Power vs Time display.

ON or 1 shows the marker readout in the LTE Power vs Time display.

Returns

OFF or 0 means the marker readout in the LTE Power vs Time display is hidden.

ON or 1 means the marker readout in the LTE Power vs Time display is showing.

Examples

DISPLAY:LTE:PVTIME:MARKER:SHOW:STATE ON turns on the marker readout.

DISPlay:LTE:PVTime:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:WINDow:TRACe:GRATicule:GRID:STATe {OFF | ON | 0 | 1 }
DISPlay:LTE:PVTime:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticule in the LTE Power vs Time display.

ON or 1 shows the graticule in the LTE Power vs Time display.

Returns

OFF or 0 means the graticule in the LTE Power vs Time display is hidden.

ON or 1 means the graticule in the LTE Power vs Time display is showing.

Examples

DISPLAY:LTE:PVTIME:WINDOW:TRACE:GRATICULE:GRID:STATE OFF hides the graticules in the LTE Power vs Time display.

DISPlay:LTE:PVTime:X:SCALe

Sets or queries the vertical range of the LTE Power vs Time graph.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:X:SCALe <NRf>
DISPlay:LTE:PVTime:X:SCALe?
```

Arguments

<NRf> specifies the vertical range.

Returns

<NRf>

Examples

DISPLAY:LTE:PVTIME:X:SCALE 10 sets the horizontal range to 10 dB.

DISPLay:LTE:PVTime:X:SCALe:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

DISPLay:LTE:PVTime:X:SCALe:AUTO

Arguments

None

Examples

DISPLAY:LTE:PVTIME:X:SCALE:AUTO rescales the horizontal axis to fit the display screen.

DISPlay:LTE:PVTime:X:SCALe:RESet (No Query Form)

Resets the horizontal scale to the default value for the time measurements for the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

DISPlay:LTE:PVTime:X:SCALe:RESet

Arguments

None

Examples

DISPLAY:LTE:PVTIME:X:SCALE:RESET resets the horizontal scale to the default value.

DISPlay:LTE:PVTime:Y:SCALe

Sets or queries the horizontal range of the LTE Power vs Time graph.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:Y:SCALe <value>
DISPlay:LTE:PVTime:Y:SCALe?
```

Arguments

<value>::<NRf> specifies the horizontal range.

Returns

<NRf>

Examples

DISPLAY:LTE:PVTIME:Y:SCALE 100 sets the horizontal range to 100 ms.

DISPlay:LTE:PVTime:Y:SCALe:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform on the screen in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:Y:SCALe:AUTO
```

Arguments

None

Examples

DISPLAY:LTE:PVTIME:Y:SCALE:AUTO rescales the vertical scale to fit the waveform on the screen.

DISPlay:LTE:PVTime:Y:SCALe:OFFSet

Sets or queries the vertical offset (top edge of the vertical axis) of the trace in the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:Y:SCALe:OFFSet <NRf>
DISPlay:LTE:PVTime:Y:SCALe:OFFSet?
```

Arguments

<NRf> specifies the vertical offset.

Returns

<NRf>

Examples

DISPLAY:LTE:PVTIME:Y:SCALE:OFFSET −10 sets the vertical position of the trace to −10 dBm.

DISPlay:LTE:PVTime:Y:SCALe:PDIVision

Sets or queries the value of the vertical scale for the LTE Power vs. Time display in dB/division. This is only a visual control for panning the graph.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:Y:SCALe:PDIVision <NRf>
DISPlay:LTE:PVTime:Y:SCALe:PDIVision?
```

Arguments

<NRf> specifies the vertical scale in dB/div.

Returns

<NRf>

Examples

DISPLAY:LTE:PVTIME:Y:SCALE:PDIVISION 20 sets the vertical scale to 20.0 dB/div.

DISPlay:LTE:PVTime:Y:SCALe:RESet (No Query Form)

Resets the vertical scale and position (offset) to the default value for the time measurements for the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Display commands

Syntax

```
DISPlay:LTE:PVTime:Y:SCALe:RESet
```

Arguments

None

Examples

DISPLAY:LTE:PVTIME:Y:SCALE:RESET resets the vertical scale and position (offset) to the default value.

DISPlay:MCPower:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the MCPR view.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:MCPower:MARKer:SHOW:STATe?
```

Arguments

OFF or 0 hides the readout for the selected marker in the graph.

ON or 1 shows the readout for the selected marker in the graph.

Examples

DISPLAY:MCPOWER:MARKER:SHOW:STATE ON shows the readout for the selected marker in the graph.

DISPlay:MCPower:PLEVel:SHOW:STATe

Determines whether to show or hide the power levels in the MCPR view.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:PLEVel:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:MCPower:PLEVel:SHOW:STATe?
```

Arguments

OFF or 0 hides the power levels in the graph.

ON or 1 shows the power levels in the graph.

Examples

DISPLAY:MCPOWER:PLEVEL:SHOW:STATE ON shows the power levels in the graph.

DISPlay:MCPower:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale to the default values described below in the MCPR view.

Vertical offset = Reference level, Vertical scale = 100 dB,

Horizontal offset = Center frequency, and Horizontal scale = Default span

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:RESet:SCALe
```

Arguments

None

Examples

`DISPLAY:MCPOWER:RESET:SCALE` resets the horizontal and vertical scale to the default values.

DISPlay:MCPower:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:MCPower:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Examples

`DISPLAY:MCPOWER:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen.

DISPlay:MCPower:X[:SCALe]

Sets or queries the horizontal range of the MCPR graph.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:X[:SCALe] <value>
DISPlay:MCPower:X[:SCALe]?
```

Related Commands

DISPlay:MCPower:X[:SCALe]:OFFSet (on page 836)

Arguments

`<value>::<NRf>` specifies the horizontal range.

Range:

- RSA5103B – 1 to 3 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5115B – 1 to 15 GHz
- RSA5126B – 1 to 26.5 GHz

Examples

`DISPLAY:MCPOWER:X:SCALE 10MHz` sets the horizontal range to 10 MHz.

DISPlay:MCPower:X[:SCALe]:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the MCPR view.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:MCPOWER:X:SCALE:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:MCPower:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the MCPR graph.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:X[:SCALe]:OFFSet <value>
DISPlay:MCPower:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:MCPower:X[:SCALe] (on page 835)

Arguments

<value>::<NRf> specifies the minimum horizontal value.

Range: [(center frequency) - (X scale) × 0.9] to [(center frequency) + (X scale) × 0.9]

Examples

DISPLAY:MCPOWER:X:SCALE:OFFSET 1.45GHz sets the minimum horizontal value to 1.45 GHz in the MCPR graph.

DISPlay:MCPower:Y[:SCALe]

Sets or queries the vertical range of the MCPR graph.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:Y[:SCALe] <value>
DISPlay:MCPower:Y[:SCALe]?
```

Related Commands

DISPlay:MCPower:Y[:SCALe]:OFFSet (on page 838)

Arguments

<value>::<NRf> specifies the vertical range. Range: 0.1 to 200 dB.

Examples

DISPLAY:MCPOWER:Y:SCALE 100 sets the vertical range to 100 dB in the MCPR graph.

DISPlay:MCPower:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the MCPR view.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:Y[:SCALe]:AUTO
```

Arguments

None

Examples

DISPLAY:MCPOWER:Y:SCALE:AUTO rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:MCPower:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) in the MCPR graph.

Conditions

Measurement views: MCPR

Group

Display commands

Syntax

```
DISPlay:MCPower:Y[:SCALe]:OFFSet <value>
DISPlay:MCPower:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:MCPower:Y[:SCALe] (on page 837)

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -170 to +50 dBm.

Examples

`DISPLAY:MCPOWER:Y:SCALE:OFFSET -12.5` sets the vertical offset to -12.5 dBm in the MCPR graph.

DISPlay:MERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule grid view state for the Magnitude error versus Time view.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Display commands

Syntax

```
DISPlay:MERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:MERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

OFF or 0

ON or 1

Examples

`DISPLay:MERRor:MEASview2:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the Magnitude error versus Time Measview 2.

DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the Magnitude error versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Display commands

Syntax

```
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe] <value>
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:MERRor:[MEASview<y>]:Y[:SCALe]:OFFSet (on page 840)

Arguments

`<value>::<NRf>` specifies the vertical range.

Range: 1 to 100%.

Returns

`<NRF>`

Examples

`DISPlay:MERRor:MEASview1:Y:SCALe 50` sets the vertical range to 50% in the Magnitude error versus Time display Measurement view 1.

DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]:AUTO (No query form)

Sets the vertical scale automatically to fit the waveform to the screen in the Magnitude error versus Time display.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Display commands

Syntax

```
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLay:MERRor:MEASview2:Y:SCALe:AUTO` sets the vertical scale automatically to fit the waveform to the screen of Magnitude error versus Time Measurement view 2.

DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the minimum vertical value (bottom edge) of the Magnitude error versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Display commands

Syntax

```
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:MERRor[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:MERRor[:MEASview<y>]:Y[:SCALe] (on page 839)

Arguments

`<value>::<NRf>` specifies the minimum vertical value.

Range: -100 to +100%.

Returns

`<NRF>`

Examples

`DISPlay:MERRor:MEASview2:Y:SCALe:OFFSet? -9.5` sets the minimum vertical value to -9.5% in the Magnitude error versus Time graph Measurement View 2.

DISPlay:NOISe:FIGure[:SCALe]:AUTO (No Query Form)

Automatically scales the Noise Figure graph.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:NOIS:FIG:SCAL:AUTO` will automatically scale the Noise Figure graph.

DISPlay:NOISe:FIGure:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule state in the Noise Figure display to on (showing) or off (hidden).

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:FIGure:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the Noise Figure display.

`ON` or 1 shows the graticule in the Noise Figure display.

Returns

0 means the graticule in the Noise Figure display is hidden (off).

1 means the graticule in the Noise Figure display is showing (on).

Examples

`DISPLAY:NOISE:FIGURE:WINDOW:TRACE:GRATICULE:GRID:STATE ON` will turn on the graticule in the Noise Figure display.

`DISPLAY:NOISE:FIGURE:WINDOW:TRACE:GRATICULE:GRID:STATE?` return of 1 indicates that the graticule in the Noise Figure display is showing (on).

DISPlay:NOISe:FIGure:WINDow:TRACe:LEGend:STATe

Sets or queries the trace legend state in the Noise Figure display to on (showing) or off (hidden).

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:WINDow:TRACe:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:FIGure:WINDow:TRACe:LEGend:STATe?
```

Arguments

OFF or 0 hides the trace legend in the Noise Figure display.

ON or 1 shows the trace legend in the Noise Figure display.

Returns

0 means the trace legend in the Noise Figure display is hidden (off).

1 means the trace legend in the Noise Figure display is showing (on).

Examples

DISPLAY:NOISE:FIGURE:WINDOW:TRACE:LEGEND:STATE ON will turn on the trace legend in the Noise Figure display.

DISPLAY:NOISE:FIGURE:WINDOW:TRACE:LEGEND:STATE? return of 1 indicates that the trace legend in the Noise Figure display is showing (on).

DISPlay:NOISe:FIGure:WINDow:TRACe:MEASpoints:STATe

Sets or queries the measurement points state in the Noise Figure display to on (showing) or off (hidden).

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:WINDow:TRACe:MEASpoints:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:FIGure:WINDow:TRACe:MEASpoints:STATe?
```

Arguments

OFF or 0 hides the measurement points in the Noise Figure display.

ON or 1 shows the measurement points in the Noise Figure display.

Returns

0 means the measurement points in the Noise Figure display is hidden (off).

1 means the measurement points in the Noise Figure display is showing (on).

Examples

DISPLAY:NOISE:FIGURE:WINDOW:TRACE:MEASPOINTS:STATE ON will turn on the measurement points in the Noise Figure display.

DISPLAY:NOISE:FIGURE:WINDOW:TRACE:MEASPOINTS:STATE? might return 1, indicating that the measurement points in the Noise Figure display are showing (on).

DISPlay:NOISe:FIGure:X:AUTO (No Query Form)

Automatically sets the horizontal scale of the Noise Figure graph.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:X:AUTO
```

Arguments

None

DISPlay:NOISe:FIGure:X:OFFSet

Sets or queries the center frequency (offset) in the Noise Figure display.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:X:OFFSet <NRf>
DISPlay:NOISe:FIGure:X:OFFSet?
```

Arguments

<NRf> is the center frequency (offset) in the Noise Figure display.

Range: -1.9900 GHz to +5.0000 GHz

Returns

<NR3> is a floating point value with an exponent. This is the center frequency (offset) value.

Examples

DISPLAY:NOISE:FIGURE:X:OFFSET? might return 2.0000000009E+9, indicating that the center frequency (offset) value is 2.0000 GHz.

DISPlay:NOISe:FIGure:X[:SCALe]

Sets or queries the horizontal scale of the Noise Figure display.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:X[:SCALe] <NRf>
DISPlay:NOISe:FIGure:X[:SCALe]
```

Arguments

<NRf> is the horizontal scale value of the display.

Range: 100 Hz to 6.2 GHz

Returns

<NR3> = a floating point value with an exponent. This is the horizontal scale value.

Examples

DISPLAY:NOISE:FIGURE:X:SCALE? might return 2.9900000000E+9, indicating that the horizontal scale value is 3.0 GHz.

DISPlay:NOISe:FIGure:Y:AUTO (No Query Form)

Automatically sets the vertical scale of the Noise Figure graph.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:Y:AUTO
```

Arguments

None

DISPlay:NOISe:FIGure:Y:AUTO:STATe

Sets the state of the automatic vertical scale and position of the graph to on or off. The query form of the command returns the current state.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:Y:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:FIGure:Y:AUTO:STATe?
```

Arguments

OFF or 0 sets the analyzer to manual setting of the vertical scale and position of the graph.

ON or 1 sets the analyzer to automatically set the vertical scale and position of the graph.

Returns

OFF or 0 means the analyzer is in manual mode for setting of the vertical scale and position of the graph.

ON or 1 means the analyzer is in automatic mode for setting of the vertical scale and position of the graph.

Examples

DISPLAY:NOISE:FIGURE:Y:AUTO:STATE ON sets the analyzer to automatically set the vertical scale and position of the graph.

DISPlay:NOISe:FIGure:Y:PDIVision

Sets or queries the distance between graticule lines on the display in dB.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:Y:PDIVision <NRf>
DISPlay:NOISe:FIGure:Y:PDIVision?
```

Arguments

<NRf> is the distance between graticule lines on the display.

Range: 100 mdB to 5.00 dB

Returns

<NR2> = a floating point value without an exponent, which is the distance between graticule lines on the display in dB.

Examples

DISPLAY:NOISE:FIGURE:Y:PDIVISION? might return 1.5000000000, indicating that the distance between graticule lines on the display is 1.50 dB.

DISPlay:NOISe:FIGure:Y:POSition

Sets or queries the vertical position of the Noise Figure display.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:Y:POSition <NRf>
DISPlay:NOISe:FIGure:Y:POSition?
```

Arguments

<NRf> is the vertical position of the Noise Figure display.

Range: 5.12 to 26.5

Returns

<NR2> =a floating point value without an exponent, which is the vertical position value.

The vertical position value

Examples

`DISPLAY:NOISE:FIGURE:Y:POSITION?` might return 26.5000000000, indicating that the vertical position is 26.5.

DISPlay:NOISe:FIGure:Y:SCALe

Sets or queries the vertical scale of the Noise Figure display.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:Y:SCALe <NRf>
DISPlay:NOISe:FIGure:Y:SCALe?
```

Arguments

`<NRf>` is the vertical scale of the Noise Figure display Range: 10.2 to 31.6

Returns

`<NR2>` = a floating point value without an exponent, which is the vertical scale value.

Examples

`DISPLAY:NOISE:FIGURE:Y:SCALE?` might return 10.0000000000, indicating that the vertical scale is 10.0 dB.

DISPlay:NOISe:FIGure:Y:SCALe:LINear:STATe

Sets or queries whether the linear units are shown (on) or not shown (off) on the display.

Conditions

Measurement view: Noise Figure

Group

Display commands

Syntax

```
DISPlay:NOISe:FIGure:Y:SCALe:LINear:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:FIGure:Y:SCALe:LINear:STATe?
```

Arguments

`OFF` or 0 sets the analyzer to show the linear units on the display.

`ON` or 1 sets the analyzer to not show the linear units on the display.

Returns

OFF or 0 indicates that the analyzer is set to show the linear units on the display.

ON or 1 indicates that the analyzer is set to not show the linear units on the display.

Examples

`DISPLAY:NOISE:FIGURE:Y:SCALE:LINEAR:STATE?` might return 1, indicating that linear units are not showing on the display.

DISPlay:NOISe:GAIN[:SCALe]:AUTO (No Query Form)

Automatically scales the Gain graph.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN[:SCALe]:AUTO
```

Arguments

None

DISPlay:NOISe:GAIN:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule state in the Gain display to on (showing) or off (hidden).

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:WINDow:TRACe:GRATicule:GRID:STATe {OFF|ON|0|1}
DISPlay:NOISe:GAIN:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the Gain display.

`ON` or 1 shows the graticule in the Gain display.

Returns

0 means the graticule in the Gain display is hidden (off).

1 means the graticule in the Gain display is showing (on).

Examples

`DISPLAY:NOISE:GAIN:WINDOW:TRACE:GRATICULE:GRID:STATE ON` will turn on the graticule in the Gain display.

`DISPLAY:NOISE:GAIN:WINDOW:TRACE:GRATICULE:GRID:STATE?` might return `1`, indicating that the graticule in the Gain display is showing (on).

DISPlay:NOISe:GAIN:WINDow:TRACe:LEGend:STATe

Sets or queries the trace legend state in the Gain display to on (showing) or off (hidden).

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:WINDow:TRACe:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:GAIN:WINDow:TRACe:LEGend:STATe?
```

Arguments

`OFF` or 0 hides the trace legend in the Gain display.

`ON` or 1 shows the trace legend in the Gain display.

Returns

0 means the trace legend in the Gain display is hidden (off).

1 means the trace legend in the Gain display is showing (on).

Examples

`DISPLAY:NOISE:GAIN:WINDOW:TRACE:LEGEND:STATE ON` will turn on the trace legend in the Gain display.

`DISPLAY:NOISE:GAIN:WINDOW:TRACE:LEGEND:STATE? 1` indicates that the trace legend in the Gain display is showing (on).

DISPlay:NOISe:GAIN:WINDow:TRACe:MEASPoints:STATe

Sets or queries the measurement points state in the Gain display to on (showing) or off (hidden).

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:WINDow:TRACe:MEASPoints:STATe {OFF|ON|0|1}
DISPlay:NOISe:GAIN:WINDow:TRACe:MEASPoints:STATe?
```

Arguments

`OFF` or 0 hides the measurement points in the Gain display.

`ON` or 1 shows the measurement points in the Gain display.

Returns

0 means the measurement points in the Gain display is hidden (off).

1 means the measurement points in the Gain display is showing (on).

Examples

`DISPLAY:NOISE:GAIN:WINDOW:TRACE:MEASPOINTS:STATE ON` will turn on the measurement points in the Gain display.

`DISPLAY:NOISE:GAIN:WINDOW:TRACE:MEASPOINTS:STATE?` might return `1`, indicating that the measurement points in the Gain display are showing (on).

DISPlay:NOISe:GAIN:X:AUTO (No Query Form)

Automatically sets the horizontal scale of the Gain graph.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:X:AUTO
```

Arguments

None

DISPlay:NOISe:GAIN:X:OFFSet

Sets or queries the center frequency (offset) in the Gain display.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:X:OFFSet <NRf>
DISPlay:NOISe:GAIN:X:OFFSet?
```

Arguments

`<NRf>` is the center frequency (offset) in the Gain display.

Range: -1.9900 GHz to +5.0000 GHz

Returns

`<NR3>` = a floating point value with an exponent, which is the center frequency (offset) value.

Examples

`DISPLAY:NOISE:GAIN:X:OFFSET?` might return `2.0000000009E+9`, indicating that the center frequency (offset) value is 2.0000 GHz.

DISPlay:NOISe:GAIN:X:SCALe

Sets or queries the horizontal scale of the Gain display.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:X:SCALe <NRf>
DISPlay:NOISe:GAIN:X:SCALe
```

Related Commands

DISPlay:NOISe:GAIN:Y:SCALe (on page 852)

Arguments

<NRf> is the horizontal scale of the Gain display.

Range: 100 Hz to 6.2 GHz

Returns

<NR3> = a floating point value with an exponent, which is the horizontal scale value.

Examples

DISP:NOIS:GAIN:X:SCAL? might return 2.9900000000E+9, indicating that the horizontal scale value is 3.0 GHz.

DISPlay:NOISe:GAIN:Y:AUTO (No Query Form)

Automatically sets the vertical scale of the Gain graph.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:Y:AUTO
```

Related Commands

DISPlay:NOISe:GAIN:Y:AUTO:STATe (on page 850)

DISPlay:NOISe:GAIN:X:AUTO (on page 849)

Arguments

None

DISPlay:NOISe:GAIN:Y:AUTO:STATe

Sets or queries the state of the automatic vertical scale and position of the Gain graph to on or off.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:Y:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:GAIN:Y:AUTO:STATe?
```

Related Commands

DISPlay:NOISe:GAIN:Y:AUTO (on page 850)

Arguments

`OFF` or 0 sets the analyzer to manual setting of the vertical scale and position of the graph.

`ON` or 1 sets the analyzer to automatically set the vertical scale and position of the graph.

Returns

OFF or 0 means the analyzer is in manual mode for setting of the vertical scale and position of the graph.

ON or 1 means the analyzer is in automatic mode for setting of the vertical scale and position of the graph.

Examples

`DISPLAY:NOISE:GAIN:Y:AUTO:STATE ON` sets the analyzer to automatically set the vertical scale and position of the graph.

DISPlay:NOISe:GAIN:Y:PDIVision

Sets or queries the distance between graticule lines on the Gain display in dB.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:Y:PDIVision <NRf>
DISPlay:NOISe:GAIN:Y:PDIVision?
```

Related Commands

Arguments

`<NRf>` is the distance between graticule lines on the Gain display.

Returns

`<NR2>` = a floating point value without exponents, which is the distance between graticule lines on the display in dB.

Examples

`DISPLAY:NOISE:GAIN:Y:PDIVISION?` might return 1.5000000000, indicating that the distance between graticule lines on the display is 1.50 dB.

DISPlay:NOISe:GAIN:Y:POSition

Sets or queries the vertical position of the Gain display.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:Y:POSition <NRf>
DISPlay:NOISe:GAIN:Y:POSition?
```

Related Commands

Arguments

<NRf> is the vertical position of the Gain display.

Range: 5.12 to 26.5

Returns

<NR2> = a floating point value without exponents, which is the vertical position value.

Examples

DISPLAY:NOISE:GAIN:Y:POSITION? might return 26.5000000000, indicating that the vertical position is 26.5.

DISPlay:NOISe:GAIN:Y:SCALe

Sets or queries the vertical scale of the Gain display.

Conditions

Measurement view: Gain

Group

Display commands

Syntax

```
DISPlay:NOISe:GAIN:Y:SCALe <NRf>
DISPlay:NOISe:GAIN:Y:SCALe?
```

Related Commands

Arguments

<NRf> is the vertical scale of the Gain display.

Range: 10.2 to 31.6

Returns

<NR2> = a floating point value without an exponent, which is the vertical scale value.

Examples

`DISPLAY:NOISE:GAIN:Y:SCALE?` might return `10.0000000000`, indicating that the vertical scale is 10.0 dB

DISPlay:NOISe:MEASview:DELete (No Query Form)

Deletes the selected Noise and Gain measurement view.

Conditions

Measurement views: All Noise and Gain displays

Group

Display commands

Syntax

`DISPlay:NOISe:MEASview:DELete { GAIN | YFACtor | FIGure | TEMPerature | TABLe | UNCertainty }`

Related Commands

DISPlay:NOISe:MEASview:SELect (on page 854)

DISPlay:NOISe:MEASview:NEW (on page 853)

Arguments

`GAIN`: Deletes the Gain display from the view.

`YFACtor`: Deletes the Y Factor display from the view.

`FIGure`: Deletes the Noise Figure display from the view.

`TEMPerature`: Deletes the Noise Temperature display from the view.

`TABLe`: Deletes the Noise Table display from the view.

`UNCertainty`: Deletes the Uncertainty Calculator display from the view.

Examples

`DISPLAY:NOISE:MEASVIEW:DELETE TABL` will delete the Noise Table display view from the screen.

DISPlay:NOISe:MEASview:NEW (No Query Form)

Displays a new Noise and Gain measurement view.

Conditions

Measurement views: All Noise and Gain displays

Group

Display commands

Syntax

`DISPlay:NOISe:MEASview:NEW { GAIN | YFACtor | FIGure | TEMPerature | TABLe | UNCertainty }`

Related Commands

DISPlay:NOISe:MEASview:SELect (on page 854)

DISPlay:NOISe:MEASview:DELete (on page 853)

Arguments

GAIN: Displays the Gain display.

YFACtor: Displays the Y Factor display.

FIGure: Displays the Noise Figure display.

TEMPerature: Displays the Noise Temperature display.

TABLe: Displays the Noise Table display.

UNCertainty: Displays the Uncertainty Calculator display.

Examples

DISPLAY:NOISE:MEASVIEW:NEW YFAC will bring the Y Factor display up on the screen.

DISPlay:NOISe:MEASview:SELect

Selects a noise measurement view. The query command returns the currently selected view.

Selecting a measurement optimizes it. Other measurements may be optimized as a side effect. Refer to the DISplay:WINDow:OPTImized:MEASurement query.

Conditions

Measurement views: All Noise and Gain displays The measurement view must be displayed.

Group

Display commands

Syntax

```
DISPlay:NOISe:MEASview:SELect { GAIN | YFACtor | FIGure | TEMPerature | TABLe | UNCertainty }
DISPlay:NOISe:MEASview:SELect?
```

Related Commands

DISPlay:NOISe:MEASview:DELete (on page 853)

DISPlay:NOISe:MEASview:NEW (on page 853)

Arguments

GAIN: Selects the Gain display.

YFACtor: Selects the Y Factor display.

FIGure: Selects the Noise Figure display.

TEMPerature: Selects the Noise Temperature display.

TABLe: Selects the Noise Table display.

UNCertainty: Selects the Uncertainty Calculator display.

Returns

GAIN: Means that the Gain display is selected.

YFAC: Means that the Y Factor display is selected.

FIG: Means that the Noise Figure display is selected.

TEMP: Means that the Noise Temperature display is selected.

TABL: Means that the Noise Table display is selected.

UNC: Means that the Uncertainty Calculator display is selected.

Examples

DISPLAY:NOISE:MEASVIEW:SELECT GAIN will select the Gain display.

DISPlay:NOISe:POWer:LINear:STATe

Sets or queries whether the linear units are shown (on) or not shown (off) on the Noise Table display.

Conditions

Measurement view: Noise Table

Group

Display commands

Syntax

```
DISPlay:NOISe:POWer:LINear:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:POWer:LINear:STATe?
```

Arguments

OFF or 0 sets the analyzer to show the linear units on the display.

ON or 1 sets the analyzer to not show the linear units on the display.

Returns

OFF or 0 indicates that the analyzer is set to show the linear units on the display.

ON or 1 indicates that the analyzer is set to not show the linear units on the display.

Examples

DISPLAY:NOISE:POWER:LINEAR:STATE? might return 1, indicating that linear units are not showing on the Noise Table display.

DISPlay:NOISe:TEMPerature[:SCALe]:AUTO (No Query Form)

Automatically scales the Noise Temperature graph.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature[:SCALe]:AUTO
```

Arguments

None

DISPlay:NOISe:TEMPerature:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule state in the Noise Temperature display to on (showing) or off (hidden).

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:TEMPerature:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the Noise Temperature display.

`ON` or 1 shows the graticule in the Noise Temperature display.

Returns

0 means the graticule in the Noise Temperature display is hidden (off).

1 means the graticule in the Noise Temperature display is showing (on).

Examples

`DISPLAY:NOISE:TEMPERATURE:WINDOW:TRACE:GRATICULE:GRID:STATE ON` will turn on the graticule in the Noise Temperature display.

`DISPLAY:NOISE:TEMPERATURE:WINDOW:TRACE:GRATICULE:GRID:STATE?` might return `1`, indicating that the graticule in the Noise Temperature display is showing (on).

DISPlay:NOISe:TEMPerature:WINDow:TRACe:LEGend:STATe

Sets or queries the trace legend state in the Noise Temperature display to on (showing) or off (hidden).

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:WINDow:TRACe:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:TEMPerature:WINDow:TRACe:LEGend:STATe?
```

Arguments

`OFF` or 0 hides the trace legend in the Noise Temperature display.

`ON` or 1 shows the trace legend in the Noise Temperature display.

Returns

0 means the trace legend in the Noise Temperature display is hidden (off).

1 means the trace legend in the Noise Temperature display is showing (on).

Examples

`DISPLAY:NOISE:TEMPERATURE:WINDOW:TRACE:LEGEND:STATE ON` will turn on the trace legend in the Noise Temperature display.

`DISPLAY:NOISE:TEMPERATURE:WINDOW:TRACE:LEGEND:STATE? 1` indicates that the trace legend in the Noise Temperature display is showing (on).

DISPlay:NOISe:TEMPerature:WINDow:TRACe:MEASPoints:STATe

Sets or queries the measurement points state in the Noise Temperature display to on (showing) or off (hidden).

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:WINDow:TRACe:MEASPoints:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:TEMPerature:WINDow:TRACe:MEASPoints:STATe?
```

Arguments

`OFF` or 0 hides the measurement points in the Noise Temperature display.

`ON` or 1 shows the measurement points in the Noise Temperature display.

Returns

0 means the measurement points in the Noise Temperature display is hidden (off).

1 means the measurement points in the Noise Temperature display is showing (on).

Examples

`DISPLAY:NOISE:TEMPERATURE:WINDOW:TRACE:MEASPOINTS:STATE ON` will turn on the measurement points in the Noise Temperature display.

`DISPLAY:NOISE:TEMPERATURE:WINDOW:TRACE:MEASPOINTS:STATE?` might return `1`, indicating that the measurement points in the Noise Temperature display are showing (on).

DISPlay:NOISe:TEMPerature:X:AUTO (No Query Form)

Automatically sets the horizontal scale of the Noise Temperature graph.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:X:AUTO
```

Arguments

None

DISPlay:NOISe:TEMPerature:X:OFFSet

Sets or queries the center frequency (offset) value for the Noise Temperature display.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:X:OFFSet <NRf>
DISPlay:NOISe:TEMPerature:X:OFFSet?
```

Arguments

<NRf> is the center frequency (offset) value.

Range: -1.9900 GHz to +5.0000 GHz

Returns

<NR3> = a floating point value with an exponent, which is the center frequency (offset) value.

Examples

DISPLAY:NOISE:TEMPERATURE:X:OFFSET? might return 2.0000000009E+9, indicating that the center frequency (offset) value is 2.0000 GHz.

DISPlay:NOISe:TEMPerature:X[:SCALe]

Sets or queries the horizontal scale of the Noise Temperature display.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:X[:SCALe] <NRf>
DISPlay:NOISe:TEMPerature:X[:SCALe]
```

Related Commands

DISPlay:NOISe:GAIN:Y:SCALe (on page 852)

Arguments

<NRf> is the horizontal scale of the Noise Temperature display.

Range: 100 Hz to 6.2 GHz

Returns

<NR3> = a floating point value with an exponent, which is the horizontal scale value.

Examples

DISP:NOIS:TEMP:X:SCAL? might return 2.9900000000E+9, indicating that the horizontal scale value is 3.0 GHz.

DISPlay:NOISe:TEMPerature:X:STARt

Sets or queries the Start Frequency value in the Noise Temperature display.

Conditions

Measurement views: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:X:STARt <NRf>
DISPlay:NOISe:TEMPerature:X:STARt?
```

Arguments

<NRf> is the Start Frequency value.

Returns

<NR3> = floating point value with an exponent, which is the Start Frequency value.

Examples

DISPLAY:NOISE:TEMPERATURE:X:START 1.5GHz sets the Start Frequency in the Noise Temperature display to 1.5000 GHz.

DISPLAY:NOISE:TEMPERATURE:X:START? might return 1.5000000000E+9, indicating that the Start Frequency in the Noise Temperature display is 1.5000 GHz.

DISPlay:NOISe:TEMPerature:X:STOP

Sets or queries the Stop Frequency value in the Noise Temperature display.

Conditions

Measurement views: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:X:STOP <NRf>
DISPlay:NOISe:TEMPerature:X:STOP?
```

Arguments

<NRf> is the Stop Frequency value.

Returns

<NR3> = floating point value with an exponent, which is the Stop Frequency value.

Examples

`DISPLAY:NOISE:TEMPERATURE:X:STOP 1.5GHz` sets the Stop Frequency in the Noise Temperature display to 1.5000 GHz.

`DISPLAY:NOISE:TEMPERATURE:X:STOP?` might return `1.5000000000E+9`, indicating that the Stop Frequency in the Noise Temperature display is 1.5000 GHz.

DISPlay:NOISe:TEMPerature:Y:AUTO (No Query Form)

Automatically sets the vertical scale of the Noise Temperature graph.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:Y:AUTO
```

Arguments

None

DISPlay:NOISe:TEMPerature:Y:AUTO:STATe

Sets or queries the state of the automatic vertical scale and position of the graph to on or off.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:Y:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:TEMPerature:Y:AUTO:STATe?
```

Arguments

`OFF` or 0 sets the analyzer to manual setting of the vertical scale and position of the graph.

`ON` or 1 sets the analyzer to automatically set the vertical scale and position of the graph.

Returns

`OFF` or 0 means the analyzer is in manual mode for setting of the vertical scale and position of the graph.

`ON` or 1 means the analyzer is in automatic mode for setting of the vertical scale and position of the graph.

Examples

`DISPLAY:NOISE:TEMPERATURE:Y:AUTO:STATE ON` sets the analyzer to automatically set the vertical scale and position of the graph.

DISPlay:NOISe:TEMPerature:Y:PDIVision

Sets or queries the distance between graticule lines on the display in dB.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:Y:PDIVision <NRf>
DISPlay:NOISe:TEMPerature:Y:PDIVision?
```

Arguments

<NRf> is the distance between graticule lines on the display.

Range: 100 mdB to 5.00 dB

Returns

<NR2> = a floating point value without an exponent, which is the distance between graticule lines on the display in dB.

Examples

DISPLAY:NOISE:TEMPERATURE:Y:PDIVISION? might return 1.5000000000, indicating that the distance between graticule lines on the display is 1.50 dB.

DISPlay:NOISe:TEMPerature:Y:POSition

Sets or queries the vertical position of the Noise Temperature display.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:Y:POSition <NRf>
DISPlay:NOISe:TEMPerature:Y:POSition?
```

Arguments

<NRf> is the vertical position of the Noise Temperature display.

Range: 5.12 to 26.5

Returns

<NR2> = a floating point value without an exponent, which is the vertical position value.

The vertical position value

Examples

DISPLAY:NOISE:TEMPERATURE:Y:POSITION? might return 26.5000000000, indicating that the vertical position is 26.5.

DISPlay:NOISe:TEMPerature:Y:SCALe

Sets or queries the vertical scale of the Noise Temperature display.

Conditions

Measurement view: Noise Temperature

Group

Display commands

Syntax

```
DISPlay:NOISe:TEMPerature:Y:SCALe <NRf>
DISPlay:NOISe:TEMPerature:Y:SCALe?
```

Arguments

<NRf> is the vertical scale of the Noise Temperature display.

Range: 10.2 to 31.6

Returns

<NR2> = a floating point value without an exponent, which is the vertical scale value.

Examples

DISPLAY:NOISE:TEMPERATURE:Y:SCALE? might return 10.0000000000, indicating that the vertical scale is 10.0 dB.

DISPlay:NOISe:UNCERTainty:RESult:GAIN? (Query Only)

Queries the gain computed uncertainty value (dB).

Conditions

Measurement view: Uncertainty Calculator

Group

Display commands

Syntax

```
DISPlay:NOISe:UNCERTainty:RESult:GAIN?
```

Related Commands

DISPlay:NOISe:UNCERTainty:RESult:NFIGure? (on page 862)

Returns

<NR3> = a floating point value with an exponent, which is the gain computed uncertainty value (dB).

Examples

DISPLAY:NOISE:UNCERTAINTY:RESULT:GAIN? might return 783.0000000000E-3, indicating that the computed uncertainty value for gain is 0.783 dB.

DISPlay:NOISe:UNCERTainty:RESult:NFIGure? (Query Only)

Queries the noise figure computed uncertainty value (dB).

Conditions

Measurement view: Uncertainty Calculator

Group

Display commands

Syntax

```
DISPlay:NOISe:UNCERTainty:RESult:NFIGure?
```

Related Commands

DISPlay:NOISe:UNCERTainty:RESult:GAIN? (on page 862)

Returns

<NR3> = a floating point value with an exponent, which is the noise figure computed uncertainty value (dB).

Examples

`DISPLAY:NOISE:UNCERTAINTY:RESULT:NFIGURE?` might return `783.0000000000E-3`, indicating that the computed uncertainty value for noise figure is 0.783 dB.

DISPlay:NOISe:YFACtor[:SCALe]:AUTO (No Query Form)

Automatically scales the Y Factor graph.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor[:SCALe]:AUTO
```

Arguments

None

DISPlay:NOISe:YFACtor:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule state in the Y Factor display to on (showing) or off (hidden).

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:YFACtor:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticule in the Y Factor display.

ON or 1 shows the graticule in the Y Factor display.

Returns

0 means the graticule in the Y Factor display is hidden (off).

1 means the graticule in the Y Factor display is showing (on).

Examples

DISPLAY:NOISE:YFACTOR:WINDOW:TRACE:GRATICULE:GRID:STATE ON will turn on the graticule in the Y Factor display.

DISPLAY:NOISE:YFACTOR:WINDOW:TRACE:GRATICULE:GRID:STATE? might return 1, indicating that the graticule in the Y Factor display is showing (on).

DISPlay:NOISe:YFACtor:WINDow:TRACe:LEGend:STATe

Sets or queries the trace legend state in the Y Factor display to on (showing) or off (hidden).

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:WINDow:TRACe:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:YFACtor:WINDow:TRACe:LEGend:STATe?
```

Arguments

OFF or 0 hides the trace legend in the Y Factor display.

ON or 1 shows the trace legend in the Y Factor display.

Returns

0 means the trace legend in the Y Factor display is hidden (off).

1 means the trace legend in the Y Factor display is showing (on).

Examples

DISPLAY:NOISE:YFACTOR:WINDOW:TRACE:LEGEND:STATE ON will turn on the trace legend in the Y Factor display.

DISPLAY:NOISE:YFACTOR:WINDOW:TRACE:LEGEND:STATE? might return 1 indicates that the trace legend in the Y Factor display is showing (on).

DISPlay:NOISe:YFACtor:WINDow:TRACe:MEASPoints:STATe

Sets or queries the measurement points state in the Y Factor display to on (showing) or off (hidden).

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:WINDow:TRACe:MEASPoints:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:YFACtor:WINDow:TRACe:MEASPoints:STATe?
```

Arguments

`OFF` or 0 hides the measurement points in the Y Factor display.

`ON` or 1 shows the measurement points in the Y Factor display.

Returns

0 means the measurement points in the Y Factor display is hidden (off).

1 means the measurement points in the Y Factor display is showing (on).

Examples

`DISPLAY:NOISE:YFACTOR:WINDOW:TRACE:MEASPOINTS:STATE ON` will turn on the measurement points in the Y Factor display.

`DISPLAY:NOISE:YFACTOR:WINDOW:TRACE:MEASPOINTS:STATE?` might return 1, indicating that the measurement points in the Y Factor display are showing (on).

DISPlay:NOISe:YFACtor:X:AUTO (No Query Form)

Automatically sets the horizontal scale of the Y Factor graph.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:X:AUTO
```

Arguments

None

DISPlay:NOISe:YFACtor:X:OFFSet

Sets or queries the center frequency (offset) in the Y Factor display.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:X:OFFSet <NRf>
DISPlay:NOISe:YFACtor:X:OFFSet?
```

Arguments

<NRf> is the center frequency (offset) in the Y Factor display.

Range: -1.9900 GHz to +5.0000 GHz

Returns

<NR3> = a floating point value with an exponent, which is the center frequency (offset) value.

Examples

DISPLAY:NOISE:YFACTOR:X:OFFSET? might return 2.0000000009E+9, indicating that the center frequency (offset) value is 2.0000 GHz.

DISPlay:NOISe:YFACtor:X[:SCALe]

Sets or queries the horizontal scale of the Y Factor display.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:X[:SCALe] <NRf>
DISPlay:NOISe:YFACtor:X[:SCALe]
```

Related Commands

DISPlay:NOISe:GAIN:Y:SCALe (on page 852)

Arguments

<NRf> is the horizontal scale of the Y Factor display.

Range: 100 Hz to 6.2 GHz

Returns

<NR3> = a floating point value with an exponent, which is the horizontal scale value.

Examples

DISP:NOIS:YFAC:X:SCAL? might return 2.9900000000E+9, indicating that the horizontal scale value is 3.0 GHz.

DISPlay:NOISe:YFACtor:X:STARt

Sets or queries the Start Frequency value in the Y Factor display.

Conditions

Measurement views: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:X:STARt <NRf>
DISPlay:NOISe:YFACtor:X:STARt?
```

Arguments

<NRf> is the Start Frequency value in the Y Factor display.

Returns

<NR3> = floating point value with an exponent, which is the Start Frequency value.

Examples

DISPLAY:NOISE:YFACTOR:X:START 1.5GHz sets the Start Frequency in the Y Factor display to 1.5000 GHz.

DISPLAY:NOISE:YFACTOR:X:START? might return 1.5000000000E+9, indicating that the Start Frequency in the Y Factor display is 1.5000 GHz.

DISPlay:NOISe:YFACtor:X:STOP

Sets or queries the Stop Frequency value Y Factor display.

Conditions

Measurement views: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:X:STOP <NRf>
DISPlay:NOISe:YFACtor:X:STOP?
```

Arguments

<NRf> is the Stop Frequency value in the Y Factor display.

Returns

<NR3> = floating point value with an exponent, which is the Stop Frequency value.

Examples

DISPLAY:NOISE:YFACTOR:X:STOP 1.5GHz sets the Stop Frequency in the Y Factor display to 1.5000 GHz.

DISPLAY:NOISE:YFACTOR:X:STOP? might return 1.5000000000E+9, indicating that the Stop Frequency in the Y Factor display is 1.5000 GHz.

DISPlay:NOISe:YFACtor:Y:AUTO (No Query Form)

Automatically sets the vertical scale of the Y Factor graph.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:Y:AUTO
```

Arguments

None

DISPlay:NOISe:YFACtor:Y:AUTO:STATe

Sets or queries the state of the automatic vertical scale and position of the Y Factor graph to on or off.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:Y:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:NOISe:YFACtor:Y:AUTO:STATe?
```

Arguments

`OFF` or 0 sets the analyzer to manual setting of the vertical scale and position of the graph.

`ON` or 1 sets the analyzer to automatically set the vertical scale and position of the graph.

Returns

OFF or 0 means the analyzer is in manual mode for setting of the vertical scale and position of the graph.

ON or 1 means the analyzer is in automatic mode for setting of the vertical scale and position of the graph.

Examples

`DISPLAY:NOISE:YFACTOR:Y:AUTO:STATE ON` sets the analyzer to automatically set the vertical scale and position of the graph.

DISPlay:NOISe:YFACtor:Y:PDIVision

Sets or queries the distance between graticule lines on the display in dB.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:Y:PDIVision <NRf>
DISPlay:NOISe:YFACtor:Y:PDIVision?
```

Arguments

`<NRf>` is the distance between graticule lines on the display in dB. Range: 100 mdB to 5.00 dB

Returns

`<NR2>` = a floating point value without an exponent, which is the distance between graticule lines on the display in dB.

Examples

`DISPLAY:NOISE:YFACTOR:Y:PDIVISION?` might return `1.5000000000`, indicating that the distance between graticule lines on the display is 1.50 dB.

DISPlay:NOISe:YFACtor:Y:POSition

Sets or queries the vertical position of the Y Factor display.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:Y:POSition <NRf>
DISPlay:NOISe:YFACtor:Y:POSition?
```

Arguments

`<NRf>` is the vertical position of the Y Factor display.

Range: 5.12 to 26.5

Returns

`<NR2>` = a floating point value without an exponent, which is the vertical position value.

Examples

`DISPLAY:NOISE:YFACTOR:Y:POSITION?` might return `26.5000000000`, indicating that the vertical position is 26.5.

DISPlay:NOISe:YFACtor:Y:SCALe

Sets or queries the vertical scale of the Y Factor display.

Conditions

Measurement view: Y Factor

Group

Display commands

Syntax

```
DISPlay:NOISe:YFACtor:Y:SCALe <NRf>
DISPlay:NOISe:YFACtor:Y:SCALe?
```

Related Commands

Arguments

`<NRf>` is the vertical scale of the Y Factor display.

Range: 10.2 to 31.6 dB

Returns

`<NR2>` = a floating point value without an exponent, which is the vertical scale

value.

Examples

DISPLAY:NOISE:YFACTOR:Y:SCALE? might return 10.0000000000, indicating that the vertical scale is 10.0 dB.

DISPlay:OBWidth:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:OBWidth:MARKer:SHOW:STATe?
```

Arguments

OFF or 0 hides the readout for the selected marker in the view.

ON or 1 shows the readout for the selected marker in the view.

Examples

DISPLAY:OBWIDTH:MARKER:SHOW:STATE ON shows the readout for the selected marker in the view.

DISPlay:OBWidth:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale to the default values described below in the Occupied Bandwidth view.

Vertical offset = Reference level, Vertical scale = 100 dB,

Horizontal offset = Center frequency, and Horizontal scale = Default span

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:RESet:SCALe
```

Arguments

None

Examples

DISPLAY:OBWIDTH:RESET:SCALE resets the horizontal and vertical scale to the default values.

DISPlay:OBWidth:SELected:BANDwidth

Sets or queries the bandwidth (OBW or x dB BW) to measure in the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:SELected:BANDwidth { OBWidth | XDBbandwidth }
DISPlay:OBWidth:SELected:BANDwidth?
```

Arguments

`OBWidth` selects the occupied bandwidth to measure.

`XDBbandwidth` selects the x dB bandwidth to measure.

Examples

`DISPLAY:OBWIDTH:SELECTED:BANDWIDTH OBWidth` selects the occupied bandwidth to measure.

DISPlay:OBWidth:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:OBWidth:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Examples

`DISPLAY:OBWIDTH:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen.

DISPlay:OBWidth:X[:SCALe]

Sets or queries the horizontal range of the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:X[:SCALe] <value>
DISPlay:OBWidth:X[:SCALe]?
```

Related Commands

DISPlay:OBWidth:X[:SCALe]:OFFSet (on page 872)

Arguments

`<value>::<NRf>` specifies the horizontal range.

Range:

- RSA5103B – 1 to 3 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5115B – 1 to 15 GHz
- RSA5126B – 1 to 26.5 GHz

Examples

`DISPLAY:OBWIDTH:X:SCALE 10MHz` sets the horizontal range to 10 MHz.

DISPlay:OBWidth:X[:SCALe]:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:OBWIDTH:X:SCALE:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:OBWidth:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:X[:SCALe]:OFFSet <value>
DISPlay:OBWidth:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:OBWidth:X[:SCALe] (on page 871)

Arguments

`<value>::<NRf>` specifies the minimum horizontal value.

Range: [(center frequency) - (X scale) × 0.9] to [(center frequency) + (X scale) × 0.9]

Examples

`DISPLAY:OBWIDTH:X:SCALE:OFFSET 1.45GHz` sets the minimum horizontal value to 1.45 GHz in the Occupied Bandwidth view.

DISPlay:OBWidth:Y[:SCALe]

Sets or queries the vertical range of the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:Y[:SCALe] <value>
DISPlay:OBWidth:Y[:SCALe]?
```

Related Commands

DISPlay:OBWidth:Y[:SCALe]:OFFSet (on page 874)

Arguments

`<value>::<NRf>` specifies the vertical range. Range: 0.1 to 200 dB.

Examples

`DISPLAY:OBWIDTH:Y:SCALE 100` sets the vertical range to 100 dB in the Occupied Bandwidth view.

DISPlay:OBWidth:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:OBWIDTH:Y:SCALE:AUTO` rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:OBWidth:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) in the Occupied Bandwidth view.

Conditions

Measurement views: Occupied Bandwidth

Group

Display commands

Syntax

```
DISPlay:OBWidth:Y[:SCALe]:OFFSet <value>
DISPlay:OBWidth:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:OBWidth:Y[:SCALe] (on page 873)

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -170 to +50 dBm.

Examples

`DISPLAY:OBWIDTH:Y:SCALE:OFFSET -12.5` sets the vertical offset to -12.5 dBm in the Occupied Bandwidth view.

DISPlay:OFDM:CONSte[:SCALe]

Sets or queries the scale (zoom) in the OFDM Constellation view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CONSte[:SCALe] <value>
DISPlay:OFDM:CONSte[:SCALe]?
```

Arguments

`<value>::<NRf>` specifies the zoom setting in the OFDM Constellation view.

A positive value zooms out and a negative value zooms in.

Examples

`DISPLAY:OFDM:CONSTE[:SCALE] 5` zooms the display out by 5

DISPlay:OFDM:CONSte:X:OFFSet

Sets or queries the horizontal offset in the OFDM Constellation view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CONSte:X:OFFSet <value>
DISPlay:OFDM:CONSte:X:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the offset range.

Examples

`DISPLAY:OFDM:CONSTE:X:OFFSET 2.7` sets the horizontal offset to 2.7 units to the left.

DISPlay:OFDM:CONSte:Y:OFFSet

Sets or queries the vertical offset in the OFDM Constellation view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CONSte:Y:OFFSet <value>
DISPlay:OFDM:CONSte:Y:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the offset range.

A positive value moves the offset up; and negative value moves the offset down.

Examples

`DISPLAY:OFDM:CONSTE:Y:OFFSET 2` sets the vertical offset to up 2 units.

DISPlay:OFDM:CRESponse:FREQuency:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:FREQuency:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:CRESPONSE:FREQUENCY:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:OFDM:CRESponse:FREQuency:OFFSet

Sets or queries the frequency offset in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:FREQuency:OFFSet <value>
DISPlay:OFDM:CRESponse:FREQuency:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the frequency offset.

Examples

`DISPLAY:OFDM:CRESPONSE:FREQUENCY:OFFSET 1.45E+9` sets the frequency offset to 1.45 GHz.

DISPlay:OFDM:CRESponse:FREQuency[:SCALe]

Sets or queries the horizontal range of the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:FREQuency[:SCALe] <value>
DISPlay:OFDM:CRESponse:FREQuency[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:OFDM:CRESPONSE:FREQUENCY[:SCALE] 10E+6` sets the horizontal range to 10 MHz.

DISPlay:OFDM:CRESponse:MAGNitude:AUTO (No Query Form)

Rescales the magnitude automatically to fit the waveform to the screen in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:MAGNitude:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:CRESPONSE:MAGNITUDE:AUTO` rescales the magnitude scale automatically to fit the waveform to the screen.

DISPlay:OFDM:CRESponse:MAGNitude:OFFSet

Sets or queries the magnitude offset in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:MAGNitude:OFFSet <value>
DISPlay:OFDM:CRESponse:MAGNitude:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the magnitude offset.

Examples

`DISPLAY:OFDM:CRESPONSE:MAGNITUDE:OFFSET 5` sets the magnitude offset to 5 dB.

DISPlay:OFDM:CRESponse:MAGNitude:PDIVision

Sets or queries the scale (per division) of the magnitude in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:MAGNitude:PDIVision <value>
DISPlay:OFDM:CRESponse:MAGNitude:PDIVision?
```

Arguments

`<value>::<NRf>` specifies the vertical scale (per division).

Examples

`DISPLAY:OFDM:CRESPONSE:MAGNITUDE:PDIVISION 2.7` sets the vertical scale to 2.70 dB/div.

DISPlay:OFDM:CRESponse:PHASe:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:PHASe:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:CRESPONSE:PHASE:AUTO` rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:OFDM:CRESponse:PHASe:OFFSet

Sets or queries the phase offset in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:PHASe:OFFSet <value>
DISPlay:OFDM:CRESponse:PHASe:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the phase offset.

Examples

`DISPLAY:OFDM:CRESPONSE:PHASE:OFFSET -14.5` sets the minimum vertical value to -14.5 ° in the OFDM Channel response graph.

DISPlay:OFDM:CRESponse:PHASe[:SCALe]

Sets the vertical scale automatically to fit the waveform to the screen in the OFDM Channel response graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:PHASe[:SCALe] <value>
DISPlay:OFDM:CRESponse:PHASe[:SCALe]?
```

Arguments

`<value>::<NRf>` specifies the vertical range.

Examples

`DISPLAY:OFDM:CRESPONSE:PHASE[:SCALE] 30` sets the vertical range to 30 ° in the OFDM Channel response graph.

DISPlay:OFDM:CRESponse:WINDow:SELect:PLOT

Sets or queries the plot in the OFDM Channel Response window measurement.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:WINDow:SELect:PLOT { MAGNitude | PHASe }
DISPlay:OFDM:CRESponse:WINDow:SELect:PLOT?
```

Arguments

`MAGNitude` selects the magnitude display.

`PHASe` selects the phase display

Examples

`DISPLAY:OFDM:CRESPONSE:WINDOW:SELECT:PLOT PHASe` selects the phase display.

DISPlay:OFDM:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the OFDM Channel Response view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 1| 0}
DISPlay:OFDM:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the graph.

`ON` or 1 shows the graticule in the graph.

Examples

`DISPLAY:OFDM:CRESPONSE:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` turns off the graticule in the graph.

DISPlay:OFDM:EVM:FREQuency:AUTO (No Query Form)

Rescales the frequency automatically to fit the waveform to the screen in the OFDM EVM graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:FREQuency:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:EVM:FREQUENCY:AUTO` rescales the frequency scale automatically to fit the waveform to the screen.

DISPlay:OFDM:EVM:FREQuency:OFFSet

Sets or queries the frequency offset in the OFDM EVM graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:FREQuency:OFFSet <value>
DISPlay:OFDM:EVM:FREQuency:OFFSet
```

Arguments

`<value>::<NRf>` specifies the frequency offset.

Examples

`DISPLAY:OFDM:EVM:FREQUENCY:OFFSET -21` sets the frequency offset to –21 subcarriers.

DISPlay:OFDM:EVM:FREQuency[:SCALe]

Sets or queries the horizontal range of the OFDM EVM graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:FREQuency[:SCALe] <value>
DISPlay:OFDM:EVM:FREQuency[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:OFDM:EVM:FREQUENCY[:SCALE] 10E+6` sets the horizontal range to 10 MHz.

DISPlay:OFDM:EVM:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:MARKer:SHOW:STATe { OFF | ON | 1| 0 }
DISPlay:OFDM:EVM:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the graph.

`ON` or 1 shows the readout for the selected marker in the graph.

Examples

`DISPLAY:OFDM:EVM:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:OFDM:EVM:TIME:AUTO (No Query Form)

Rescales the time automatically to fit the waveform to the screen in the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:TIME:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:EVM:TIME:AUTO` rescales the time scale automatically to fit the waveform to the screen.

DISPlay:OFDM:EVM:TIME:OFFSet

Sets or queries the time offset in the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:TIME:OFFSet <value>
DISPlay:OFDM:EVM:TIME:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the magnitude offset.

Examples

`DISPLAY:OFDM:EVM:TIME:OFFSET -11.7` sets the time scale offset to −11.7 symbols.

DISPlay:OFDM:EVM:TIME[:SCALe]

Sets or queries the time scale in the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:TIME[:SCALe] <value>
DISPlay:OFDM:EVM:TIME[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the time scale.

Examples

`DISPLAY:OFDM:EVM:TIME[:SCALE] 13` sets the time scale to 13 symbols.

DISPlay:OFDM:EVM:WINDow:SELect:PLOT

Sets or queries the plot in the OFDM EVM window measurement.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:WINDow:SELect:PLOT { BOTH | SCARrier | SYMBols }
DISPlay:OFDM:EVM:WINDow:SELect:PLOT?
```

Arguments

`SCARrier` selects the subcarrier display.

`SYMBols` selects the symbols display

`BOTH` selects both displays.

Examples

`DISPLAY:OFDM:EVM:WINDOW:SELECT:PLOT SYMBols` selects the symbols display.

DISPlay:OFDM:EVM:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 1| 0}
DISPlay:OFDM:EVM:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the graph.

`ON` or 1 shows the graticule in the graph.

Examples

`DISPLAY:OFDM:EVM:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` turns off the graticule in the graph.

DISPlay:OFDM:EVM:Y:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform in the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:Y:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:EVM:Y:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:OFDM:EVM:Y:OFFSet

Sets or queries the vertical offset in the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:Y:OFFSet <value>
DISPlay:OFDM:EVM:Y:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the vertical offset.

Examples

`DISPLAY:OFDM:EVM:Y:OFFSET -20` sets the vertical offset to –20%.

DISPlay:OFDM:EVM:Y[:SCALe]

Sets or queries the vertical range of the OFDM EVM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:EVM:Y[:SCALe] <value>
DISPlay:OFDM:EVM:Y[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the vertical scale.

Examples

`DISPLAY:OFDM:EVM:Y[:SCALE] 200` sets the vertical scale to 200%.

DISPlay:OFDM:FLATness:AUTO (No Query Form)

Automatically rescales the horizontal and vertical axes for the best display in the OFDM Spectral Flatness view.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Display commands

Syntax

`DISPlay:OFDM:FLATness:AUTO`

Arguments

None

Examples

`DISP:OFDM:FLAT:AUTO` automatically rescales the horizontal and vertical axes for the best display.

DISPlay:OFDM:FLATness:X:AUTO (No Query Form)

Rescales the horizontal axis automatically in the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Display commands

Syntax

`DISPlay:OFDM:FLATness:X:AUTO`

Arguments

None

Examples

`DISP:OFDM:FLAT:X:AUTO` rescales the horizontal axis automatically for the best display.

DISPlay:OFDM:FLATness:X:OFFSet

Sets or queries the value of the offset of the horizontal axis from the center of the OFDM WLAN Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Display commands

Syntax

```
DISPlay:OFDM:FLATness:X:OFFSet <NRf>
DISPlay:OFDM:FLATness:X:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 recenters the plot.

Returns

The value of the offset of the X axis from the center of the plot as a floating point number.

Examples

`DISP:OFDM:FLAT:X:OFFS 150` shifts the display to the left by 150%.

DISPlay:OFDM:FLATness:X[:SCALe]

Sets or queries the value of the horizontal scale in the OFDM Spectral Flatness display. The units are Frequency or Subcarrier. To set the units, use the command [SENSe]:OFDM:UNIT:FREQuency.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Display commands

Syntax

```
DISPlay:OFDM:FLATness:X[:SCALe] <NRf>
DISPlay:OFDM:FLATness:X[:SCALe]?
```

Arguments

Floating point number that represents the value of the horizontal scale.

Examples

`DISP:OFDM:FLAT:X:SCALE 32` sets the horizontal scale to 32.

DISPlay:OFDM:FLATness:Y:AUTO (No Query Form)

Rescales the vertical axis scale and position values automatically in the OFDM Spectral Flatness display.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Display commands

Syntax

```
DISPlay:OFDM:FLATness:Y:AUTO
```

Arguments

None

Examples

`DISP:OFDM:FLAT:Y:AUTO` automatically selects the vertical scale and position values.

DISPlay:OFDM:FLATness:Y:OFFSet

Sets or queries the value of the offset from the center (vertical position), in percent terms, for the OFDM Spectral Flatness display. To set the Vertical Scale, use the command `DISPlay:OFDM:FLATness:Y[:SCALe]`.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Display commands

Syntax

```
DISPlay:OFDM:FLATness:Y:OFFSet <NRf>
DISPlay:OFDM:FLATness:Y:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 re-centers the plot.

Returns

The value of the offset from the center of the Y axis for the plot as a floating point number.

Examples

`DISP:OFDM:FLAT:Y:OFFS 150` sets the offset from the center (vertical position) of the plot to 150%.

DISPlay:OFDM:FLATness:Y[:SCALe]

Sets or queries the vertical scale value for the OFDM Spectral Flatness display. To set the vertical position (offset) value, use the command `DISPlay:OFDM:FLATness:Y:OFFSet`.

Conditions

Measurement view: OFDM

This command requires Option 22, “OFDM Measurements”.

Group

Display commands

Syntax

```
DISPlay:OFDM:FLATness:Y[:SCALe] <NRf>
DISPlay:OFDM:FLATness:Y[:SCALe]?
```

Arguments

Floating point number that specifies the vertical scale value.

Examples

`DISP:OFDM:FLAT:Y:SCALE 10` sets the vertical scale value to 10.

DISPlay:OFDM:MEASview:DELete (No Query Form)

Deletes the specified OFDM view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MEASview:DELete { CONSte | SUMMary | STABle | CRESponse | EVM | PERRor | MERRor |
    POWer }
```

Arguments

`CONSte` deletes the OFDM Constellation view.

`SUMMary` deletes the OFDM Summary view.

`STABle` deletes the OFDM Symbol table view.

`CRESponse` deletes the OFDM Channel response view.

`EVM` deletes the EVM (Error Vector Magnitude) versus Time view.

`PERRor` deletes the Phase error versus Time view.

`MERRor` deletes the Magnitude error versus Time view.

`POWer` deletes the OFDM Power view.

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Examples

`DISPLAY:OFDM:MEASVIEW:DELETE CONSte` deletes the OFDM Constellation view.

DISPlay:OFDM:MEASview:NEW (No Query Form)

Displays a new OFDM measurement view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MEASview:NEW { CONSte | SUMMary | STABle | CRESponse | EVM | PERRor | MERRor | POWer }
```

Arguments

`CONSte` creates a new OFDM Constellation view.

`SUMMary` creates a new OFDM Summary view.

`STABle` creates a new OFDM Symbol table view.

`CRESponse` creates a new OFDM Channel response view.

`EVM` creates a new EVM (Error Vector Magnitude) versus Time view.

`PERRor` creates a new Phase error versus Time view.

`MERRor` creates a new Magnitude error versus Time view.

`POWer` creates a new OFDM Power view.

If you attempt to open a view that is currently displayed on screen, the error (–200, "Execution error; Measurement is already running") will be returned.

Examples

`DISPLAY:OFDM:MEASVIEW:NEW:CONSte` creates a new OFDM Constellation view.

DISPlay:OFDM:MEASview:SELect

Selects a OFDM measurement view on the screen. The query returns the currently selected view.

Selecting a measurement optimizes it. Other measurements may be optimized as a side effect. Refer to the `DISPlay:WINDow:OPTimized:MEASurement?` query.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MEASview:SELect { CONSte | SUMMary | STABle | CRESponse | EVM | PERRor | MERRor |
    POWer }
DISPlay:OFDM:MEASview:SELect?
```

Arguments

`CONSte` creates a new OFDM Constellation view.

`SUMMary` creates a new OFDM Summary view.

`STABle` creates a new OFDM Symbol table view.

`CRESponse` creates a new OFDM Channel response view.

`EVM` creates a new EVM (Error Vector Magnitude) versus Time view.

`PERRor` creates a new Phase error versus Time view.

`MERRor` creates a new Magnitude error versus Time view.

`POWer` creates a new OFDM Power view.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

`DISPLAY:OFDM:MEASVIEW:SELECT:STABle` selects the OFDM symbol table view.

DISPlay:OFDM:MERRor:FREQuency[:SCALe]

Sets or queries the horizontal range of the OFDM Magnitude error graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:FREQuency[:SCALe] <value>
DISPlay:OFDM:MERRor:FREQuency[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:OFDM:MERROR:FREQUENCY[:SCALE] 10E+6` sets the horizontal range to 10 MHz.

DISPlay:OFDM:MERRor:FREQuency[:SCALe]:AUTO (No Query Form)

Rescales the frequency automatically to fit the waveform to the screen in the OFDM Magnitude error graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:FREQuency[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:MERROR:FREQUENCY[:SCALE]:AUTO` rescales the frequency scale automatically to fit the waveform to the screen.

DISPlay:OFDM:MERRor:FREQuency[:SCALe]:OFFSet

Sets or queries the frequency offset in the OFDM Magnitude error graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:FREQuency[:SCALe]:OFFSet <value>
DISPlay:OFDM:MERRor:FREQuency[:SCALe]:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the frequency offset.

Examples

`DISPLAY:OFDM:MERROR:FREQUENCY[:SCALE]:OFFSET -26` sets the offset to −26 subcarriers.

DISPlay:OFDM:MERRor:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:MARKer:SHOW:STATe { OFF | ON | 1| 0 }
DISPlay:OFDM:MERRor:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the graph.

`ON` or 1 shows the readout for the selected marker in the graph.

Examples

`DISPLAY:OFDM:MERROR:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:OFDM:MERRor:TIME[:SCALe]

Sets or queries the time scale in the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:TIME[:SCALe] <value>
DISPlay:OFDM:MERRor:TIME[:SCALe]?
```

Arguments

<value>::= <NRf> specifies the time scale.

Examples

DISPLAY:OFDM:MERROR:TIME[:SCALE] 50 sets the time scale to 50 subcarriers.

DISPlay:OFDM:MERRor:TIME[:SCALe]:AUTO (No Query Form)

Rescales the time automatically to fit the waveform to the screen in the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

DISPlay:OFDM:MERRor:TIME[:SCALe]:AUTO

Arguments

None

Examples

DISPLAY:OFDM:MERROR:TIME[:SCALE]:AUTO rescales the time scale automatically to fit the waveform to the screen.

DISPlay:OFDM:MERRor:TIME[:SCALe]:OFFSet

Sets or queries the time offset in the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

DISPlay:OFDM:MERRor:TIME[:SCALe]:OFFSet <value>
DISPlay:OFDM:MERRor:TIME[:SCALe]:OFFSet?

Arguments

<value>::= <NRf> specifies the time offset.

Examples

DISPLAY:OFDM:MERROR:TIME[:SCALE]:OFFSET -47 sets the offset to −47 symbols.

DISPlay:OFDM:MERRor:WINDow:SELect:PLOT

Sets or queries the plot in the OFDM Magnitude error window measurement.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:WINDow:SELect:PLOT { BOTH | SCARrier | SYMBols }
DISPlay:OFDM:MERRor:WINDow:SELect:PLOT?
```

Arguments

`SCARrier` selects the subcarrier display.

`SYMBols` selects the symbols display

`BOTH` selects both displays.

Examples

`DISPLAY:OFDM:MERROR:WINDOW:SELECT:PLOT SYMBols` selects the symbols display.

DISPlay:OFDM:MERRor:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 1| 0}
DISPlay:OFDM:MERRor:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the graph.

`ON` or 1 shows the graticule in the graph.

Examples

`DISPLAY:OFDM:MERROR:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` turns off the graticule in the graph.

DISPlay:OFDM:MERRor:Y:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform in the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:Y:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:MERROR:Y:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:OFDM:MERRor:Y:OFFSet

Sets or queries the vertical offset in the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:Y:OFFSet <value>
DISPlay:OFDM:MERRor:Y:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the vertical offset.

Examples

`DISPLAY:OFDM:MERROR:Y:OFFSET -90` sets the vertical scale offset to −90%.

DISPlay:OFDM:MERRor:Y[:SCALe]

Sets or queries the vertical range of the OFDM Magnitude error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:MERRor:Y[:SCALe] <value>
DISPlay:OFDM:MERRor:Y[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the vertical scale.

Examples

`DISPLAY:OFDM:MERROR:Y[:SCALE] 100` sets the vertical scale to 100%.

DISPlay:OFDM:PERRor:FREQuency[:SCALe]

Sets or queries the horizontal range of the OFDM Phase error graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:FREQuency[:SCALe] <value>
DISPlay:OFDM:PERRor:FREQuency[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:OFDM:PERROR:FREQUENCY[:SCALE] 10E+6` sets the horizontal range to 10 MHz.

DISPlay:OFDM:PERRor:FREQuency[:SCALe]:AUTO (No Query Form)

Rescales the frequency automatically to fit the waveform to the screen in the OFDM Phase error graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:FREQuency[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:PERROR:FREQUENCY[:SCALE]:AUTO` rescales the frequency scale automatically to fit the waveform to the screen.

DISPlay:OFDM:PERRor:FREQuency[:SCALe]:OFFSet

Sets or queries the frequency offset in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:FREQuency[:SCALe]:OFFSet <value>
DISPlay:OFDM:PERRor:FREQuency[:SCALe]:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the frequency offset.

Examples

`DISPLAY:OFDM:PERROR:FREQUENCY[:SCALE]:OFFSET -26` sets the frequency scale offset to −26 subcarriers.

DISPlay:OFDM:PERRor:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:MARKer:SHOW:STATe { OFF | ON | 1| 0 }
DISPlay:OFDM:PERRor:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the graph.

`ON` or 1 shows the readout for the selected marker in the graph.

Examples

`DISPLAY:OFDM:PERROR:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:OFDM:PERRor:TIME[:SCALe]

Sets or queries the time scale in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:TIME[:SCALe] <value>
DISPlay:OFDM:PERRor:TIME[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the time scale.

Examples

`DISPLAY:OFDM:PERROR:TIME[:SCALE] 50` sets the time scale to 50 symbols.

DISPlay:OFDM:PERRor:TIME[:SCALe]:AUTO (No Query Form)

Rescales the time automatically to fit the waveform to the screen in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:TIME[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:PERROR:TIME[:SCALE]:AUTO` rescales the time scale automatically to fit the waveform to the screen.

DISPlay:OFDM:PERRor:TIME[:SCALe]:OFFSet

Sets or queries the time offset in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:TIME[:SCALe]:OFFSet <value>
DISPlay:OFDM:PERRor:TIME[:SCALe]:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the time offset.

Examples

`DISPLAY:OFDM:PERROR:TIME[:SCALE]:OFFSET -17` sets the time scale offset to −17 symbols.

DISPlay:OFDM:PERRor:WINDow:SELect:PLOT

Sets or queries the plot in the OFDM Phase error window measurement.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:WINDow:SELect:PLOT { BOTH | SCARrier | SYMBols }
DISPlay:OFDM:PERRor:WINDow:SELect:PLOT?
```

Arguments

`SCARrier` selects the subcarrier display.

`SYMBols` selects the symbols display

`BOTH` selects both displays.

Examples

`DISPLAY:OFDM:PERROR:WINDOW:SELECT:PLOT SYMBols` selects the symbols display.

DISPlay:OFDM:PERRor:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 1| 0}
DISPlay:OFDM:PERRor:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the graph.

`ON` or 1 shows the graticule in the graph.

Examples

`DISPLAY:OFDM:PERROR:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` turns off the graticule in the graph.

DISPlay:OFDM:PERRor:Y:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

```
Syntax
DISPlay:OFDM:PERRor:Y:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:PERROR:Y:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:OFDM:PERRor:Y:OFFSet

Sets or queries the vertical offset in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:Y:OFFSet <value>
DISPlay:OFDM:PERRor:Y:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:OFDM:PERROR:Y:OFFSET -173` sets the vertical offset to –173 °.

DISPlay:OFDM:PERRor:Y[:SCALe]

Sets or queries the vertical range of the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:PERRor:Y[:SCALe] <value>
DISPlay:OFDM:PERRor:Y[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the vertical scale.

Examples

`DISPLAY:OFDM:PERROR:Y[:SCALE] 200` sets the vertical scale to 200 °.

DISPlay:OFDM:POWer:FREQuency[:AUTO] (No Query Form)

Rescales the frequency automatically to fit the waveform to the screen in the OFDM Power graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:FREQuency[:AUTO]
```

Arguments

None

Examples

`DISPLAY:OFDM:POWER:FREQUENCY[:AUTO]` rescales the frequency scale automatically to fit the waveform to the screen.

DISPlay:OFDM:POWer:FREQuency[:OFFSet]

Sets or queries the frequency offset in the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:FREQuency[:OFFSet] <value>
DISPlay:OFDM:POWer:FREQuency[:OFFSet]?
```

Arguments

`<value>::= <NRf>` specifies the frequency offset.

Examples

`DISPLAY:OFDM:POWER:FREQUENCY[:OFFSET] -26` sets the frequency offset to –26 subcarriers.

DISPlay:OFDM:POWer:FREQuency[:SCALe]

Sets or queries the horizontal range of the OFDM Power graph.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:FREQuency[:SCALe] <value>
DISPlay:OFDM:POWer:FREQuency[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:OFDM:POWER:FREQUENCY:SCALE 10E+6` sets the horizontal range to 10 MHz.

DISPlay:OFDM:POWer:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:MARKer:SHOW:STATe { OFF | ON | 1| 0 }
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the graph.

`ON` or 1 shows the readout for the selected marker in the graph.

Examples

`DISPLAY:OFDM:POWER:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:OFDM:POWer:TIME[:AUTO] (No Query Form)

Rescales the time automatically to fit the waveform to the screen in the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:TIME[:AUTO]
```

Arguments

None

Examples

`DISPLAY:OFDM:POWER:TIME:AUTO` rescales the time scale automatically to fit the waveform to the screen.

DISPlay:OFDM:POWer:TIME:OFFSet

Sets or queries the time offset in the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:TIME:OFFSet <value>
DISPlay:OFDM:POWer:TIME:OFFSet?
```

Arguments

`<value>::= <NR1>` specifies the time offset.

Examples

`DISPLAY:OFDM:POWER:TIME:OFFSET?` might return `2.00000` indicating the offset is 2 symbols.

DISPlay:OFDM:POWer:TIME[:SCALe]

Sets or queries the time scale in the OFDM Phase error view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:TIME[:SCALe] <value>
DISPlay:OFDM:POWer:TIME[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the time scale.

Examples

`DISPLAY:OFDM:POWER:TIME[:SCALE] 46` sets the time scale to 46 symbols.

DISPlay:OFDM:POWer:WINDow:SELect:PLOT

Sets or queries the plot in the OFDM Power window measurement.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:WINDow:SELect:PLOT { BOTH | SCARrier | SYMBols }
DISPlay:OFDM:POWer:WINDow:SELect:PLOT?
```

Arguments

`SCARrier` selects the subcarrier display.

`SYMBols` selects the symbols display

`BOTH` selects both displays.

Examples

`DISPLAY:OFDM:POWER:WINDOW:SELECT:PLOT SYMBols` selects the symbols display.

DISPlay:OFDM:POWer:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 1| 0}
DISPlay:OFDM:POWer:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule in the graph.

`ON` or 1 shows the graticule in the graph.

Examples

`DISPLAY:OFDM:POWER:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` turns off the graticule in the graph.

DISPlay:OFDM:POWer:Y:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform in the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:Y:AUTO
```

Arguments

None

Examples

`DISPLAY:OFDM:POWER:Y:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:OFDM:POWer:Y:OFFSet

Sets or queries the vertical offset in the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:Y:OFFSet <value>
DISPlay:OFDM:POWer:Y:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:OFDM:POWER:Y:OFFSET -37.29` sets the vertical offset to –37.29 dBm.

DISPlay:OFDM:POWer:Y[:SCALe]

Sets or queries the vertical range of the OFDM Power view.

Conditions

Measurement views: OFDM

Group

Display commands

Syntax

```
DISPlay:OFDM:POWer:Y[:SCALe] <value>
DISPlay:OFDM:POWer:Y[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the vertical scale.

Examples

`DISPLAY:OFDM:POWER:Y:SCALE 64.48` sets the vertical scale to 64.48 dB.

DISPlay:P25:CONSte:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries to show or hide the graticule grid on the screen in the P25 Constellation display.

Conditions

Measurement view: P25 Constellation

Group

Display commands

Syntax

```
DISPlay:P25:CONSte:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:P25:CONSte:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or `0` hides the graticule grid.

`ON` or `1` shows the graticule grid.

Returns

0 means that the graticule grid is hidden.

1 means that the graticule grid is showing.

Examples

`DISPLAY:P25:CONSTE:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen.

DISPlay:P25:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen in the P25 Eye Diagram display.

Conditions

Measurement view: P25 Eye Diagram

Group

Display commands

Syntax

```
DISPlay:P25:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe {OFF|ON|0|1}
DISPlay:P25:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

0 means that the graticule grid is hidden.

1 means that the graticule grid is showing.

Examples

`DISPlay:P25:EDIagram:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the screen in the P25 Eye Diagram display.

DISPlay:P25:EDIagram:Y[:SCALe]

Sets or queries the vertical scale (Hz) of the P25 Eye Diagram display.

Conditions

Measurement view: P25 Eye Diagram

Group

Display commands

Syntax

```
DISPlay:P25:EDIagram:Y[:SCALe]<NRf>
DISPlay:P25:EDIagram:Y[:SCALe]?
```

Arguments

`<value>::<NRf>` specifies the vertical scale value (no units).

Range is 1 to 100

Returns

`<NR3>` = a floating point value with an exponent, which is the vertical scale value in Hz.

Examples

`DISP:P25:EDI:Y:SCAL 0.0005` sets the vertical scale to 500 µHz in the display.

`DISP:P25:EDI:Y:SCAL?` might return `500.0000000000E-6`, indicating that the vertical scale is 500 µHz.

DISPlay:P25:EDIagram:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale automatically to fit the waveform to the screen in the P25 Eye Diagram display.

Conditions

Measurement view: P25 Eye Diagram

Group

Display commands

Syntax

```
DISPlay:P25:EDIagram:Y[:SCALe]:AUTO
```

Arguments

None.

Returns

0 indicates the vertical scale is set to automatically fit the waveform to the screen in the P25 Eye Diagram display.

1 indicates the vertical scale is not set to automatically fit the waveform to the screen in the P25 Eye Diagram display.

Examples

`DISPLAY:P25:EDIAGRAM:Y[:SCALE]:AUTO` sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:P25:EDIagram:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (center point of the vertical axis) in the P25 Eye Diagram display.

Conditions

Measurement view: P25 Eye Diagram

Group

Display commands

Syntax

```
DISPlay:P25:EDIagram:Y[:SCALe]:OFFSet
DISPlay:P25:EDIagram:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the minimum vertical value. Range is -50 to +50 (no units).

Returns

Vertical offset value.

Examples

`DISPLAY:P25:EDIAGRAM:Y[:SCALE]:OFFSET -0.5` sets the vertical offset to -0.5 in the P25 Eye Diagram display.

DISPlay:P25:MEASview:DELete (No Query Form)

Deletes the specified P25 measurement display.

Conditions

Measurement view: P25 measurements

Group

Display commands

Syntax

```
DISPlay:P25:MEASview:DELete { FDVT | EDI | PVT | CONS | SUMM }
```

Related Commands

DISPlay:P25:MEASview:NEW (on page 907)

DISPlay:P25:MEASview:SELect (on page 908)

Arguments

`FDVT`: Frequency Deviation vs Time display

`EDI`: P25 Eye Diagram display

`PVT`: Power vs Time display

`CONS`: P25 Constellation display

`SUMM`: P25 Summary display

Examples

`DISPLAY:P25:MEASVIEW:DELETE CONS` deletes the P25 Constellation display.

DISPlay:P25:MEASview:NEW (No Query Form)

Displays a new P25 measurement view.

Conditions

Measurement view: P25 measurements

Group

Display commands

Syntax

```
DISPlay:P25:MEASview:NEW { FDVT | EDI | PVT | CONS | SUMM }
```

Related Commands

DISPlay:P25:MEASview:SELect (on page 908)

DISPlay:P25:MEASview:DELete (on page 906)

Arguments

`FDVT`: Frequency Deviation vs Time display

`EDI`: P25 Eye Diagram display

`PVT`: Power vs Time display

`CONS`: P25 Constellation display

`SUMM`: P25 Summary display

NOTE: If you attempt to open a view that is currently displayed on the screen, the error -200, "Execution error; Measurement is already running" will be returned.

Examples

`DISPLAY:P25:MEASVIEW:NEW PVT` creates a new view of the Power vs Time display.

DISPlay:P25:MEASview:SELect

Selects a P25 measurement display. The query form returns the currently selected display.

Conditions

Measurement view: P25 measurements

Group

Display commands

Syntax

`DISPlay:P25:MEASview:SELect { FDVT | EDI | PVT | CONS | SUMM }`

Related Commands

DISPlay:P25:MEASview:NEW (on page 907)

DISPlay:P25:MEASview:DELete (on page 906)

Arguments

`FDVT`: Frequency Deviation vs Time display

`EDI`: P25 Eye Diagram display

`PVT`: Power vs Time display

`CONS`: P25 Constellation display

`SUMM`: P25 Summary display

NOTE: If you attempt to select a view that is not displayed on the screen, the error -200, "Execution error; Measurement not running" will be returned.

Returns

FDVT: Frequency Deviation vs Time display

EDI: P25 Eye Diagram display

PVT: Power vs Time display

CONS: P25 Constellation display

SUMM: P25 Summary display

Examples

`DISPLAY:P25:MEASVIEW:SELECT CONS` selects the P25 Constellation display.

DISPlay:P25:PVTime:BURSt:X[:SCALe]

Sets or queries the value of the scale (width) value, in seconds, for the P25 Power vs. Time display when using horizontal Full Burst view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:BURSt:X[:SCALe]
DISPlay:P25:PVTime:BURSt:X[:SCALe]?
```

Related Commands

DISPlay:P25:PVTime:BURSt:X[:SCALe]:AUTO (on page 908)

Arguments

Floating point number that represents the value of the scale (width), in seconds, when using horizontal Full Burst view.

Returns

Horizontal scale value.

Examples

`DISPLAY:P25:PVTIME:BURST:X[:SCALE] 5.0E-6` sets the width of the display to 5.000 µS for the horizontal Full Burst view.

DISPlay:P25:PVTime:BURSt:X[:SCALe]:AUTO (No Query Form)

Automatically sets the starting time (position) and scale (width) values for the best display in the horizontal Full Burst view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:BURSt:X[:SCALe]:AUTO
```

Related Commands

DISPlay:P25:PVTime:BURSt:X[:SCALe] (on page 908)

Examples

`DISPLAY:P25:PVTIME:BURST:X:SCALE:AUTO` automatically sets the starting time (position) and scale (width) values for the best display.

DISPlay:P25:PVTime:BURSt:X[:SCALe]:OFFSet

Sets or queries the starting time (position) value, in seconds, for the P25 Power vs. Time display when using the horizontal Full Burst view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:BURSt:X[:SCALe]:OFFSet
DISPlay:P25:PVTime:BURSt:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:P25:PVTime:BURSt:X[:SCALe]:AUTO (on page 909)

Arguments

Floating point number that represents the starting time (position) value, in seconds, when using horizontal Full Burst view.

Returns

Horizontal offset value.

Examples

`DISPLAY:P25:PVTIME:BURST:X[:SCALE]:OFFSET 5.0E-6` sets the starting time (position) of the graph to 5.000 µS for horizontal Full Burst view.

DISPlay:P25:PVTime:BURSt:X[:SCALe]:RESet (No Query Form)

Resets the starting time (position) and scale (width) values for the horizontal Full Burst view on the P25 Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:BURSt:X[:SCALe]:RESet
```

Related Commands

DISPlay:P25:PVTime:BURSt:X[:SCALe]:AUTO (on page 909)

Examples

`DISPLAY:P25:PVTIME:BURST:X:SCALE:RESET` resets the starting time (position) and scale (width) values for the horizontal Full Burst view.

DISPlay:P25:PVTime:FALL:X[:SCALe]

Sets or queries the scale (width) value, in seconds, for the P25 Power vs. Time display when using the horizontal Falling Edge view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:FALL:X[:SCALe]<NRf>
DISPlay:P25:PVTime:FALL:X[:SCALe]?
```

Related Commands

Arguments

Floating point number that represents the scale (width), in seconds, when using

the horizontal Falling Edge view.

Returns

Horizontal scale value.

Examples

`DISPLAY:P25:PVTIME:FALL:X:SCALE 5.0E-6` sets the width of the graph to 5.000 µs when using the horizontal Falling Edge view.

DISPlay:P25:PVTime:FALL:X[:SCALe]:AUTO (No Query Form)

Automatically sets the starting time (position) and scale (width) values for the best display in the horizontal Falling Edge view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:FALL:X[:SCALe]:AUTO
```

Related Commands

DISPlay:P25:PVTime:FALL:X[:SCALe]:RESet (on page 912)

Examples

`DISPLAY:P25:PVTIME:FALL:X:SCALE:AUTO` automatically sets the starting time (position) and scale (width) values for the best display.

DISPlay:P25:PVTime:FALL:X[:SCALe]:OFFSet

Sets or queries the value for the starting time (offset) of the graph, in seconds, for the P25 Power vs. Time display when using the horizontal Falling Edge view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:FALL:X[:SCALe]:OFFSet
```

Related Commands

DISPlay:P25:PVTime:RISE:X[:SCALe] (on page 913)

Arguments

Floating point number that represents the value of the starting time (offset) of the graph, in seconds, when using the horizontal Falling Edge view.

Returns

Horizontal offset value.

Examples

`DISPLAY:P25:PVTIME:FALL:X:SCALE:OFFSET 5.0` sets the starting time (position) of the graph to 5.000 µS when using the horizontal Falling Edge view.

DISPlay:P25:PVTime:FALL:X[:SCALe]:RESet (No Query Form)

Resets the starting time (position) and scale (width) values for the horizontal Falling Edge view on the P25 Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:FALL:X[:SCALe]:RESet
```

Examples

`DISPLAY:P25:PVTIME:FALL:X:SCALE:RESET` resets the starting time (position) and scale (width) values for the horizontal Falling Edge view.

DISPlay:P25:PVTime:MARKer:SHOW:STATe

Shows or hides the marker readout on the P25 Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:MARKer:SHOW:STATe
```

Arguments

`ON` or 1 specifies to show the marker readout. OFF or 0 specifies to turn the marker readout off.

Returns

#<num_digit><num_byte><data(1)><data(2)>..<data(n)>

Where:

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the data value at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

DISPLAY:P25:PVTIME:MARKER:SHOW:STATE? might return #43204 (3204-byte data), which represents the vertical values (power) for the P25 Power vs. Time trace.

DISPlay:P25:PVTime:RISE:X[:SCALe]

Sets or queries the scale (width) value, in seconds, for the P25 Power vs. Time display when using the horizontal Rising Edge view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:RISE:X[:SCALe]
DISPlay:P25:PVTime:RISE:X[:SCALe]?
```

Arguments

Floating point number that represents the scale (width) value, in seconds, for the horizontal Rising Edge view.

Returns

Scale value.

Examples

DISPLAY:P25:PVTIME:RISE:X:SCALE 5.0E-6 sets the width of the graph to 5.000 µS for the horizontal Rising Edge view.

DISPlay:P25:PVTime:RISE:X[:SCALe]:AUTO (No Query Form)

Sets the scale (width) value, in seconds, for the P25 Power vs. Time display to automatic.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:RISE:X[:SCALe]:AUTO
```

Related Commands

DISPlay:P25:PVTime:RISE:X[:SCALe]:RESet (on page 914)

Examples

`DISPLAY:P25:PVTIME:RISE:X:SCALE:AUTO` automatically sets the starting time (position) and scale (width) values for the best display.

DISPlay:P25:PVTime:RISE:X[:SCALe]:OFFSet

Sets or queries the starting time value (offset), in seconds, for the P25 Power vs. Time display when using the horizontal Rising Edge view.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

`DISPlay:P25:PVTime:RISE:X[:SCALe]:OFFSet`

Related Commands

DISPlay:P25:PVTime:RISE:X[:SCALe] (on page 913)

Arguments

Floating point number that represents the value of the starting time (offset) of the graph, in seconds, for the horizontal Rising Edge view.

Returns

Horizontal scale view

Examples

`DISPLAY:P25:PVTIME:RISE:X:SCALE:OFFSET 5.0e-6` sets the starting time (position) of the graph to 5.000 µS for the horizontal Rising Edge view.

DISPlay:P25:PVTime:RISE:X[:SCALe]:RESet (No Query Form)

Resets the starting time (position) and scale (width) values for the horizontal Rising Edge view on the P25 Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

`DISPlay:P25:PVTime:RISE:X[:SCALe]:RESet`

Related Commands

DISPlay:P25:PVTime:RISE:X[:SCALe]:OFFSet (on page 914)

Examples

`DISPLAY:P25:PVTIME:RISE:X:SCALE:RESET` resets the starting time (position) and scale (width) values for the horizontal Rising Edge view.

DISPlay:P25:PVTime:WINDow:SELect:PLOT

Sets or queries which view to use for the P25 Power vs. Time display. Select from Full Burst, Rising Edge or Falling Edge.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:WINDow:SELect:PLOT {BURS|RISE|FALL}
DISPlay:P25:PVTime:WINDow:SELect:PLOT?
```

Related Commands

Arguments

- `BURSt` sets the view to Full Burst, which displays the entire packet, with vertical lines indicating the length of the burst.
- `RISE` sets the view to Rising Edge, which zooms the display into the interval around the burst rising edge, with vertical lines indicating the 10% to 90% Power-On Ramp time.
- `FALL` sets the view to Falling Edge, which zooms the display into the interval around the burst Falling Edge, with vertical lines indicating the 90% to 10% Power-Down Ramp time.

Returns

`DISPlay:P25:PVTime:WINDow:SELect:PLOT BURS` sets the view to Full Burst.

Examples

`DISPLAY:P25:PVTIME:WINDOW:SELECT:PLOT?` might return `RISE`, indicating that the view has been set to Rising Edge.

DISPlay:P25:PVTime:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule state in the Power vs Time display to on (showing) or off (hidden).

Conditions

Measurement view: P25 Power vs Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:P25:PVTime:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticule in the Power vs. Time display.

ON or 1 shows the graticule in the Power vs. Time display.

Returns

0 means the graticule in the Noise Temperature display is hidden (off).

1 means the graticule in the Noise Temperature display is showing (on).

Examples

DISPLAY:P25:PVTIME:WINDOW:TRACE:GRATICULE:GRID:STATE ON will turn on the graticule in the Noise Temperature display.

DISPLAY:P25:PVTIME:WINDOW:TRACE:GRATICULE:GRID:STATE? might return 1, indicating that the graticule in the Noise Temperature display is showing (on).

DISPlay:P25:PVTime:Y[:SCALe]

Sets or queries the vertical scale value for the P25 Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:Y[:SCALe] <NRf>
DISPlay:P25:PVTime:Y[:SCALe]?
```

Related Commands

DISPlay:P25:PVTime:Y[:SCALe]:PDIVision (on page 917)

Arguments

<NRf> = a numeric value for the vertical scale in dB.

Returns

<NR2> = a floating point number without an exponent, which is the vertical scale value.

Examples

DISP:P25:PVT:Y:SCAL 10.5 sets the vertical scale value to 10.50 dB.

DISP:P25:PVT:Y:SCAL? might return 10, indicating that the vertical scale is 10.00 dB.

DISPlay:P25:PVTime:Y[:SCALe]:AUTO (No Query Form)

Automatically selects the vertical scale and position values for the P25 Power vs Time display.

Conditions

Measurement view: P25 Power vs Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:Y[:SCALe]:AUTO
```

Related Commands

DISPlay:P25:PVTime:Y[:SCALe] (on page 916)

Examples

`DISP:P25:PVT:Y:SCAL:AUTO` specifies to reset the vertical scale and position (offset) values for the P25 Power vs. Time display.

DISPlay:P25:PVTime:Y[:SCALe]:OFFSet

Sets or queries the value of the vertical offset (top edge of the vertical axis) for the P25 Power vs. Time display.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:Y[:SCALe]:OFFSet<NRf>
DISPlay:P25:PVTime:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:P25:PVTime:Y[:SCALe] (on page 916)

Arguments

Floating point number between limits that specifies the value of the vertical offset. Positive inputs move the plot down and negative inputs move the plot up (as viewed by the user).

Returns

The value of the vertical offset for the P25 Power vs. Time display as a floating point number.

Examples

`DISPLAY:P25:PVTIME:Y[:SCALE]:OFFSET -10` sets the vertical offset to −10 dBm.

DISPlay:P25:PVTime:Y[:SCALe]:PDIVision

Sets or queries the value of the vertical scale for the P25 Power vs. Time display, in dB/division. This is only a visual control for panning the graph.

Conditions

Measurement view: P25 Power vs. Time

Group

Display commands

Syntax

```
DISPlay:P25:PVTime:Y[:SCALe]:PDIVision<NRf>
DISPlay:P25:PVTime:Y[:SCALe]:PDIVision?
```

Related Commands

DISPlay:P25:PVTime:Y[:SCALe] (on page 916)

Arguments

Floating point value that represents the value of the vertical scale, in dB/division, for the P25 Power vs. Time display.

Examples

`DISPLAY:P25:PVTIME:Y:SCALE:PDIVISION 20` sets the vertical scale to 20.0 dB/division.

DISPlay:P25:RADix

Set or queries the symbol radix for the P25 Symbol Table display.

Conditions

Measurement view: P25 Symbol Table

Group

Display commands

Syntax

```
DISPlay:P25:RADix { QUAT | BIN | MODS }
```

Arguments

`QUATernary`: sets the symbols base to quaternary.

`BINary`: sets the symbols base to binary.

`MODsymbols`: sets the symbols to modular.

Returns

`QUAT`: means that the symbols base is set to Quaternary.

`BINary`: means that the symbols base is set to Binary.

`MODsymbols`: means that the symbols base is set to ModSymbols (modular).

Examples

```
DISPLAY:P25:RADIX
```

DISPlay:PERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the graticule grid view state for the Phase error versus Time view.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Display commands

Syntax

```
DISPlay:PERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:PERRor[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

OFF or 0

ON or 1

Examples

`DISPlay:PERRor:MEASview2:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the Phase error versus Time Measview 2.

DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the Phase error versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Display commands

Syntax

```
DISPlay:PERRor[:MEASview<y>]:Y[:SCALe] <value>
DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:PERRor:[MEASview1]:Y[:SCALe]:OFFSet (on page 920)

Arguments

`<value>::<NRf>` specifies the vertical range.

Range: 1 to 100%.

Returns

<NRf>

Examples

`DISPlay:PERRor:MEASview1:Y:SCALe` sets the vertical range to 50% in the Phase error versus Time display Measurement view 1.

DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]:AUTO (No query form)

Sets the vertical scale automatically to fit the waveform to the screen in the Phase error versus Time display.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Display commands

Syntax

```
DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPlay:PERRor:MEASview2:Y:SCALe:AUTO` sets the vertical scale automatically to fit the waveform to the screen of Phase error versus Time measurement view 2.

DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the minimum vertical value (bottom edge) of the Phase error versus Time graph.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Phase error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Phase error versus Time).

Group

Display commands

Syntax

```
DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:PERRor[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:PERRor[:MEASview<y>]:Y[:SCALe] (on page 919)

Arguments

<value>::<NRf> specifies the minimum vertical value.

Range: -360 to +360°.

Returns

<NRf>

Examples

DISPlay:PERRor:MEASview2:Y:SCALe:OFFSet? -9.5 sets the minimum vertical value to -9.5% in the Phase error versus Time graph Measurement view 2.

DISPlay:PHVTime[:MEASview<y>]:SELected:TIMestamp

Sets or queries the display of the time stamp in the ogram plot.

Conditions

Applicable measurement view must be active.

Group

Display commands

Syntax

DISPlay:PHVTime[:MEASview<y>]:SELected:TIMestamp {OFF | ON | 0 | 1}

DISPlay:PHVTime[:MEASview<y>]:SELected:TIMestamp?

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional. By default y is 1.

OFF or 0 removes or turns off the time stamp.

ON or 1 displays or turns on the time stamp.

Returns

{OFF | ON | 0 | 1}

Examples

DISPlay:PHVTime:MEASview1:SELected:TIMestamp? queries the display status of the time stamp in the ogram plot view 1.

DISPlay:PHVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:PHVTime[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

OFF or 0 hides the graticule grid.

ON or 1 shows the graticule grid.

Examples

DISPLAY:PHVTIME:MEASview1:WINDOW:TRACE:GRATICULE:GRID:STATE ON shows the graticule grid on the Frequency versus Time view.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]

Sets or queries the horizontal scale (full-scale time) of the Phase versus Time graph. Programming a specified scale sets DISPlay:PHVTime[:MEASview<y>]:X[:SCALe] AUTO:STATe OFF.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe] <value>
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]?
```

Related Commands

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO:STAT (on page 924)

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 926)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::={ <NRf> | MAXimum | MINimum } specifies the horizontal scale in full-scale time. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively.

Use the DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (on page 926) and DISPlay:PHVTime[:MEASview<y>]:X[: SCALe]:OFFSet:MINimum? (on page 927) queries to get the upper and lower limit values of the setting range.

Examples

DISPLAY:PHVTIME:MEASview1:X:SCALE 1.5ms sets the horizontal scale to 1.5 ms.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale automatically to fit the waveform to the screen in the Phase versus Time view. Executing this command sets DISPlay:PHVTime[:MEASview<y>]:X [SCALe]:AUTO:STATe ON.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO
```

Related Commands

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 924)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

`DISPLAY:PHVTIME:MEASview1:X:SCALE:AUTO` sets the horizontal scale automatically to fit the waveform to the screen.

DISPlay:PHVTime[:MEASview?]:Y[:SCALe]:AXIS:ENABle:REFerence {set and query}

Sets or queries the state of Y reference checkbox.

Conditions

Measurement views: Phase VS Time.

Applicable only for MSO/LPD/SX.

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview?]:Y[:SCALe]:AXIS:ENABle:REFerence {0|1|TRUE |FALSE}
DISPlay:PHVTime[:MEASview?]:Y[:SCALe]:AXIS:ENABle:REFerence? (Query)
```

Arguments

`0` is used to change the 'Y Reference' checkbox state from checked to unchecked.

`1` is used to change the 'Y Reference' checkbox state from unchecked to checked.

Example

`DISPlay:PHVTime:MEASview1:Y:SCALe:AXIS:ENABle:REFerence 1` changes the state of 'Y Reference' checkbox to checked.

DISPlay:PHVTime[:MEASview<y>]:READout[:STATe]

Determines whether to show or hide the measurement parameter readouts in the Phase versus Time view.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

`DISPlay:PHVTime[:MEASview<y>]:READout[:STATe] { OFF | ON | 0 | 1 }`

`DISPlay:PHVTime[:MEASview<y>]:READout[:STATe]?`

Arguments

`OFF` or `0` hides the parameter readouts.

`ON` or `1` shows the parameter readouts.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. By default y is 1

Examples

`DISPLAY:PHVTIME:MEASVIEW1:READOUT:STATE ON` shows the parameter readouts on the screen.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe

Determines whether to set the horizontal scale automatically or manually.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe { OFF | ON | 0 | 1 }
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

`OFF` or 0 specifies that the horizontal scale is set manually. To set it, use the DISPlay:PHVTime[:MEASview<y>]:X[:SCALe] (on page 927) and DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 926) commands.

`ON` or 1 specifies that the horizontal scale is set automatically.

Examples

`DISPLAY:PHVTIME:MEASview1:X:SCALE:AUTO:STATE ON` specifies that the horizontal scale is set automatically.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:MAXimum? (Query Only)

Queries the upper limit of the horizontal scale setting range.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

`DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:MAXimum?`

Related Commands

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe] (on page 922)

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

`<NRf>` The upper limit of the horizontal scale setting range.

Examples

`DISPLAY:PHVTIME:MEASview1:X:SCALE:MAXIMUM?` might return `18.135E-3`, indicating that the upper limit of the horizontal scale setting range is 18.135 ms.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:MINimum? (Query Only)

Queries the lower limit of the horizontal scale setting range.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

`DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:MINimum?`

Related Commands

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe] (on page 922)

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

`<NRf>` The lower limit of the horizontal scale setting range.

Examples

`DISPLAY:PHVTIME:MEASview1:X:SCALE:MINIMUM?` might return `10.0E-9`, indicating that the lower limit of the horizontal scale setting range is 10.0 ns.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the Phase versus Time graph. Programming a specified offset sets `DISPlay:PHVTime:MEASview<y>:X[SCALe]:AUTO:STATe OFF`.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:AUTO:STATe (on page 924)

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe] (on page 922)

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

`<value>::={ <NRf> | MAXimum | MINimum }` specifies the horizontal offset. MAXimum and MINimum represent the upper and lower limits of the setting range, respectively.

Use the DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (on page 926) and DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (on page 927) queries to get the upper and lower limit values of the setting range.

Examples

`DISPLAY:PHVTIME:MEASview1:X:SCALE:OFFSET 800ns` sets the minimum horizontal value to 800 ns in the Phase versus Time graph.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum? (Query Only)

Queries the upper limit of the horizontal offset setting range.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MAXimum?
```

Related Commands

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 926)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<NRf> The upper limit of the horizontal offset setting range.

Examples

DISPLAY:PHVTIME:MEASview1:X:SCALE:OFFSET:MAXIMUM? might return -1.812E-3, indicating that the upper limit of the horizontal offset setting range is -1.812 ms.

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum? (Query Only)

Queries the lower limit of the horizontal offset setting range.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet:MINimum?

Related Commands

DISPlay:PHVTime[:MEASview<y>]:X[:SCALe]:OFFSet (on page 926)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<NRf> The lower limit of the horizontal offset setting range.

Examples

DISPLAY:PHVTIME:MEASview1:X:SCALE:OFFSET:MINIMUM? might return -16.28E-3, indicating that the lower limit of the horizontal offset setting range is -16.28 ms.

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the Phase versus Time graph.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe] <value>

```
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 929)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::<NRf> specifies the vertical range. Range: 1 to 1T°.

Examples

DISPLAY:PHVTIME:MEASview1:Y:SCALE 180 sets the vertical range to 180° in the Phase versus Time graph.

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale automatically to fit the waveform to the screen in the Phase versus Time view.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AUTO
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

DISPLAY:PHVTIME:MEASview1:Y:SCALE:AUTO sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS

Sets or queries the vertical axis representation.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS { MODulopi | CONTinuous }
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

MODulopi (modulo π) shows the phase constrained within ±180 ° along the vertical axis.

CONTinuous shows the phase as continuous quantity along the vertical axis.

Examples

DISPLAY:PHVTIME:MEASview1:Y:SCALE:AXIS MODulopi selects modulo π representation for the vertical axis.

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS:REFerence

Sets or queries which time point in the analysis period to use as the zero-phase-value reference.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS:REFerence <value>
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:AXIS:REFerence?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::<NRf> specifies the phase reference time.

Examples

DISPLAY:PHVTIME:MEASview1:Y:SCALE:AXIS:REFERENCE 1.5us sets the phase reference time to 1.5 µs.

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the center of the vertical axis) in the Phase versus Time graph.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

```
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe] (on page 927)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<value>::<NRf> specifies the vertical offset. Range: -0.5T to +0.5T°.

Examples

DISPLAY:PHVTIME:MEASview1:Y:SCALE:OFFSET -158.5 sets the vertical offset to −158.5° in the Phase versus Time graph.

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:RESCale (No Query Form)

Rescales the vertical axis automatically to fit the Phase versus Time waveform to the screen.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

DISPlay:PHVTime[:MEASview<y>]:Y[:SCALe]:RESCale

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Examples

DISPLAY:PHVTIME:MEASview1:Y:SCALE:RESCALE rescales the vertical axis automatically to fit the Phase versus Time waveform to the screen.

DISPlay:PNOise:LEGend:STATe

Determines whether to show or hide the trace legend on the display. The legend indicates the trace detection and function on the screen for each displayed trace.

Conditions

Measurement views: Phase versus Time

Group

Display commands

Syntax

DISPlay:PNOise:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:PNOise:LEGend:STATe?

Arguments

OFF or 0 hides the trace legend.

ON or 1 shows the trace legend.

Examples

DISPLAY:PNOISE:LEGEND:STATE ON shows the trace legend on the screen.

DISPlay:PNOise:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the phase noise view.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:PNOise:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the graph.

`ON` or 1 shows the readout for the selected marker in the graph.

Examples

`DISPLAY:PNOISE:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:PNOise:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale to the default values described below in the phase noise view.

Vertical offset = -50 dBc/Hz, Vertical scale = 100 dB, Horizontal start = 10 Hz, and Horizontal stop = 1 GHz

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:RESet:SCALe
```

Arguments

None

Examples

`DISPLAY:PNOISE:RESET:SCALE` resets the horizontal and vertical scale to the default values.

DISPlay:PNOise:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:PNOise:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Examples

`DISPLAY:PNOISE:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen.

DISPlay:PNOise:X[:SCALe]:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the phase noise view.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:PNOISE:X:SCALE:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:PNOise:X[:SCALe]:STARt

Sets or queries the start frequency (left edge) of the phase noise graph.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:X[:SCALe]:STARt <value>
DISPlay:PNOise:X[:SCALe]:STARt?
```

Arguments

`<value>::<NRf>` specifies the start frequency.

Range: 10 mHz to 100 MHz.

Note that (start frequency) = 104 × (stop frequency).

Examples

`DISPLAY:PNOISE:X:SCALE:START 10Hz` sets the start frequency to 10 Hz in the phase noise graph.

DISPlay:PNOise:X[:SCALe]:STOP

Sets or queries the stop frequency (right edge) of the phase noise graph.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:X[:SCALe]:STOP <value>
DISPlay:PNOise:X[:SCALe]:STOP?
```

Arguments

`<value>::<NRf>` specifies the stop frequency.

Range: 100 Hz to 1 THz.

Note that (start frequency) = 104 × (stop frequency).

Examples

`DISPLAY:PNOISE:X:SCALE:STOP 2GHz` sets the stop frequency to 2 GHz in the phase noise graph.

DISPlay:PNOise:Y[:SCALe]

Sets or queries the vertical range of the phase noise graph.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:Y[:SCALe] <value>
DISPlay:PNOise:Y[:SCALe]?
```

Arguments

`<value>::<NRf>` specifies the vertical range. Range: 0.1 to 200 dB.

Examples

`DISPLAY:PNOISE:Y:SCALE 100` sets the vertical range to 100 dB for the phase noise graph.

DISPlay:PNOise:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the phase noise view.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:PNOISE:Y:SCALE:AUTO` rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:PNOise:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) of the phase noise graph.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:Y[:SCALe]:OFFSet <value>
DISPlay:PNOise:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -200 to +20 dBc/Hz.

Examples

`DISPLAY:PNOISE:Y:SCALE:OFFSET -12.5` sets the vertical offset to -12.5 dBc/Hz for the phase noise graph.

DISPlay:PNOise:Y[:SCALe]:PDIVision

Sets or queries the vertical scale (per division) of the phase noise graph.

Conditions

Measurement views: Phase noise

Group

Display commands

Syntax

```
DISPlay:PNOise:Y[:SCALe]:PDIVision <value>
DISPlay:PNOise:Y[:SCALe]:PDIVision?
```

Arguments

`<value>::<NRf>` specifies the vertical scale (per division).

Range: 0.01 to 20 dB/div.

Examples

`DISPLAY:PNOISE:Y:SCALE:PDIVISION 5` sets the vertical scale to 5 dB/div.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:CURRent:BIN

Sets or queries the current bin number where the indicator is positioned from the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:CURRent:BIN <value>
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:CURRent:BIN?
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NR1>` sets the current bin number.

Examples

`DISPLAY:PULSE:CUMULATIVE:HISTOGRAM:CURRENT:BIN 50` sets the current bin number to 50.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:AUTO (No Query Form)

Sets the scale auto value in the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:AUTO <value>
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NR1>`

Examples

`DISPLAY:PULSE:CUMULATIVE:HISTOGRAM:MEASview<y>:SCALE:AUTO 1` sets the auto scale value to 1.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:RESEt (No Query Form)

Resets the current scale in the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

`DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>:]SCALe:RESEt <value>`

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NR1>`

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:RESEt` sets the scale value to 1.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:AUTO (No Query Form)

Sets the X auto value in the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

`DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:AUTO <value>`

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Returns

`<NR1>`

Examples

`DISPLAY:PULSE:CUMULATIVE:HISTOGRAM:MEASview<y>:SCALE:X:AUTO 1` sets the X auto value to 1.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:NUMBer

Sets or queries the current X scale number from the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:NUMBer <value>
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:NUMBer?
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Returns

`<NR1>` returns the X scale value.

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:X:NUMBer 50` sets the X scale value to 50.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:OFFSet

Sets or queries the current X offset number from the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:OFFSet <value>
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:OFFSet?
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Returns

`<NR1>` returns the X offset value.

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:X:OFFSET 2` sets the X scale offset value to 2.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:RSCale (No Query Form)

Sets the current X reset scale in the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

`DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:X:RSCale <value>`

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

The parameter <x> = 0 to 4.

Returns

`<NR1>`

Examples

`DISPLAY:PULSE:CUMULATIVE:HISTOGRAM:MEASview<y>:SCALE:X:RSCALE 1` sets the X reset scale value to 1.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:AUTO (No Query Form)

Sets the current Y auto value in the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

`DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:AUTO <value>`

Arguments

`<value>` sets the Y auto value.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NR1>`

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:Y:AUTO 1` sets the Y auto value to 1.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:FULL

Sets or queries the current Y scale full number from the histogram display.

Conditions

Measurement views:

Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:FULL <value>
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:FULL?
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NR1>` sets the Y scale full value

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:Y:FULL? 10` sets the Y scale value to 10.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:OFFSet

Sets the current Y offset numbering the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:OFFSet<value>
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:OFFSet?
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NR1>` returns the Y scale offset value.

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:Y:OFFSET 2` sets the Y scale offset value to 2.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:RSCale (No Query Form)

Sets the current Y reset scale in the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

`DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:RSCale <value>`

Arguments

`<value>` sets the Y reset scale value.

Returns

`<NR1>` sets the Y reset scale value.

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:Y:RSCALE 1` sets the Y reset scale value to 1.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:STOP? (Query Only)

Queries the minimum vertical value (bottom edge) in the cumulative histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

`DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:SCALe:Y:STOP?`

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NRf>` is the minimum vertical value (bottom edge).

Examples

`DISPlay:PULSe:CUMulative:HISTogram:MEASview<y>:SCALe:Y:STOP?` might return 0, indicating that the minimum vertical value is 0 in the pulse cumulative histogram display.

DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries the current graticule selection from the histogram display.

Conditions

Measurement views: Cumulative Histogram with the specified Measurement View Number

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:HISTogram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { 0 | 1 }
```

Arguments

`0` sets the display without graticule (box is unchecked)

`1` sets the display with graticule (checkbox is checked)

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

0 or 1, <NRf>

Examples

`DISPLAY:PULSE:CUMULATIVE:HISTOGRAM:MEASview<y>:WINDOW:TRACE:GRATICULE:GRID:STATE 1` sets the display with graticule option checked.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MFReqerror

Sets or queries the Max Frequency error measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MFReqerror <value>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MFReqerror
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MFReqerror?
```

Arguments

`0` unchecks the checkbox

`1` checks the checkbox

Returns

0 or 1, <NRf>

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:MFReqerror 1` enables the Max Frequency Error measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:ATX

Sets or queries the Peak Power measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:ATX <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:ATX?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`0` unchecks the checkbox

`1` checks the checkbox

Returns

0 or 1, <NRf>

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:ATX 1` enables the Average Transmitted Power measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:AVERage

Sets or queries the Average ON Power measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:AVERage <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:AVERage?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:AVERage 1 enables the Average ON Power measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DRODb

Sets or queries the Droop dB measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DRODb <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DRODb?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:DRODb 1 enables the Droop dB measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DROop

Sets or queries the Droop measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DROop <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DROop?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:DROop 1 enables the Droop measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DUTPct

Sets or queries the Duty Factor (%) measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DUTPct <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DUTPct?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:DUTPct 1 enables the Duty Factor(%) measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DUTRatio

Sets or queries the Duty Factor (Ratio) measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DUTRatio <0 | 1>
```

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:DUTRatio?

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:DUTRatio 1 enables the Duty Factor (Ratio) measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FABS

Sets or queries the Absolute Frequency measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FABS <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FABS?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:FABS 1 enables the Absolute Frequency measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FALL

Sets or queries the Fall Time measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FALL <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FALL?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:FALL 1 enables the Fall Time measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FDELta

Sets or queries the Delta Frequency measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FDELta <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FDELta?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:FDELta 1 enables the Delta Frequency measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FRDeviation

Sets or queries the Frequency Deviation measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FRDeviation <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:FRDeviation?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:FRDeviation 1 enables the Frequency Deviation measurement.

DISPLAY:PULSe:CUMulative:STATistics[:MEASview<y>]:IRAMplitude

Sets or queries the Response Amplitude measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPLAY:PULSe:CUMulative:STATistics[:MEASview<y>]:IRAMplitude <0 | 1>
DISPLAY:PULSe:CUMulative:STATistics[:MEASview<y>]:IRAMplitude?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPLAY:PULSe:CUMulative:STATistics:MEASview1:IRAMplitude 1 enables the Response Amplitude measurement.

DISPLAY:PULSe:CUMulative:STATistics[:MEASview<y>]:IRTime

Sets or queries the Impulse Response Time measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPLAY:PULSe:CUMulative:STATistics[:MEASview<y>]:IRTime <0 | 1>
DISPLAY:PULSe:CUMulative:STATistics[:MEASview<y>]:IRTime?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPLAY:PULSe:CUMulative:STATistics:MEASview1:IRTime 1 enables the Impulse Response Time measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MPHerror

Sets or queries the Max phase error measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MPHerror <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MPHerror?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

<Boolean> , 0 or 1

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:MPHerror 1` enables the Max phase error measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:OVEDb

Sets or queries the Overshoot dB measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:OVEDb <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:OVEDb?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`0` unchecks the checkbox

`1` checks the checkbox

Returns

0 or 1, <NRf>

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:OVEDb 1` enables the Overshoot dB measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:OVERshoot

Sets or queries the Overshoot measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:OVERshoot <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:OVERshoot?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`0` unchecks the checkbox

`1` checks the checkbox

Returns

0 or 1, <NRf>

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:OVERshoot 1` enables the Overshoot measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PHDeviation

Sets or queries the Phase Deviation measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PHDeviation <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PHDeviation?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:PHDeviation 1` enables the Phase Deviation measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPFD

Sets or queries the Pulse-Pulse Frequency Difference measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPFD <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPFD?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:PPFD 1 enables the Pulse-Pulse Frequency Difference measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPFRequency

Sets or queries the Pulse-pulse carrier frequency measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPFRequency <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPFRequency?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:PPFRequency 1 enables the Pulse-pulse carrier frequency phase measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPOWer

Sets or queries the Peak Power measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPOWer <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPOWer?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:PPOWer 1 enables the Peak Power measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPPD

Sets or queries the Pulse-Pulse Phase Difference measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPPD <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPPD?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:PPPD 1 enables the Pulse-Pulse Phase Difference measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPPHase

Sets or queries the Pulse-pulse carrier phase measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPPHase <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:PPPHase?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:PPPHase 1 enables the Pulse-pulse carrier phase measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RINTerval

Sets or queries the Repetition Interval measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RINTerval <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RINTerval?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:RINTerval 1 enables the Repetition Interval measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RIPDb

Sets or queries the Ripple dB measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RIPDb <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RIPDb?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:RIPDb 1 enables the Ripple dB measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RIPPle

Sets or queries the Ripple measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RIPPle <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RIPPle?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:RIPPle 1 enables the Ripple measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RISE

Sets or queries the Rise Time measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RISE <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RISE?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:RISE 1 enables the Rise Time measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RMSFreqerror

Sets or queries the RMS Frequency error measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RMSFreqerror <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RMSFreqerror?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:RMSFreqerror 1` enables the RMS Frequency error measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MFReqerror

Sets or queries the Max Frequency error measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MFReqerror <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:MFReqerror?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`0` unchecks the checkbox

`1` checks the checkbox

Returns

<0 | 1>

Examples

`DISPlay:PULSe:CUMulative:STATistics:MEASview1:MFReqerror 1` enables the Max Frequency Error measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RMSPherror

Sets or queries the Max Frequency error measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RMSPherror <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RMSPherror?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`0` unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:RMSPherror 1 enables the Max Frequency Error measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RRATe

Sets or queries the Repetition Rate measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RRATe <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:RRATe?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:RRATe 1 enables the Repetition Rate measurement.

DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:WIDTh

Sets or queries the Pulse Width measurement selection from the Cumulative Statistics display.

Conditions

Measurement views: Pulse Cumulative Statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:WIDTh <0 | 1>
DISPlay:PULSe:CUMulative:STATistics[:MEASview<y>]:WIDTh?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

DISPlay:PULSe:CUMulative:STATistics:MEASview1:WIDTh 1 enables the Pulse Width measurement.

DISPlay:PULSe:MEASview<y>:DELete (No Query Form)

Deletes the measurement view in the pulsed RF measurements.

Conditions

Measurement views: Pulsed RF measurements

Group

Display commands

Syntax

DISPlay:PULSe:MEASview<y>:DELete { RESult | TRACe | STATistics}

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

RESult deletes the pulse table view.

TRACe deletes the pulse trace view.

STATistics deletes the pulse statistics view.

If you attempt to delete a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Examples

DISPlay:PULSe:MEASview1:DELete deletes the pulse trace view.

DISPlay:PULSe:MEASview<y>[:SOURce<x>]:NEW (No Query Form)

Selects a measurement view in the pulsed RF measurements on the screen. The query command returns the currently selected view.

Conditions

Should be connected to MSO/LPD to Set or Query.

Source keyword is optional, if not present Source1 will be default source.

Measurement views: Pulsed RF with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:MEASview<y>[:SOURce<x>]:NEW { RESult | TRACe | STATistics }
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<x> = 1 to 8, representing Range of Source.

RESult opens the pulse table view.

TRACe opens the pulse trace view.

STATistics opens the pulse statistics view.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Examples

DISPlay:PULSe:MEASview2:SOURce1:NEW STATistics creates pulse statistics measurement with source 1.

DISPlay:PULSe:MEASview<y>:SELect

Selects a measurement view in the pulsed RF measurements on the screen. The query command returns the currently selected view.

Conditions

Measurement views: Pulsed RF with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:MEASview<y>:SELect { RESult | TRACe | STATistics}
DISPlay:PULSe:MEASview<y>:SELect?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

RESult selects the pulse table view.

TRACe selects the pulse trace view.

STATistics selects the pulse statistics view.

If you attempt to select a view that is not displayed on screen, the error (-200, "Execution error; Measurement not running") will be returned.

Returns

<NRf>

Examples

DISPlay:PULSe:MEASview2:SELect TRACe selects the pulse trace Measurement view 2.

DISPlay:PULSe:OGRAm[:MEASview<y>]

Sets the chosen display from the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]<arg1>
DISPlay:PULSe:OGRAm[:MEASview<y>]
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<arg1> is FVT or TVT or BOTH

Where

TVT = Time Vs Time

FVT = Frequency Vs Time

BOTH = Both

Returns

<String> FVT or TVT or BOTH

Examples

DISPlay:PULSe:OGRAm:MEASview1 BOTH sets the display type to both.

DISPlay:PULSe:OGRAm[:MEASview<y>]:FRAME:INFOrmation

Sets or queries the Frame Info parameter is enabled or not from the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]:FRAME:INFOrmation <0 | 1>
DISPlay:PULSe:OGRAm[:MEASview<y>]:FRAME:INFOrmation?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

0 unchecks the checkbox

1 checks the checkbox

Returns

0 or 1, <NRf>

Examples

`DISPlay:PULSe:OGRAm:MEASview1:FRAME:INFOrmation 1` enables the Frame Info parameter.

DISPlay:PULSe:OGRAm[:MEASview<y>]:MARKer:FRAME

Sets or queries the Marker frame number from the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]:MARKer:FRAME <value>
DISPlay:PULSe:OGRAm[:MEASview<y>]:MARKer:FRAME?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value> :: = <NR1>` sets the marker frame number.

Returns

`<NR1>`

Examples

`DISPlay:PULSe:OGRAm:MEASview1:MARKer:FRAME 5` sets the marker frame number to 5.

DISPlay:PULSe:OGRAm[:MEASview<y>]:MARKer:SHOW:STATe

Sets or queries the Show Marker readout in graph option from the Prefs tab of the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]:MARKer:SHOW:STATe {OFF | ON | 0 | 1}
DISPlay:PULSe:OGRAm[:MEASview<y>]:MARKer:SHOW:STATe?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`0` unchecks the checkbox

1 checks the checkbox

Returns

{OFF | ON | 0 | 1}

Examples

DISPlay:PULSe:OGRAm:MEASview1:MARKer:SHOW:STATe 1 enables the Show Marker readout in graph parameter.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:FREQuency:STARt

Sets or queries the current X scale frequency start value from the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:FREQuency:STARt <value>
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:FREQuency:STARt?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value> :: = <NR1> sets the X scale frequency start value.

Returns

<NR1>

Examples

DISPlay:PULSe:OGRAm:MEASview1:SCALe:X:FVTime:FREQuency:STARt 43 sets X scale frequency start value to 43.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:FREQuency:STOP

Sets or queries the current X scale frequency stop value from the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:FREQuency:STOP <value>
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:FREQuency:STOP?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value> :: = <NR1> sets the X scale frequency stop value.

Returns

<NR1>

Examples

DISPlay:PULSe:OGRAm:MEASview1:SCALe:X:FVTime:FREQuency:STOP 155 sets X scale frequency stop value to 155.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:RSCale (No Query Form)

Restores the horizontal axis of start frequency and stop frequency to default value in the Frequency vs Time plot of Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:FVTime:RSCale

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

DISPlay:PULSe:OGRAm:MEASview1:SCALe:X:FVTime:RSCale restores the horizontal axis of start frequency and stop frequency to default value.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:RSCale (No Query Form)

Restores the horizontal axis of position and scale to default value in the Time vs Time plot of Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:RSCale

Arguments

None

Examples

`DISPLay:PULSe:OGRAm:MEASview1[:SCALe]:X:RSCALe` restores the horizontal axis of position and scale to default value.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:TVTime (No Query Form)

Sets the scale value in the Time vs Time of Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

`DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:TVTime <value>`

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value> :: = <NR1>` sets the scale value in Time vs Time.

Examples

`DISPlay:PULSe:OGRAm:MEASview1:SCALe:X:TVTime 1` sets the scale value to 1.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:TVTime:OFFSet (No Query Form)

Sets the scale value in the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

`DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:TVTime:OFFSet <value>`

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value> :: = <NR1>` sets the X scale offset value.

Examples

`DISPlay:PULSe:OGRAm:MEASview1:SCALe:X:TVTime:OFFSet 1` sets the X scale offset value to 1.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:TVTime:RSCale (No Query Form)

Restores the horizontal axis of position and scale to default value in the Time vs Time plot of Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:X:TVTime:RSCale
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

None

Examples

`DISPlay:PULSe:OGRAm:MEASview1:SCALe:X:TVTime:RSCale` restores the horizontal axis of position and scale to default value.

DISPlay:PULSe:OGRAm[:MEASview<y>]:FVTime:DETection

Sets or queries the type of detection for the specified trace.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]:FVTime:DETection {AVERage | POSitive | NEGative | POSNegative |
   SAMPle}
DISPlay:PULSe:OGRAm[:MEASview<y>]:FVTime:DETection?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`AVERage` displays the average data value for each pixel.

`POSitive` displays the maximum data value for each pixel.

`NEGative` displays the minimum data value for each pixel.

`POSNegative` displays the maximum and minimum data values for each pixel.

SAMPle displays the first sample value received for each pixel.

Returns

{AVERage | POSitive | NEGative | POSNegative | SAMPle}

Examples

DISPlay:PULSe:OGRAm:MEASview1:FVTime:DETection POSitive enables positive detection.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:RSCale

Restores the default value of both the axis inTime vs Time and Frequency vs Time plot of Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:RSCale
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

DISPlay:PULSe:OGRAm:MEASview1:SCALe:RSCale restores default value in PulseOgram displays.

DISPlay:PULSe:OGRAm[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:PULSe:OGRAm[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

OFF or 0 hides the graticule grid.

ON or 1 shows the graticule grid.

Returns

{ OFF | ON | 0 | 1 }

Examples

`DISPlay:PULSe:OGRAm:MEASview1:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the screen.

DISPlay:PULSe:OGRAm[:MEASview<y>]:TRACE:POINts

Sets or queries the trace points in the Pulseo-gram measurement.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]:TRACE:POINts {ONEK | TENK | HUNDredk | NDECimate | NEVerdecimate}
DISPlay:PULSe:OGRAm[:MEASview<y>]:TRACE:POINts?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`ONEK` sets the trace points to 1k.

`TENK` sets the trace points to 10k.

`HUNDredk` sets the trace points to 100k.

`NDECimate` or `NEVerdecimate` sets the trace points to Never decimate.

Returns

{ONEK | TENK | HUNDredk | NDECimate | NEVerdecimate}

Examples

`DISPlay:PULSe:OGRAm:MEASview1:TRACE:POINts ONEK` selects the trace points of 1000 in the PulseOgram measurement.

DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:Y:FRAMe:FULL

Sets or queries the frame scale value in the Pulse-Ogram display in fast frame mode acquisition.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:Y:FRAMe:FULL <value>
DISPlay:PULSe:OGRAm[:MEASview<y>][:SCALe]:Y:FRAMe:FULL?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value> :: = <NR1> sets the frame scale value.

Returns

<NR1> sets the frame scale value.

Examples

DISPlay:PULSe:OGRAm:MEASview1:SCALe:Y:FRAMe:FULL 4 sets the frame scale value to 4.

DISPlay:PULSe:OGRAm:SCALe:Y:FRAMe:OFFSet

Sets or queries the frame offset value in the Pulse-Ogram display in fast frame mode acquisition.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm:SCALe:Y:FRAMe:OFFSet <value>
DISPlay:PULSe:OGRAm:SCALe:Y:FRAMe:OFFSetDISPlay:PULSe:OGRAm: SCALe:Y:FRAMe:OFFSet?
```

Arguments

<value> :: = <NR1> sets the frame offset value.

Examples

DISPLAY:PULSE:OGRAM:SCALE:Y:FRAME:OFFSET 2 sets the frame offset value to 2.

DISPlay:PULSe:OGRAm[:MEASview<y>]:TVTime:SMOOth:POINts

Sets or queries the value of Smooth points from the Traces tab in Time vs Time display of the Pulse-Ogram.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>]:TVTime:SMOOth:POINts <value>
DISPlay:PULSe:OGRAm[:MEASview<y>]:TVTime:SMOOth:POINts?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value> :: = <NR1> sets the smooth points value.

Returns

<NR1> sets the smooth points value.

Examples

`DISPlay:PULSe:OGRAm:MEASview1:TVTime:SMOOth:POINts 5` sets the smooth points value to 5.

DISPlay:PULSe:OGRAm[:MEASview<y>]

Sets the chosen display from the Pulse-Ogram display.

Conditions

Measurement views: Pulse-Ogram

Group

Display commands

Syntax

```
DISPlay:PULSe:OGRAm[:MEASview<y>] <arg1>
DISPlay:PULSe:OGRAm[:MEASview<y>]?
```

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

`<arg1>` = `{TVT | FVT | BOTH}`

Where

`TVT` =Time Vs Time

`FVT` =Frequency Vs Time

`BOTH` =Both

Returns

<String> TVT or FVT or BOTH

Examples

`DISPlay:PULSe:OGRAm:MEASview1 FVT` sets Frequency vs Time as the display type.

DISPlay:PULSe:RESult[:MEASview<y>]:ATX

Determines whether or not to show the average transmitted power measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:ATX { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:ATX?
```

Arguments

`OFF` or `0` does not show the average transmitted power measurement result.

`ON` or `1` shows the average transmitted power measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:ATX ON` shows the average transmitted power measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:AVERage

Determines whether or not to show the average on power measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:AVERage { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:AVERage?
```

Arguments

`OFF` or `0` does not show the average on power measurement result.

`ON` or `1` shows the average on power measurement result in the results table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:AVERAGE ON` shows the average on power measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:DRODb

Determines whether or not to show the droop measurement result in dB in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:DRODb { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:DRODb?
```

Arguments

`OFF` or `0` does not show the droop measurement result in dB.

`ON` or `1` shows the droop measurement result in dB in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:DRODB ON` shows the droop measurement result in dB in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:DROop

Sets or queries showing the droop measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:DROop { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:DROop?
```

Arguments

`OFF` or `0` does not show the droop measurement result.

`ON` or `1` shows the droop measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:DROOP ON` shows the droop measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:DUTPct

Determines whether or not to show the duty factor (%) measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:DUTPct { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:DUTPct?
```

Arguments

OFF or 0 does not show the duty factor measurement result.

ON or 1 shows the duty factor measurement result in the pulse table.

Returns

See Arguments.

Examples

DISPLAY:PULSE:RESULT:MEASVIEW1:DUTPCT ON shows the duty factor (%) measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:DUTRatio

Determines whether or not to show the duty factor (ratio) measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:DUTRatio { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:DUTRatio?
```

Arguments

OFF or 0 does not show the duty factor measurement result.

ON or 1 shows the duty factor measurement result in the pulse table.

Returns

See Arguments.

Examples

DISPLAY:PULSE:RESULT:MEASVIEW1:DUTRATIO ON shows the duty factor (ratio) measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:FABS

Determines whether or not to show the absolute frequency measurement result in the Pulse Table.

Conditions

Measurement views: Pulse Table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:FABS {OFF | ON | 0 | 1}
```

Arguments

OFF or 0 does not show the absolute frequency measurement result in the pulse table.

ON or 1 shows the absolute frequency measurement result in the pulse table.

Returns

See Arguments.

Examples

DISPLAY:PULSE:RESULT:MEASVIEW1:FABS ON shows the absolute frequency measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:FALL

Determines whether or not to show the fall time measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:FALL { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:FALL?
```

Arguments

OFF or 0 does not show the fall time measurement result.

ON or 1 shows the fall time measurement result in the pulse table.

Returns

See Arguments.

Examples

DISPLAY:PULSE:RESULT:MEASVIEW1:FALL ON shows the fall time measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:FDELta

Determines whether or not to show the delta frequency measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:FDELta { OFF | ON | 0 | 1 }
```

Arguments

OFF or 0 does not show the delta frequency measurement result.

ON or 1 shows the delta frequency measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:FDELTA ON` shows the delta frequency measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:FRDeviation

Determines whether or not to show the frequency deviation measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:FRDeviation { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:FRDeviation?
```

Arguments

`OFF` or `0` does not show the frequency deviation measurement result.

`ON` or `1` shows the frequency deviation measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:FRDEVIATION ON` shows the frequency deviation measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:IRAMplitude

Sets or queries showing the impulse response amplitude measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:IRAMplitude { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:IRAMplitude?
```

Arguments

`OFF` or `0` does not show the Impulse Response Amplitude measurement result.

`ON` or `1` shows the Impulse Response Amplitude measurement result in the results table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:IRAMPLITUDE ON` shows the Impulse Response Amplitude measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:IRTime

Sets or queries showing the Impulse Response Time measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:IRTime { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:IRTime?
```

Arguments

`OFF` or `0` does not show the Impulse Response Time measurement result.

`ON` or `1` shows the Impulse Response Time measurement result in the results table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:IRTIME ON` shows the Impulse Response Time measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:MFReqerror

Determines whether or not to show the maximum frequency error measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:MFReqerror { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:MFReqerror?
```

Arguments

`OFF` or `0` does not show the maximum frequency error measurement result.

`ON` or `1` shows the maximum frequency error measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:MFREQERROR ON` shows the maximum frequency error measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:MPHerror

Determines whether or not to show the maximum phase error measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:MPHerror { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:MPHerror?
```

Arguments

`OFF` or `0` does not show the maximum phase error measurement result.

`ON` or `1` shows the maximum phase error measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:MPHERROR ON` shows the maximum phase error measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:OVEDb

Determines whether or not to show the Overshoot measurement result in dB in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:OVEDb { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:OVEDb?
```

Arguments

`OFF` or `0` does not show the Overshoot measurement result in dB.

`ON` or `1` shows the Overshoot measurement result in dB in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:OVEDB ON` shows the Overshoot measurement result in dB in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:OVERshoot

Sets or queries whether or not to show the Overshoot measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:OVERshoot { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:OVERshoot?
```

Arguments

`OFF` or `0` does not show the Overshoot measurement result.

`ON` or `1` shows the Overshoot measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:OVERSHOOT ON` shows the Overshoot measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:PHDeviation

Determines whether or not to show the phase deviation measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:PHDeviation { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:PHDeviation?
```

Arguments

`OFF` or `0` does not show the phase deviation measurement result.

`ON` or `1` shows the phase deviation measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:PHDEVIATION ON` shows the phase deviation measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:PPPD

Determines whether or not to show the pulse to pulse phase measurement result in the Pulse Table.

Conditions

Measurement views: Pulse Table

Group

Display commands

Syntax

`DISPlay:PULSe:RESult[:MEASview<y>]:PPPD {OFF | ON | 0 | 1}`

Arguments

`OFF` or `0` does not show the pulse to pulse phase measurement result in the pulse table.

`ON` or `1` shows the pulse to pulse phase measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:PPPD ON` shows the pulse to pulse frequency measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:PPFD

Determines whether or not to show the pulse to pulse frequency measurement result in the Pulse Table.

Conditions

Measurement views: Pulse Table

Group

Display commands

Syntax

`DISPlay:PULSe:RESult[:MEASview<y>]:PPFD {OFF | ON | 0 | 1}`

Arguments

`OFF` or `0` does not show the pulse to pulse frequency measurement result in the pulse table.

`ON` or `1` shows the pulse to pulse frequency measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:PPFD ON` shows the pulse to pulse frequency measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:PPFRequency

Determines whether or not to show the pulse-pulse carrier frequency measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:PPFRequency { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:PPFRequency?
```

Arguments

`OFF` or `0` does not show the pulse-pulse carrier frequency measurement result.

`ON` or `1` shows the pulse-pulse carrier frequency measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:PPFREQUENCY ON` shows the pulse-pulse carrier frequency measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:PPOWer

Determines whether or not to show the peak power measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:PPOWer { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:PPOWer?
```

Arguments

`OFF` or `0` does not show the peak power measurement result.

`ON` or `1` shows the peak power measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:PPOWER ON` shows the peak power measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:PPPHase

Determines whether or not to show the pulse-pulse carrier phase measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult:PPPHase { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:PPPHase?
```

Arguments

`OFF` or `0` does not show the pulse-pulse carrier phase measurement result.

`ON` or `1` shows the pulse-pulse carrier phase measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASview1:PPPHASE ON` shows the pulse-pulse carrier phase measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:RINTerval

Determines whether or not to show the repetition interval measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:RINTerval { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:RINTerval?
```

Arguments

`OFF` or `0` does not show the repetition interval measurement result.

`ON` or `1` shows the repetition interval measurement result in the results table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:RINTERVAL ON` shows the repetition interval measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:RIPDb

Sets or queries showing the ripple measurement result in dB in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:RIPDb { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:RIPDb?
```

Arguments

`OFF` or `0` does not show the ripple measurement result in dB.

`ON` or `1` shows the ripple measurement result in dB in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:RIPDB ON` shows the ripple measurement result in dB in the pulse table.

DISPlay:PULSe:RESult:MEASview<y>:RIPPle

Sets or queries showing the ripple measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult:MEASview<y>:RIPPle { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult:MEASview<y>:RIPPle?
```

Arguments

`OFF` or `0` does not show the ripple measurement result.

`ON` or `1` shows the ripple measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:RIPPLE ON` shows the ripple measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:RISE

Determines whether or not to show the rise time measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:RISE { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:RISE?
```

Arguments

`OFF` or `0` does not show the rise time measurement result.

`ON` or `1` shows the rise time measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:RISE ON` shows the rise time measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:RMSFreqerror

Determines whether or not to show the RMS frequency error measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:RMSFreqerror { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:RMSFreqerror?
```

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

`OFF` or `0` does not show the RMS frequency error measurement result.

`ON` or `1` shows the RMS frequency error measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:RMSFREQERROR ON` shows the RMS frequency error measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:RMSPherror

Determines whether or not to show the RMS phase error measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:RMSPherror { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:RMSPherror?
```

Arguments

`OFF` or `0` does not show the RMS phase error measurement result.

`ON` or `1` shows the RMS phase error measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:RMSPHERROR ON` shows the RMS phase error measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:RRATe

Determines whether or not to show the repetition rate measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:RRATe { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:RRATe?
```

Arguments

`OFF` or `0` does not show the repetition rate measurement result.

`ON` or `1` shows the repetition rate measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:RRATE ON` shows the repetition rate measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:TIME

Determines whether or not to show the time measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:TIME { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:TIME?
```

Arguments

`OFF` or `0` does not show the time measurement result.

`ON` or `1` shows the time measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:TIME ON` shows the time measurement result in the pulse table.

DISPlay:PULSe:RESult[:MEASview<y>]:WIDTh

Determines whether or not to show the pulse width measurement result in the pulse table.

Conditions

Measurement views: Pulse table

Group

Display commands

Syntax

```
DISPlay:PULSe:RESult[:MEASview<y>]:WIDTh { OFF | ON | 0 | 1 }
DISPlay:PULSe:RESult[:MEASview<y>]:WIDTh?
```

Arguments

`OFF` or `0` does not show the pulse width measurement result.

`ON` or `1` shows the pulse width measurement result in the pulse table.

Returns

See Arguments.

Examples

`DISPLAY:PULSE:RESULT:MEASVIEW1:WIDTH ON` shows the pulse width measurement result in the pulse table.

DISPlay:PULSe[:MEASview<y>]:SELect:NUMBer

Sets or queries a pulse to measure. For the selected pulse, the statistics view indicates the measurement result while the table view highlights it, and the trace view displays the waveform.

Conditions

Measurement views: : Pulse Statistics with specified Measurement view number, Pulse table, Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe[:MEASview<y>]:SELect:NUMBer <number>
DISPlay:PULSe[:MEASview<y>]:SELect:NUMBer?
```

Arguments

`<number>::<NR1>` specifies the number of pulse to measure.Range: -(the number of acquired pulses before the time reference) to +(the number of acquired pulses after the time reference).

Zero (0) represents the pulse at the analysis time reference specified using the `[SENSe]:ANALysis:REFerence` command. The number of acquired pulses depends on the analysis range.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NR1>`

Examples

`DISPlay:PULSe:MEASview2:SELect:NUMBer -28` measures the pulse #-28.

DISPlay:PULSe[:MEASview<y>]:SELect:RESult

Sets or queries which result is shown in the pulse trace and statistics views.

Conditions

Measurement views: Pulse statistics, Pulse trace

Group

Display commands

Syntax

```
DISPlay:PULSe[:MEASview<y>]:SELect:RESult { AVERage | PPOWer | ATX |WIDTh| RISE | FALL | RINTerval
    | RRATe | DUTPct | DUTRatio |RIPPle| RIPDb | DROop | DRODb | OVERshoot | OVEDb | PPPHase|
    PPFRequency | RMSFreqerror | MFReqerror| RMSPherror |MPHerror | FRDeviation | FDELta |
    PHDeviation | IRAMplitude| IRTime }
DISPlay:PULSe[:MEASview<y>]:SELect:RESult?
```

Arguments

The following table lists the arguments.

Pulse results

Argument	Result
AVERage	Average on power
PPOWer	Peak power
ATX	Average transmitted power
WIDTh	Pulse width
RISE	Rise time
FALL	Fall time
RINTerval	Repetition interval
RRATe	Repetition rate
DUTPct	Duty factor (%)
DUTRatio	Duty factor (ratio)
RIPPle	Ripple
RIPDb	Ripple (dB)
DROop	Droop
DRODb	Droop (dB)
OVERshoot	Overshoot
OVEDb	Overshoot (dB)
PPPHase	Pulse-pulse carrier phase
PPFRequency	Pulse-pulse carrier frequency
RMSFreqerror	RMS frequency error
MFReqerror	Maximum frequency error
RMSPherror	RMS phase error
MPHerror	Maximum phase error
FRDeviation	Frequency deviation
PHDeviation	Phase deviation
FDELta	Delta frequency

Argument	Result
IRAMplitude	Impulse Response Amplitude
IRTime	Impulse Response Sidelobe Offset Time from Mainlobe

Returns

See Arguments.

Examples

`DISPlay:PULSe:MEASview1:SELect:RESult AVERage` shows the average on power result in the pulse trace and statistics views.

DISPlay:PULSe[:MEASview<y>]:SELect:RESult

Sets or queries the result shown in the pulse trace and statistics views.

Conditions

Measurement views: Pulse Statistics with specified Measurement view number, Pulse trace with specified Measurement view number

Group

Display commands

Syntax

DISPlay:PULSe[:MEASview<y>]:SELect:RESult <arg>

DISPlay:PULSe[:MEASview<y>]:SELect:RESult?

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

AVERage is the average on power

PPOWer is the peak power

ATX is the average transmitted power

WIDTh is the Pulse width

RISE is the rise time

FALL is the fall time

RINTerval is the repetition interval

RRATe is the repetition rate

DUTPct is the duty factor (%)

DUTRatio is the duty factor (ratio)

RIPPle is the ripple

RIPDb is the ripple (dB)

DROop is the droop

DRODb is the droop (dB)

OVERshoot is the overshoot

OVEDb is the overshoot (dB)

PPPHase is the pulse-pulse carrier phase

PPFRequency is the pulse-pulse carrier frequency

RMSFreqerror is the RMS frequency error

MFReqerror is the maximum frequency error

RMSPherror is the RMS phase error

MPHerror is the maximum phase error

FRDeviation is the frequency deviation

FDELta is the delta frequency

PHDeviation is the phase deviation

IRAMplitude is the impulse response amplitude

TIME is the time in seconds

IRTime is the impulse response sidelobe offset time from the mainlobe

PPPD is the pulse to pulse phase difference

PPFD is the pulse to pulse frequency difference

FABS is the absolute frequency

Returns

<NRf>

Examples

DISPlay:PULSe:MEASview1:SELect:RESult AVERAGE shows the average on power result in the pulse trace and statistics views.

DISPlay:PULSe:STATistics[:MEASview<y>]:MARKer<x>:SHOW:STATe

Determines whether to show or hide the marker readout in the statistics graph. This command is valid when DISPlay:PULSe:STATistics:PLOT is set to FFT.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:MARKer<x>:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:PULSe:STATistics[:MEASview<y>]:MARKer<x>:SHOW:STATe?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

`OFF` or 0 hides the marker readout.

ON or 1 shows the marker readout.

Returns

See Arguments.

Examples

DISPlay:PULSe:STATistics:MEASview1:MARKer:SHOW:STATe ON shows the marker readout in the statistics graph.

DISPlay:PULSe:STATistics[:MEASview<y>]:PLOT

Sets or queries how to show the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:PLOT { TRENd | FFT | TTRend | HISTogram }
DISPlay:PULSe:STATistics[:MEASview<y>]:PLOT?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

<x> = 0 to 4.

TRENd shows the statistics result along with the pulse number.

FFT shows the statistics result transformed into the frequency domain by FFT.

TTRend shows the statistics result along with time.

HISTogram shows the histogram statistics results.

Returns

See Arguments.

Examples

DISPLAY:PULSE:STATISTICS:MEASview1:PLOT TRENd shows the statistics result along with the pulse number.

DISPlay:PULSe:STATistics[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid in the statistics view.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:PULSe:STATistics[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or `0` hides the graticule grid.

`ON` or `1` shows the graticule grid.

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

`DISPLAY:PULSE:STATISTICS:MEASVIEW2:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the Pulse Statistics.

DISPlay:PULSe:STATistics[:MEASview<y>]:X:RSCale (No Query Form)

Rescales the horizontal axis to fit the waveform to the screen in the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:X:RSCale
```

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

`DISPlay:PULSe:STATistics:MEASview2:X:RSCale` rescales the horizontal axis of the statistics graph.

DISPlay:PULSe:STATistics[:MEASview<y>]:X[:SCALe]:NUMBer

Sets or queries the horizontal full scale in the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:X[:SCALe]:NUMBer <value>
DISPlay:PULSe:STATistics[:MEASview<y>]:X[:SCALe]:NUMBer?
```

Related Commands

DISPlay:PULSe:STATistics[:MEASview<y>]:X[:SCALe]:OFFSet (on page 991)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<value>::<NRf> specifies the horizontal full scale. The setting range depends on the DISPlay:PULSe:STATistics:PLOT command parameters as shown in the table below.

DISPlay:PULSe:STATistics:PLOT	Setting range
TRENd	1 to 1000
FFT	1 Hz to 120 MHz

Returns

<NRf>

Examples

DISPlay:PULSe:STATistics:MEASview2:X:SCALe:NUMBer 50 sets the horizontal full scale to 50 pulses when the plot is trend.

DISPlay:PULSe:STATistics[:MEASview<y>]:X:SCALe:OFFSet

Sets or queries the minimum horizontal value (the first pulse to show) in the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:X:SCALe:OFFSet <value>
DISPlay:PULSe:STATistics[:MEASview<y>]:X:SCALe:OFFSet?
```

Arguments

<value>::<NRf> specifies the number of the first pulse.

Range: -(X - X/10) to +(X - X/10) where X is the horizontal scale set by the DISPlay:PULSe:STATistics:X[:SCALe]:NUMBer command.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf>

Examples

DISPLAY:PULSE:STATISTICS:MEASview2:X:SCALE:OFFSET 120 sets the first pulse number to #120.

DISPlay:PULSe:STATistics[:MEASview<y>]:Y:RSCale (No Query Form)

Rescales the vertical axis to fit the waveform to the screen in the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:Y:RSCale
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

DISPlay:PULSe:STATistics:MEASview2:Y:RSCale rescales the vertical axis of the statistics graph.

DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:FULL

Sets or queries the vertical full scale in the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:FULL <value>
DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:FULL
```

Related Commands

DISPlay:PULSe:STATistics[:MEASview<y>]:X[:SCALe]:OFFSET (on page 993)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<value>::<NRf> specifies the vertical full scale. The setting range depends on the DISPlay:PULSe:STATistics:PLOT command parameters and the measurement items as shown in the following table.

DISPlay:PULSe:STATistics:PLOT	Measurement item	Setting range
TRENd	Average on power, Peak power, Average transmitted power	0.1 to 200 dB
	Pulse width, Rise time, Fall time, Repetition interval	1 n to 5 Ms
	Repetition rate	100 m to 100 MHz
	Duty factor, Ripple	1 to 100%
	Droop	1 to 200%
	Pulse-pulse carrier phase	1 to 360°
FFT	All	10 to 200 dB

Returns

<NRf>

Examples

DISPlay:PULSe:STATistics:MEASview2:Y:SCALe:FULL 100 sets the vertical full scale to 100 dB.

DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset in the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

```
DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

<value>::<NRf> specifies the vertical offset. The vertical offset is the value at the top or the bottom edge of the graph depending on measurement items. The setting range depends on the DISPlay:PULSe:STATistics:PLOT command parameters and the measurement items as shown in the table below.

DISPlay:PULSe:STATistics:PLOT	Measurement item	Setting range	Offset position [1]
TRENd	Average on power, Peak power, Average transmitted power	-170 to +50 dBm	Top (Bottom for the unit of Volts or Watts)
	Pulse width, Rise time, Fall time, Repetition interval	0 to 5 Ms	Bottom
	Repetition rate	0 to 100 MHz	Bottom
	Duty factor, Ripple	0 to 100%	Bottom
	Droop	0 to +100%	Bottom
	Pulse-pulse carrier phase	-180 to +180°	Bottom
FFT	All	-400 to +100 dB	Top

Returns

<NRf>

Examples

DISPLAY:PULSE:STATISTICS:MEASview2:Y:SCALE:OFFSET 24.8 sets the maximum vertical value to 24.8 dBm in the statistics graph.

DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:STOP? (Query Only)

Queries the minimum vertical value (bottom edge) in the statistics graph.

Conditions

Measurement views: Pulse statistics

Group

Display commands

Syntax

DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:STOP?

Related Commands

DISPlay:PULSe:STATistics[:MEASview<y>]:Y[:SCALe]:OFFSET (on page 993)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<y_stop>::<NRf> is the minimum vertical value (bottom edge).

Examples

DISPlay:PULSe:STATistics:MEASview2:Y:SCALe:STOP? might return –150.0, indicating that the minimum vertical value is -150 dBm in the pulse statistics graph.

DISPlay:PULSe:TRACe[:MEASview<y>]:MARKer:SHOW:STATe

Determines whether to show or hide the marker readout in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:PULSe:TRACe[:MEASview<y>]:MARKer:SHOW:STATe?
```

Arguments

OFF or 0 hides the marker readout.

ON or 1 shows the marker readout.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:MARKER:SHOW:STATE ON shows the marker readout on the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:POINt:SHOW

Determines whether to show or hide the measurement points and lines in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:POINt:SHOW { OFF | ON | 0 | 1 }
DISPlay:PULSe:TRACe[:MEASview<y>]:POINt:SHOW?
```

Arguments

OFF or 0 hides the measurement points and lines.

ON or 1 shows the measurement points and lines.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:POINT:SHOW ON shows the measurement points and lines in the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:PULSe:TRACe[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticule grid.

ON or 1 shows the graticule grid.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:WINDOW:TRACE:GRATICULE:GRID:STATE ON shows the graticule grid on the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:X:RSCale

Rescales the horizontal axis to fit the waveform to the screen in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:X:RSCale
```

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:X:RSCALE rescales the horizontal axis in the pulse trace Measurement View 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]

Sets or queries the horizontal full scale in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe] <value>
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]?
```

Arguments

<value>::<NRf> specifies the horizontal full scale.

Range: 10 ns to acquisition memory capacity.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf>

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:X:SCALE 5.5E-6 sets the horizontal scale to 5.5 µs in the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:FULL

Sets or queries the full-scale reference for the horizontal rescale.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:FULL { SELected | MAXimum }
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:FULL?
```

Arguments

SELected uses the selected pulse for the full-scale reference.

MAXimum uses the maximum pulse for the full-scale reference.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf>

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:X:SCALE:FULL SELected uses the selected pulse for the full-scale reference in the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:OFFSet <value>
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:PDIVision (on page 998)

Arguments

<value>::<NRf> specifies the minimum horizontal value.

Range: [(analysis offset) - (X scale) × 0.9] to [(analysis offset) + (analysis length) - (X scale) × 0.1]

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf>

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:X:SCALE:OFFSET 937.5E-9 sets the minimum horizontal value to 937.5 ns in the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:PDIVision

Sets or queries the horizontal full scale in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:PDIVision <value>
DISPlay:PULSe:TRACe[:MEASview<y>]:X[:SCALe]:PDIVision?
```

Arguments

<value>::<NRf> specifies the horizontal full scale.

Range: 10 ns to acquisition memory capacity.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf>

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:X:SCALE:PDIVISION 5.5E-6 sets the horizontal scale to 5.5 µs in the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:Y:RSCale

Rescales the vertical axis to fit the waveform to the screen in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

DISPlay:PULSe[:MEASview<y>]:TRACe:Y:RSCale

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:Y:RSCALE rescales the vertical axis in the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:FULL

Sets or queries the vertical full scale in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:FULL <value>
DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:FULL?

Related Commands

DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 1000)

Arguments

<value>::<NRf> specifies the vertical full scale.

Range: 0.1 to 200 dB.

The unit can be changed by the [SENSe]:POWer:UNITs command.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf>

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:Y:SCALE:FULL 100 sets the vertical full scale to 100 dB on the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:STOP? (on page 1000)

Arguments

<value>::<NRf> specifies the vertical offset. Range: -170 to +50 dBm.

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<NRf>

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:Y:SCALE:OFFSET 23.5 sets the vertical offset to 23.5 dBm on the pulse trace measurement view 1.

DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:STOP

Queries the minimum vertical value (bottom edge) in the pulse trace view.

Conditions

Measurement views: Pulse trace with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:PULSe:TRACe:MEASview<y>:Y[:SCALe]:STOP?
```

Related Commands

DISPlay:PULSe:TRACe[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 1000)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

<y_stop>::<NRf> is the minimum vertical value (bottom edge).

Examples

DISPLAY:PULSE:TRACE:MEASVIEW1:Y:SCALE:STOP? might return -150.0, indicating that the minimum vertical value is -150 dBm in the pulse trace measurement view 1.

DISPlay:SEM:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the Spectral Emissions Mask view.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:MARKer:SHOW:STATe { OFF | ON | 1| 0 }
DISPlay:SEM:MARKer:SHOW:STATe?
```

Arguments

OFF or 0 hides the readout for the selected marker in the graph.

ON or 1 shows the readout for the selected marker in the graph.

Examples

DISPLAY:SEM:MARKER:SHOW:STATE ON shows the readout for the selected marker in the graph.

DISPlay:SEM:RESet:SCALe (No Query Form)

Resets the scale in the Spectral Emissions Mask view.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:RESet:SCALe
```

Arguments

None

Examples

`DISPLAY:SEM:RESET:SCALE` resets the scale in the view.

DISPlay:SEM:SHOW:LIMit

Sets or queries the appearance of the limits in the Spectral Emissions Mask view

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:SHOW:LIMit { SHADed | LINE | OFF }
DISPlay:SEM:SHOW:LIMit?
```

Arguments

`SHADed` uses shading for the limit area in the display.

`LINE` uses a line for the limit area.

`OFF` turns off the limits in the display.

Examples

`DISPLAY:SEM:SHOW:LIMIT SHADed` uses shading to identify the limits in the display.

DISPlay:SEM:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the Spectral Emissions Mask view.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 1| 0}
DISPlay:SEM:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or `0` hides the graticule in the graph.

`ON` or `1` shows the graticule in the graph.

Examples

`DISPLAY:SEM:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` turns off the graticule in the graph.

DISPlay:SEM:X[:SCALe]:AUTO (No Query Form)

Rescales the horizontal scale automatically to fit the waveform in the Spectral Emissions Mask view.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:SEM:X[:SCALE]:AUTO` rescales the horizontal scale to fit the waveform on the screen.

DISPlay:SEM:X[:SCALe]:START

Sets or queries the start frequency (left edge) of the Spectral Emissions Mask graph.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:X[:SCALe]:START <value>
DISPlay:SEM:X[:SCALe]:START?
```

Arguments

`<value>::<NRf>` specifies the start frequency.

Examples

`DISPLAY:SEM:X[:SCALE]:START 10Hz` sets the start frequency to 10 Hz in the graph.

DISPlay:SEM:X[:SCALe]:STOP

Sets or queries the stop frequency (right edge) of the Spectral Emissions Mask graph.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:X[:SCALe]:STOP <value>
DISPlay:SEM:X[:SCALe]:STOP?
```

Arguments

`<value>::<NRf>` specifies the start frequency.

Examples

`DISPLAY:SEM:X[:SCALE]:STOP 2GHz` sets the stop frequency to 2 GHz in the graph.

DISPlay:SEM:Y[:SCALe]

Sets or queries the vertical range of the Spectral Emissions Mask view.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:Y[:SCALe] <value>
DISPlay:SEM:Y[:SCALe]?
```

Arguments

`<value>::= <NRf>` specifies the vertical scale.

Examples

`DISPLAY:SEM:Y[:SCALE] 200` sets the vertical scale to 200 MHz.

DISPlay:SEM:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform in the Spectral Emissions Mask view.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:SEM:Y[:SCALE]:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:SEM:Y[:SCALe]:OFFSet

Sets or queries the vertical offset in the Spectral Emissions Mask view.

Conditions

Measurement views: Spectral Emissions Mask

Group

Display commands

Syntax

```
DISPlay:SEM:Y[:SCALe]:OFFSet <value>
DISPlay:SEM:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::= <NRf>` specifies the horizontal range.

Examples

`DISPLAY:SEM:Y[:SCALE]:OFFSET 40` sets the vertical position to 40 dBm.

DISPlay:SGRam[:MEASview<y>]:FREQuency:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the spectrogram view.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:FREQuency:AUTO
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

`DISPlay:SGRam:MEASview1:FREQuency:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen in the spectrogram measurement view 1.

DISPlay:SGRam[:MEASview<y>]:FREQuency:OFFSet

Sets or queries the frequency offset (the value at the center of the horizontal axis) in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:FREQuency:OFFSet <value>
DISPlay:SGRam[:MEASview<y>]:FREQuency:OFFSet?
```

Related Commands

DISPlay:SGRam[:MEASview<y>]:FREQuency[:SCAle] (on page 1006)

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value>::<NRf>` specifies the frequency offset.

Range: [(center frequency) - (X scale) × 0.9] to [(center frequency) + (X scale) × 0.9]

Examples

`DISPlay:SGRam:MEASview1:FREQuency:OFFSet 1.45GHz` sets the frequency offset to 1.45 GHz in the spectrogram measurement view 1.

DISPlay:SGRam[:MEASview<y>]:FREQuency[:SCAle]

Sets or queries the horizontal range of the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:FREQuency[:SCAle] <value>
DISPlay:SGRam[:MEASview<y>]:FREQuency[:SCAle]?
```

Related Commands

DISPlay:SGRam[:MEASview<y>]:FREQuency:OFFSet (on page 1005)

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value>::<NRf>` specifies the horizontal range.

Range:

- RSA5103B – 1 to 3 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5115B – 1 to 15 GHz
- RSA5126B – 1 to 26.5 GHz

Returns

<NRf> Returns the horizontal range

Examples

`DISPlay:SGRam:MEASview1:FREQuency:SCAle 10MHz` sets the horizontal range to 10 MHz on the trace of Spectrogram measurement view 1.

DISPlay:SGRam[:MEASview<y>]:MARKer:SHOW:STATe

Sets or queries the display of the Marker legend in the Spectrogram graph.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:MARKer:SHOW:STATe{ OFF | ON | 0 | 1 }
DISPlay:SGRam[:MEASview<y>]:MARKer:SHOW:STATe?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`OFF` or 0 removes or turns off the Marker legend.

`ON` or 1 displays or turns on the Marker legend.

Returns

{ OFF | ON | 0 | 1 }

Examples

`DISPlay:SGRam:MEASview1:MARKer:SHOW:STATe ON` turns on the display of the Marker legend in the spectrogram graph of view 1.

DISPlay:SGRam[:MEASview<y>]:SELected:TIMestamp

Sets or queries the display of the time stamp in the Spectrogram graph.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:SELected:TIMestamp {OFF | ON | 0 | 1}
DISPlay:SGRam[:MEASview<y>]:SELected:TIMestamp?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`OFF` or `0` removes or turns off the time stamp.

`ON` or `1` displays or turns on the time stamp.

Returns

{OFF | ON | 0 | 1}

Examples

`DISPlay:SGRam:MEASview1:SELected:TIMestamp?` queries the display status of the time stamp in the spectrogram graph view 1.

DISPlay:SGRam[:MEASview<y>]:TIME:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the graph to the screen in the spectrogram view.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

`DISPlay:SGRam[:MEASview<y>]:TIME:AUTO`

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Examples

`DISPlay:SGRam:MEASview1:TIME:AUTO` rescales the vertical scale automatically to fit the waveform to the screen in the spectrogram measurement view 1.

DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet

Sets or queries the vertical axis (time) offset (bottom line number) in the spectrogram.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet <value>
DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet?
```

Related Commands

DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle] (on page 1010)

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value>::<NRf>` specifies the time offset.

Range: Line #0 to 125000. Zero (0) represents the latest line.

Returns

<NRf> specifies the time offset

Examples

`DISPlay:SGRam:MEASview1:TIME:OFFSet 15` sets the time offset to Line #15 in the spectrogram view 1.

DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet:DIVisions

Sets or queries the Vertical offset or Position in divisions.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet:DIVisions <value>
DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet:DIVisions?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`<value>::<NRf>` sets the vertical offset value in divisions. Range is -130,000 to +130,000.

Returns

<NRf> specifies the vertical offset

Examples

`DISPlay:SGRam:MEASview1:TIME:OFFSet:DIVisions 10` sets the vertical offset to 10 divisions in the spectrogram view 1.

DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap

Sets or queries if overlap is enabled or not.

Conditions

Measurement view: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap { OFF | ON | 0 | 1 }
DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap?
```

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

`OFF` or `0` hides the overlap in the spectrogram view.

ON or 1 shows the overlap in the spectrogram view.

Returns

{ OFF | ON | 0 | 1 }

Examples

DISPlay:SGRam:MEASview1:TIME:OVERlap ON enables time overlap for spectrogram.

DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap:PERCent

Sets or queries the Overlap in percent. Note that changing this value may change the time per division DISPlay:SGRam:MEASview<y>:TIME:SCAle:PER:DIVision value.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap:PERCent <value>
DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap:PERCent?
```

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value>::<NRf> specifies the overlap in percent.

Returns

<NRf> specifies the overlap in percent

Examples

DISPlay:SGRam:MEASview1:TIME:OVERlap:PERCent 1.0E1 sets the overlap to 10% in the spectrogram view 1.

DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle]

NOTE: The user interface on the instrument no longer presents this setting. However, the command is still function. Setting this value will change the TIME:PER:DIVision value.

Sets or queries the vertical scale (the amount of time in each line) in the spectrogram. The vertical axis is composed of successive spectral displays. The new spectra can be added at a timed rate specified by this command. For example, if you set the scale to -5, one line is displayed every 5 spectra.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle] <value>
DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle]?
```

Related Commands

DISPlay:SGRam[:MEASview<y>]:TIME:OFFSet (on page 1008)

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value>::<NR1> specifies the vertical scale.

Range: -1023 to 0. Zero (0) displays every spectrum.

Returns

<NRf> specifies the vertical scale

Examples

`DISPlay:SGRam:MEASview1:TIME:SCAle -5` displays one line every 5 spectra in the spectrogram view 1.

DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle]:PER:DIVision

Sets or queries the vertical Time/division value. Note that changing this value may change the `DISPlay:SGRam:MEASview<y>:TIME:OVERlap:PERCent` value.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

```
DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle]:PER:DIVision <value>
DISPlay:SGRam[:MEASview<y>]:TIME[:SCAle]:PER:DIVision?
```

Related Commands

DISPlay:SGRam[:MEASview<y>]:TIME:OVERlap:PERCent (on page 1010)

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

<value>::<NRf> specifies the time per division in seconds.

Returns

<NRf> specifies the time per division in seconds

Examples

`DISPlay:SGRam:MEASview1:TIME:SCAle:PER:DIVision?` might return `1.1160000000E-3` in the spectrogram view 1.

DISPlay:SGRam[:MEASview<y>]:TIME:SPECtrums:PERLine (Query Only)

Queries the Spectrums/Line value.

Conditions

Measurement views: Spectrogram

Group

Display commands

Syntax

`DISPlay:SGRam[:MEASview<y>]:TIME:SPECtrums:PERLine?`

Arguments

`<y>` = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional by default y is 1.

Returns

<NRf> specifies the specturm/Line value

Examples

`DISPlay:SGRam:MEASview1:TIME:SPECtrums:PERLine?` might return a `1.0000000000` as a response in the spectrogram view 1.

DISPlay:SIGClass:REGion? (Query only)

Queries the number of frequency regions for the signal classification present in the Spectrum or DPX measurements.

conditions

Measurement views: Spectrum and DPX

Group

Display commands

Syntax

`DISPlay:SIGClass:REGion?`

Arguments

None

Returns

`<NRf>` number of frequency regions.

Example

`DISPlay:SIGClass:REGion?` might return `3`, indicating three classified frequency regions in the spectrum display.

DISPlay:SIGClass:REGion:ADD (No query form)

Adds a frequency region for the signal classification in the Spectrum or DPX measurement.

Conditions

Measurement views: Spectrum and DPX

Group

Display commands

Syntax

`DISPlay:SIGClass:REGion:ADD <start frequency, end frequency>`

Arguments

`<start frequency, end frequency>:: <NRf>` based on the instrument frequency range.

Example

`DISPlay:SIGClass:REGion:ADD 826000000, 827000000` adds a frequency region starting at 826 MHz to 827 MHz in the selected Spectrum or DPX trace.

DISPlay:SPECtrum[:MEASview<y>]:FREQuency:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the spectrum view.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

`DISPlay:SPECtrum[:MEASview<y>]:FREQuency:AUTO`

Arguments

The parameter `<y>`=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:FREQuency:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:SPECtrum[:MEASview<y>]:FREQuency:OFFSet

Sets or queries the frequency offset (the value at the center of the horizontal axis) in the spectrum graph.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

`DISPlay:SPECtrum[:MEASview<y>]:FREQuency:OFFSet <value>`

```
DISPlay:SPECtrum[:MEASview<y>]:FREQuency:OFFSet?
```

Related Commands

DISPlay:SPECtrum[:MEASview<y>]:FREQuency:OFFSet[:SCALe] (on page 1014)

Arguments

`<value>::<NRf>` specifies the frequency offset.

Range: [(center frequency) - (X scale) × 0.9] to [(center frequency) + (X scale) × 0.9]

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:FREQuency:OFFSet 1.45GHz` sets the frequency offset to 1.45 GHz in the spectrum.

DISPlay:SPECtrum[:MEASview<y>]:FREQuency[:SCAle]

Sets or queries the horizontal range of the spectrum graph.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:FREQuency[:SCAle] <value>
DISPlay:SPECtrum[:MEASview<y>]:FREQuency[:SCAle]?
```

Related Commands

DISPlay:SPECtrum[:MEASview<y>]:FREQuency:OFFSet

Arguments

`<value>::<NRf>` specifies the horizontal range.

Range:

- RSA5103B – 1 to 3 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5115B – 1 to 15 GHz
- RSA5126B – 1 to 26.5 GHz

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:FREQuency:SCAle 10MHz` sets the horizontal range to 10 MHz.

DISPlay:SPECtrum[:MEASview<y>]:MARKer:NOISe:MODE

Determines whether to enable or disable the marker noise mode in the spectrum view. In this mode, the marker readout indicates amplitude in dBm/Hz. It is valid for all markers except for the reference marker.

NOTE: To use the marker noise mode, select dBm as the power unit by the `[SENSe]:POWer:UNITs` command.

NOTE: It is an overlapped command, which does not finish executing before the next command starts executing. Use the *OPC(?) command to synchronize all pending operations to the execution of this command.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:MARKer:NOISe:MODE { OFF | ON | 0 | 1 }
DISPlay:SPECtrum[:MEASview<y>]:MARKer:NOISe:MODE?
```

Related Commands

[SENSe]:POWer:UNITs (on page 2319)

Arguments

`OFF` or `0` disables the marker noise mode.

`ON` or `1` enables the marker noise mode.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1.

Examples

`DISPlay:SPECtrum:MEASview2:MARKer:NOISe:MODE ON` enables the marker noise mode

DISPlay:SPECtrum[:MEASview<y>]:READout[:STATe]

Determines whether to show or hide the measurement parameter readouts in the Spectrum view.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:READout[:STATe] { OFF | ON | 0 | 1 }
DISPlay:SPECtrum[:MEASview<y>]:READout[:STATe]?
```

Arguments

`OFF` or `0` hides the parameter readouts.

`ON` or `1` shows the parameter readouts.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. By default y is 1

Examples

`DISPLAY:SPECTRUM:MEASVIEW1:READOUT:STATE ON` shows the parameter readouts on the screen.

DISPlay:SPECtrum[:MEASview<y>][:SCALe]:LOG:STATe

Determines whether or not to set the horizontal axis logarithmic in the Spectrum view.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>][:SCALe]:LOG:STATe {OFF | ON | 0 | 1}
DISPlay:SPECtrum[:MEASview<y>][:SCALe]:LOG:STATe?
```

Related Commands

DISPlay:SPECtrum[:MEASview<y>]:X:LABel (on page 1017)

Arguments

`OFF` or `0` sets the horizontal axis linear (default).

`ON` or `1` sets the horizontal axis logarithmic.

Executing `DISPlay:SPECtrum:SCALe:LOG:STATe ON` sets `DISPlay:SPECtrum:X:LABel SSFReq`.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:SCALe:LOG:STATe ON` sets the horizontal axis logarithmic in the Spectrum view.

DISPlay:SPECtrum[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:SPECtrum[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or `0` hides the graticule grid.

`ON` or `1` shows the graticule grid.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:WINDow:TRACe:GRATicule:GRID:STATe ON` shows the graticule grid on the screen in the spectrum measurement.

DISPlay:SPECtrum[:MEASview<y>]:WINDow:TRACe:LEGend:STATe

Determines whether to show or hide the trace legend in the Spectrum view. The legend indicates the trace detection and function on the screen for each displayed spectrum trace.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:WINDow:TRACe:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:SPECtrum[:MEASview<y>]:WINDow:TRACe:LEGend:STATe?
```

Arguments

`OFF` or `0` hides the trace legend.

`ON` or `1` shows the trace legend.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:WINDow:TRACe:LEGend:STATe ON` shows the trace legend on the screen in the spectrum measurement.

DISPlay:SPECtrum[:MEASview<y>]:X:LABel

Sets or queries the labels for the horizontal (X) axis in the Spectrum view. The labels are indicated beneath the spectrum graph on the screen.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:X:LABel { SSFReq | CFSPan }
DISPlay:SPECtrum[:MEASview<y>]:X:LABel?
```

Arguments

SSFReq sets the labels to the start and stop frequencies.

CFSPan sets the labels to the center frequency and span.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

DISPlay:SPECtrum:MEASview2:X:LABel SSFReq sets the labels to the start and stop frequencies for the horizontal axis in the Spectrum view.

DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]

Sets or queries the vertical range of the spectrum graph.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle] <value>
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]?
```

Arguments

<value>::<NRf> specifies the vertical range. Range: 0.1 to 200 dB. The amplitude unit is set by the [SENSe]:POWer:UNITs (on page 2319) command.

You can omit the unit in the argument. When you include the unit in the argument, only dB is available. For the amplitude units Watts, Volts, and Amps, omit the unit in the argument.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

DISPlay:SPECtrum:MEASview2:Y:SCAle 50dB sets the vertical range to 50 dB in the Spectrum view.

DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the Spectrum view.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:AUTO
```

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:Y:SCAle:AUTO` rescales the vertical scale automatically to fit the waveform to the screen

DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:OFFSET

Sets or queries the vertical offset (the value at the top edge of the vertical axis) of the spectrum graph.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:OFFSET <value>
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:OFFSET?
```

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -270 to +150 dBm. The amplitude unit is set by the [SENSe]:POWer:UNITs (on page 2319) command (default: dBm).

You can omit the unit in the argument. When you include the unit in the argument, only dBm is allowed. For the other amplitude units, omit the unit in the argument.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:Y:SCAle:OFFSET -12.5` sets the vertical offset to -12.5 dBm

DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:PDIVision

Sets or queries the vertical scale (per division) of the spectrum graph.

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:PDIVision <value>
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:PDIVision?
```

Related Commands

[SENSe]:POWer:UNITs (on page 2319)

Arguments

`<value>::<NRf>` specifies the vertical scale (per division).

Range: 0.01 to 20 dB/div.

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:Y:SCAle:PDIVision 0.5` sets the vertical scale to 0.5 dB/div.

DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:RESet (No Query Form)

Resets the vertical scale of the spectrum graph to the default values: Vertical offset = Reference level and Vertical scale = 100 dB

Conditions

Measurement views: Spectrum

Group

Display commands

Syntax

```
DISPlay:SPECtrum[:MEASview<y>]:Y[:SCAle]:RESet
```

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Examples

`DISPlay:SPECtrum:MEASview2:Y:SCAle:RESet` resets the vertical scale to the default values in the Spectrum view

DISPlay:SPURious:MARKer:SHOW:STATe

Determines whether to show or hide the readout for the selected marker in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:SPURious:MARKer:SHOW:STATe?
```

Arguments

`OFF` or 0 hides the readout for the selected marker in the graph.

`ON` or 1 shows the readout for the selected marker in the graph.

Examples

`DISPLAY:SPURIOUS:MARKER:SHOW:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:SPURious:RESet:SCALe (No Query Form)

Resets the horizontal and vertical scale to the default values described below in the Spurious view.

Vertical offset = 0 dBm, Vertical scale = 100 dB,

Horizontal offset = Center frequency, and Horizontal scale = Default span

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:RESet:SCALe
```

Arguments

None

Examples

`DISPLAY:SPURIOUS:RESET:SCALE` resets the horizontal and vertical scale to the default values.

DISPlay:SPURious:SCALe:LOG:STATe

Determines whether or not to set the horizontal axis logarithmic in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:SCALe:LOG:STATe { OFF | ON | 0 | 1 }
DISPlay:SPURious:SCALe:LOG:STATe?
```

Arguments

`OFF` or `0` sets the horizontal axis linear (default).

`ON` or `1` sets the horizontal axis logarithmic.

Examples

`DISPLAY:SPURIOUS:SCALE:LOG:STATE ON` sets the horizontal axis logarithmic in the Spurious view.

DISPlay:SPURious:SELect:NUMBer

Sets or queries the spurious number in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:SELect:NUMBer <number>
DISPlay:SPURious:SELect:NUMBer?
```

Arguments

`<number>::<NR1>` specifies the spurious number.

Range: 1 to the number of spurious signals.

Use the FETCh:SPURious:COUNt? (on page 1423) or READ:SPURious:COUNt? (on page 1877) query to get the number of spurious signals.

Examples

`DISPLAY:SPURIOUS:SELECT:NUMBER 7` selects the spurious #7.

DISPlay:SPURious:SHOW:LIMit

Sets or queries how to display the limits.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:SHOW:LIMit { SHADed | LINE | OFF }
DISPlay:SPURious:SHOW:LIMit?
```

Arguments

`SHADed` displays the limits with shade.

`LINE` displays the limits with line only.

`OFF` hides the limits.

Examples

`DISPLAY:SPURIOUS:SHOW:LIMIT LINE` displays the limits with line only.

DISPlay:SPURious:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:SPURious:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or `0` hides the graticule grid.

`ON` or `1` shows the graticule grid.

Examples

`DISPLAY:SPURIOUS:WINDOW:TRACE:GRATICULE:GRID:STATE ON` shows the graticule grid on the screen.

DISPlay:SPURious:X[:SCALe]:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:SPURIOUS:X:SCALE:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:SPURious:X[:SCALe]:STARt

Sets or queries the minimum horizontal value (left edge) of the spectrum graph in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:X[:SCALe]:STARt <value>
DISPlay:SPURious:X[:SCALe]:STARt?
```

Arguments

`<value>::<NRf>` specifies the minimum horizontal value.

Range:

- RSA5103B – 1 to 3 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5115B – 1 to 15 GHz
- RSA5126B – 1 to 26.5 GHz

Examples

`DISPLAY:SPURIOUS:X:SCALE:START 1.61GHz` sets the minimum horizontal value to 1.61 GHz in the spectrum graph.

DISPlay:SPURious:X[:SCALe]:STOP

Sets or queries the maximum horizontal value (right edge) of the spectrum graph in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:X[:SCALe]:STOP <value>
DISPlay:SPURious:X[:SCALe]:STOP?
```

Arguments

`<value>::<NRf>` specifies the minimum horizontal value.

Range:

- RSA5103AB – 1 to 3 GHz
- RSA5106B – 1 to 6.2 GHz
- RSA5115B – 1 to 15 GHz
- RSA5126B – 1 to 26.5 GHz

Examples

`DISPLAY:SPURIOUS:X:SCALE:STOP 2.16GHz` sets the maximum horizontal value to 2.16 GHz in the spectrum graph.

DISPlay:SPURious:Y[:SCALe]

Sets or queries the vertical range of the spectrum graph in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:Y[:SCALe] <value>
DISPlay:SPURious:Y[:SCALe]?
```

Arguments

`<value>::<NRf>` specifies the vertical range. Range: 0.1 to 200 dB. The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`DISPLAY:SPURIOUS:Y:SCALE 100` sets the vertical range to 100 dB in the Spurious view.

DISPlay:SPURious:Y[:SCALe]:AUTO (No Query Form)

Rescales the vertical axis automatically to fit the waveform to the screen in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:SPURIOUS:Y:SCALE:AUTO` rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:SPURious:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) of the spectrum graph in the Spurious view.

Conditions

Measurement views: Spurious

Group

Display commands

Syntax

```
DISPlay:SPURious:Y[:SCALe]:OFFSet <value>
DISPlay:SPURious:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -270 to +150 dBm.The unit can be changed by the [SENSe]:POWer:UNITs (on page 2319) command.

Examples

`DISPLAY:SPURIOUS:Y:SCALE:OFFSET -12.5` sets the vertical offset to -12.5 dBm in the spectrum graph.

DISPlay:TDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen in the Trellis diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Display commands

Syntax

```
DISPlay:TDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:TDIagram[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule grid.

`ON` or 1 shows the graticule grid.

Returns

OFF or 0

ON or 1

Examples

`DISPLay:TDIagram:MEASview2:WINDOW:TRACe:GRATICULE:GRID:STATe ON` shows the graticule grid on the screen in the Trellis diagram.

DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the trellis diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Display commands

Syntax

```
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe] <value>
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]?
```

Arguments

`<value>::<NRf>` specifies the vertical range.

Range: 1 ° to 1 T°.

Returns

<NRf>

Examples

`DISPlay:TDIagram:MEASview2:Y:SCALe 2.5` sets the vertical range to 2.5° in the Trellis diagram.

DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]:AUTO (No query form)

Sets the vertical scale automatically to fit the waveform to the screen in the Trellis diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Display commands

Syntax

```
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPlay:TDIagram:MEASview2:Y:SCALe:AUTO` sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (center point of the vertical axis) of the Trellis diagram.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Trellis diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Trellis diagram).

Group

Display commands

Syntax

```
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:TDIagram[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Arguments

`<value>::<NRf>` specifies the vertical offset.

Range: -1 T° to +1 T°.

Returns

<NRf>

Examples

`DISPLay:TDIagram:MEASview2:Y:SCALe:OFFSet -28.5` sets the vertical offset to -28.5 ° in the Trellis diagram measview 2.

DISPlay:TG:MEASview:DELete TXGain (No Query Form)

This command removes the Transmission Gain display icon from the Selected displays filed of the Selected Displays window.

Conditions

Measurement view: Select Displays window

Group

Display commands

Syntax

```
DISPlay:TG:MEASview:DELete TXGain
```

Arguments

Examples

```
DISPLAY:TG:MEASVIEW:DELETE TXGAIN
```

DISPlay:TG:MEASview:NEW TXGain (No Query Form)

This command opens a new Transmission Gain measurement display window.

Conditions

Measurement view: Select Displays window

Group

Display commands

Syntax

```
DISPlay:TG:MEASview:NEW TXGain
```

DISPlay:TG:MEASview:SELect TXGain

This command selects the Transmission Gain display icon in the Select Display window and queries if the display is selected or not.

Conditions

Measurement view: Select Displays window

Group

Display commands

Syntax

```
DISPlay:TG:MEASview:SELect TXGain { OFF | ON | 0 | 1 }
DISPlay:TG:MEASview:SELect TXGain?
```

Arguments

OFF or 0 deselects the Transmission Gain display icon.

ON or 1 selects the Transmission Gain display icon.

Returns

0 means the icon is not selected.

1 means the icon is selected.

Examples

```
DISPLAY:TG:MEASVIEW:SELECT TXGAIN
```

DISPlay:TOVerview[:MEASview<y>]:WINDow:NAVigator:STATe

Sets or queries whether the navigator view of the Time Overview display is on or off.

Conditions

Measurement view: Time Overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:WINDow:NAVigator:STATe { OFF | ON | 0 | 1 }
DISPlay:TOVerview[:MEASview<y>]:WINDow:NAVigator:STATe?
```

Arguments

OFF or 0 sets the Time Overview display to not show in Navigator View mode.

ON or 1 sets the Time Overview display to show in Navigator View mode.

Returns

OFF or 0 means that the Time Overview display is not in Navigator View mode.

ON or 1 means that the Time Overview display is in Navigator View mode.

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:WINDOW:NAVIGATOR:STATE ON` will set the Time Overview display to show in Navigator View mode.

DISPlay:TOVerview[:MEASview<y>]:WINDow:TIME:MODE

Sets or queries the type of time analysis to be performed for the Time Overview display.

Conditions

Measurement view: Time Overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:WINDow:TIME:MODE { ANALysis | SPECtrum | LINKed }
```

DISPlay:TOVerview[:MEASview<y>]:WINDow:TIME:MODE?

Related Commands

Arguments

ANALysis sets the type of analysis time to Analysis length, which is the period of time within the acquisition record over which all other measurements (such as Amplitude vs. Time) are made.

SPECtrum sets the type of analysis time to Spectrum length, which is the period of time within the acquisition record over which the spectrum is calculated.

LINKed sets the type of analysis time to lock the Spectrum length and Analysis length together so that the data used to produce the Spectrum display is also used for measurement displays.

Returns

ANAL means that the type of time analysis is set to Analysis.

SPEC means that the type of time analysis is set to Spectrum.

LINK means that the type of time analysis is set to Linked.

Examples

DISPLAY:TOVERVIEW:WINDOW:TIME:MODE? might return SPEC, which indicates that the type of analysis time is set to Spectrum, which is the period of time within the acquisition record over which the spectrum is calculated.

DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule grid on the screen.

Conditions

Measurement views: Time overview

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

OFF or 0 hides the graticule grid.

ON or 1 shows the graticule grid.

Examples

DISPLAY:TOVERVIEW:MEASVIEW1:WINDOW:TRACE:GRATICULE:GRID:STATE ON shows the graticule grid on the screen in the time overview Measurement View 1.

DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:LEGend:STATe

Sets or queries the trace legend state in the Time Overview display to on (showing) or off (hidden).

Conditions

Measurement view: Time Overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:LEGend:STATe { OFF | ON | 0 | 1 }
DISPlay:TOVerview[:MEASview<y>]:WINDow:TRACe:LEGend:STATe?
```

Related Commands

Arguments

`OFF` or `0` hides the trace legend in the Time Overview display.

`ON` or `1` shows the trace legend in the Time Overview display.

Returns

0 means the trace legend in the Time Overview display is hidden (off).

1 means the trace legend in the Time Overview display is showing (on).

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:WINDOW:TRACE:LEGEND:STATE ON` will turn on the trace legend in the Time Overview display.

`DISPLAY:TOVERVIEW:MEASVIEW1:WINDOW:TRACE:LEGEND:STATE?` might return `1`, which indicates that the trace legend in the Time Overview display is showing (on).

DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]

Sets or queries the horizontal scale (full-scale time) of the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe] <value>
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]?
```

Related Commands

DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]:OFFSet (on page 1032)

Arguments

`<value>::<NRf>` specifies the horizontal scale in full-scale time.

Range: 10 ns to the acquisition memory capacity.

You can see the acquisition memory capacity using the [SENSe]:ACQuisition:MEMory:CAPacity[:TIME]? (on page 1994) query.

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:X:SCALE 12.5us` sets the horizontal scale to 12.5 µs.

DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]:AUTO (No Query Form)

Sets the horizontal scale and offset automatically to fit the waveform to the screen in the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:X:SCALE:AUTO` sets the horizontal scale and offset automatically to fit the waveform on the trace of Time overview Measurement View 1.

DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]:OFFSet

Sets or queries the minimum horizontal value (left edge) of the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]:OFFSet <value>
DISPlay:TOVerview[:MEASview<y>]:X[:SCALe]:OFFSet?
```

Related Commands

DISPlay:TOVerview[:MEASview<y>]:X[:SCALe] (on page 1031)

Arguments

`<value>::<NRf>` specifies the minimum horizontal value.

Range: [(analysis offset) - (X scale) × 0.9] to [(analysis offset) + (analysis length) - (X scale) × 0.1]

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:X:SCALE:OFFSET 800ns` sets the minimum horizontal value to 800 ns in the Time overview Measurement View 1.

DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]

Sets or queries the vertical range of the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe] <value>
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]?
```

Related Commands

DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:OFFSet (on page 1034)

Arguments

`<value>::<NRf>` specifies the vertical range. Range: 0.1 to 200 dB.

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Returns

`<NRf>`

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:Y:SCALE 50` sets the vertical range to 50 dBm in the time overview.

DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:AUTO (No Query Form)

Sets the vertical scale and offset automatically to fit the waveform to the screen in the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:AUTO
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:Y:SCALE:AUTO` sets the vertical scale and offset automatically to fit the waveform to the screen.

DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:OFFSet

Sets or queries the vertical offset (the value at the top edge of the vertical axis) in the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:OFFSet <value>
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:OFFSet?
```

Related Commands

DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe] (on page 1033)

Arguments

`<value>::<NRf>` specifies the vertical offset. Range: -170 to +50 dBm.

Returns

`<NRf>`

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:Y:SCALE:OFFSET -80` sets the vertical offset to -80 dBm in the time overview Measurement View 1.

DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:RESCale (No Query Form)

Sets the vertical scale automatically to fit the waveform to the screen in the time overview.

Conditions

Measurement views: Time overview with specified Measurement view number

Group

Display commands

Syntax

```
DISPlay:TOVerview[:MEASview<y>]:Y[:SCALe]:RESCale
```

Arguments

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value is 1.

Examples

`DISPLAY:TOVERVIEW:MEASVIEW1:Y:SCALE:RESCALE` sets the vertical scale automatically to fit the waveform to the screen.

DISPlay:TXGain:MARKer:SHOW:STATe

Displays or hides the marker readout, but not the marker itself, on the graph area.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:MARKer:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:TXGain:MARKer:SHOW:STATe?
```

Arguments

`OFF` or `0` hides the readout for the selected marker.

`ON` or `1` shows the readout for the selected marker.

Returns

OFF or 0 means that the readout for the selected marker is hidden.

ON or 1 means that the readout for the selected marker is showing.

Examples

`DISPLAY:TXGAIN:MARKER:SHOW:STATE ON` shows the readout for the marker on the display.

DISPlay:TXGain[:SCALe]:AUTO (No Query Form)

Automatically rescales the horizontal and vertical scale.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:TXGAIN[:SCALE]:AUTO` rescales the horizontal and vertical scale automatically.

DISPlay:TXGain:WINDow:TRACe:GRATicule:GRID:STATe

Displays or hides the graticule grid in the display. Queries whether the graticule grid is hidden or showing.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:TXGain:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or 0 hides the graticule.

`ON` or 1 shows the graticule.

Returns

`OFF` or 0 means that the graticule is hidden.

`ON` or 1 means that the graticule is showing.

Examples

`DISPLAY:TXGAIN:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` will hide the graticule.

DISPlay:TXGain:WINDow:TRACe:POINts:SHOW:STATe

Sets to mark each measurement point on the trace.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:WINDow:TRACe:POINts:SHOW:STATe { OFF | ON | 0 | 1 }
DISPlay:TXGain:WINDow:TRACe:POINts:SHOW:STATe?
```

Arguments

`OFF` or 0 hides each measurement point on the trace.

`ON` or 1 shows each measurement point on the trace.

Returns

`OFF` or 0 means that each measurement point on the trace is hidden.

`ON` or 1 means that each measurement point on the trace is showing.

Examples

`DISPLAY:TXGAIN:WINDOW:TRACE:POINTS:SHOW:STATE 1` shows each measurement point on the trace.

DISPlay:TXGain:X[:SCALe]:AUTO (No Query Form)

Resets the scale of the horizontal axis to contain the complete trace.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISPLAY:TXGAIN:X:SCALE:AUTO` resets the scale of the horizontal axis to contain the complete trace.

DISPlay:TXGain:X[:SCALe]:LOG:STATe

Sets or queries the display to show the frequency axis in a logarithmic scale.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:X[:SCALe]:LOG:STATe { OFF | ON | 0 | 1 }
DISPlay:TXGain:X[:SCALe]:LOG:STATe?
```

Arguments

`OFF` or `0` sets the frequency axis in linear scale.

`ON` or `1` sets the frequency axis in logarithmic scale.

Returns

OFF or 0 means that the frequency axis is set to linear scale.

ON or 1 means that the frequency axis is set to logarithmic scale.

Examples

`DISPLAY:TXGAIN:X:SCALE:LOG:STATE 1` sets the frequency axis to logarithmic scale.

DISPlay:TXGain:X[:SCALe]:STARt

Sets the Zoom Start frequency. This only affects the start frequency shown on the graph.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:X[:SCALe]:STARt <value>
DISPlay:TXGain:X[:SCALe]:STARt?
```

Arguments

`<value>::=<NRf>` is a floating point number that is the zoom start frequency.

Returns

See Arguments.

Examples

`DISPLAY:TXGAIN:X:SCALE:START 1E9` sets the zoom start frequency to 1 GHz.

DISPlay:TXGain:X[:SCALe]:STOP

Sets the Zoom Stop frequency. This only affects the stop frequency shown on the graph.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:X[:SCALe]:STOP <value>
DISPlay:TXGain:X[:SCALe]:STOP?
```

Arguments

`<value>::=<NRf>` specifies the zoom stop frequency.

Returns

A floating point value that is the zoom stop frequency.

Examples

`DISPLAY:TXGAIN:X:SCALE:STOP 1E9` sets the zoom stop frequency to 1 GHz.

DISPlay:TXGain:Y[:SCALe]

Sets or queries the vertical scale value in dB.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:Y[:SCALe] <value>
DISPlay:TXGain:Y[:SCALe]?
```

Arguments

<value>::=<NRf> specifies the vertical scale in dB.

Returns

A floating point value that is the vertical scale in dB.

Examples

DISPLAY:TXGAIN:Y:SCALE 100 sets the vertical scale to 100 dB.

DISPlay:TXGain:Y[:SCALe]:AUTO (No Query Form)

Automatically scales the plot vertically.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:Y[:SCALe]:AUTO
```

Arguments

None

Examples

DISPLAY:TXGAIN:Y:SCALE:AUTO automatically scales the plot vertically.

DISPlay:TXGain:Y[:SCALe]:BOTTom

Sets or queries the bottom of the vertical position of the display.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:Y[:SCALe]:BOTTom <value>
DISPlay:TXGain:Y[:SCALe]:BOTTom?
```

Arguments

<value>::=<NRf> specifies the bottom of the vertical position of the display.

Returns

A floating point value that is the bottom of the vertical position of the display.

Examples

DISPLAY:TXGAIN:Y:SCALE:BOTTOM -100 sets the bottom of Y axis to -100 dB.

DISPlay:TXGain:Y[:SCALe]:PDIVision

Sets or queries the vertical scale (per division) of the graph.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:Y[:SCALe]:PDIVision <value>
DISPlay:TXGain:Y[:SCALe]:PDIVision?
```

Arguments

`<value>::=<NRf>` specifies the vertical scale (per division).

Returns

A floating point value that is the vertical scale (per division) of the graph.

Examples

`DISPLAY:TXGAIN:Y:SCALE:PDIVision 0.5` sets the vertical scale to 0.5 dB/div.

DISPlay:TXGain:Y[:SCALe]:POSition

Sets or queries the vertical position of the trace.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:Y[:SCALe]:POSition <value>
DISPlay:TXGain:Y[:SCALe]:POSition?
```

Arguments

`<value>::=<NRf>` specifies the vertical position.

Returns

A floating point value that is the vertical position.

Examples

`DISPLAY:TXGAIN:Y:SCALE:PDIVision 0` sets the vertical position to 0 dB.

DISPlay:TXGain:Y[:SCALe]:TOP

Sets or queries the top of the vertical scale.

Conditions

Measurement view: Transmission Gain

Group

Display commands

Syntax

```
DISPlay:TXGain:Y[:SCALe]:TOP <value>
DISPlay:TXGain:Y[:SCALe]:TOP?
```

Arguments

`<value>::=<NRf>` specifies the top of the vertical scale.

Returns

A floating point value that is the top of the vertical scale.

Examples

`DISPLAY:TXGAIN:Y:SCALE:TOP 10` sets the vertical top to 10 dB.

:DISPlay:WINDow:ACQuisition:BANdwidth:SHOw:STAte {set and query}

Sets or queries the state of show acquisition bandwidth checkbox.

Conditions

Measurement views: Spectrum, Spectrogram

Group

Display commands

Syntax

```
:DISPlay:WINDow:ACQuisition:BANdwidth:SHOw:STAte {0|1|TRUE |FALSE}
:DISPlay:WINDow:ACQuisition:BANdwidth:SHOw:STAte?
```

Arguments

0 is used to change 'Show Acquisition Bandwidth' checkbox state from checked to unchecked.

1 is used to change 'Show Acquisition Bandwidth' checkbox state from unchecked to checked.

Examples

`:DISPlay:WINDow:ACQuisition:BANdwidth:SHOw:STAte 1` changes the state of 'Show Acquisition Bandwidth' checkox to checked.

DISPlay:WINDow:ACTive:MEASurement? (Query Only)

Queries the active measurement views.

Conditions

Measurement views: All

Group

Display commands

Syntax

```
DISPlay:WINDow:ACTive:MEASurement?
```

Arguments

None

Returns

<view1>,<view2>,...,<view(n)>

Where

`<view(n)>::<string>` is the view name as shown in the following table.

Measurement view mnemonic

Return value	Measurement view	Display group
"SPEC"	Spectrum	General signal viewing
"DPX"	DPX (Digital Phosphor) spectrum	
"MAGVT"	Amplitude versus Time	
"ACP"	Channel power and ACPR	
"FVT"	Frequency versus Time	
"PHVT"	Phase versus Time	
"IQVT"	RF I&Q versus Time	
"SGRam"	Spectrogram	
"TOV"	Time overview	
"AM"	Amplitude modulation	Analog Modulation
"FM"	Frequency modulation	
"PM"	Phase modulation	

Return value	Measurement view	Display group
"CONS"	Constellation	General purpose digital modulation
"DIQV"	Demodulated I&Q versus Time	
"EDI"	Eye Diagram	
"EVM"	EVM versus Time	
"FVDT"	Frequency deviation versus Time	
"MERR"	Magnitude error versus Time	
"PERR"	Phase error versus Time	
"SIGN"	Signal quality	
"STAB"	Symbol table	
"TDI"	Trellis Diagram	
"CCDF"	CCDF	RF measurements
"MCP"	MCPR (Multiple Carrier Power Ratio)	
"OBW"	Occupied bandwidth	
"PNO"	Phase noise	
"SPUR"	Spurious	
"STAT"	Pulse statistics	Pulsed RF
""RES"	Pulse table (results table)	
"TRAC"	Pulse trace	

DISPlay:WINDow:APPLy:SOURce:COLOr {set and query}

Sets or queries the state of apply source color to trace checkbox.

Conditions

Measurement views: All

Applicable for only MSO/LPD/SX.

Group

Display commands

Syntax

```
:DISPlay:WINDow:APPLy:SOURce:COLOr {0|1|TRUE |FALSE}
```

```
:DISPlay:WINDow:APPLy:SOURce:COLOr?
```

Argument

`0` is used to change 'Apply Source Color to Trace' checkbox state from unchecked to checked.

`1` is used to change 'Apply Source Color to Trace' checkbox state from checked to unchecked.

Examples

`:DISPlay:WINDow:APPLy:SOURce:COLOr 1` changes the state of 'Apply Source Color to Trace' checkox to checked.

DISPlay:WINDow:COLor:SCHeme

Sets or queries the color scheme for displaying traces and background on the screen.

Conditions

Measurement views: All

Group

Display commands

Syntax

```
DISPlay:WINDow:COLor:SCHeme { THUNderstorm | BLIZzard | CLASsic }
DISPlay:WINDow:COLor:SCHeme?
```

Arguments

`THUNderstorm` displays the backgound in dark blue.

`BLIZzard` displays the backgound in white. It saves ink when printing the screen image.

`CLASsic` displays the backgound in black (default).

Examples

`DISPLAY:WINDOW:COLOR:SCHEME BLIZzard` displays the backgound in white.

DISPlay:WINDow:OPTimized:MEASurement? (Query Only)

Queries the measurement views that are optimized. "Optimized" means that there is a perfect match between the view's settings and the actual acquisition parameters to meet the specifications. When multiple measurements are running at one time, the measurements can have different requirements for setting the acquisition hardware. You can make a measurement optimized by selecting it using the following commands:

- DISPlay:GENeral:MEASview<y>:SELect (on page 806) for the general signal viewing
- DISPlay:DDEMod[:MEASview<y>]:SELect (on page 759) for the digital modulation views
- DISPlay:GPRF:MEASview:SELect (on page 809) for the RF measurement views
- DISPlay:PULSe:MEASview<y>:SELect (on page 959) for the pulsed RF measurement views

Conditions

Measurement views: All

Group

Display commands

Syntax

DISPlay:WINDow:OPTimized:MEASurement?

Arguments

None

Returns

<view1>,<view2>,...,<view(n)>

Where

<view(n)>::<string> is the view name as shown in the table. The following table shows the view arguments. The arguments are the string type.

General signal viewing views

Argument	View
SPECtrum	Spectrum
DPX	DPX (Digital Phosphor) spectrum
AVTime	Amplitude versus Time
FVTime	Frequency versus Time
PHVTime	Phase versus Time
IQVTime	IQ versus Time
SGRam	Spectrogram
TOVerview	Time overview

Examples

DISPLAY:WINDOW:OPTIMIZED:MEASUREMENT? might return "SPEC","MCP", indicating that the views of spectrum and MCPR are optimized.

DISPlay:WLAN:AD:CONSte:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticules in the 802.11ad Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Display commands

Syntax

DISPlay:WLAN:AD:CONSte:WINDow:TRACe:GRATicule:GRID:STATe { 0 | 1 | ON | OFF }
DISPlay:WLAN:AD:CONSte:WINDow:TRACe:GRATicule:GRID:STATe?

Arguments

0 or OFF hides the graticules in the graph

1 or ON shows the graticules in the graph

Returns

0 or OFF means that the graticules in the graph are hidden

1 or ON means that the graticules in the graph are showing

Examples

`DISPLAY:WLAN:AD:CONSTE:WINDOW:TRACE:GRATICULE:GRID:STATE 1` shows the graticules in the display.

DISPlay:WLAN:AD:CONSte:WINDow:TRACe:MARKer:STATe

Determines whether to show or hide marker readout in graph in the 802.11ad Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:CONSte:WINDow:TRACe:MARKer:STATe { 0 | 1 | ON | OFF }
DISPlay:WLAN:AD:CONSte:WINDow:TRACe:MARKer:STATe?
```

Arguments

`OFF` or `0` hides the marker readout in the graph

`ON` or `1` shows the marker readout in the graph

Returns

`0` or `OFF` means that the graticules in the graph are hidden

`1` or `ON` means that the graticules in the graph are shown

Examples

`DISPLAY:WLAN:AD:CONSTE:WINDOW:TRACE:MARKER:STATE 1` shows the marker readout in the display.

DISPlay:WLAN:AD:CONSte:ZOOM:SCALe

Sets or queries the zoom scale value in the Scale tab of the Settings control panel for the 802.11ad Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:CONSte:ZOOM:SCALe <value>
DISPlay:WLAN:AD:CONSte:ZOOM:SCALe?
```

Arguments

<value>=<NRf> where range is 0.1 to 10

Returns

<NRf> where range is 0.1 to 10

Examples

DISPLAY:WLAN:AD:CONSTE:ZOOM:SCALE 5 sets the zoom scale value to 5.

DISPlay:WLAN:AD:CONSte:ZOOM[:SCALe]:X:OFFSet

Sets or queries the Horizontal Position value in the Scale tab of the Settings control panel for the 802.11ad Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:CONSte:ZOOM[:SCALe]:X:OFFSet <value>
DISPlay:WLAN:AD:CONSte:ZOOM[:SCALe]:X:OFFSet?
```

Arguments

<value>=<NRf> where range is -5.1 to 5.1

Returns

<NRf> where range is -5.1 to 5.1

Examples

DISPLAY:WLAN:AD:CONSTE:ZOOM[:SCALE]:X:OFFSET 3.5 sets the Horizontal Position to 3.5.

DISPlay:WLAN:AD:CONSte:ZOOM[:SCALe]:Y:OFFSet

Sets or queries the Vertical Position value in the Scale tab of the Settings control panel for the 802.11ad Constellation display.

Conditions

Measurement view: 802.11ad Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:CONSte:ZOOM[:SCALe]:Y:OFFSet <value>
DISPlay:WLAN:AD:CONSte:ZOOM[:SCALe]:Y:OFFSet?
```

Arguments

<value>=<NRf> where range is -5.1 to 5.1

Returns

<NRf> where range is -5.1 to 5.1

Examples

DISPLAY:WLAN:AD:CONSTE:ZOOM[:SCALE]:Y:OFFSET -3.5 sets the Vertical Position to -3.5.

DISPlay:WLAN:AD:DATA:RADix

Set or queries the symbol radix type (set in the Prefs tab of the Settings control panel) in the display.

Conditions

Measurement views: All 802.11ad Symbol Table and Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:DATA:RADix {DEC,BIN}
DISPlay:WLAN:AD:DATA:RADix?
```

Arguments

DEC sets the radix type to Decimal

BIN sets the radix type to Binary

Returns

See Arguments

Examples

DISPLAY:WLAN:AD:DATA:RADIX might return BIN, indicating the data radix selected is binary.

DISPlay:WLAN:AD:EVM:SCALe:AUTO (No Query Form)

Rescales both horizontal and vertical axis automatically to fit the waveform to the screen in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:SCALe:AUTO
```

Arguments

None

Returns

None

Examples

`DISPLAY:WLAN:AD:EVM:SCALE:AUTO` fits the waveform to the graph both horizontally and vertically.

DISPlay:WLAN:AD:EVM:WINDow:TRACe:GRATicule:GRID:STATe

Determines whether to show or hide the graticule in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:WINDow:TRACe:GRATicule:GRID:STATe { 0 | 1 | ON | OFF }
DISPlay:WLAN:AD:EVM:WINDow:TRACe:GRATicule:GRID:STATe ?
```

Arguments

`OFF` or `0` hides the graticules in the graph

`1` or `ON` shows the graticules in the graph

Returns

0 or OFF means that the graticules in the graph are hidden

1 or ON means that the graticules in the graph are showing

Examples

`DISPLAY:WLAN:AD:EVM:WINDOW:TRACE:GRATICULE:GRID:STATE OFF` turns off the graticule in the graph.

DISPlay:WLAN:AD:EVM:WINDow:TRACe:MARKer:STATe

Determines whether to show or hide the readout for the selected marker in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:WINDow:TRACe:MARKer:STATe { 0 | 1 | ON | OFF }
DISPlay:WLAN:AD:EVM:WINDow:TRACe:MARKer:STATe ?
```

Arguments

`OFF` or `0` hides the marker readout in the graph

`1` or `ON` shows the marker readout in the graph

Returns

0 or OFF means that the graticules in the graph are hidden

1 or ON means that the graticules in the graph are shown

Examples

`DISPLAY:WLAN:AD:EVM:WINDOW:TRACE:MARKER:STATE ON` shows the readout for the selected marker in the graph.

DISPlay:WLAN:AD:EVM:X:SCALe

Sets or queries the horizontal scale (time) axis range in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:X:SCALe <value>
DISPlay:WLAN:AD:EVM:X:SCALe?
```

Arguments

`<value>=<NRf>`

Returns

`<NRf>` = time trace

Examples

`DISPLAY:WLAN:AD:EVM:X:SCALE 30E-3` sets the horizontal scale to 30 ms.

DISPlay:WLAN:AD:EVM:X:SCALe:AUTO (No Query Form)

Rescales the horizontal axis automatically to fit the waveform to the screen in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:X:SCALe:AUTO
```

Arguments

None

Returns

None

Examples

`DISPLAY:WLAN:AD:EVM:X:SCALE:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:WLAN:AD:EVM:X:SCALe:OFFSet

Sets or queries the start of the horizontal offset value (position) of the trace in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:X:SCALe:OFFSet <value>
DISPlay:WLAN:AD:EVM:X:SCALe:OFFSet?
```

Arguments

`<value>=<NRf>`

Returns

`<NRf>` = position of trace

Examples

`DISPLAY:WLAN:AD:EVM:X:SCALE:OFFSET 150E-3` sets the horizontal offset value of the trace to 150 ms.

DISPlay:WLAN:AD:EVM:Y:SCALe

Sets or queries the vertical scale (time) axis range of the in display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:Y:SCALe<value>
DISPlay:WLAN:AD:EVM:Y:SCALe?
```

Arguments

`<value>=<NRf>`

Returns

`<NRf>` = vertical range

Examples

`DISPLAY:WLAN:AD:EVM:Y:SCALE 100` sets the vertical range scale to 100 dB.

DISPlay:WLAN:AD:EVM:Y:SCALe:AUTO (No Query Form)

Rescales the vertical scale automatically to fit the waveform in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:Y:SCALe:AUTO
```

Arguments

None

Returns

None

Examples

`DISPLAY:WLAN:AD:EVM:Y:SCALE:AUTO` rescales the vertical scale to fit the waveform on the screen.

DISPlay:WLAN:AD:EVM:Y:SCALe:OFFSet

Sets or queries the start of the vertical offset scale value (position) in the display.

Conditions

Measurement views: 802.11ad EVM vs Time

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:EVM:Y:SCALe:OFFSet<value>
DISPlay:WLAN:AD:EVM:Y:SCALe:OFFSet?
```

Arguments

`<value>=<NRf>`

Returns

`<NRf>` = vertical offset

Examples

`DISPLAY:WLAN:AD:EVM:Y:SCALE:OFFSET 100` sets the vertical offset to 100 dB.

DISPlay:WLAN:AD:MEASview:DELete (No Query Form)

Delete (Close) the corresponding 802.11ad measurement view from the analysis window.

Conditions

Measurement views: All 802.11ad measurement views

Group

Display commands

Syntax

`DISPlay:WLAN:AD:MEASview:DELete {CONS,SUMM,EVM,STAB}`

Arguments

`CONS` selects the 802.11ad Constellation view

`SUMM` selects the 802.11ad Summary view

`EVM` selects the 802.11ad EVM vs Time view

`STAB` selects the 802.11ad Symbol Table view

Returns

See Arguments

Examples

`DISPLAY:WLAN:AD:MEASVIEW:DELETE CONS` will close the Constellation display.

DISPlay:WLAN:AD:MEASview:NEW (No Query Form)

Displays a new 802.11ad measurement view in the analysis window.

Conditions

Measurement views: All 802.11ad measurement views

Group

Display commands

Syntax

`DISPlay:WLAN:AD:MEASview:NEW {CONS,SUMM,EVM,STAB}`

Arguments

`CONS` selects the 802.11ad Constellation view

`SUMM` selects the 802.11ad Summary view

`EVM` selects the 802.11ad EVM vs Time view

`STAB` selects the 802.11ad Symbol Table view

Returns

See Arguments

Examples

`DISPLAY:WLAN:AD:MEASVIEW:NEW CONS` will display the constellation display.

DISPlay:WLAN:AD:MEASview:SELect

Selects the corresponding 802.11 ad measurement view on the analysis window. The query command returns the currently selected view.

Conditions

Measurement views: All 802.11ad measurement views

Group

Display commands

Syntax

```
DISPlay:WLAN:AD:MEASview:SELect {CONS,SUMM,EVM,STAB}
DISPlay:WLAN:AD:MEASview:SELect?
```

Arguments

`CONS` selects the 802.11ad Constellation view

`SUMM` selects the 802.11ad Summary view

`EVM` selects the 802.11ad EVM vs Time view

`STAB` selects the 802.11ad Symbol Table view

Returns

See Arguments

Examples

`DISPLAY:WLAN:AD:MEASVIEW:SELECT SUMM` selects the 802.11ad Summary view.

DISPlay:WLAN:AY:CONSte:WINDow:TRACe:GRATicule:GRID:STATe

Set or query whether to show or hide the graticule in the Constellation display.

Conditions

Measurement view: 802.11ay Analysis Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:CONSte:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 0 | 1 }
DISPlay:WLAN:AY:CONSte:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or `0` hides the graticule on the graph.

`ON` or `1` shows the graticule on the graph.

Returns

0 indicates the graticule is hidden on the graph.

1 indicates the graticule is shown on the graph.

Examples

`DISP:WLAN:AY:CONS:WIND:TRAC:GRAT:GRID:STAT 1` enables the graticule to show.

`DISP:WLAN:AY:CONS:WIND:TRAC:GRAT:GRID:STAT?` may return `0`, which means the graticule is disabled.

DISPlay:WLAN:AY:CONSte:WINDow:TRACe:MARKer:STATe

Set or query whether to show or hide the marker readout on the graph in the Constellation display.

Conditions

Measurement view: 802.11ay Analysis Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:CONSte:WINDow:TRACe:MARKer:STATe { OFF | ON | 0 | 1 }
DISPlay:WLAN:AY:CONSte:WINDow:TRACe:MARKer:STATe?
```

Arguments

`OFF` or `0` hides the marker readout on the graph.

`ON` or `1` shows the marker readout on the graph.

Returns

`OFF` or `0` means the marker readout is hidden on the graph.

`ON` or `1` means the marker readout shows on the graph.

Examples

`DISP:WLAN:AY:CONS:WIND:TRAC:MARK:STAT 1` enables marker readout to show.

`DISP:WLAN:AY:CONS:WIND:TRAC:MARK:STAT?` may return `0`, which means marker readout is disabled.

DISPlay:WLAN:AY:CONSte:ZOOM:SCALe

Set or query the scale value, which is located under the scale tab.

Conditions

Measurement view: 802.11ay Analysis Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:CONSte:ZOOM:SCALe <value>
DISPlay:WLAN:AY:CONSte:ZOOM:SCALe?
```

Arguments

`<value>::=<NRf>` specifies the scale value.

Range: 0.1 to 10

Returns

`<NRf>`

Examples

`DISP:WLAN:AY:CONS:ZOOM:SCAL 5` sets the scale value to 5.

`DISP:WLAN:AY:CONS:ZOOM:SCAL?` may return `6`, indicating that 6 is the scale value.

DISPlay:WLAN:AY:CONSte:ZOOM:[SCALe]:X:OFFSet

Set or query the horizontal position value of the scale in the Constellation display.

Conditions

Measurement view: 802.11ay Analysis Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:CONSte:ZOOM:[SCALe]:X:OFFSet <value>
DISPlay:WLAN:AY:CONSte:ZOOM:[SCALe]:X:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the horizontal position value.

Range: -3.5 to 3.5

Returns

`<NRf>`

Examples

`DISP:WLAN:AY:CONS:ZOOM:SCAL:X:OFFS 3.5` sets the horizontal position value of the scale to 3.5.

`DISP:WLAN:AY:CONS:ZOOM:SCAL:X:OFFS?` may return `3.5`, which is the horizontal position value of the scale.

DISPlay:WLAN:AY:CONSte:ZOOM:[SCALe]:Y:OFFSet

Set or query the vertical position of the scale.

Conditions

Measurement view: 802.11ay Analysis Constellation

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:CONSte:ZOOM:[SCALe]:Y:OFFSet <value>
DISPlay:WLAN:AY:CONSte:ZOOM:[SCALe]:Y:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the vertical position value.

Range: -3.5 to 3.5

Returns

`<NRf>`

Examples

`DISP:WLAN:AY:CONS:ZOOM:Y:OFFS -3.5` sets the vertical position value of the scale to -3.5.

`DISP:WLAN:AY:CONS:ZOOM:Y:OFFS?` may return `-3.5`, which is the vertical position value of the scale.

DISPlay:WLAN:AY:DATA:RADix

Set or query the type of symbol radix present in the WLAN 802.11ay Symbol Table control panel settings.

Conditions

Measurement views: WLAN 802.11ay Symbol Table display

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:DATA:RADix { DEC | BIN }
DISPlay:WLAN:AY:DATA:RADix?
```

Arguments

`DEC` sets the data radix type to decimal.

`BIN` sets the data radix type to binary.

Returns

`DEC` means that the data radix type is decimal.

`BIN` means that the data radix type is binary.

Examples

`DISP:WLAN:AY:DATA:RAD DEC` sets the data radix to decimal.

`DISP:WLAN:AY:DATA:RAD?` may return `BIN`, indicating the data radix selected is binary.

DISPlay:WLAN:AY:EVM:SCALe:AUTO (No Query Form)

Rescales both horizontal and vertical axis automatically to fit the waveform to the screen in the 802.11ay EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:SCALe:AUTO
```

Arguments

None

Examples

`DISP:WLAN:AY:EVM:SCAL:AUTO` rescales both horizontal and vertical axis to fit the waveform to the graph.

DISPlay:WLAN:AY:EVM:WINDow:TRACe:GRATicule:GRID:STATe

Set or query whether to show or hide the graticule in the 802.11ay EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:WINDow:TRACe:GRATicule:GRID:STATe { OFF | ON | 1 | 0 }
DISPlay:WLAN:AY:EVM:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`OFF` or `0` hides the graticule on the graph.

`ON` or `1` shows the graticule on the graph.

Returns

`OFF` or `0` means the graticule is hidden on the graph.

`ON` or `1` means that the graticule shows on the graph.

Examples

`DISP:WLAN:AY:EVM:WIND:TRAC:GRAT:GRID:STAT OFF` hides the graticule on the graph.

`DISP:WLAN:AY:EVM:WIND:TRAC:GRAT:GRID:STAT?` may return `ON`, which means the graticule shows on the graph.

DISPlay:WLAN:AY:EVM:WINDow:TRACe:MARKer:STATe

Set or query whether to show or hide the readout for the selected marker in the 802.11ay EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:WINDow:TRACe:MARKer:STATe { OFF | ON | 0 | 1 }
DISPlay:WLAN:AY:EVM:WINDow:TRACe:MARKer:STATe?
```

Arguments

`OFF` or `0` hides the readout for the selected marker on the graph.

`ON` or `1` shows the readout for the selected marker on the graph.

Returns

`OFF` or `0` means the readout for the selected marker is hidden on the graph.

`ON` or `1` means the readout for the selected marker shows on the graph.

Examples

`DISP:WLAN:AY:EVM:WIND:TRAC:MARK:STAT ON` shows the readout for the selected marker on the graph.

`DISP:WLAN:AY:EVM:WIND:TRAC:MARK:STAT?` may return `OFF`, which means the readout for the selected marker is hidden on the graph.

DISPlay:WLAN:AY:EVM:X:SCALe

Set or query the horizontal (time) axis range in the 802.11ay EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:X:SCALe <value>
DISPlay:WLAN:AY:EVM:X:SCALe?
```

Arguments

`<value>::=<NRf>` specifies the horizontal (time) axis range.

Units: ms (milliseconds)

Returns

`<NRf>`

Examples

`DISP:WLAN:AY:EVM:X:SCAL 30e-3` sets the horizontal scale to 30 ms.

`DISP:WLAN:AY:EVM:X:SCAL?` may return `30e-3`, which means that the horizontal scale is 30 ms.

DISPlay:WLAN:AY:EVM:X:SCALe:AUTO (No Query Form)

Rescale the horizontal axis automatically to fit the waveform to the screen in the EVM display.

Conditions

Measurement views: 802.11ay Analysis in 802.11ay EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:X:SCALe:AUTO
```

Arguments

None

Examples

`DISP:WLAN:AY:EVM:X:SCAL:AUTO` rescales the horizontal scale automatically to fit the waveform to the screen.

DISPlay:WLAN:AY:EVM:X:SCALe:OFFSet

Set or query the start of the horizontal (time) trace in the 802.11ay EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:X:SCALe:OFFSet <value>
DISPlay:WLAN:AY:EVM:X:SCALe:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the minimum horizontal value.

Units: ms (milliseconds)

Returns

`<NRf>`

Examples

`DISP:WLAN:AY:EVM:X:SCAL:OFFS 150e-3` sets the horizontal offset value to 150 ms.

`DISP:WLAN:AY:EVM:X:SCAL:OFFS?` may return `150e-3`, which means the horizontal offset value is 150 ms.

DISPlay:WLAN:AY:EVM:Y:SCALe

Set or query the vertical range in the 802.11ay EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:Y:SCALe <value>
DISPlay:WLAN:AY:EVM:Y:SCALe?
```

Arguments

`<value>::=<NRf>` specifies the vertical scale. Units: % or dB (based on the EVM units set)

Returns

`<NRf>`

Examples

`DISP:WLAN:AY:EVM:Y:SCAL 100` sets the vertical range to 100 dB.

`DISP:WLAN:AY:EVM:Y:SCAL?` may return `100`, which means that the vertical range is 100%.

DISPlay:WLAN:AY:EVM:Y:SCALe:AUTO (No Query Form)

Rescale the vertical scale automatically to fit the waveform in the 802.11ay EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:Y:SCALe:AUTO
```

Arguments

None

Examples

`DISP:WLAN:AY:EVM:X:SCAL:AUTO` rescales the vertical scale automatically to fit the waveform to the screen.

DISPlay:WLAN:AY:EVM:Y:SCALe:OFFSet

Set or query the start of the vertical (EVM) trace in the 802.11ay EVM display. This command corresponds to setting or query positions in the EVM display.

Conditions

Measurement views: 802.11ay Analysis EVM

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:EVM:Y:SCALe:OFFSet <value>
DISPlay:WLAN:AY:EVM:Y:SCALe:OFFSet?
```

Arguments

`<value>::=<NRf>` specifies the vertical range.

Units: % or dB (based on the EVM units set)

Returns

`<NRf>`

Examples

`DISP:WLAN:AY:EVM:Y:SCAL:OFFS 0` sets the vertical offset to 0%.

`DISP:WLAN:AY:EVM:Y:SCAL:OFFS?` may return `0`, which means the vertical offset is 0 dB.

DISPlay:WLAN:AY:MEASview:DELete (No Query Form)

Deletes the corresponding WLAN 802.11ay display from the analysis window.

Conditions

Measurement views: All WLAN 802.11ay

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:MEASview:DELete { CONS | SUMM | EVM | STAB }
```

Arguments

Select one of the below arguments:

Arguments	Description
CONS	Selects the WLAN 802.11ay Constellation view.
SUMM	Selects the WLAN 802.11ay Summary view.
EVM	Selects the WLAN 802.11ay EVM versus Time view.
STAB	Selects the WLAN 802.11ay Symbol Table view.

Examples

`DISP:WLAN:AY:MEAS:DEL CONS` deletes the Constellation display.

DISPlay:WLAN:AY:MEASview:NEW (No Query Form)

Shows a new WLAN 802.11ay display on the analysis window.

Conditions

Measurement views: All WLAN 802.11ay

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:MEASview:NEW { CONS | SUMM | EVM | STAB }
```

Arguments

Select one of the below arguments:

Argument	Description
CONS	Selects the WLAN 802.11ay Constellation view.
SUMM	Selects the WLAN 802.11ay Summary view.
EVM	Selects the WLAN 802.11ay EVM versus Time view.
STAB	Selects the WLAN 802.11ay Symbol Table view.

Examples

`DISP:WLAN:AY:MEAS:NEW CONS` opens the Constellation display.

DISPlay:WLAN:AY:MEASview:SELect

Set or query the corresponding 802.11 ay display on the analysis window. The query command returns the currently selected view.

Conditions

Measurement views: All WLAN 802.11ay

Group

Display commands

Syntax

```
DISPlay:WLAN:AY:MEASview:SELect { CONS | SUMM | EVM | STAB }
DISPlay:WLAN:AY:MEASview:SELect?
```

Arguments

Select one of the below arguments:

Arguments

Select one of the below arguments:

Arguments	Description
CONS	Selects the WLAN 802.11ay Constellation view.
SUMM	Selects the WLAN 802.11ay Summary view.
EVM	Selects the WLAN 802.11ay EVM versus Time view.
STAB	Selects the WLAN 802.11ay Symbol Table view.

Returns

See Arguments.

Examples

`DISP:WLAN:AY:MEAS:SEL SUMM` selects the Summary view.

`DISP:WLAN:AY:MEAS:SEL?` may return `STAB`, which indicates the Symbol Table view.

DISPlay:WLAN:CONSte[:SCALe]

Sets the magnification value (zoom factor) for the WLAN constellation plot.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CONSte[:SCALe] <NRf>
DISPlay:WLAN:CONSte[:SCALe]?
```

Arguments

Floating point number that represents the scale factor. Valid inputs are any floating point number between 0.1 and 10. A positive value zooms in and a negative value zooms out.

Returns

A floating point number indicating the current magnification value.

Examples

`DISP:WLAN:CONS:SCAL` 5.0 zooms the display out by a factor of 5.

DISPlay:WLAN:CONSte:X:OFFSet

Sets or queries the value of the offset of the horizontal axis from the center of the WLAN Constellation display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CONSte:X:OFFSet <NRf>
DISPlay:WLAN:CONSte:X:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the Constellation plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 recenters the plot.

Returns

The value of the offset of the X axis from the center for the Constellation plot as a floating point number.

Examples

`DISP:WLAN:CONST:X:OFFS 1` shifts the constellation display to the left by 1.

DISPlay:WLAN:CONSte:Y:OFFSet

Sets or queries the value of the offset of the vertical axis from the center for the WLAN Constellation display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CONSte:Y:OFFSet <NRf>
DISPlay:WLAN:CONSte:Y:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the constellation plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 re-centers the plot.

Returns

The value of the offset of the Y axis from the center for the Constellation display as a floating point number.

Examples

`DISP:WLAN:CONST:Y:OFFS 1` shifts the constellation display up by 1.

DISPlay:WLAN:CRESponse:AUTO (No Query Form)

Automatically rescales the horizontal and vertical values for the best display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

`DISPlay:WLAN:CRESponse:AUTO`

Arguments

None

Examples

`DISP:WLAN:CRES:AUTO` automatically rescales the horizontal and vertical values.

DISPlay:WLAN:CRESponse:FREQuency:AUTO (No Query Form)

Automatically rescales the horizontal subcarrier (frequency) start and stop values to fit the waveform to the screen in the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

`DISPlay:WLAN:CRESponse:FREQuency:AUTO`

Arguments

None

Examples

`DISP:WLAN:CRES:FREQ:AUTO` automatically rescales the horizontal subcarrier (frequency) start and stop values to fit the waveform to the screen.

DISPlay:WLAN:CRESponse:FREQuency:STARt

Specifies or queries the horizontal start value (left edge) on the WLAN Channel Response display. The units are either Frequency (Hz) or Subcarriers, and are set using the command `[SENSe]:WLAN:UNIT:FREQuency`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:FREQuency:STARt <NRf>
DISPlay:WLAN:CRESponse:FREQuency:STARt?
```

Arguments

Floating point number that specifies the horizontal start value (left edge) on the graph.

Returns

The returned value indicates the Subcarrier (for non-b standards only) or frequency shown at the left edge of the display.

Examples

`DISP:WLAN:CRES:FREQ:START 2.41e9` sets the horizontal start value (left edge) to 2.41 GHz (assuming the units have been set to Frequency).

DISPlay:WLAN:CRESponse:FREQuency:STOP

Specifies or queries the horizontal stop value (right edge) on the WLAN Channel Response display. The units are either Frequency (Hz) or Subcarriers, and are set using the command `[SENSe]:WLAN:UNIT:FREQuency`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:FREQuency:STOP <NRf>
DISPlay:WLAN:CRESponse:FREQuency:STOP?
```

Arguments

Floating point number that specifies the horizontal stop value (right edge) on the display.

Examples

`DISP:WLAN:CRES:FREQ:STOP 8.1250e9` sets the horizontal stop value to 8.1250 GHz (assuming the units have been set to Frequency).

DISPlay:WLAN:CRESponse:MAGNitude:AUTO (No Query Form)

Rescales the vertical magnitude offset (position) and scale values to automatically to fit the waveform to the screen in the WLAN Channel Response magnitude graph.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:MAGNitude:AUTO
```

Arguments

None

Examples

`DISP:WLAN:CRES:MAGN:AUTO` rescales the vertical magnitude offset (position) and scale values automatically to fit the waveform to the screen.

DISPlay:WLAN:CRESponse:MAGNitude:OFFSet

Sets or queries the vertical offset (position in the center of the vertical axis) in the WLAN Channel Response magnitude graph.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:MAGNitude:OFFSet <NRf>
DISPlay:WLAN:CRESponse:MAGNitude:OFFSet?
```

Arguments

Floating point number that specifies the vertical offset in dB.

Examples

`DISP:WLAN:CRES:MAGN:OFFS 5` sets the vertical offset to 5 dB.

DISPlay:WLAN:CRESponse:MAGNitude[:SCALe]

Sets or queries the value of the vertical scale for the WLAN Channel Response magnitude display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:MAGNitude[:SCALe] <NRf>
DISPlay:WLAN:CRESponse:MAGNitude[:SCALe]?
```

Arguments

Floating point number that represents the vertical scale value in dB.

Examples

`DISP:WLAN:CRES:MAGN:SCAL 5.0` sets the vertical scale to 5 dB.

DISPlay:WLAN:CRESponse:MARKer:SHOW:STATe

Shows or hides the marker readout on the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:MARKer:SHOW:STATe {0|1|OFF|ON}
DISPlay:WLAN:CRESponse:MARKer:SHOW:STATe?
```

Arguments

`ON` or `1` specifies to show the marker readout.

`OFF` or `0` specifies to turn the marker readout off.

Examples

`DISP:WLAN:CRES:MARK:SHOW:STATE ON` specifies to turn the marker readout on.

DISPlay:WLAN:CRESponse:PHASe:AUTO (No Query Form)

Rescales the vertical phase value automatically to fit the waveform to the screen in the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:PHASe:AUTO
```

Arguments

None

Examples

`DISP:WLAN:CRES:PHAS:AUTO` rescales the vertical phase value automatically to fit the waveform to the screen.

DISPlay:WLAN:CRESponse:PHASe:OFFSet

Sets or queries the vertical offset (position in the center of the vertical axis) in the WLAN Channel Response phase graph.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:PHASe:OFFSet <NRf>
DISPlay:WLAN:CRESponse:PHASe:OFFSet?
```

Arguments

Floating point number that specifies the vertical offset (position) in degrees.

Examples

`DISPLAY:WLAN:CRESPONSE:PHASE:OFFSET -14.5` sets the vertical offset value to -14.5º in the WLAN Channel Response phase graph.

DISPlay:WLAN:CRESponse:PHASe[:SCALe]

Sets or queries the phase value for the WLAN Channel Response display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:PHASe[:SCALe] <NRf>
DISPlay:WLAN:CRESponse:PHASe[:SCALe]?
```

Arguments

Floating point number that represents the phase value in degrees.

Examples

`DISP:WLAN:CRES:PHASE:SCAL 5` sets the vertical scale to 5 degrees for the display.

DISPlay:WLAN:CRESponse:WINDow:SELect:PLOT

Specifies or queries which graphs are displayed in the WLAN Channel Response display view. Select from Magnitude, Phase, or Both.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:WINDow:SELect:PLOT {MAGNitude|PHASe|BOTH}
DISPlay:WLAN:CRESponse:WINDow:SELect:PLOT?
```

Arguments

`MAGNitude` displays the Magnitude graph.

`PHASe` displays the Phase graph.

`BOTH` displays both graphs.

Examples

`DISP:WLAN:CRES:WIND:SEL:PLOT PHAS` displays the Phase graph on the WLAN Channel Response analysis display.

DISPlay:WLAN:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe

Sets or queries whether to show the graticule grid on the WLAN Channel Response analysis display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe {0|1|OFF|ON}
DISPlay:WLAN:CRESponse:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`ON` or `1` specifies to show the graticule.

`OFF` or `0` specifies to turn it off.

Examples

`SENSE:WLAN:CRES:WIND:TRAC:GRAT:GRID:STATE ON` specifies to turn the graticule on.

DISPlay:WLAN:EVM:FREQuency:AUTO (No Query Form)

Automatically rescales the horizontal subcarrier (frequency) start and stop values to fit the waveform to the screen in the WLAN EVM display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

`DISPlay:WLAN:EVM:FREQuency:AUTO`

Arguments

None

Examples

`DISP:WLAN:EVM:FREQ:AUTO` automatically rescales the horizontal Subcarrier (frequency) values to fit the waveform to the screen.

DISPlay:WLAN:EVM:FREQuency:RESet (No Query Form)

Automatically resets the horizontal subcarrier (frequency) start and stop values for the WLAN EVM display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

`DISPlay:WLAN:EVM:FREQuency:RESet`

Arguments

None

Examples

`DISP:WLAN:EVM:FREQ:RES` automatically resets the horizontal subcarrier start and stop values for the WLAN EVM display.

DISPlay:WLAN:EVM:FREQuency:STARt

Specifies or queries the horizontal start value (left edge) on the WLAN EVM display. The units are either Frequency (Hz) or Subcarriers, and are set using the command `[SENSe]:WLAN:UNIT:FREQuency`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:FREQuency:STARt <NRf>
DISPlay:WLAN:EVM:FREQuency:STARt?
```

Arguments

Floating point number that specifies the horizontal start value (left edge) on the graph.

Returns

The returned value indicates the Subcarrier (for non-b standards only) or frequency shown at the left edge of the display.

Examples

`DISP:WLAN:EVM:FREQ:START 2.41e9` sets the horizontal start value (left edge) to 2.41e9 MHz (assuming the units have been set to Frequency).

DISPlay:WLAN:EVM:FREQuency:STOP

Specifies or queries the horizontal stop value (right edge) on the WLAN EVM display. The units are either Frequency (Hz) or Subcarriers, and are set using the command `[SENSe]:WLAN:UNIT:FREQuency`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:FREQuency:STOP <NRf>
DISPlay:WLAN:EVM:FREQuency:STOP?
```

Arguments

Floating point number that specifies the horizontal stop value (right edge) on the display.

Examples

`DISP:WLAN:EVM:FREQ:STOP 8.1250` sets the horizontal stop value to 8.1250 MHz (assuming the units have been set to Frequency).

DISPlay:WLAN:EVM:MARKer:SHOW:STATe

Shows or hides the Marker readout on the WLAN EVM display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:MARKer:SHOW:STATe {0|1|OFF|ON}
DISPlay:WLAN:EVM:MARKer:SHOW:STATe?
```

Arguments

`ON` or 1 specifies to show the Marker readout.

`OFF` or 0 specifies to turn the Marker readout off.

Examples

`DISP:WLAN:EVM:MARK:SHOW:STATE ON` specifies to turn the Marker readout on.

DISPlay:WLAN:EVM[:SCALe]:AUTO (No Query Form)

Automatically adjusts all vertical and horizontal values to provide the best display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:WLAN:EVM:SCALE:AUTO` automatically adjusts all vertical and horizontal values to provide the best display.

DISPlay:WLAN:EVM:TIME:AUTO (No Query Form)

Sets the horizontal start and stop values to fit the waveform to the WLAN EVM display, and also enables Auto horizontal scaling so the waveform will remain properly scaled as burst lengths change.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:TIME:AUTO
```

Arguments

None

Examples

DISP:WLAN:EVM:TIME:AUTO sets the horizontal start and stop values to fit the waveform to the display, and also enables Auto horizontal scaling.

DISPlay:WLAN:EVM:TIME:AUTO:STATe

When enabled, sets the horizontal symbol scale value automatically for the WLAN EVM display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:TIME:AUTO:STATe {0|1|OFF|ON}
DISPlay:WLAN:EVM:TIME:AUTO:STATe?
```

Arguments

ON or 1 sets the horizontal symbol scale value automatically.

OFF or 0 specifies to stop setting the horizontal symbol scale value automatically.

Examples

DISP:WLAN:EVM:TIME:AUTO:STATE ON specifies to the horizontal symbol scale value automatically.

DISPlay:WLAN:EVM:TIME:RESet (No Query Form)

Resets the horizontal symbol start and stop values for the WLAN EVM display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:TIME:RESet
```

Arguments

None

Examples

DISP:WLAN:EVM:TIME:RES resets the horizontal symbol start and stop values for the WLAN EVM display.

DISPlay:WLAN:EVM:TIME:STARt

Sets or queries the horizontal symbol start value for the WLAN EVM display. The units are either Symbols or Seconds, and are set using the command `[SENSe]:WLAN:UNIT:TIME`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:TIME:STARt <NRf>
DISPlay:WLAN:EVM:TIME:STARt?
```

Arguments

Floating point number.

Examples

`DISP:WLAN:EVM:TIME:START 40` sets the horizontal symbol start value of the WLAN EVM display to 40 Symbols (assuming the units have been set to Symbols).

DISPlay:WLAN:EVM:TIME:STOP

Sets or queries the horizontal symbol stop value for the WLAN EVM display. The units are either Symbols or Seconds, and are set using the command `[SENSe]:WLAN:UNIT:TIME`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:TIME:STOP <NRf>
DISPlay:WLAN:EVM:TIME:STOP?
```

Arguments

Floating point number.

Examples

`DISP:WLAN:EVM:TIME:STOP 804.96e-6` sets the horizontal symbol stop value for the WLAN EVM display to 804.960 µs (assuming the units have been set to Seconds).

DISPlay:WLAN:EVM:WINDow:SELect:PLOT

Specifies or queries which graphs are displayed in the WLAN EVM display. Select from Symbols, Subcarriers, or Both.

To set the Time units, use `[SENSe]:WLAN:UNIT:TIME`. To set the Frequency units, use `[SENSe]:WLAN:UNIT:FREQuency`. To set the Radix, use `[SENSe]:WLAN:RADix`.

NOTE: Use this command only with multicarrier standards and not singlecarrier (802.11b).

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:WINDow:SELect:PLOT {SYMBols|SCARrier|BOTH}
DISPlay:WLAN:EVM:WINDow:SELect:PLOT?
```

Arguments

`SYMBols` displays the Symbols graph.

`SCARrier` displays the Subcarriers graph.

`BOTH` displays both graphs.

Examples

`DISP:WLAN:EVM:WIND:SEL:PLOT SCAR` displays the Subcarrier graph on the WLAN EVM display.

DISPlay:WLAN:EVM:WINDow:TRACe:GRATicule:GRID:STATe

Shows or hides the graticule grid on the screen.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:WINDow:TRACe:GRATicule:GRID:STATe {0|1|OFF|ON}
DISPlay:WLAN:EVM:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`ON` or 1 specifies to show the graticule.

`OFF` or 0 specifies to turn it off.

Examples

`DISP:WLAN:EVM:WIND:TRAC:GRAT:GRID:STATE ON` specifies to turn the graticule on.

DISPlay:WLAN:EVM:Y:AUTO (No Query Form)

Automatically sets the vertical scale and position values for the WLAN EVM display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:Y:AUTO
```

Arguments

None

Examples

`DISP:WLAN:EVM:Y:AUTO` automatically sets the vertical scale and position values for the WLAN EVM display.

DISPlay:WLAN:EVM:Y:OFFSet

Sets or queries the value of the offset from the center (vertical position), in percent terms, for the WLAN EVM display. To set the vertical scale, use the command `DISPlay:WLAN:EVM:Y[:SCALe]`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:Y:OFFSet <NRf>
DISPlay:WLAN:EVM:Y:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the EVM plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 re-centers the plot.

Returns

The value of the offset from the center of the Y axis for the Error Magnitude Vector plot as a floating point number.

Examples

`DISP:WLAN:EVM:Y:OFFS 150` sets the offset from the center (vertical position) of the EVM plot to 150%.

DISPlay:WLAN:EVM:Y:RESet (No Query Form)

Resets the vertical scale and position (offset) values for the WLAN EVM display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:Y:RESet
```

Arguments

None

Examples

`DISP:WLAN:EVM:Y:RES` specifies to reset the vertical scale and position (offset) values for the WLAN EVM display.

DISPlay:WLAN:EVM:Y[:SCALe]

Sets or queries the vertical scale value for the WLAN EVM display. To set the vertical position (offset) value, use the command DISPlay:WLAN:EVM:Y:OFFSet (on page 1077).

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:EVM:Y[:SCALe] <NRf>
DISPlay:WLAN:EVM:Y[:SCALe]?
```

Arguments

Floating point number that specifies the vertical scale value for the WLAN EVM display.

Examples

`DISP:WLAN:EVM:Y:SCALE 10` sets the vertical scale value for the WLAN EVM display to 10.

DISPlay:WLAN:FLATness:AUTO (No Query Form)

Automatically rescales the horizontal and vertical axes for the best display in the WLAN Spectral Flatness view.

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:FLATness:AUTO
```

Arguments

None

Examples

`DISP:WLAN:FLAT:AUTO` automatically rescales the horizontal and vertical axes for the best display.

DISPlay:WLAN:FLATness:X:AUTO (No Query Form)

Rescales the horizontal axis automatically in the WLAN Spectral Flatness display.

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:FLATness:X:AUTO
```

Arguments

None

Examples

`DISP:WLAN:FLAT:X:AUTO` rescales the horizontal axis automatically for the best display.

DISPlay:WLAN:FLATness:X:OFFSet

Sets or queries the value of the offset of the horizontal axis from the center of the WLAN Spectral Flatness display.

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:FLATness:X:OFFSet <NRf>
DISPlay:WLAN:FLATness:X:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 recenters the plot.

Returns

The value of the offset of the X axis from the center of the plot as a floating point number.

Examples

`DISP:WLAN:FLAT:X:OFFS 150` shifts the display to the left by 150%.

DISPlay:WLAN:FLATness:X[:SCALe]

Sets or queries the horizontal scale value in the WLAN Spectral Flatness display. The units are Frequency or Subcarrier. To set the units, use `[SENSe]:WLAN:UNIT:FREQuency`.

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:FLATness:X[:SCALe] <NRf>
DISPlay:WLAN:FLATness:X[:SCALe]?
```

Arguments

Floating point number that represents the horizontal scale.

Examples

`DISP:WLAN:FLAT:X:SCALE 32` sets the horizontal scale value to 32.

DISPlay:WLAN:FLATness:Y:AUTO (No Query Form)

Automatically rescales the vertical axis scale and position values in the WLAN Spectral Flatness display.

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:FLATness:Y:AUTO
```

Arguments

None

Examples

`DISP:WLAN:FLAT:Y:AUTO` automatically selects the vertical scale and position values.

DISPlay:WLAN:FLATness:Y:OFFSet

Sets or queries the value of the offset from the center (vertical position), in percent terms, for the WLAN Spectral Flatness display. To set the Vertical Scale, use the command DISPlay:WLAN:FLATness:Y[:SCALe] (on page 1081).

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:FLATness:Y:OFFSet <NRf>
DISPlay:WLAN:FLATness:Y:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 re-centers the plot.

Returns

The value of the offset from the center of the Y axis for the plot as a floating point number.

Examples

`DISP:WLAN:FLAT:Y:OFFS 150` sets the offset from the center (vertical position) of the plot to 150 %.

DISPlay:WLAN:FLATness:Y[:SCALe]

Sets or queries the vertical scale value for the WLAN Spectral Flatness display. To set the vertical position (offset) value, use the command `DISPlay:WLAN:FLATness:Y:OFFSet`.

NOTE: WLAN Spectral Flatness is only available for OFDM (non-802.11b) signals.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:FLATness:Y[:SCALe] <NRf>
DISPlay:WLAN:FLATness:Y[:SCALe]?
```

Arguments

Floating point number that specifies the vertical scale value.

Examples

`DISP:WLAN:FLAT:Y:SCALE 10` sets the vertical scale value to 10.

DISPlay:WLAN:MEASview:DELete (No Query Form)

Deletes the selected measurement view in the WLAN display.

If you attempt to delete a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MEASview:DELete {SUMMary|FLATness|CONStellation|EVM|MERRor|PERRor|CRESponse|STABle|
    PVTime}
```

Arguments

The following table lists the arguments.

Argument	WLAN measurement view
SUMMary	Summary measurements
FLATness	Spectral Flatness measurement
CONStellation	Constellation measurement

Examples

`DISP:WLAN:MEAS:DEL PERR` deletes the Phase Error measurement view.

DISPlay:WLAN:MEASview:NEW (No Query Form)

Displays a new measurement view in the WLAN display.

If you attempt to open a view that is currently displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MEASview:NEW {SUMMary|FLATness|CONStellation|EVM|MERRor|PERRor|CRESponse|STABle|
    PVTime}
```

Arguments

The following table lists the arguments.

Argument	WLAN measurement view
SUMMary	Summary measurements
FLATness	Spectral Flatness measurement
CONStellation	Constellation measurement

Examples

`DISP:WLAN:MEASVIEW:NEW CONSTELLATION` creates the Constellation measurement view.

DISPlay:WLAN:MEASview:SELect

Selects a measurement view on the screen in the WLAN measurements. The query command returns the currently selected view.

If you attempt to select a view that is not displayed on screen, the error (-200, "Execution error; Measurement is already running") will be returned.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MEASview:SELect {SUMMary|FLATness|CONStellation|EVM|MERRor|PERRor|CRESponse|STABle|
    PVTime}
DISPlay:WLAN:MEASview:SELect?
```

Arguments

The following table lists the arguments.

The following table lists the arguments.

Argument	WLAN measurement view
SUMMary	Summary measurements
FLATness	Spectral Flatness measurement
CONStellation	Constellation measurement
EVM	Error Vector Magnitude measurement

Argument	WLAN measurement view
MERRor	Magnitude Error vs. Time
PERRor	Phase Error vs. Time
CRESponse	Channel Response measurement
STABle	Symbol Table
PVTime	Power Vs. Time

Examples

`DISP:WLAN:MEASVIEW:SEL CONSTELLATION` selects the Constellation measurement view.

`DISP:WLAN:MEASVIEW:SEL?` might return FLAT, indicating that the Spectral Flatness measurement view is the currently selected view.

DISPlay:WLAN:MERRor:FREQuency:AUTO (No Query Form)

Automatically rescales the horizontal subcarrier (frequency) start and stop values to fit the waveform to the screen in the WLAN Magnitude Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

`DISPlay:WLAN:MERRor:FREQuency:AUTO`

Arguments

None

Examples

`DISPlay:WLAN:MERRor:FREQuency:AUTO` automatically rescales the horizontal Subcarrier (frequency) values to fit the waveform to the screen.

DISPlay:WLAN:MERRor:FREQuency:RESet (No Query Form)

Automatically resets the horizontal subcarrier (frequency) start and stop values for the WLAN Magnitude Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:FREQuency:RESet
```

Arguments

None

Examples

`DISP:WLAN:MERR:FREQ:RES` automatically resets the horizontal subcarrier start and stop values for the WLAN Magnitude Error display.

DISPlay:WLAN:MERRor:FREQuency:STARt

Specifies or queries the horizontal start value (left edge) on the WLAN Magnitude Error display. The units are either Frequency (Hz) or Subcarriers, and are set using the command [SENSe]:WLAN:UNIT:FREQuency (on page 2530).

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:FREQuency:STARt <NRf>
DISPlay:WLAN:MERRor:FREQuency:STARt?
```

Arguments

Floating point number that specifies the horizontal start value (left edge) on the graph.

Returns

The returned value indicates the Subcarrier (for non-b standards only) or frequency shown at the left edge of the display.

Examples

`DISP:WLAN:MERR:FREQ:START 2.41e9` sets the horizontal start value (left edge) to 2.41e9 MHz (assuming the units have been set to Frequency).

DISPlay:WLAN:MERRor:FREQuency:STOP

Specifies or queries the horizontal stop value (right edge) on the WLAN Magnitude Error display. The units are either Frequency (Hz) or Subcarriers, and are set using the command [SENSe]:WLAN:UNIT:FREQuency (on page 2530).

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:FREQuency:STOP <NRf>
DISPlay:WLAN:MERRor:FREQuency:STOP?
```

Arguments

Floating point number that specifies the horizontal stop value (right edge) on the display.

Examples

`DISP:WLAN:MERR:FREQ:STOP 8.1250` sets the horizontal stop value to 8.1250 MHz (assuming the units have been set to Frequency).

DISPlay:WLAN:MERRor:MARKer:SHOW:STATe

Shows or hides the marker readout on the WLAN Magnitude Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:MARKer:SHOW:STATe {0|1|OFF|ON}
DISPlay:WLAN:MERRor:MARKer:SHOW:STATe?
```

Arguments

`ON` or 1 specifies to show the marker readout.

`OFF` or 0 specifies to turn the marker readout off.

Examples

`DISP:WLAN:MERR:MARK:SHOW:STATE ON` specifies to turn the marker readout on.

DISPlay:WLAN:MERRor[:SCALe]:AUTO (No Query Form)

Automatically adjusts all vertical and horizontal values to provide the best display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:WLAN:MERR:SCALE:AUTO` automatically adjusts all vertical and horizontal values to provide the best display.

DISPlay:WLAN:MERRor:TIME:AUTO (No Query Form)

Sets the horizontal start and stop values to fit the waveform to the WLAN Magnitude Error display, and also enables Auto horizontal scaling so the waveform will remain properly scaled as burst lengths change.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:TIME:AUTO
```

Arguments

None

Examples

`DISP:WLAN:MERR:TIME:AUTO` sets the horizontal start and stop values to fit the waveform to the display, and also enables Auto horizontal scaling.

DISPlay:WLAN:MERRor:TIME:AUTO:STATe

When enabled, automatically sets the horizontal symbol scale value for the WLAN MERR display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:TIME:AUTO:STATe {0|1|OFF|ON}
DISPlay:WLAN:MERRor:TIME:AUTO:STATe?
```

Arguments

`ON` or 1 sets the horizontal symbol scale value automatically.

`OFF` or 0 specifies to stop setting the horizontal symbol scale value automatically.

Examples

`DISP:WLAN:MERR:TIME:AUTO:STATE ON` specifies to the horizontal symbol scale value automatically.

DISPlay:WLAN:MERRor:TIME:RESet (No Query Form)

Resets the horizontal symbol start and stop values for the WLAN Magnitude Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:TIME:RESet
```

Arguments

None

Examples

`DISP:WLAN:MERR:TIME:RES` resets the horizontal symbol start and stop values for the WLAN Magnitude Error display.

DISPlay:WLAN:MERRor:TIME:STARt

Sets or queries the horizontal symbol start value for the WLAN Magnitude Error display. The units are either Symbols or Seconds, and are set using the command `[SENSe]:WLAN:UNIT:TIME`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:TIME:STARt <NRf>
DISPlay:WLAN:MERRor:TIME:STARt?
```

Arguments

Floating point number.

Examples

`DISP:WLAN:MERR:TIME:START 40` sets the horizontal symbol start value of the WLAN Magnitude Error display to 40 Symbols (assuming the units have been set to Symbols).

DISPlay:WLAN:MERRor:TIME:STOP

Sets or queries the horizontal symbol stop value for the WLAN Magnitude Error display. The units are either Symbols or Seconds, and are set using the command `[SENSe]:WLAN:UNIT:TIME`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:TIME:STOP <NRf>
DISPlay:WLAN:MERRor:TIME:STOP?
```

Arguments

Floating point number.

Examples

`DISP:WLAN:MERR:TIME:STOP 804.96e-6` sets the horizontal symbol stop value for the WLAN Magnitude Error display to 804.960 µs (assuming the units have been set to Seconds).

DISPlay:WLAN:MERRor:WINDow:SELect:PLOT

Specifies or queries which graphs are displayed in the WLAN Magnitude Error display. Select from Symbols, Subcarriers, or Both.

To set the Time units, use [SENSe]:WLAN:UNIT:TIME (on page 2530). To set the Frequency units, use [SENSe]:WLAN:UNIT:FREQuency (on page 2530). To set the Radix, use [SENSe]:WLAN:RADix (on page 2521).

NOTE: Use this command only with multicarrier standards and not singlecarrier (802.11b).

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:WINDow:SELect:PLOT{SYMBols|SCARrier|BOTH}
DISPlay:WLAN:MERRor:WINDow:SELect:PLOT?
```

Arguments

`SYMBols` displays the Symbols graph.

`SCARrier` displays the Subcarriers graph.

`BOTH` displays both graphs.

Examples

`DISP:WLAN:MERR:WIND:SEL:PLOT SCAR` displays the Subcarrier graph on the WLAN Magnitude Error display.

DISPlay:WLAN:MERRor:WINDow:TRACe:GRATicule:GRID:STATe

Shows or hides the graticule grid on the display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:WINDow:TRACe:GRATicule:GRID:STATe {0|1|OFF|ON}
DISPlay:WLAN:MERRor:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`ON` or 1 specifies to show the graticule.

`OFF` or 0 specifies to turn it off.

Examples

`DISP:WLAN:MERR:WIND:TRAC:GRAT:GRID:STATE ON` specifies to turn the graticule on.

DISPlay:WLAN:MERRor:Y:AUTO (No Query Form)

Automatically sets the vertical scale and position values for the WLAN Magnitude Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:Y:AUTO
```

Arguments

None

Examples

`DISP:WLAN:MERR:Y:AUTO` automatically sets the vertical scale and position values for the WLAN Magnitude Error display.

DISPlay:WLAN:MERRor:Y:OFFSet

Sets or queries the offset from the center (vertical position), in percent terms, for the WLAN Magnitude Error display. To set the vertical scale, use the command `DISPlay:WLAN:EVM:Y[:SCALe]`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:Y:OFFSet <NRf>
DISPlay:WLAN:MERRor:Y:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the Magnitude Error plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 re-centers the plot.

Returns

The offset from the center of the Y axis for the Magnitude Error plot as a floating point number.

Examples

`DISP:WLAN:MERR:Y:OFFS 150` sets the offset from the center of the vertical axis of the Magnitude Error plot to 150%.

DISPlay:WLAN:MERRor:Y:RESet (No Query Form)

Resets the vertical scale and position (offset) for the WLAN Magnitude Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:Y:RESet
```

Arguments

None

Examples

`DISP:WLAN:MERR:Y:RES` specifies to reset the vertical scale and position (offset) values for the WLAN Magnitude Error display.

DISPlay:WLAN:MERRor:Y[:SCALe]

Sets or queries the vertical scale value for the WLAN Magnitude Error display. To set the vertical position (offset) value, use the command `DISPlay:WLAN:EVM:Y:OFFSet`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:MERRor:Y[:SCALe] <NRf>
DISPlay:WLAN:MERRor:Y[:SCALe]?
```

Arguments

Floating point number that specifies the vertical scale value for the WLAN Magnitude Error display.

Examples

`DISP:WLAN:MERR:Y:SCALE 10` sets the vertical scale for the WLAN Magnitude Error display to 10.

DISPlay:WLAN:PERRor:FREQuency:AUTO (No Query Form)

Automatically rescales the horizontal subcarrier (frequency) start and stop values to fit the waveform to the screen in the WLAN Phase Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

`DISPlay:WLAN:PERRor:FREQuency:AUTO`

Arguments

None

Examples

`DISP:WLAN:PERR:FREQ:AUTO` automatically rescales the horizontal Subcarrier (frequency) start and stop values to fit the waveform to the screen.

DISPlay:WLAN:PERRor:FREQuency:RESet (No Query Form)

Automatically resets the horizontal subcarrier (frequency) start and stop values for the WLAN Phase Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

`DISPlay:WLAN:PERRor:FREQuency:RESet`

Arguments

None

Examples

`DISP:WLAN:PERR:FREQ:RES` automatically resets the horizontal Subcarrier start and stop values for the WLAN Phase Error display.

DISPlay:WLAN:PERRor:FREQuency:STARt

Specifies or queries the horizontal start value (left edge) on the WLAN Phase Error display. The units are either Frequency (Hz) or Subcarriers, and are set using the command `[SENSe]:WLAN:UNIT:FREQuency`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:FREQuency:STARt <NRf>
DISPlay:WLAN:PERRor:FREQuency:STARt?
```

Arguments

Floating point number that specifies the horizontal start value (left edge) on the display.

Returns

The readout indicates the Subcarrier (for non-b standards only) or frequency shown at the left edge of the display.

Examples

`DISP:WLAN:PERR:FREQ:START -8.1250` sets the horizontal start value to -8.1250 MHz (assuming the units have been set to Frequency).

DISPlay:WLAN:PERRor:FREQuency:STOP

Specifies or queries the horizontal stop value (right edge) on the WLAN Phase Error display. The units are either Frequency (Hz) or Subcarriers, and are set using the command `[SENSe]:WLAN:UNIT:FREQuency`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:FREQuency:STOP <NRf>
DISPlay:WLAN:PERRor:FREQuency:STOP?
```

Arguments

Floating point number that specifies the horizontal stop value (right edge) on the display.

Examples

`DISP:WLAN:PERR:FREQ:STOP 8.1250` sets the horizontal stop value to 8.1250 MHz (assuming the units have been set to Frequency).

DISPlay:WLAN:PERRor:MARKer:SHOW:STATe

Show or hides the Marker readout on the WLAN Phase Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:MARKer:SHOW:STATe {0|1|OFF|ON}
DISPlay:WLAN:PERRor:MARKer:SHOW:STATe?
```

Arguments

`ON` or 1 specifies to show the Marker readout.

`OFF` or 0 specifies to turn the Marker readout off.

Examples

`DISP:WLAN:PERR:MARK:SHOW:STATE ON` specifies to turn the Marker readout on.

DISPlay:WLAN:PERRor[:SCALe]:AUTO (No Query Form)

Automatically adjusts all vertical and horizontal settings to provide the best display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:WLAN:PERRor:SCALE:AUTO` automatically adjusts all vertical and horizontal settings to provide the best display.

DISPlay:WLAN:PERRor:TIME:AUTO (No Query Form)

Automatically sets the horizontal symbol start and stop values to fit the waveform to the screen for the WLAN Phase Error vs. Symbol plot. In addition, sets the state for this feature to ON.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:TIME:AUTO
```

Arguments

None

Examples

`DISP:WLAN:PERR:TIME:AUTO` sets the instrument to automatically select the horizontal symbol start and stop values to fit the waveform to the screen, and turns the AUTO feature on.

DISPlay:WLAN:PERRor:TIME:AUTO:STATe

When enabled, automatically sets the horizontal symbol scale value for the WLAN Phase Error display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:TIME:AUTO:STATe {0|1|OFF|ON}
DISPlay:WLAN:PERRor:TIME:AUTO:STATe?
```

Arguments

`ON` or 1 specifies to set the Analysis Time value automatically.

`OFF` or 0 specifies to turn stop setting the Analysis Time value automatically.

Examples

`DISP:WLAN:PERR:TIME:AUTO:STATE ON` specifies to set the Analysis Time value automatically, based on the requirements of the selected display

DISPlay:WLAN:PERRor:TIME:RESet (No Query Form)

Resets the horizontal symbol start and stop values for the WLAN Phase Error Average vs. Symbol display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:TIME:RESet
```

Arguments

None

Examples

DISP:WLAN:PERR:TIME:RES resets the horizontal symbol start and stop values for the WLAN Phase Error Average vs. Symbol display.

DISPlay:WLAN:PERRor:TIME:STARt

Sets or queries the horizontal symbol start value for the WLAN Phase Error Average vs. Symbol display. The units are either Symbols or Seconds, and are set using the command [SENSe]:WLAN:UNIT:TIME.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:TIME:STARt <NRf>
DISPlay:WLAN:PERRor:TIME:STARt?
```

Arguments

Floating point number.

Examples

DISP:WLAN:PERR:TIME:START 40 sets the horizontal symbol start value of the Average vs. Symbol display to 40 Symbols (assuming the units have been set to Symbols).

DISPlay:WLAN:PERRor:TIME:STOP

Sets or queries the horizontal symbol stop value for the WLAN Phase Error Average vs. Symbol display. The units are either Symbols or Seconds, and are set using the command [SENSe]:WLAN:UNIT:TIME.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:TIME:STOP <NRf>
DISPlay:WLAN:PERRor:TIME:STOP?
```

Arguments

Floating point number.

Examples

DISP:WLAN:PERR:TIME:STOP 804.960 sets the horizontal symbol stop value for the Average vs. Symbol display to 804.960 µs (assuming the units have been set to Seconds).

DISPlay:WLAN:PERRor:WINDow:SELect:PLOT

Specifies or queries which displays are displayed in the WLAN Phase Error analysis display (Symbols, Subcarriers, or Both).

To set the Time units, use [SENSe]:WLAN:UNIT:TIME (on page 2530). To set the Frequency units, use [SENSe]:WLAN:UNIT:FREQuency (on page 2530). To set the Radix, use [SENSe]:WLAN:RADix (on page 2521).

NOTE: Use this command only with multicarrier standards and not singlecarrier (802.11b).

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:WINDow:SELect:PLOT {SYMBols|SCARrier|BOTH}
DISPlay:WLAN:PERRor:WINDow:SELect:PLOT?
```

Arguments

`SYMBols` displays the Symbols graph.

`SCARrier` displays the Subcarriers graph.

`BOTH` displays both graphs.

Examples

`DISP:WLAN:PERR:WIND:SEL:PLOT SCAR` displays the Subcarrier graph on the WLAN Phase Error analysis display.

DISPlay:WLAN:PERRor:WINDow:TRACe:GRATicule:GRID:STATe

Shows or hides the graticule grid on the screen.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:WINDow:TRACe:GRATicule:GRID:STATe {0|1|OFF|ON}
DISPlay:WLAN:PERRor:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

`ON` or 1 specifies to show the graticule.

`OFF` or 0 specifies to turn it off.

Examples

`DISP:WLAN:PERR:WIND:TRAC:GRAT:GRID:STATE ON` specifies to turn the graticule on.

DISPlay:WLAN:PERRor:Y:AUTO (No Query Form)

Automatically selects the vertical scale and position values for the WLAN Phase Error Symbol and Subcarrier plots.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:Y:AUTO
```

Arguments

None

Examples

`DISP:WLAN:PERR:Y:AUTO` automatically selects the vertical scale and position values for the WLAN Phase Error Symbol and Subcarrier plots.

DISPlay:WLAN:PERRor:Y:OFFSet

Sets or queries the value of the offset from the center (vertical position), in percent terms, for the WLAN Phase Error Symbol and Subcarrier plots. To set the Vertical Scale, use the command `DISPlay:WLAN:PERRor:Y[:SCALe]`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:Y:OFFSet <NRf>
DISPlay:WLAN:PERRor:Y:OFFSet?
```

Arguments

Floating point number between limits which are set as a function of the current scale value guaranteed to keep the plot at least partially visible on the display. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up. 0 re-centers the plot.

Returns

The value of the offset from the center of the Y axis for the Phase Error plot as a floating point number.

Examples

`DISP:WLAN:PERR:Y:OFFS 150` sets the offset from the center (vertical position) of the Phase Error plot to 150%.

DISPlay:WLAN:PERRor:Y:RESet (No Query Form)

Resets the vertical scale and position (offset) values for the WLAN Phase Error Symbol and Subcarrier plots.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:Y:RESet
```

Arguments

None

Examples

`DISP:WLAN:PERR:Y:RES` specifies to reset the vertical scale and position (offset) values for the WLAN Phase Error plot.

DISPlay:WLAN:PERRor:Y[:SCALe]

Sets or queries the vertical scale value for the WLAN Phase Error plots. To set the vertical position (offset) value, use the command `DISPlay:WLAN:PERRor:Y:OFFSet`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PERRor:Y[:SCALe] <NRf>
DISPlay:WLAN:PERRor:Y[:SCALe]?
```

Arguments

Floating point number that specifies the vertical scale value.

Examples

`DISP:WLAN:PERR:Y:SCALE 10` sets the vertical scale value to 10.

DISPlay:WLAN:PVTime:BURSt:X[:SCALe]

Sets or queries the value of the scale (width), in seconds, for the WLAN Power vs. Time display when using horizontal Full Burst view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:BURSt:X[:SCALe] <NRf>
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]?
```

Arguments

Floating point number that represents the value of the scale (width), in seconds, when using horizontal Full Burst view.

Examples

`DISP:WLAN:PVT:BURS:X:SCALE 5.0E-6` sets the width of the display to 5.000 µS for the horizontal Full Burst view.

DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:AUTO (No Query Form)

Automatically sets the starting time (position) and scale (width) values for the best display in the horizontal Full Burst view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:WLAN:PVT:BURS:X:SCALE:AUTO` automatically sets the starting time (position) and scale (width) values for the best display.

DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:OFFSet

Sets or queries the starting time (position) value, in seconds, for the WLAN Power vs. Time display when using the horizontal Full Burst view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:OFFSet <NRf>
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:OFFSet?
```

Arguments

Floating point number that represents the starting time (position) value, in seconds, when using horizontal Full Burst view.

Examples

`DISP:WLAN:PVT:BURS:X:OFFFSET 5.0E-6` sets the starting time (position) of the graph to 5.000 µS for horizontal Full Burst view.

DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:RESet (No Query Form)

Resets the starting time (position) and scale (width) values for the horizontal Full Burst view on the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:BURSt:X[:SCALe]:RESet
```

Arguments

None

Examples

`DISP:WLAN:PVT:BURST:X:SCALE:RESET` resets the starting time (position) and scale (width) values for the horizontal Full Burst view.

DISPlay:WLAN:PVTime:FALL:X[:SCALe]

Sets or queries the scale (width) value, in seconds, for the WLAN Power vs. Time display when using the horizontal Falling Edge view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:FALL:X[:SCALe] <NRf>
DISPlay:WLAN:PVTime:FALL:X[:SCALe]?
```

Arguments

Floating point number that represents the scale (width), in seconds, when using the horizontal Falling Edge view.

Examples

`DISP:WLAN:PVT:FALL:X:SCALE 5.0E-6` sets the width of the graph to 5.000 µS when using the horizontal Falling Edge view.

DISPlay:WLAN:PVTime:FALL:X[:SCALe]:AUTO (No Query Form)

Automatically sets the starting time (position) and scale (width) values for the best display in the horizontal Falling Edge view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:FALL:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:WLAN:PVT:FALL:X:SCALE:AUTO` automatically sets the starting time (position) and scale (width) values for the best display.

DISPlay:WLAN:PVTime:FALL:X[:SCALe]:OFFSet

Sets or queries the value for the starting time (offset) of the graph, in seconds, for the WLAN Power vs. Time display when using the horizontal Falling Edge view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:FALL:X[:SCALe]:OFFSet <NRf>
DISPlay:WLAN:PVTime:FALL:X[:SCALe]:OFFSet?
```

Arguments

Floating point number that represents the value of the starting time (offset) of the graph, in seconds, when using the horizontal Falling Edge view.

Examples

`DISP:WLAN:PVT:FALL:X:SCALE 5.0` sets the starting time (position) of the graph to 5.000 µS when using the horizontal Falling Edge view.

DISPlay:WLAN:PVTime:FALL:X[:SCALe]:RESet (No Query Form)

Resets the starting time (position) and scale (width) values for the horizontal Falling Edge view on the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:FALL:X[:SCALe]:RESet
```

Arguments

None

Examples

`DISP:WLAN:PVT:FALL:X:SCALE:RESET` resets the starting time (position) and scale (width) values for the horizontal Falling Edge view.

DISPlay:WLAN:PVTime:MARKer:SHOW:STATe

Shows or hides the marker readout on the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:MARKer:SHOW:STATe {0|1|OFF|ON}
DISPlay:WLAN:PVTime:MARKer:SHOW:STATe?
```

Arguments

`ON` or 1 specifies to show the marker readout.

`OFF` or 0 specifies to turn the marker readout off.

Examples

`DISP:WLAN:PVT:MARK:SHOW:STATE ON` specifies to turn the marker readout on.

DISPlay:WLAN:PVTime:RISE:X[:SCALe]

Sets or queries the scale (width) value, in seconds, for the WLAN Power vs. Time display when using the horizontal Rising Edge view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:RISE:X[:SCALe] <NRf>
DISPlay:WLAN:PVTime:RISE:X[:SCALe]?
```

Arguments

Floating point number that represents the scale (width) value, in seconds, for the horizontal Rising Edge view.

Examples

`DISP:WLAN:PVT:RISE:X:SCALE 5.0E-6` sets the width of the graph to 5.000µS for the horizontal Rising Edge view.

DISPlay:WLAN:PVTime:RISE:X[:SCALe]:AUTO (No Query Form)

Automatically sets the starting time (position) and scale (width) values for the best display in the horizontal Rising Edge view of the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:RISE:X[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:WLAN:PVT:RISE:X:SCALE:AUTO` automatically sets the starting time (position) and scale (width) values for the best display.

DISPlay:WLAN:PVTime:RISE:X[:SCALe]:OFFSet

Sets or queries the starting time value (offset), in seconds, for the WLAN Power vs. Time display when using the horizontal Rising Edge view.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:RISE:X[:SCALe]:OFFSet <NRf>
DISPlay:WLAN:PVTime:RISE:X[:SCALe]:OFFSet?
```

Arguments

Floating point number that represents the value of the starting time (offset) of the graph, in seconds, for the horizontal Rising Edge view.

Examples

`DISP:WLAN:PVT:RISE:X:OFFSET 5.0e-6` sets the starting time (position) of the graph to 5.000 µS for the horizontal Rising Edge view.

DISPlay:WLAN:PVTime:RISE:X[:SCALe]:RESet (No Query Form)

Resets the starting time (position) and scale (width) values for the horizontal Rising Edge view on the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:RISE:X[:SCALe]:RESet
```

Arguments

None

Examples

`DISP:WLAN:PVT:RISE:X:SCALE:RESET` resets the starting time (position) and scale (width) values for the horizontal Rising Edge view.

DISPlay:WLAN:PVTime:WINDow:SELect:PLOT

Specifies or queries which view to use for the WLAN Power vs. Time display. Select from Full Burst, Rising Edge or Falling Edge.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:WINDow:SELect:PLOT {BURSt|RISE|FALL}
DISPlay:WLAN:PVTime:WINDow:SELect:PLOT?
```

Arguments

BURSt sets the view to Full Burst, which displays the entire packet, with vertical lines indicating the length of the burst.

RISE sets the view to Rising Edge, which zooms the display into the interval around the burst rising edge, with vertical lines indicating the 10% to 90% Power-On Ramp time.

FALL sets the view to Falling Edge, which zooms the display into the interval around the burst Falling Edge, with vertical lines indicating the 90% to 10% Power-Down Ramp time.

Returns

DISP:WLAN:PVT:WIND:SEL:PLOT BURS sets the view to Full Burst.

DISP:WLAN:PVT:WIND:SEL:PLOT? might return RISE, indicating that the view has been set to Rising Edge.

DISPlay:WLAN:PVTime:WINDow:TRACe:GRATicule:GRID:STATe

Shows or hides the graticule grid on the screen.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:WINDow:TRACe:GRATicule:GRID:STATe {0|1|OFF|ON}
DISPlay:WLAN:PVTime:WINDow:TRACe:GRATicule:GRID:STATe?
```

Arguments

ON or 1 specifies to show the graticule.

OFF or 0 specifies to turn it off.

Examples

DISP:WLAN:PVT:WIND:TRAC:GRAT:GRID:STATE ON specifies to turn the graticule on.

DISPlay:WLAN:PVTime:Y[:SCALe]

Sets or queries the vertical scale value for the WLAN Power vs. Time display.

To set the vertical position (offset) value, use the command DISPlay:WLAN:PVTime:Y[:SCALe]:OFFSet (on page 1107).

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:Y[:SCALe] <NRf>
DISPlay:WLAN:PVTime:Y[:SCALe]?
```

Arguments

Floating point number that specifies the vertical scale value for the WLAN Power vs. Time display.

Examples

`DISP:WLAN:PVT:Y:SCALE 10` sets the vertical scale value to 10 dB.

DISPlay:WLAN:PVTime:Y[:SCALe]:AUTO (No Query Form)

Automatically selects the vertical scale and position values for the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:Y[:SCALe]:AUTO
```

Arguments

None

Examples

`DISP:WLAN:PVT:Y:AUTO` automatically selects the vertical scale and position values for the display.

DISPlay:WLAN:PVTime:Y[:SCALe]:OFFSet

Sets or queries the value of the vertical offset (top edge of the vertical axis) for the WLAN Power vs. Time display. To set the vertical scale, use the command `DISPlay:WLAN:PVTime:Y[:SCALe]`.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:Y[:SCALe]:OFFSet <NRf>
DISPlay:WLAN:PVTime:Y[:SCALe]:OFFSet?
```

Arguments

Floating point number between limits which specifies the value of the vertical offset. Positive inputs push the plot down (as viewed by the user) and negative inputs push the plot up.

Returns

The value of the vertical offset for the WLAN Power vs. Time display as a floating point number.

Examples

`DISP:WLAN:PVT:Y:OFFS -10` sets the vertical offset to −10 dBm.

DISPlay:WLAN:PVTime:Y[:SCALe]:PDIVision

Sets or queries the value of the vertical scale for the WLAN Power vs. Time display, in dB/division. This is only a visual control for panning the graph.

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:Y[:SCALe]:PDIVision <NRf>
DISPlay:WLAN:PVTime:Y[:SCALe]:PDIVision?
```

Arguments

Floating point value that represents the value of the vertical scale, in dB/division, for the WLAN Power vs. Time display.

Examples

`DISP:WLAN:PVT:Y:SCALE:PDIV 20` sets the vertical scale to 20.0 dB/division.

DISPlay:WLAN:PVTime:Y[:SCALe]:RESet (No Query Form)

Resets the vertical scale and position (offset) values for the WLAN Power vs. Time display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:PVTime:Y[:SCALe]:RESet
```

Arguments

None

Examples

`DISP:WLAN:PVT:Y:RES` specifies to reset the vertical scale and position (offset) values for the WLAN Power vs. Time display.

DISPlay:WLAN:SUMMary:EVMUnits

Sets or queries the EVM Units setting in the WLAN Summary display.

Conditions

Measurement view: WLAN

This command requires WLAN Measurements

Group

Display commands

Syntax

```
DISPlay:WLAN:SUMMary:EVMUnits {PERCent | DB}
DISPlay:WLAN:SUMMary:EVMUnits?
```

Arguments

`PERCent`. Units in the WLAN Summary display are shown as percentages.

`DB`. Units in the WLAN Summary display are shown in decibels (dB).

*ESE

Sets or queries the bits in the Event Status Enable Register (ESER). The ESER prevents events from being reported to the Status Byte Register (STB). Refer to Status and Events (on page 2796) for the register information.

Conditions

Measurement views: All

Group

IEEE common commands

Syntax

```
*ESE <value>
*ESE?
```

Related Commands

*CLS (on page 713)

*ESR? (on page 1109)

*SRE (on page 2531)

*STB? (on page 2532)

Arguments

`<value>::<NR1>` is a value in the range from 0 through 255.

The binary bits of the ESER are set according to this value.

Examples

`*ESE 145` sets the ESER to binary 10010001, which enables the PON, EXE, and OPC bits.

`*ESE?` might return the string `*ESE 184`, showing that the ESER contains the binary value 10111000.

*ESR? (Query Only)

Returns the contents of the Standard Event Status Register (SESR). `*ESR?` also clears the SESR (since reading the SESR clears it). Refer to Status and Events (on page 2796) for the register information.

Conditions

Measurement views: All

Group

IEEE common commands

Syntax

```
*ESR?
```

Related Commands

*CLS (on page 713)

*ESE (on page 1109)

*SRE (on page 2531)

*STB? (on page 2532)

Arguments

None

Returns

<NR1> representing the contents of the SESR by a 0 to 255 decimal number.

Examples

*ESR? might return the value 213, showing that the SESR contains binary 11010101.

Fetch commands

FETCh:ACPower? (Query Only)

Returns the Channel power and ACPR measurement results for all available channels.

Conditions

Measurement views: Channel power and ACPR

Group

Fetch commands

Syntax

```
FETCh:ACPower?
```

Arguments

None

Returns

<chan_power>,<acpr_lower(1)>,<acpr_upper(1)>,

<acpr_lower(2)>,<acpr_upper(2)>,...

<acpr_lower(n)>,<acpr_upper(n)>

Where

<chan_power> is the average power of the main channel as the power reference in dBm. The unit can be changed by the [SENSe]:POWer:UNITs command.

<acpr_lower(n)> is the ACPR for the lower channel #n in dB.

<acpr_upper(n)> is the ACPR for the upper channel #n in dB.

The number of n depends on the setting of the [SENSe]:ACPower:CHANnel:PAIRs command.

Examples

FETCH:ACPOWER? might return 4.227,-28.420,-23.847,-22.316,-29.225, indicating (average power of the main channel) = 4.227 dBm, (ACPR for the lower channel 1) = -28.420 dB, (ACPR for the upper channel 1) = -23.847 dB, (ACPR for the lower channel 2) = -22.316 dB, and (ACPR for the upper channel 2) = -29.225 dB.

FETCh:ACPower:CHANnel:POWer? (Query Only)

Returns the average power of the main channel (power reference) in the Channel power and ACPR measurement.

Conditions

Measurement views: Channel power and ACPR

Group

Fetch commands

Syntax

FETCh:ACPower:CHANnel:POWer?

Arguments

None

Returns

<chan_power>::<NRf> is the average power of the main channel in dBm.

The unit can be changed by the [SENSe]:POWer:UNITs command.

Examples

FETCH:ACPOWER:CHANNEL:POWER? might return 4.227, indicating that the average power of the main channel is 4.227 dBm.

FETCh:ACPower:SPECtrum? (Query Only)

Returns spectrum trace data of the Channel power and ACPR measurement.

Conditions

Measurement views: Channel power and ACPR

Group

Fetch commands

Syntax

FETCh:ACPower:SPECtrum?

Arguments

None

Returns

#<num_digit><num_byte><data(1)><data(2)>...<data(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the amplitude in dBm at the nth data point,

4-byte little endian floating-point format specified in IEEE 488.2. The unit can be changed by the [SENSe]:POWer:UNITs command.

Examples

FETCH:ACPOWER:SPECTRUM? might return #43204xxxx... (3204-byte data) for the spectrum trace data of the Channel power and ACPR measurement.

FETCh:{AM|FM|PM}? (Query Only)

Returns the trace data in the AM/FM/PM measurement.

Conditions

Measurement views: AM, FM, and PM

Group

Fetch commands

Syntax

FETCh:{AM|FM|PM}?

Arguments

None

Returns

#<num_digit><num_byte><data(1)><data(2)>...<data(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the modulation factor in percent (AM), frequency deviation in Hz (FM), or phase deviation in degrees (PM) at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:AM? might return #3156xxxx... (156-byte data) for the AM measurement trace.

FETCh:AM:AMINdex? (Query Only)

Returns the modulation depth which is the (positive peak modulation factor - negative peak modulation factor)/2 returned as a percentage (%).

Conditions

Measurement views: AM

Group

Fetch commands

Syntax

FETCh:AM:AMINdex?

Arguments

None

Returns

<value>::<NRf> the modulation index.

Examples

FETCH:AM:AMINDEX? might return 77.1854035556E-3, indicating the modulation index is 0.0772% or 77.2 m%.

FETCh:AM:AMNegative? (Query Only)

Returns the negative peak modulation factor (–AM) in the AM measurement.

Conditions

Measurement views: AM

Group

Fetch commands

Syntax

FETCh:AM:AMNegative?

Arguments

None

Returns

<-AM>::<NRf> is the negative peak modulation factor in percent (%).

Examples

FETCH:AM:AMNEGATIVE? might return -23.4, indicating the negative peak modulation factor is –23.4%.

FETCh:AM:AMPositive? (Query Only)

Returns the positive peak modulation factor (+AM) in the AM measurement.

Conditions

Measurement views: AM

Group

Fetch commands

Syntax

FETCh:AM:AMPositive?

Arguments

None

Returns

<+AM>::<NRf> is the positive peak modulation factor in percent (%).

Examples

`FETCH:AM:AMPOSITIVE?` might return `43.8`, indicating the positive peak modulation factor is 43.8%.

FETCh:AM:RESult? (Query Only)

Returns the AM measurement results.

Conditions

Measurement views: AM

Group

Fetch commands

Syntax

`FETCh:AM:RESult?`

Arguments

None

Returns

`<+AM>,<-AM>,<Total AM>`

Where

`<+AM>::<NRf>` is the positive peak modulation factor in percent (%).

`<-AM>::<NRf>` is the negative peak modulation factor in percent (%).

`<Total AM>::<NRf>` is the (peak to peak modulation factor)/2 in percent (%).

Examples

`FETCH:AM:RESULT?` might return `62.63,-50.89,56.76`.

FETCh:AUDio:FERRor? (Query Only)

Returns the carrier frequency error in the audio measurement. This command is only available for FM and PM measurements.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:FERRor?`

Arguments

None

Returns

<value> ::= <NRf> the carrier frequency error.

Examples

`FETCH:AUDIO:FERROR?` might return `419.9529809622` indicating that the audio frequency error is approximately 420 Hz.

FETCh:AUDio:FREQuency? (Query Only)

Returns the audio frequency.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:FREQuency?`

Arguments

None

Returns

`<value> ::= <NRf>` the audio frequency.

Examples

`FETCH:AUDIO:FREQUENCY?` might return 5.8239462705E+3 indicating that the audio frequency is 5.824 kHz.

FETCh:AUDio:HARMonic:COUNt? (Query Only)

Returns the number of harmonics in the audio spectrum measurement.

The number of harmonics appear in the results table in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Fetch commands

Syntax

`FETCh:AUDio:HARMonic:COUNt?`

Related Commands

FETCh:AUDio:NHARmonic:COUNt? (on page 1119)

Arguments

None

Returns

`<count> ::= <NR1>` the number of harmonics in the measurement view.

Examples

`FETCH:AUDIO:HARMONIC:COUNT?` might return 3 indicating that there are three harmonics in the measurement.

FETCh:AUDio:HARMonic<x>:AMPLitude? (Query Only)

Returns the amplitude of the specified harmonic in the audio spectrum measurement.

The value <x> represents the specific harmonic, from 1 to the value specified by the `CALCulate:AUDio:HARMonic:HNUMber` command.

Conditions

Measurement views: Audio Spectrum

Group

Fetch commands

Syntax

`FETCh:AUDio:HARMonic<x>:AMPLitude?`

Related Commands

CALCulate:AUDio:HARMonic:HNUMber (on page 400)

Arguments

None

Returns

`<value> ::= <NRf>` the amplitude of the specified harmonic in dBc.

Examples

`FETCh:AUDio:HARMonic3:AMPLitude?` might return -2.861 indicating that amplitude of the third harmonic is -2.86 dBc.

FETCh:AUDio:HARMonic<x>:FREQuency? (Query Only)

Returns the frequency of the specified harmonic in the audio spectrum measurement.

The value <x> represents the specific harmonic, from 1 to the value specified by the `CALCulate:AUDio:HARMonic:HNUMber` command.

Conditions

Measurement views: Audio Spectrum

Group

Fetch commands

Syntax

`FETCh:AUDio:HARMonic<x>:FREQuency?`

Related Commands

CALCulate:AUDio:HARMonic:HNUMber (on page 400)

Arguments

None

Returns

<value> ::= <NRF> the frequency of the specified harmonic.

Examples

FETCh:AUDio:HARMonic3:FREQuency? might return 17.4718007813E+3, indicating that the frequency of the third harmonic is 17.472 kHz.

FETCh:AUDio:HNOise? (Query Only)

Returns the difference between the current RMS modulation value and the reference value.

This information is only available when the Hum & Noise is measurement is enabled; see the [SENSe]:AUDio:HNOise:ENABle command. The reference value is stored after capturing the reference by pressing the Capture Reference button or by enabling the [SENSe]:AUDio:HNOise:REFerence command.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

FETCh:AUDio:HNOise?

Related Commands

[SENSe]:AUDio:HNOise:ENABle (on page 2023)

[SENSe]:AUDio:HNOise:REFerence (on page 2024)

Arguments

None

Returns

<value> ::= <NRF> specifies the difference between the Hum & Noise reference and the actual signal in dB.

Examples

FETCH:AUDIO:HNOISE? might return 0.00 dB, indicating that there is no difference between the Hum & Noise reference and the actual signal.

FETCh:AUDio:HNREFerence? (Query Only)

Returns the Hum and Noise RMS modulation reference value.

The value is stored after capturing the reference by pressing the Capture Reference button or by enabling the [SENSe]:AUDio:HNOise:REFerence command. This information is only available when the Hum & Noise measurement is enabled; see the [SENSe]:AUDio:HNOise:ENABle command.

For AM signal types, the reference represents modulation depth. For FM signal types, the reference represents frequency deviation. For PM signal types the reference represents phase. For Direct signal types the reference represents power.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:HNREFerence?`

Related Commands

[SENSe]:AUDio:HNOise:ENABle (on page 2023)

[SENSe]:AUDio:HNOise:REFerence (on page 2024)

Arguments

None

Returns

`<value>` ::= <NRf> the Hum & Noise reference frequency.

Examples

`FETCH:AUDIO:HNREFERENCE?` might return `20.581121E+3` indicating that the Hum & Noise reference frequency is 20.58 kHz.

FETCh:AUDio:HPTPeak? (Query Only)

Returns the half peak-to-peak modulation excursion (where the modulation excursion depends on the signal type).

For AM signal types, the modulation excursion is “% Modulation Depth.” For FM signal types, the modulation excursion is “Frequency Deviation.” For PM signal types, the modulation excursion is “Phase Deviation.” For Direct signal types, there is no modulation excursion; it is actually “signal excursion.”

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:HPTPeak?`

Arguments

None

Returns

`<value>` ::= <NRF> specifies the half peak modulation excursion.

Examples

`FETCH:AUDIO:HPTPEAK?` might return `125.28231E+3`, indicating that the half peak modulation excursion is 125.28 kHz.

FETCh:AUDio:MODDist? (Query Only)

Returns the modulation distortion for the audio measurement.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

```
FETCh:AUDio:MODDist?
```

Arguments

None

Returns

<value> ::= <NRf> specifies the modulation distortion.

Examples

`FETCH:AUDIO:MODDIST?` might return 98.6282113 indicating that the modulation distortion is 98.628%.

FETCh:AUDio:NHARmonic:COUNt? (Query Only)

Returns the number of non-harmonics in the audio spectrum measurement.

The number of non-harmonics appear in the results table in the audio spectrum view.

Conditions

Measurement views: Audio Spectrum

Group

Fetch commands

Syntax

```
FETCh:AUDio:NHARmonic:COUNt?
```

Related Commands

FETCh:AUDio:HARMonic:COUNt? (on page 1115)

Arguments

None

Returns

<count> ::= <NR1> the number of non-harmonics in the measurement view.

Examples

`FETCH:AUDIO:NHARMONIC:COUNT?` might return `7`, indicating that there are seven harmonics in the measurement.

FETCh:AUDio:NHARmonic<x>:AMPLitude? (Query Only)

Returns the amplitude of the specified non-harmonic in the audio spectrum measurement.

The value <x> represents the specific non-harmonic, from 1 to the value specified by the `CALCulate:AUDio:HARMonic:NHNumber` command.

Conditions

Measurement views: Audio Spectrum

Group

Fetch commands

Syntax

```
FETCh:AUDio:NHARmonic<x>:AMPLitude?
```

Related Commands

CALCulate:AUDio:HARMonic:NHNumber (on page 401)

Arguments

None

Returns

<value> ::= <NRf> the amplitude of the specified non-harmonic in dBc.

Examples

`FETCh:AUDio:NHARMonic3:AMPLitude?` might return `-2.861`, indicating that amplitude of the third non-harmonic is -2.86 dBc.

FETCh:AUDio:NHARmonic<x>:FREQuency? (Query Only)

Returns the frequency of the specified non-harmonic in the audio spectrum measurement.

The value <x> represents the specific non-harmonic, from 1 to the value specified by the `CALCulate:AUDio:HARMonic:NHNumber` command.

Conditions

Measurement views: Audio Spectrum

Group

Fetch commands

Syntax

```
FETCh:AUDio:NHARmonic<x>:FREQuency?
```

Related Commands

CALCulate:AUDio:HARMonic:NHNumber (on page 401)

Arguments

None

Returns

<value> ::= <NRF> the frequency of the specified non-harmonic.

Examples

`FETCh:AUDio:NHARMonic3:FREQuency?` might return `17.4718007813E+3`, indicating that the frequency of the third non-harmonic is 17.472 kHz.

FETCh:AUDio:PNEGative? (Query Only)

Returns the minus peak modulation excursion (where the modulation excursion depends on the signal type).

For AM signal types, the modulation excursion is “% Modulation Depth.” For FM signal types, the modulation excursion is “Frequency Deviation.” For PM signal types, the modulation excursion is “Phase Deviation.” For Direct signal types, there is no modulation excursion; it is actually “signal excursion.”

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:PNEGative?`

Arguments

None

Returns

<value> ::= <NRf> specifies the minus peak modulation excursion.

Examples

`FETCH:AUDIO:PNEGATIVE?` might return `-196.04321E+3`, indicating that the minus peak modulation excursion is -196.04 kHz.

FETCh:AUDio:POWer? (Query Only)

Returns the carrier power or signal power depending the signal type.

If the signal type is Direct, the returned value is the average power of the input signal. If the signal type is AM, FM, or PM, the returned value is the carrier power; the average power of the carrier signal with the modulation removed.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:POWer?`

Arguments

None

Returns

<value> ::= <NRf> specifies the carrier or signal power in dBm.

Examples

`FETCH:AUDIO:POWER?` might return `-22.231123`, indicating that the carrier power is -22.23 dBm.

FETCh:AUDio:PPOSitive? (Query Only)

Returns the positive peak modulation excursion (where the modulation excursion depends on the signal type).

For AM signal types, the modulation excursion is “% Modulation Depth.” For FM signal types, the modulation excursion is “Frequency Deviation.” For PM signal types, the modulation excursion is “Phase Deviation.” For Direct signal types, there is no modulation excursion; it is actually “signal excursion.”

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:PPOSitive?`

Arguments

None

Returns

<value> ::= <NRf> specifies the positive peak modulation excursion.

Examples

`FETCH:AUDIO:PPOSITIVE?` might return `215.04321E+3`, indicating that the positive peak modulation excursion is -215.04 kHz.

FETCh:AUDio:RMS? (Query Only)

Returns the RMS modulation excursion for the audio measurement (where the modulation excursion depends on the signal type).

For AM signal types, the modulation excursion is “% Modulation Depth.” For FM signal types, the modulation excursion is “Frequency Deviation.” For PM signal types, the modulation excursion is “Phase Deviation.” For Direct signal types, there is no modulation excursion; it is actually “signal excursion.”

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:RMS?`

Arguments

None

Returns

`<value> ::= <NRf>` specifies the RMS modulation excursion.

Examples

`FETCH:AUDIO:RMS?` might return `20.575039E+3`, indicating that RMS modulation excursion is 20.575 kHz.

FETCh:AUDio:SINad? (Query Only)

Returns the signal-to-noise and distortion for the audio measurement.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:SINad?`

Arguments

None

Returns

`<value> ::= <NRf>` specifies the RMS modulation excursion.

Examples

`FETCH:AUDIO:SINAD?` might return `176.229024E-3`, indicating that the signal-to-noise and distortion for the audio measurement is 0.18 dB.

FETCh:AUDio:SNOise? (Query Only)

Returns the signal level to noise level with the harmonic distortion and non-harmonic distortion components removed.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:SNOise?`

Arguments

None

Returns

<value> ::= <NRf> specifies the signal level to noise level.

Examples

`FETCH:AUDIO:SNOISE?` might return `-12.8156364`, indicating the signal level to noise level is -12.82 dB.

FETCh:AUDio:SPECtrum:TRACe<x>? (Query Only)

Returns the audio spectrum trace data for the audio measurement.

The <x> represents trace 1 for this measurement. No other traces are supported.

Conditions

Measurement views: Audio Spectrum

Group

Fetch commands

Syntax

`FETCh:AUDio:SPECtrum:TRACe<x>?`

Arguments

None

Returns

`#<num_digit><num_byte><date(1)><data(2)> . . . <data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the data value at the nth data point in percent (%), 4-byte little endian floating point format specifed in IEEE.488.2.

Examples

`FETCh:AUDio:SPECtrum:TRACe1?` might return `#516004xxxx ...` (16004 byte data) for the audio measurement.

FETCh:AUDio:THDist? (Query Only)

Returns the percentage of the total harmonic distortion in the audio measurement.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:THDist?`

Related Commands

FETCh:AUDio:THDist:DB? (on page 1125)

Arguments

None

Returns

`<value> ::= <NRf>` specifies the percentage of the total harmonic distortion.

Examples

`FETCH:AUDIO:THDIST?` might return `53.332921`, indicating the percentage of total harmonic distortion is 53.333%.

FETCh:AUDio:THDist:DB? (Query Only)

Returns the total harmonic distortion in dB in the audio measurement.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:THDist:DB?`

Related Commands

FETCh:AUDio:THDist? (on page 1124)

Arguments

None

Returns

`<value> ::= <NRf>` specifies the total harmonic distortion in dB.

Examples

`FETCH:AUDIO:THDIST:DB?` might return `-5.46009`, indicating that the total harmonic distortion is -5.46 dB.

FETCh:AUDio:TNHDist? (Query Only)

Returns the percentage of the total non-harmonic distortion in the audio measurement.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

`FETCh:AUDio:TNHDist?`

Related Commands

FETCh:AUDio:TNHDist:DB? (on page 1126)

Arguments

None

Returns

<value> ::= <NRf> specifies the percentage of the total non-harmonic distortion.

Examples

FETCH:AUDIO:TNHDIST? might return 297.332921, indicating the percentage of total non-harmonic distortion is 297.333%.

FETCh:AUDio:TNHDist:DB? (Query Only)

Returns the total non-harmonic distortion in dB in the audio measurement.

Conditions

Measurement views: Audio Summary

Group

Fetch commands

Syntax

FETCh:AUDio:TNHDist:DB?

Related Commands

FETCh:AUDio:TNHDist? (on page 1125)

Arguments

None

Returns

<value> ::= <NRf> specifies the total non-harmonic distortion in dB.

Examples

FETCH:AUDIO:TNHDIST:DB? might return 9.46009, indicating that the total harmonic distortion is 9.46 dB.

FETCh:AVTime[:MEASview<y>]:AVERage? (Query Only)

Returns the RMS (root-mean-square) value for the selected trace in the Amplitude versus Time measurement. Select the trace using the TRACe<x>:AVTime[:MEASview<y>]:SELect command.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

FETCh:AVTime[:MEASview<y>]:AVERage?

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<avg>::<NRf> is the RMS amplitude in dBm.

The unit can be changed by the [SENSe]:POWer:UNITs command.

Examples

FETCH:AVTIME:MEASVIEW1:AVERAGE? might return -2.53, indicating the RMS amplitude is -2.53 dBm for Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:{FIRSt|SECond|THIRd|FOURth}? (Query Only)

Returns the trace data in the Amplitude versus Time measurement.

The mnemonics FIRSt, SECond, THIRd, and FOURth represent Trace 1, Trace 2, Trace 3, and Math trace, respectively. The traces can be specified by the TRACe<x>:AVTime command subgroup.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

FETCh:AVTime[:MEASview<y>]:{FIRSt|SECond|THIRd|FOURth}?

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

#<num_digit><num_byte><data(1)><data(2)>...<data(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the amplitude in dBm at the nth data point,

4-byte little endian floating-point format specified in IEEE 488.2. The unit can be changed by the [SENSe]:POWer:UNITs command.

Examples

FETCH:AVTIME:MEASVIEW1:FIRST? might return #3156xxxx... (156-byte data) for Trace 1 for the Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:MAXimum? (Query Only)

Returns the maximum value for the selected trace in the Amplitude versus Time measurement. Select the trace using the TRACe<x>:AVTime[:MEASview<y>]:SELect command.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`FETCh:AVTime[:MEASview<y>]:MAXimum?`

Related Commands

FETCh:AVTime[:MEASview<y>]:MAXLocation? (on page 1128)

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<max>::<NRf>` is the maximum Amplitude in dBm.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`FETCH:AVTIME:MEASVIEW1:MAXIMUM?` might return `-2.84`, indicating the maximum amplitude is -2.84 dBm for the Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:MAXLocation? (Query Only)

Returns the time at which the amplitude is maximum for the selected trace in the Amplitude versus Time measurement. Select the trace using the `TRACe<x>:AVTime[:MEASview<y>]:SELect` command.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`FETCh:AVTime[:MEASview<y>]:MAXLocation?`

Related Commands

FETCh:AVTime[:MEASview<y>]:MAXimum? (on page 1127)

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<max_time>::<NRf>` is the time at the maximum in seconds.

Examples

`FETCH:AVTIME:MEASVIEW1:MAXLOCATION:FIRST?` might return `25.03E-9`, indicating the amplitude is maximum at 25.03 ns in Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:MINimum? (Query Only)

Returns the minimum value for the selected trace in the Amplitude versus Time measurement. Select the trace using the `TRACe<x>:AVTime[:MEASview<y>]:SELect` command.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`FETCh:AVTime[:MEASview<y>]:MINimum?`

Related Commands

FETCh:AVTime[:MEASview<y>]:MINLocation? (on page 1129)

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<min>::<NRf>` is the minimum amplitude in dBm.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`FETCH:AVTIME:MEASVIEW1:MINIMUM?` might return `-57.64`, indicating the minimum amplitude is -57.64 dBm for Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:MINLocation? (Query Only)

Returns the time at which the amplitude is minimum for the selected trace in the Amplitude versus Time measurement. Select the trace using the `TRACe<x>:AVTime[:MEASview<y>]:SELect` command.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`FETCh:AVTime[:MEASview<y>]:MINLocation?`

Related Commands

FETCh:AVTime[:MEASview<y>]:MINimum? (on page 1129)

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<min_time>::<NRf> is the time at the minimum in seconds.

Examples

FETCH:AVTIME:MEASVIEW1:MINLOCATION? might return 450.7E-9, indicating the amplitude is minimum at 450.7 ns for Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:RESult? (Query Only)

Returns the measurement results for the selected trace in the Amplitude versus Time measurement. Select the trace using the TRACe<x>:AVTime[:MEASview<y>]:SELect command.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

FETCh:AVTime[:MEASview<y>]:RESult?

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<max>,<max_time>,<min>,<min_time>,<rms>

Where

<max>::<NRf> is the maximum amplitude in dBm.

<max_time>::<NRf> is the time at the maximum in seconds.

<min>::<NRf> is the minimum amplitude in dBm.

<min_time>::<NRf> is the time at the minimum in seconds.

<rms>::<NRf> is the RMS amplitude in dBm.

The unit of amplitude can be changed by the [SENSe]:POWer:UNITs command.

Examples

FETCH:AVTIME:MEASVIEW1:RESULT? might return -2.68,48.62E-6,-82.47,22.11E-6,-8.24, indicating that the maximum amplitude is -2.68 dBm at 48.62 µs, the minimum amplitude is -82.47 dBm at 22.11 µs, and the RMS amplitude is -8.24 dBm on Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:TRACe:BITMap? (Query Only)

Returns trace waveform data of the bitmap trace in the Amplitude versus Time measurement.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`FETCh:AVTime[:MEASview<y>]:TRACe:BITMap?`

Arguments

None

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. By default y is 1

Returns

A binary block of 32-bit floating point values (IEEE standard single precision floating point format). Each value ranges from 0 to 1.0, where 1.0 represents 100%.

Bitmaps have 201 rows. Data[0] is the first column in the first row, and the following data continues along that row before moving to the next.

Bitmap values are returned in the order of top left pixel first, then the rest of the top row, after that row by row.
In other words, the pixels in the bitmap are returned from left to right and top to bottom; one row at a time.

Examples

`FETCH:AVTIME:TRACE:BITMAP?` might return #6644004xxxx...

:FETCh:AVTime[:MEASview<y>]:AVERage:{FIRSt|SECond|THIRd|FOURth}

Returns the RMS (root-mean-square) value for the selected trace in the Amplitude versus Time measurement. Select the trace using the `:TRACe<x>:AVTime[:MEASview<y>]:SELect` command.

The mnemonics FIRSt, SECond, THIRd, and FOURth represent Trace 1, Trace 2, Trace 3, and Math trace, respectively.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`:FETCh:AVTime[:MEASview<y>]:AVERage:{FIRSt|SECond|THIRd|FOURth}?`

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<max>::<NRf>` is the maximum Amplitude in dBm.

The unit can be changed by the `[SENSe]:POWer:UNITs` command

Examples

:FETCH:AVTIME:MEASVIEW1:AVERAGE:FIRST? might return -2.53, indicating the RMS amplitude is -2.53 dBm for Trace1 in Amplitude versus Time Measurement View 1.

:FETCh:AVTime[:MEASview<y>]:MAXimum:{FIRSt|SECond|THIRd|FOURth}

Returns the maximum value for the selected trace in the Amplitude versus Time measurement. Select the trace using the TRACe<x>:AVTime[:MEASview<y>]:SELect command.

The mnemonics FIRSt, SECond, THIRd, and FOURth represent Trace 1, Trace 2, Trace 3, and Math trace, respectively.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

:FETCh:AVTime[:MEASview<y>]:MAXimum:{FIRSt|SECond|THIRd|FOURth}?

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

<max>::<NRf> is the maximum Amplitude in dBm.

The unit can be changed by the [SENSe]:POWer:UNITs command.

Examples

:FETCH:AVTIME:MEASVIEW1:MAXIMUM:FIRST? might return -2.84, indicating the maximum amplitude is -2.84 dBm for the Trace1 in Amplitude versus Time Measurement View 1.

:FETCh:AVTime[:MEASview<y>]:MAXLocation:{FIRSt|SECond|THIRd|FOURth}

Returns the time at which the amplitude is maximum for the selected trace in the Amplitude versus Time measurement. Select the trace using the :TRACe<x>:AVTime[:MEASview<y>]:SELect command.

The mnemonics FIRSt, SECond, THIRd, and FOURth represent Trace 1, Trace 2, Trace 3, and Math trace, respectively.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

:FETCh:AVTime[:MEASview<y>]:MAXimum:{FIRSt|SECond|THIRd|FOURth}?

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<max>::<NRf>` is the maximum Amplitude in dBm.

Examples

`:FETCH:AVTIME:MEASVIEW1:MAXLOCATION?` might return `25.03E-9`, indicating the amplitude is maximum at 25.03 ns in Trace1 for Amplitude versus Time Measurement View 1.

:FETCh:AVTime[:MEASview<y>]:MINimum:{FIRSt|SECond|THIRd|FOURth}

Returns the minimum value for the selected trace in the Amplitude versus Time measurement. Select the trace using the `:TRACe<x>:AVTime[:MEASview<y>]:SELect` command.

The mnemonics FIRSt, SECond, THIRd, and FOURth represent Trace 1, Trace 2, Trace 3, and Math trace, respectively.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`:FETCh:AVTime[:MEASview<y>]:MINimum:{FIRSt|SECond|THIRd|FOURth}?`

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<max>::<NRf>` is the maximum Amplitude in dBm.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`:FETCH:AVTIME:MEASVIEW1:MINIMUM:FIRST?` might return `-57.64`, indicating the minimum amplitude is -57.64 dBm for Trace1 in Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:MINLocation:{FIRSt|SECond|THIRd|FOURth}

Returns the time at which the amplitude is minimum for the selected trace in the Amplitude versus Time measurement. Select the trace using the `:TRACe<x>:AVTime[:MEASview<y>]:SELect` command.

The mnemonics FIRSt, SECond, THIRd, and FOURth represent Trace 1, Trace 2, Trace 3, and Math trace, respectively.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

`:FETCh:AVTime[:MEASview<y>]:MINLocation:{FIRSt|SECond|THIRd|FOURth}?`

Related Commands

:FETCh:AVTime[:MEASview<y>]:MINimum? (on page 1133)

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<max>::<NRf>` is the maximum Amplitude in dBm.

Examples

`:FETCH:AVTIME:MEASVIEW1:MINLOCATION:FIRST?` Might return 450.7E-9, indicating the amplitude is minimum at 450.7 ns for Trace1 in Amplitude versus Time Measurement View 1.

FETCh:AVTime[:MEASview<y>]:OGRAm? (Query only)

Returns trace data of a line in the ogram. The line is selected using the `TRACe:AVTime[:MEASview<y>]:OGRAm:SELect:LINE` command.

Conditions

Applicable measurement view must be active.

Group

Fetch commands

Syntax

`FETCh:AVTime[:MEASview<y>]:OGRAm?`

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional. By default y is 1.

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in <num_byte>.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the amplitude in dBm at the n^{th} data point, 4-byte little endian floating-point format specified in IEEE 488.2. The unit can be changed by the `[SENSe]:POWer:UNITs` command

Examples

`FETCh:AVTime:MEASview1:OGRAm?` might return #43204xxxx... (3204-byte data) for the line in the ogram.

FETCh:AVTime[:MEASview<y>]:RESult:{FIRSt|SECond|THIRd|FOURth}

Returns the measurement results for the selected trace in the Amplitude versus Time measurement. Select the trace using the `:TRACe<x>:AVTime[:MEASview<y>]:SELect` command.

The mnemonics FIRSt, SECond, THIRd, and FOURth represent Trace 1, Trace 2, Trace 3, and Math trace, respectively.

Conditions

Measurement views: Amplitude versus Time

Group

Fetch commands

Syntax

```
:FETCh:AVTime[:MEASview<y>]:RESult:{FIRSt|SECond|THIRd|FOURth}??
```

Arguments

The parameter <y>=1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional by default y is 1

Returns

`<max>,<max_time>,<min>,<min_time>,<rms>`

Where

`<max>::<NRf>` is the maximum amplitude in dBm.

`<max_time>::<NRf>` is the time at the maximum in seconds.

`<min>::<NRf>` is the minimum amplitude in dBm.

`<min_time>::<NRf>` is the time at the minimum in seconds.

`<rms>::<NRf>` is the RMS amplitude in dBm.

The unit of amplitude can be changed by the `[:SENSe]:POWer:UNITs` command.

Examples

`:FETCH:AVTIME:MEASVIEW1:RESULT:FIRST?` might return `-2.68,48.62E-6,-82.47,22.11E-6,-8.24`, indicating that the maximum amplitude is -2.68 dBm at 48.62 µs, the minimum amplitude is -82.47 dBm at 22.11 µs, and the RMS amplitude is -8.24 dBm for Trace1 on Amplitude versus Time Measurement View 1.

FETCh:BIBEmissions:FTX? (Query Only)

Returns the band number corresponding to the transmitted FTX detected in the Bluetooth InBand Emission display.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Fetch commands

Syntax

```
FETCh:BIBEmissions:FTX?
```

Arguments

None

Returns

<value> ::= <NR1> the band number.

Examples

FETCH:BIBEMISSIONS:FTX? might returns 39 indicating the band number corresponding to transmitted FTX.

FETCh:BIBEmissions:POWer? (Query Only)

Returns all channel power results from the Bluetooth InBand Emission display.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Fetch commands

Syntax

FETCh:BIBEmissions:POWer?

Arguments

None

Returns

<Band0_power>,<Band1_power>,<Band2_power>, . . . <Band78_power>

Where:

Bandx_power is the integrated power in that band. All power values are in dBm

Examples

FETCH:BIBEMISSIONS:POWER? might return 4.227,-28.420,-23.847, . . .,-29.225, indicating:

(integrated power for Band 0) = 4.227 dBm,

(Integrated power for Band 1) = -28.420 dBm,

(Integrated power for Band 2) = -23.847 dBm, and

(Integrated power for Band 78) = -29.225 dBm.

FETCh:BIBEmissions:RESUlts:STATus? (Query Only)

Returns the Pass/Fail result status of the Bluetooth InBand Emission display.

Conditions

Measurement views: Bluetooth InBand Emission

Group

Fetch commands

Syntax
`FETCh:BIBEmissions:RESUlts:STATus?`

Arguments
None

Examples
`FETCH:BIBEMISSIONS:RESULTS:STATUS?` returns the Pass/Fail status result on the display.

FETCh:BLUEtooth:CONSte:FERRor? (Query Only)
Returns the frequency error in Hz in the Bluetooth Constellation. The frequency error is the difference between the measured carrier frequency of the signal and the user-selected center frequency.

Conditions
Measurement views: Bluetooth Constellation

Group
Fetch commands

Syntax
`FETCh:BLUEtooth:CONSte:FERRor?`

Arguments
None

Returns
`<freq_error> ::= <NRf>` the frequency error.

Examples
`FETCh:BLUEtooth:CONSte:FERRor?` might return `-10.7E+3`, which is a frequency error of -10.7 kHz.

FETCh:BLUEtooth:CONSte:TRACe? (Query Only)
Queries the Bluetooth Constellation trace data.

Conditions
Measurement views: Bluetooth Constellation

Group
Fetch commands

Syntax
`FETCh:BLUEtooth:CONSte:TRACe?`

Arguments
None

Returns
`#<num_digit><num_byte><I(1)><Q1><I(2)><Q2> . . . <I(n)><Qn>`

Where:

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<I(n)> and <Qn> are the normalized I- and Q-coordinate values at the nth data point. 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCh:BLUEtooth:CONSte:TRACe? might return #43848xxxx . . . (3848-byte data) for the trace.

FETCh:BLUEtooth:EDIagram:FDEViation? (Query Only)

Returns the frequency deviation vs. time trace data with the X values in the Bluetooth eye diagram.

Conditions

Measurement views: Bluetooth eye diagram.

Group

Fetch commands

Syntax

FETCh:BLUEtooth:EDIagram:FDEViation?

Arguments

None

Returns

#<num_digits><num_bytes><Y(1)><X(1)><Y(2)><X(2)> . . . <Y(n)><X(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<Y(1)> and <X(1)> are the normalized I- and Q-coordinate values at the nth datapoint. The 4–byte little endian floating point format is specified in IEEE 488.2.

Examples

FETCh:BLUEtooth:EDIagram:FDEVIiation? might return #3160xxxx... (160-byte data) for the frequency deviation versus time trace.

FETCh:BLUEtooth:EDIagram:FERRor? (Query Only)

Returns the frequency error in the Bluetooth eye diagram measurement.

Conditions

Measurement views: Bluetooth eye diagram.

Group

Fetch commands

Syntax

FETCh:BLUEtooth:EDIagram:FERRor?

Arguments

None

Returns

<freq_error> ::= <NRf> the frequency error in Hz.

Examples

FETCh:BLUEtooth:EDIagram:FERRor? might return -10.7E+3, indicating the frequency error is -10.7 kHz.

FETCh:BLUEtooth:EDIagram:HORiz:SCALe? (Query Only)

Returns the value of the horizontal scale in the Bluetooth eye diagram.

Conditions

Measurement views: Bluetooth eye diagram.

Group

Fetch commands

Syntax

FETCh:BLUEtooth:EDIagram:HORiz:SCALe?

Arguments

None

Returns

<value> ::= <NR3> the horizontal scale value.

Examples

FETCH:BLUETOOTH:EDIAGRAM:HORIZ:SCALE? might return 2, indicating the horizontal scale value is 2 symbols.

FETCh:BLUEtooth:EDIagram:I? (Query Only)

Returns the I vs. time trace in the Bluetooth eye diagram.

Conditions

Measurement views: Bluetooth eye diagram.

Group

Fetch commands

Syntax

FETCh:BLUEtooth:EDIagram:I?

Arguments

None

Returns

#<num_digits><num_bytes><Y(1)><X(1)><Y(2)><X(2)> . . . <Y(n)><X(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<Y(1)> amd <X(1)> are the normalized I- and Q-coordinate values at the nth datapoint. The 4–byte little endian floating point format is specified in IEEE 488.2.

Examples

FETCh:BLUEtooth:EDIagram:I? might return #3160xxxx... (160-byte data) for the I vs. time trace.

FETCh:BLUEtooth:EDIagram:Q? (Query Only)

Returns the Q vs. time trace in the Bluetooth eye diagram.

Conditions

Measurement views: Bluetooth eye diagram.

Group

Fetch commands

Syntax

FETCh:BLUEtooth:EDIagram:Q?

Arguments

None

Returns

#<num_digits><num_bytes><Y(1)><X(1)><Y(2)><X(2)> . . . <Y(n)><X(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<Y(1)> amd <X(1)> are the normalized I- and Q-coordinate values at the nth datapoint. The 4–byte little endian floating point format is specified in IEEE 488.2.

Examples

FETCh:BLUEtooth:EDIagram:Q? might return #3160xxxx... (160-byte data) for the Q vs. time trace.

FETCh:BLUEtooth:FDVTime:TRACe? (Query Only)

Returns the Bluetooth Frequency Deviation vs. Time trace data.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FDVTime:TRACe?`

Arguments

None

Returns

`#<num_digits><num_bytes><data(1)><data(2)> . . . <data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the frequency deviation in Hz at the nth datapoint. The 4-byte little endian floating point format is specified in IEEE 488.2.

Examples

`FETCh:BLUEtooth:FDVTime:TRACe?` might return `#3160xxxx...` (160-byte data) for the trace.

FETCh:BLUEtooth:FREQuency:ERROr? (Query Only)

Returns the frequency error from the Bluetooth Constellation diagram.

Conditions

Measurement views: Bluetooth Constellation

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:ERROr?`

Arguments

None

Returns

`<NR3>`, the frequency error value in Hz.

Examples

`FETCH:BLUETOOTH:FREQUENCY:ERROR?` might return `0.0000`, indicating the frequency error is 0.0000 Hz.

FETCh:BLUEtooth:FREQuency:ERROr:TYPE? (Query Only)

Returns the frequency error type in the Bluetooth Constellation display.

Conditions

Measurement views: Bluetooth Constellation

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:ERROr:TYPE?`

Arguments

None

Returns

`1` indicates the error is automatically detected.

`0` indicates the error is not automatically detected.

Examples

`FETCH:BLUETOOTH:FREQUENCY:ERROR:TYPE?` might return `1`, indicating the frequency error is automatically detected.

FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:F1FZero? (Query Only)

Returns the drift in frequency offset (f1–f0 — the frequency offset calculated in the first interval in the payload — the frequency offset calculated in the preamble) in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:F1FZero?`

Arguments

None

Returns

`<NR3>` the drift in frequency offset (f1–f0 — the frequency offset calculated in the first interval in the payload — the frequency offset calculated in the preamble)

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:F1FZero?` might return `-207.6465301514`, indicating the drift in frequency offset (f1 to f0 – the frequency offset calculated in the first interval in the payload – the frequency offset calculated in the preamble)

FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5? (Query Only)

Returns the maximum drift of the frequency offset in payload intervals spaced 50 µs away in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5?`

Arguments

None

Returns

`<NR3>` the maximum drift of the frequency offset in payload intervals spaced 50 µs away.

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNF5?` might return `-207.6465301514`, indicating the maximum drift of the frequency offset in payload intervals spaced 50 µs away.

FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5:INTErval? (Query Only)

Returns the interval at which the maximum drift of frequency offset in a duration of 50 µs occurred.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFN5:INTErval?`

Arguments

None

Returns

`<NR1>` interval at which the maximum drift of frequency offset in a duration of 50 µs occurred.

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNF5:INTErval?` might return `16`, indicating the interval at which the maximum drift of frequency offset in a duration of 50 µs occurred. Here 16 refers to the 16th interval and that the drift of frequency offset calculated in the 16th interval from that calculated in the 11th interval is the maximum among those calculated 50 µs away.

FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO? (Query Only)

Returns the maximum drift of the frequency offset of the intervals in the payload from the preamble packet in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO?`

Arguments

None

Returns

`<NR3>` the maximum drift of frequency offset calculated in payload intervals from the offset calculated in the preamble.

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZero?` might return `-207.6465301514`, indicating that the maximum drift of frequency offset calculated in payload intervals from the offset calculated in the preamble is -207.6465301515 Hz.

FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO:INTErval? (Query Only)

Returns the interval (n) at which the maximum drift fn-f0 occurred in the Bluetooth Frequency Deviation vs. Time display. (The fn-f0 indicates the drift of the frequency offset calculated in each payload interval from the offset calculated in the preamble.)

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZERO:INTErval?`

Arguments

None

Returns

`<NR1>` the interval at which the maximum drift (fn-f0) occurred.

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:DRIFt:FNFZero:INTErval?` might return `16`, indicating that at the 16th payload interval, the maximum drift occurred. f(16) - f(0) is the maximum drift among all f(n) -f (0).

FETCh:BLUEtooth:FREQuency:OFFSet:MAX? (Query Only)

Returns the maximum frequency offset in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.

Conditions

Measurement views: Frequency Deviation vs. Time, CF Offset

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:MAX?`

Arguments

None

Returns

`<NR3>` the maximum frequency offset value.

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:MAX?` might return `-189.4632263184`, the frequency offset value.

FETCh:BLUEtooth:FREQuency:OFFSet:MAX:INTErval? (Query Only)

Returns the maximum frequency offset interval in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.

Conditions

Measurement views: Frequency Deviation vs. Time, CF Offset

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:MAX:INTErval?`

Arguments

None

Returns

`<NR1>` the maximum frequency offset interval.

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:MAX:INTErval?` might return `271`, indicating that the maximum drift f(n) - f(0) occurred at the 271st payload interval.

FETCh:BLUEtooth:FREQuency:OFFSet:PREAmble? (Query Only)

Returns the offset calculated in the preamble region in the Frequency Deviation vs. Time and the Center Frequency Offset and Drift displays.

Conditions

Measurement views: Frequency Deviation vs. Time, CF Offset

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:FREQuency:OFFSet:PREAmble?`

Arguments

None

Returns

`<NR3>` the offset calculated in the preamble region.

Examples

`FETCh:BLUEtooth:FREQuency:OFFSet:PREAmble?` might return `106.4204711914`, indicating the offset calculated in the preamble region.

FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F? (Query Only)

Returns the average frequency value when the selected test pattern is Other in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F?`

Arguments

None

Returns

`<NRf>` the average frequency.

Examples

`FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F?` might return `140.8309531250E+3`, the average frequency value.

FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F2F1ratio? (Query Only)

Returns the average ratio value for the high and low frequency deviation in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

```
FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F2F1ratio?
```

Arguments

None

Returns

<NRf> the average ratio value.

Examples

FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:F2F1ratio? might return 24.37E-3, the average ratio value.

FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FONE? (Query Only)

Returns the average frequency deviation for the low deviation pattern in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

```
FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FONE?
```

Arguments

None

Examples

FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FONE? might return 139.8309531250E+3, the average frequency deviation for the low deviation pattern.

FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FTWO? (Query Only)

Returns the average frequency deviation for the high deviation pattern in the Bluetooth Frequency Deviation vs. Time display.

Conditions

Measurement views: Frequency Deviation vs. Time

Group

Fetch commands

Syntax

```
FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FTWO?
```

Arguments

None

Examples

`FETCh:BLUEtooth:MODUlation:CHARacteristics:AVErage:FTWO?` might return `139.8309531250E+3`, the average frequency deviation for the high deviation pattern.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:COUNt? (Query Only)

Returns the number of packets analyzed to obtain average drift results from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:COUNt?`

Arguments

None

Returns

`<NR1>` the number of packets analyzed.

Examples

`FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:COUNT?` might return `8`, the number of packets analyzed.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero? (Query Only)

Returns the drift f1–f0 from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero?`

Arguments

None

Returns

`<NRf>` the drift f1–f0 value.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:F1FZERO? might return 2.846E+3, indicating that the drift f1–f0 value is 2.846 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero:STATus? (Query Only)

Returns the Pass/Fail drift f1–f0 result status in the packet from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax
FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:F1FZero:STATus?

Arguments

None

Returns

<string> the Pass/Fail result status.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:F1FZERO:STATUS? might return PASS, FAIL, or NA indicating whether the drift f1–f0 is within the specified limit.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5? (Query Only)

Returns the maximum drift of the fn–fn-5 value from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5?

Arguments

None

Returns

<NRf> the fn–fn-5 value.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:FNFN5? might return 2.846E+3 indicating that the maximum drift fn–fn-5 value in the preamble region is -2.846 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5:STATus? (Query Only)

Returns the Pass/Fail status of the maximum fn–fn-5 drift in the packet from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFN5:STATus?

Arguments

None

Returns

<string> the Pass/Fail result status.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:FNFN5:STATUS? might return PASS, FAIL, or NA indicating whether the maximum drift fn–fn-5 is within the specified limit.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero? (Query Only)

Returns the maximum drift fn–f0 from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero?

Arguments

None

Returns

<NRf> the fn–fn0 value.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:FNFZERO? might return 4.846E+3, indicating that the drift fn–f0 value in the preamble region is 4.846 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero:STATus? (Query Only)

Returns the Pass/Fail result status of the fn–f0 maximum drift in the packet from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:FNFZero:STATus?`

Arguments

None

Returns

`<string>` the Pass/Fail result status.

Examples

`FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:FNFZERO:STATUS?` might return `PASS`, `FAIL`, or `NA` indicating whether the maximum drift fn–f0 is within the specified limit.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:CODIng:SCHEme (Query Only)

Returns the offset drift coding scheme value (LE Coded) in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:CODIng:SCHEme?`

Arguments

None

Returns

<NR1> 2 or 8

Where 2 is data at 500 Kb/s and 8 is 125 Kb/s

Examples

`FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:LECODED:CODING:SCHEME` might return `"2"`, indicating the offset drift coding scheme value is 2.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:F0FThree (Query Only)

Returns the Drift value f0-f3 for LE Coded in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:F0FThree?`

Arguments

None

Returns

`<NRf>` Maximum Frequency value in kHz

Examples

`FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:LECODED:F0FTHREE` might return 207.2 kHz, indicating the f0-f3 drift value is 207.2 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:F0FThree:STATus (Query Only)

Returns the Drift value Status of f0-f3 for LE Coded in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded: F0FThree:STATus?`

Arguments

None

Returns

<String> PASS ,FAIL or NA

`PASS` indicates that the test passed.

`FAIL` indicates that the test failed.

`NA` indicates that the test is not Applicable

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:LECODED:F0FTHREE:STATUS might return Pass, indicating the test result Status of f0-f3 was Pass.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:F1FFour (Query Only)

Returns the Drift value of f1-f4 for LE Coded in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:F1FFour?

Arguments

None

Returns

<NRf> Maximum Frequency value in kHz

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:LECODED:F1FFOUR might return –10.22 kHz, indicating the f1-f4 drift value is -10.22 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:F1FFour:STATus (Query Only)

Returns the Drift value Status of f1-f4 for LE Coded in Bluetooth Summary display

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded: F1FFour:STATus?

Arguments

None

Returns

<String> PASS, FAIL or NA

PASS indicates that the test passed.

FAIL indicates that the test failed.

NA indicates that the test is not Applicable

Examples

`FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:LECODED:F1FFOUR:STATUS?` might return `Pass`, indicating the test result Status of f1-f4 was Pass.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:FNFN3 (Query Only)

Returns the Drift value of fn-f(n-3) for LE Coded in Bluetooth Summary display

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:FNFN3?`

Arguments

None

Returns

`<NRf>` Maximum Frequency value in kHz

Examples

`FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:LECODED:FNFN3` might return `-10.42 kHz`, indicating the fn-f(n-3) drift value is -10.42 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:FNFN3:STATus (Query Only)

Returns the Drift value Status of fn-f(n-3) for LE Coded in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:DRIFt:LECoded:FNFN3:STATus?`

Arguments

None

Returns

`<String>` PASS, FAIL or NA

`PASS` indicates that the test passed.

FAIL indicates that the test failed.

NA indicates that the test is not Applicable

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:DRIFT:LECODED:FNFN3:STATUS? might return Pass, indicating the test result Status of fn-f(n-3) was Pass.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX? (Query Only)

Returns the maximum frequency offset present in the packet from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX?

Arguments

None

Returns

<NRf> the maximum frequency offset value in the packet.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:MAX? might return 7.446E+3, indicating that the maximum frequency offset value in the packet is 7.446 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX:STATus? (Query Only)

Returns the Pass/Fail result status of the frequency offset maximum in the packet from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:MAX:STATus?

Arguments

None

Returns

<string> the Pass/Fail result status.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:MAX:STATUS? might return PASS, FAIL, or NA indicating whether the maximum frequency offset in the packet is within the specified limit.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble? (Query Only)

Returns the frequency offset value in the preamble region from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble?

Arguments

None

Returns

<NRf> the frequency offset value in the preamble region.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:PREAMBLE? might return 3.546E+3 indicating that the frequency offset value in the preamble region is 3.546 kHz.

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble:STATus? (Query Only)

Returns the Pass/Fail result status of the frequency offset in the preamble region.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:FREQuency:OFFSet:PREAmble:STATus?

Arguments

None

Returns

<string> the Pass/Fail result status.

Examples

FETCH:BLUETOOTH:SUMMARY:FREQUENCY:OFFSET:PREAMBLE:STATUS? might return PASS, FAIL, or NA indicating whether the frequency offset in the preamble region is within the specified limit.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:F:MAX:PERCentage:COUNt? (Query Only)

Returns the number of packets analyzed out of 10 packets for ΔF average from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage: DELTa:F:MAX:PERCentage:COUNt?

Arguments

None

Returns

<NR1> the number of packets analyzed.

Examples

FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:DELTA:F:MAX:PERCENTAGE:COUNT? might return 3, indicating that three packets were analyzed.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FONE:MAX:PERCentage:COUNt? (Query Only)

Returns the number of packets analyzed out of 10 packets for the ΔF1avg from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FONE:MAX:PERCentage:COUNt?

Arguments

None

Returns

<NR1> the number of packets analyzed.

Examples

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FONE:MAX:PERCentage:COUNt? might return 6, indicating that six packets were analyzed.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FTWO:MAX:PERCentage:COUNt? (Query Only)

Returns the number of packets analyzed out of 10 packets for the ΔF2Max% from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage: DELTa:FTWO:MAX:PERCentage:COUNt?`

Arguments

None

Returns

<NR1> the number of packets analyzed.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:DELTA:FTWO:MAX:PERCENTAGE:COUNT?` might return `6`, indicating that six packets were analyzed.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FTWO:MAX:PERCentage? (Query Only)

Returns the percentage of the ΔF2Max values that are above the specified limit.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage: DELTa:FTWO:MAX:PERCentage?`

Arguments

None

Returns

<NRf> the number of packets analyzed.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:DELTA:FTWO:MAX:PERCENTAGE?` might return `99.2`, indicating that 99.2% of the deltaF2 maximum values are above the specified limit.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:DELTa:FTWO:MAX:PERCentage:STATus? (Query Only)

Returns the Pass/Fail result status of the ΔF2Max% field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage: DELTa:FTWO:MAX:PERCentage:STATus?`

Arguments

None

Returns

<string> the Pass/Fail result status.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:DELTA:FTWO:MAX:PERCENTAGE:STATUS?` might return `PASS`, `FAIL`, or `NA`, indicating the Pass/Fail status of the ΔF2Max% field in the Bluetooth summary.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F? (Query Only)

Returns the ΔFavg value from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F?`

Arguments

None

Returns

<NRf> the delta F value.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:F?` might return `2.8723E+3`, indicating the delta F average is 2.8723 kHz.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F2F1ratio? (Query Only)

Returns the ratio of the ΔF2avg to ΔF1avg from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F2F1ratio?`

Arguments

None

Returns

<NRf> the value of the delta F1 to delta F2 ratio.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:F2F1RATIO?` might return `225.12E+3`, indicating the average ratio is 225.12 kHz.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:F2F1ratio:STATus? (Query Only)

Returns the Pass/Fail results status of the ΔF2avg/ΔF1avg field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage: F2F1ratio:STATus?`

Arguments

None

Returns

<string> the Pass/Fail result status.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:F2F1RATIO:STATUS?` might return `PASS`, `FAIL`, or `NA`, indicating the Pass/Fall result status of the ΔF2avg/ΔF1avg field.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FONE? (Query Only)

Returns the ΔF1avg value from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FONE?`

Arguments

None

Returns

<NRf> the delta F1 value.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:FONE?` might return `155.3672E+3`, indicating the delta F1 average is 155.3672 kHz.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FONE:STATus? (Query Only)

Returns the Pass/Fail results status of the ΔF1avg from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FONE:STATus?`

Arguments

None

Returns

<string> the Pass/Fail results status.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:FONE:STATUS?` might return `PASS`, `FAIL`, or `NA`, indicating whether the delta F1 average is within the limit.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FTWO? (Query Only)

Returns the ΔF2avg value from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:AVErage:FTWO?`

Arguments

None

Returns

<NRf> the delta F2 value.

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:AVERAGE:FTWO?` might return `225.12E+3`, indicating that the delta F2 value is 225.12 kHz.

FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:INDex (Query Only)

Returns the Modulation index value in Bluetooth Summary display (for LE 1M, LE 2M, LE Coded).

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:MODUlation:CHARacteristics:INDex?`

Arguments

None

Returns

<String>

Examples

`FETCH:BLUETOOTH:SUMMARY:MODULATION:CHARACTERISTICS:INDEX` might return `"Stable"`, indicating the status of modulation index is “Stable”.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:AVErage? (Query Only)

Returns the average output power from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:AVErage?`

Arguments

None

Returns

<NRf> the average output power value in dBm.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:AVERAGE?` might return `-29.1`, indicating that the average output power is -29.1 dBm.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:AVErage:STATus? (Query Only)

Returns the Pass/Fail results status of the average output power from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:AVErage:STATus?`

Arguments

None

Returns

<string> the Pass/Fail results status.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:AVERAGE:STATUS?` might return `PASS`, `FAIL`, or `NA`, indicating whether the average output power is within the specified limit.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:COUNt? (Query Only)

Returns the number of packets analyzed out of 10 packets for the calculation of the output power from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:COUNt?`

Arguments

None

Returns

<NR1> the number of packets analyzed.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:COUNT?` might return `6`, indicating that six packets were analyzed.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:COUNt? (Query Only)

Returns the number of packets analyzed out of 10 packets for calculation of the output power for EDR from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:COUNt?`

Arguments

None

Returns

<NR1> the number of packets analyzed.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:EDR:COUNT?` might return `6`, indicating that six packets were analyzed.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:DPSK? (Query Only)

Returns the power in the DPSK portion of the EDR burst from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:DPSK?`

Arguments

None

Returns

<NRf> the power in the DPSK portion of the EDR burst.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:EDR:DPSK?` might return `-29.2`, indicating that the average output power is -29.2 dBm.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:GPSK? (Query Only)

Returns the power in the GFSK portion of the EDR burst from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:EDR:GPSK?`

Arguments

None

Returns

<NRf> the power in the GFSK portion of the EDR burst.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:EDR:GPSK?` might return `-29.1`, indicating that the average output power is -29.1 dBm.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK? (Query Only)

Returns the peak output power from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK?`

Arguments

None

Returns

<NRf> the peak output power value in dBm.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:PEAK?` might return `-29.3` indicating that the peak output power is -29.3 dBm.

FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK:STATus? (Query Only)

Returns the Pass/Fail results status of the peak output power from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:OUTPut:POWEr:PEAK:STATus?`

Arguments

None

Returns

<string> the Pass/Fail result status.

Examples

`FETCH:BLUETOOTH:SUMMARY:OUTPUT:POWER:PEAK:STATUS?` might return `PASS`, `FAIL`, or `NA`, indicating whether the peak output power is within the specified limit.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:CRC? (Query Only)

Returns the Basic Rate value of the CRC field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:CRC?`

Arguments

None

Returns

<string> the value of the CRC field.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:Basic Rate:CRC?` might return `"0x9DB0"` indicating the value of the CRC field in hexadecimal.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:ARQN? (Query Only)

Returns the value of ARQN field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:ARQN?`

Arguments

None

Returns

<NR2> the value of the ARQN field.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:Basic Rate:HEADer:ARQN?` might return 0.000000 indicating the value of the flow field.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:FLOW? (Query Only)

Returns the value of Flow field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:FLOW?`

Arguments

None

Returns

<NR2> the flow value.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:FLOW?` might return 1.000000 indicating the value of the flow field.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:HEC? (Query Only)

Returns the value of HEC field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:HEC?`

Arguments

None

Returns

<string> the value of the HEC field.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:HEC?` might return `"00110010"` indicating the value of the HEC field in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:LT:ADDRess? (Query Only)

Returns the LT address from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:LT:ADDRess?`

Arguments

None

Returns

<string> the LT address.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:LT:ADDR?` might return `"101"` indicating the LT address in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:SEQN? (Query Only)

Returns the value of SEQN field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:SEQN?`

Arguments

None

Returns

<NR2> the value of the SEQN field.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:SEQN?` might return 1.000000 indicating the value of the flow field.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:TYPE? (Query Only)

Returns the value of Type field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:TYPE?`

Arguments

None

Returns

<string> the value of the type field.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:HEADer:TYPE?` might return `"00001111"` indicating the type field in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:PAYLoad:LENgth? (Query Only)

Returns the Basic Rate payload length from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:PAYLoad:LENgth?`

Arguments

None

Returns

<string> the value of the payload length.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:PAYLoad:LENgth?` might return `"0101010011"` indicating the payload length value in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:PREAmble? (Query Only)

Returns the preamble of the Basic Rate packet from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:PACKet:BDR:PREAmble?

Arguments

None

Returns

<string> the preamble of the packet.

Examples

FETCh:BLUEtooth:SUMMary:PACKet:BDR:PREAmble? might return "0101" indicating the preamble is 0101 in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:SYNC:WORD? (Query Only)

Returns the sync word from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:PACKet:BDR:SYNC:WORD?

Arguments

None

Returns

<string> the sync word.

Examples

FETCh:BLUEtooth:SUMMary:PACKet:BDR:SYNC:WORD? might return "Ox4F36F2CEE85390CB" indicating the sync word in hexadecimal format.

FETCh:BLUEtooth:SUMMary:PACKet:BDR:TYPE? (Query Only)

Returns the packet type of the Basic Rate signal from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

FETCh:BLUEtooth:SUMMary:PACKet:BDR:TYPE?

Arguments

None

Returns

<string> the packet type.

Examples

`FETCh:BLUEtooth:SUMMary:PACKet:BDR:TYPE?` might return `"DH5"` indicating that the DH5 packet is being analyzed.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:ACCEss:ADDRess? (Query Only)

Returns the 32-bit Access Address from the Bluetooth Summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:ACCEss:ADDRess?`

Arguments

None

Returns

<string> the 32-bit Access Address.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:ACCESS:ADDRESS?` might return `"0x71764129"` indicating the Access Address in hexadecimal.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:CRC? (Query Only)

Returns the value of the CRC field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:CRC?`

Arguments

None

Returns

<string> the value of the CRC field.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:CRC?` might return `"0xAAAAAA"` indicating value CRC field in hexadecimal.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:CHANnel:SELect (Query Only)

Returns the channel selected under decoded packet information section in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:CHANnel:SELect?`

Arguments

None

Returns

<String> 0 or 1 or -1 or "–"

0 and 1 represents valid

-1 represents invalid

"–" represents NIL

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:CHANNEL:SELECT` might return `"1"`, indicating the selected channel is valid.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:LENGth? (Query Only)

Returns the value of the length field from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:LENGth?`

Arguments

None

Returns

<string> the value of the length field.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:LENGTH?` might return `"100101"` indicating value length field in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:LLID (Query Only)

Returns the LLID value (2 bits) under decoded packet information when the packet type is “OTHERS” for Low Energy in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:LLID?`

Arguments

None

Returns

<String> Either 00,01,10,11

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:LLID` might return 01, indicating the value of LLID is "01".

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:MD (Query Only)

Returns the MD value (1 bit) under decoded packet information when the packet type is “OTHERS” for Low Energy in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:MD?`

Arguments

None

Returns

<Boolean> 0, 1

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:MD` might return 1, indicating the value of MD is "1".

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:NESN (Query Only)

Returns the NESN value (1 bit) under decoded packet information when the packet type is “OTHERS” for Low Energy in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:NESN?`

Arguments

None

Returns

<Boolean> 0, 1

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:NESN` might return 1, indicating the value of NESN is "1".

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:RX:ADDRess? (Query Only)

Returns the Rx address from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:RX:ADDRess?`

Arguments

None

Returns

<string> the Rx address.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:RX:ADDRESS?` might return 0.00000000 indicating the Rx Address.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:SN (Query Only)

Returns the SN value (1 bit) under decoded packet information when the packet type is “OTHERS” for Low Energy in Bluetooth Summary display.

Conditions

Measurement view: Bluetooth Summary display

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:SN?`

Arguments

None

Returns

<Boolean> 0, 1

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:SN` might return 1, indicating the value of SN is "1".

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TX:ADDRess? (Query Only)

Returns the Tx address from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TX:ADDRess?`

Arguments

None

Returns

<string> the Tx address.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:TX:ADDRESS?` might return 0.00000000 indicating Tx Address.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TYPE? (Query Only)

Returns the PDU type from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PDU:HEADer:TYPE?`

Arguments

None

Returns

<string> the PDU type.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PDU:HEADER:TYPE?` might return "0010" indicating the PDU type in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:PREAmble? (Query Only)

Returns the preamble of the BLE packet from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

`FETCh:BLUEtooth:SUMMary:PACKet:BLE:PREAmble?`

Arguments

None

Returns

<string> the preamble of the packet.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:PREAMBLE?` might return `"01010101"` indicating the preamble is 01010101 in binary.

FETCh:BLUEtooth:SUMMary:PACKet:BLE:TYPE? (Query Only)

Returns the packet type from the Bluetooth summary.

Conditions

Measurement views: Bluetooth summary

Group

Fetch commands

Syntax

```
FETCh:BLUEtooth:SUMMary:PACKet:BLE:TYPE?
```

Arguments

None

Returns

<string> the BLE packet type.

Examples

`FETCH:BLUETOOTH:SUMMARY:PACKET:BLE:TYPE?` might return `"BLE_TEST"` indicating the BLE test signal is being analyzed.

FETCh:CCDF? (Query Only)

Returns the CCDF measurement results.

Conditions

Measurement views: CCDF

Group

Fetch commands

Syntax

```
FETCh:CCDF?
```

Related Commands

Arguments

None

Returns

```
<avg_ampl>,<avg_ccdf>,<crest_factor>,<ampl_10>,<ampl_1>,
   <ampl_p1>,<ampl_p01>,<ampl_p001>,<ampl_p0001>
```

Where

`<avg_ampl>` is the average amplitude in dBm.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

`<avg_ccdf>` is the average CCDF in percent.

`<crest_factor>` is the crest factor in dB.

<ampl_10> is the amplitude at CCDF of 10% in dB.

<ampl_1> is the amplitude at CCDF of 1% in dB.

<ampl_p1> is the amplitude at CCDF of 0.1% in dB.

<ampl_p01> is the amplitude at CCDF of 0.01% in dB.

<ampl_p001> is the amplitude at CCDF of 0.001% in dB.

<ampl_p0001> is the amplitude at CCDF of 0.0001% in dB.

Examples

FETCH:CCDF? might return -33.35,35.8,9.75,3.88,7.07,8.50,9.25,9.72,9.74, indicating (average amplitude) = -33.35 dBm, (average CCDF) = 35.8%, (crest factor) = 9.75 dB, (amplitude at CCDF of 10%) = 3.88 dB, (amplitude at CCDF of 1%) = 7.07 dB, (amplitude at CCDF of 0.1%) = 8.50 dB, (amplitude at CCDF of 0.01%) = 9.25 dB, (amplitude at CCDF of 0.001%) = 9.72 dB, and (amplitude at CCDF of 0.0001%) = 9.74 dB.

FETCh:CCDF:{FIRSt|SECond|THIRd}:X? (Query Only)

Returns the horizontal values of the specified trace in the CCDF measurement.

The mnemonics FIRSt, SECond, and THIRd represent Trace 1, Trace 2, and Gaussian reference curve, respectively.

Conditions

Measurement views: CCDF

Group

Fetch commands

Syntax

FETCh:CCDF:{FIRSt|SECond|THIRd}:X?

Arguments

None

Returns

#<num_digit><num_byte><x(1)><x(2)>...<x(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<x(n)> is the horizontal value (dB) of the CCDF graph at the nth point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:CCDF:FIRST:X? might return #41024xxxx... (1024-byte data) for the horizontal values of Trace 1.

FETCh:CCDF:{FIRSt|SECond|THIRd}:XY? (Query Only)

Returns the horizontal and vertical value pairs of the specified trace in the CCDF measurement.

The mnemonics FIRSt, SECond, and THIRd represent Trace 1, Trace 2, and Gaussian reference curve, respectively.

Conditions

Measurement views: CCDF

Group

Fetch commands

Syntax

`FETCh:CCDF:{FIRSt|SECond|THIRd}:XY?`

Arguments

None

Returns

`#<num_digit><num_byte><x(1)><y(1)><x(2)><y(2)>...<x(n)><y(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<x(n)><y(n)>` is the horizontal value (dB) and vertical value (%) pair at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:CCDF:FIRST:XY?` might return `#41024xxxx...` (1024-byte data) for the horizontal and vertical value pairs of Trace 1.

FETCh:CCDF:{FIRSt|SECond|THIRd}[:Y]? (Query Only)

Returns the vertical values of the specified trace in the CCDF measurement.

The mnemonics FIRSt, SECond, and THIRd represent Trace 1, Trace 2, and Gaussian reference curve, respectively.

Conditions

Measurement views: CCDF

Group

Fetch commands

Syntax

`FETCh:CCDF:{FIRSt|SECond|THIRd}[:Y]?`

Arguments

None

Returns

`#<num_digit><num_byte><y(1)><y(2)>...<y(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<y(n)>` is the vertical value (%) of the CCDF graph at the nth point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:CCDF:FIRST:Y?` might return `#41024xxxx...` (1024-byte data) for the vertical values of Trace 1.

FETCh:CONSte[:MEASview<y>]:FERRor? (Query only)

Returns the frequency error in Hz. The frequency error is the difference between the measured carrier frequency of the signal and the user-selected center frequency of the analyzer.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Fetch commands

Syntax

`FETCh:CONSte[:MEASview<y>]:FERRor?`

Related Commands

FETCh:EVM[:MEASview<y>]:FERRor? (on page 1204)

Arguments

None.

Returns

`<freq_error>::<NRf>` which is the frequency error in Hz.

Examples

`FETCh:CONSte:MEASview2:FERRor?` might return -10.7E+3, which is a frequency error of -10.7 kHz for measview 2 of constellation.

FETCh:CONSte[:MEASview<y>]:RESults? (Query only)

Returns the constellation measurement results of **EVM** RMS, peak, and location displayed on the bottom of the screen.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Fetch commands

Syntax

FETCh:CONSte[:MEASview<y>]:RESults?

Arguments

None

Returns

For modulation types 2|4|8|16FSK or C4FM:

FSK_deviation_Avg_Leftmost, FSK_deviation_Avg_Rightmost

Where

FSK_deviation_Avg_Leftmost is the average FSK deviation of the left-most symbol in Hz.

FSK_deviation_Avg_Rightmost is the average FSK deviation of the right-most symbol in Hz.

For all other valid modulation types:

<EVM_RMS>,<EVM_peak>,<location>

Where

<EVM_RMS>::<NRf> is the RMS EVM in percent (%).

<EVM_peak>::<NRf> is the peak EVM in percent (%).

<location>::<NRf> is the peak location in symbol number.

The time unit can be changed by the [SENSe]:DDEMod:TIMe:UNITs command.

Examples

FETCh:CONSTe:MEASview2:RESults? might return 2.841, 3.227, 68.000, indicating that the RMS EVM is 2.841% and the peak EVM is 3.227% at symbol #68 for measview 2 of constellation.

FETCh:CONSte[:MEASview<y>]:TRACe? (Query only)

Returns the constellation trace data.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Constellation

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Constellation).

Group

Fetch commands

Syntax

FETCh:CONSte[:MEASview<y>]:TRACe?

Arguments

None

Returns

#<num_digit><num_byte><I(1)><Q(1)><I(2)><Q(2)>...<I(n)><Q(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<I(n)> and <Q(n)> are the normalized I- and Q-coordinate values at the n^{th} data point. 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCh:CONSte:MEASview2:TRACe? might return #43848xxxx... (3848-byte data) for the constellation trace data for measview 2 of constellation.

FETCh:DDEMod[:MEASview<y>]:STABle? (Query only)

Returns the symbol table data.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Symbol table

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Symbol table)

Group

Fetch commands

Syntax

FETCh:DDEMod[:MEASview<y>]:STABle?

Arguments

None

Returns

#<num_digit><num_byte><data(1)><data(2)>...<data(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the symbol table data at the n^{th} data point,

4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCh:DDEMod:MEASview1:STABle? might return #3512xxxx... (512-byte data) for the Symbol table measurement view1.

FETCh:DDEMod:SYNCh:WORD:LENGth? (Query only)

Returns the length of the synch word in the symbol table.

Conditions

Measurement views: Symbol table

Group

Fetch commands

Syntax

`FETCh:DDEMod:SYNCh:WORD:LENGth?`

Related Commands

FETCh:DDEMod:SYNCh:WORD:POSition? (on page 1184)

Arguments

None

Returns

`<NR1>` indicates the length of the synch word in symbols.

Examples

`FETCH:DDEMOD:SYNCH:WORD:LENGTH?` might return 3, indicating the length of the synch word is three symbols.

FETCh:DDEMod:SYNCh:WORD:POSition? (Query Only)

Returns the position of the synch word in the symbol table.

Conditions

Measurement views: Symbol table

Group

Fetch commands

Syntax

`FETCh:DDEMod:SYNCh:WORD:POSition?`

Related Commands

FETCh:DDEMod:SYNCh:WORD:LENGth? (on page 1183)

Arguments

None

Returns

<NR1> indicates what symbol number the synch word begins at in the table. Zero (0) represents the first symbol in the table. A "-1" indicates that the synch word was not found.

Examples

`FETCH:DDEMOD:SYNCH:WORD:POSITION?` might return 10, indicating the synch word begins at 11th symbol in the table.

FETCh:DIQVtime[:MEASview<y>]:FERRor? (Query only)

Returns the frequency error in the Demod I&Q versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demod I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Fetch commands

Syntax

`FETCh:DIQVtime[:MEASview<y>]:FERRor?`

Arguments

None

Returns

`<freq_error>::<NRf>` is the frequency error in Hz.

Examples

`FETCh:DIQVtime:MEASview1:FERRor?` might return -10.7E+3, indicating the frequency error is -10.7 kHz measurement view 1.

FETCh:DIQVtime[:MEASview<y>]:I? (Query only)

Returns the I versus Time trace data.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demod I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Fetch commands

Syntax

`FETCh:DIQVtime[:MEASview<y>]:I?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the I level in volts at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:DIQVtime:MEASview1:I?` might return #3160xxxx... (160-byte data) for the I versus Time trace measurement view 1.

FETCh:DIQVtime[:MEASview<y>]:Q? (Query only)

Returns the Q versus Time trace data.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Demod I&Q versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod I&Q versus Time).

Group

Fetch commands

Syntax

`FETCh:DIQVtime[:MEASview<y>]:Q?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the Q level in volts at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:DIQVtime:MEASview1:Q?` might return #3160xxxx... (160-byte data) for the Q versus Time trace measurement view 1.

FETCh:DPX:DDENsity? (Query Only)

Returns the calculated density for the selected region in the DPXogram measurement.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

`FETCh:DPX:DDENsity?`

Arguments

None

Returns

<NR1> value.

Examples

`FETCH:DPX:DDENSITY?` might return a DPX signal density value of 24.4802413393.

FETCh:DPX:DGRam:LINE:COUNt? (Query Only)

Returns the number of lines in the DPXogram measurement.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

`FETCh:DPX:DGRam:LINE:COUNt?`

Arguments

None

Returns

<NR1> number of lines in the measurement.

Examples

`FETCH:DPX:DGRAM:LINE:COUNT?` might return `40`, indicating that there were 40 lines in the measurement.

FETCh:DPX:DGRam:TIME[:SCALe]:OFFSet? (Query Only)

Returns the time scale offset in the DPXogram measurement.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

`FETCh:DPX:DGRam:TIME[:SCALe]:OFFSet?`

Arguments

None

Returns

<string> The time offset in the DPXogram measurement in seconds.

Examples

FETCH:DPX:DGRAM:TIME[:SCALE]:OFFSET? might return "0.000 s" indicating that the time scale offset was 0.000 s.

FETCh:DPX:RESults:TRACe<x>? (Query Only)

Returns waveform data of specified trace <x> in the DPX spectrum measurement, where x is 1 to 5. The traces 1–4 are in the standard form. Trace 5 is the bitmap trace and its data is returned in a binary block. Trace 6 is the DPXogram trace on DPX spectrum plots. Trace 7 is the Ogram line in the DPXogram display.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

FETCh:DPX:RESults:TRACe<x>?

Arguments

<NR1>

Returns

For traces 1 to 4:

#<num_digit><num_byte><data(1)><data(2)>...<data(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the amplitude of the trace sample at the nth data point.

<data(n)> is in the 4-byte little endian floating-point format specified in IEEE 488.2.

The format is a binary block of 32 bit floating point values. Each value ranges from 0 to 1.0, where 1.0 represents 100%.

Examples

FETCH:DPX:RESULTS:TRACE1? might return #42004xxxx... (2004-byte of data) for the waveform data of trace one (1).

FETCh:DPX:TDM:FREQuency:TXBer:BER? (Query Only)

Returns the Tx BER measurement BER results.

Conditions

Measurement views: DPX:Frequency

Group

Fetch commands

Syntax

FETCh:DPX:TDM:FREQuency:TXBer:BER?

Related Commands

Arguments

None

Returns

<NR1> is the calculated BER.

Examples

`FETCH:DPX:TDM:FREQUENCY:TXBER:BER?` might return `9.1135684130E-6`.

FETCh:DPX:TDM:FREQuency:TXBer:BITS? (Query Only)

Returns the number of bits counted in the active Tx BER measurement session.

Conditions

Measurement views: DPX:Frequency

Group

Fetch commands

Syntax

`FETCh:DPX:TDM:FREQuency:TXBer:BITS?`

Related Commands

Arguments

None

Returns

<NR1> is the number of bits counted in the current Tx BER measurement session.

Examples

`FETCH:DPX:TDM:FREQUENCY:TXBER:BITS?` might return `72.0820000000E+12`.

FETCh:DPX:TDM:FREQuency:TXBer:ERRors? (Query Only)

Returns the number of errors counted in the active Tx BER measurement session.

Conditions

Measurement views: DPX:Frequency

Group

Fetch commands

Syntax

`FETCh:DPX:TDM:FREQuency:TXBer:ERRors?`

Arguments

None

Returns

<NR1> is the number of errors counted in the current Tx BER measurement session.

Examples

`FETCH:DPX:TDM:FREQUENCY:TXBER:ERRORS?` might return `1.0000000000`.

FETCh:DPX:TDM:FREQuency:TXBer:STATe? (Query Only)

Returns the state of the Tx BER measurement.

Conditions

Measurement views: DPX:Frequency

Group

Fetch commands

Syntax

`FETCh:DPX:TDM:FREQuency:TXBer:STATe?`

Returns

`IDLE` indicates the Tx BER measurement is not running.

`ACTIVE` indicates the Tx BER measurement is in progress.

`SYNC` indicates the instrument is in the process of syncing with the data pattern.

`DONE` indicates the Tx BER measurement is finished.

Examples

`FETCH:DPX:TDM:FREQUENCY:TXBER:STATE?` might return `ACTIVE`, indicating the instrument is measuring the Tx BER.

FETCh:DPX:TRACe:AVERage? (Query Only)

Returns waveform data of the average trace in the DPX spectrum measurement.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

`FETCh:DPX:TRACe:AVERage?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the amplitude of the average trace at the nth data point in dBm, 4-byte little endian floating-point format specified in IEEE 488.2.

The unit can be changed by the [SENSe]:POWer:UNITs command.

Examples

FETCH:DPX:TRACE:AVERAGE? might return #42004xxxx... (2004-byte data) for the waveform data of the average trace.

FETCh:DPX:TRACe:BITMap? (Query Only)

Returns a data block of the DPX spectrum measurement bitmap waveform data.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

FETCh:DPX:TRACe:BITMap?

Arguments

None

Returns

A binary block of 32-bit floating point values (IEEE standard single precision floating point format). Each value ranges from 0 to 1.0, where 1.0 represents 100%. Bitmaps have 201 rows and 801 columns. Data[0] is the first column in the first row, data[801] is the first column in the 2nd row, and so on.

Bitmap values are returned in the following order: Top left pixel first, then the rest of the top row, after that row by row. In other words, the pixels in the bitmap are returned from left to right and top to bottom; one row at a time.

Examples

FETCH:DPX:TRACE:BITMAP? might return #6644004xxxx...

FETCh:DPX:TRACe:MATH? (Query Only)

Returns waveform data of the math trace in the DPX spectrum measurement.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

FETCh:DPX:TRACe:MATH?

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the amplitude of the math trace at the nth data point in dBm, 4-byte little endian floating-point format specified in IEEE 488.2.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`FETCH:DPX:TRACE:MATH?` might return `#42004xxxx...` (2004-byte data) for the waveform data of the math trace.

FETCh:DPX:TRACe:MAXimum? (Query Only)

Returns waveform data of the maximum trace in the DPX spectrum measurement.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

`FETCh:DPX:TRACe:MAXimum?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the amplitude of the maximum trace at the nth data point in dBm, 4-byte little endian floating-point format specified in IEEE 488.2.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`FETCH:DPX:TRACE:MAXIMUM?` might return `#42004xxxx...` (2004-byte data) for the waveform data of the maximum trace.

FETCh:DPX:TRACe:MINimum? (Query Only)

Returns waveform data of the minimum trace in the DPX spectrum measurement.

Conditions

Measurement views: DPX spectrum

Group

Fetch commands

Syntax

`FETCh:DPX:TRACe:MINimum?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the amplitude data of the minimum trace at the nth data point in dBm, 4-byte little endian floating-point format specified in IEEE 488.2. The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`FETCH:DPX:TRACE:MINIMUM?` might return `#42004xxxx...` (2004-byte data) for the waveform data of the minimum trace.

FETCh:EDIagram[:MEASview<y>]:FDEViation? (Query only)

Returns the frequency deviation versus Time trace data with the X values.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Fetch commands

Syntax

`FETCh:EDIagram[:MEASview<y>]:FDEViation?`

Returns

`#<num_digit><num_byte><Y(1)><X(1)><Y(2)><X(2)>...<Y(n)><X(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<Y(n)>` and `<X(n)>` is the frequency deviation in Hz and time (symbols) pair at the n^{th} data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:EDIagram:MEASview2:FDEViation?` might return #3160xxxx... (160-byte data) for the frequency deviation versus Time trace for measview2 of the Eye diagram.

FETCh:EDIagram[:MEASview<y>]:FERRor? (Query only)

Returns the frequency error in the eye diagram measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Fetch commands

Syntax

`FETCh:EDIagram[:MEASview<y>]:FERRor?`

Arguments

None

Returns

`<freq_error>::<NRf>` is the frequency error in Hz.

Examples

`FETCh:EDIagram:MEASview2:FERRor?` might return -10.7E+3, indicating the frequency error is -10.7 kHz for measview2 of the Eye diagram.

FETCh:EDIagram[:MEASview<y>]:I? (Query only)

Returns the I versus Time trace data in the eye diagram measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Fetch commands

Syntax

`FETCh:EDIagram[:MEASview<y>]:I?`

Arguments

None

Returns

`#<num_digit><num_byte><Y(1)><X(1)><Y(2)><X(2)>...<Y(n)><X(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<Y(n)><X(n)>` is the I level (normalized) and time (symbols) pair at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:EDIagram:MEASview2:I?` might return #3160xxxx... (160-byte data) for the I versus Time trace for measview2 of the Eye diagram.

FETCh:EDIagram[:MEASview<y>]:Q? (Query only)

Returns the Q versus Time trace data in the eye diagram measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Eye diagram

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: Eye diagram).

Group

Fetch commands

Syntax

`FETCh:EDIagram[:MEASview<y>]:Q?`

Arguments

None

Returns

`#<num_digit><num_byte><Y(1)><X(1)><Y(2)><X(2)>...<Y(n)><X(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<Y(n)><X(n)>` is the Q level (normalized) and time (symbols) pair at the n^{th} data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:EDIagram:MEASview2:Q?` might return #3160xxxx... (160-byte data) for the Q versus Time trace for measview2 of the Eye digram.

FETCh:EMC:COUNt? (Query only)

Queries the total numbers of spots detected in EMC View.

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:COUNt?`

Arguments

None

Returns

<NR1>

Examples

`FETCH:EMC:COUNT?` might return `15`, indicating that 15 spots are detected.

FETCh:EMC:EMISsion:RESults:STATus? (Query Only)

Queries the status of the emission results in EMC view.

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:EMISsion:RESults:STATus?`

Arguments

None

Returns

<String> Either PASS or FAIL

Examples

`FETCH:EMC:EMISSION:RESULTS:STATUS?` returns `PASS`, indicating that the status of emission results is passed.

FETCh:EMC:SPOT<x>:AMBient:AMPLitude? (Query Only)

Queries the amplitude of the selected spot in ambient trace of EMC view.

<x> = the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:AMBIent:AMPLitude?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT1:AMBIent:AMPLitude?` might return `52.612`, indicating that the amplitude of spot 1 in the ambient trace is 52.61 dBuV.

FETCh:EMC:SPOT<x>:AMBIent:DELTa? (Query Only)

Queries the Delta value of the selected spot in ambient trace of EMC View.

<x> = the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:AMBIent:DELTa?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT2:AMBIent:DELTa?` might return `3.3614`, indicating that the delta value of spot 2 in the ambient trace is 3.36 dBuV.

FETCh:EMC:SPOT<x>:AMBIent:PASS? (Query Only)

Queries the status of the selected spot in ambient trace in EMC view. The default status is THRE.

<x> = the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:AMBIent:PASS?`

Arguments

None

Returns

`<String>` Either OLIM, OMAR or THRE

Where

`OLIM` = Over Limit

`OMAR` = Over Margin

`THRE` = Threshold

Examples

`FETCh:EMC:SPOT3:AMBIent:PASS?` might return `THRE`, indicating that spot 3 of the ambient trace is failing by crossing the threshold.

FETCh:EMC:SPOT<x>:FREQuency? (Query Only)

Queries the frequency of the specified spot in EMC View.

<x> = <NR1> indicates the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:FREQuency?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT2:FREQuency?` might return `366.12500000E+3`, indicating that the frequency of spot 2 is 366.125 kHz.

FETCh:EMC:SPOT<x>:PASS? (Query Only)

Queries the overall status of the specified spot in EMC view. The default status is THRE.

<x> = <NR1> indicates the spot number.

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:PASS?`

Arguments

None

Returns

`<String>` Either OLIM, OMAR or THRE

where

`OLIM` = Over Limit

`OMAR` = Over Margin

`THRE` = Threshold

Examples

`FETCh:EMC:SPOT1:PASS?` might return `OLIM`, indicating that spot 1 is failing by crossing over the limit.

FETCh:EMC:SPOT<x>:RANGe? (Query Only)

Queries the range of the specified spot in EMC View.

<x> = <NR1> indicates the spot number.

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:RANGe?`

Arguments

None

Returns

<String> from A to T

Examples

`FETCh:EMC:SPOT1:RANGe?` might return `"A"`, indicating that the range of spot 1 is "A".

FETCh:EMC:SPOT<x>:RECAll:AMPLitude? (Query Only)

Queries the amplitude of the selected spot in recalled trace of EMC View.

<x> = the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:RECAll:AMPLitude?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT1:RECAll:AMPLitude?` might return 23.598, indicating that the amplitude of spot 1 in the recalled trace is 23.59 dBuV.

FETCh:EMC:SPOT<x>:RECAll:DELTa? (Query Only)

Queries the Delta value of the specified spot in recalled trace of EMC View.

<x> = the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:RECAll:DELTa?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT2:RECAll:DELTa?` might return 5.5878, indicating that delta value of the spot 2 in the recalled trace is 5.58 dBuV.

FETCh:EMC:SPOT<x>:RECAll:PASS? (Query Only)

Queries the status of the selected spot in recalled trace in EMC view. The default status is THRE.

<x> = the spot number

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:RECAll:PASS?`

Arguments

None

Returns

`<String>` Either OLIM, OMAR or THRE

Where

`OLIM` = Over Limit

`OMAR` = Over Margin

`THRE` = Threshold

Examples

`FETCh:EMC:SPOT1:RECAll:PASS?` might return `OMAR`, indicating that spot 1 of the recalled trace is failing by crossing the Margin.

FETCh:EMC:SPOT<x>:SCDEtector<y>:AMPLitude? (Query Only)

Queries the amplitude of the specified spot with respect to specified scan detector in the results table.

<x> = the spot number

<y> = the scan detector number (either 1 or 2)

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:SCDEtector<y>:AMPLitude?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT1:SCDEtector1:AMPLitude?` might return `20.6209`, indicating that the amplitude of spot 1 for scan detection 1 is 20.62 dBuV.

FETCh:EMC:SPOT<x>:SCDEtector<y>:DELTa? (Query Only)

Queries the Delta value of the specified spot with respect to specified scan detector in the results table.

<x> = the spot number

<y> = the scan detector number (either 1 or 2)

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:SCDEtector<y>:DELTa?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT2:SCDEtector1:DELTa?` might return `3.6209`, indicating that the delta value of spot 2 for scan detection 1 is 3.62 dBuV.

FETCh:EMC:SPOT<x>:SCDEtector<y>:PASS? (Query Only)

Queries the status of the specified spot based on the specified scan detector in EMC view. The default status is THRE.

<x> = the spot number

<y> = the scan detector number (either 1 or 2)

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:SCDEtector<y>:PASS?`

Arguments

None

Returns

`<String>` either OLIM, OMAR or THRE

where

`OLIM` = Over Limit

`OMAR` = Over Margin

`THRE` = Threshold

Examples

`FETCh:EMC:SPOT2:SCDEtector1:PASS?` might return `THRE`, indicating that spot 2 of scan detector 1 is failing by crossing the threshold.

FETCh:EMC:SPOT<x>:SPDEtector<y>:AMPLitude? (Query Only)

Queries the amplitude of the specified spot with respect to specified spot detector in the results table.

<x> = the spot number

<y> = the spot detector number (either 1, 2, or 3)

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:SPDEtector<y>:AMPLitude?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT1:SPDEtector1:AMPLitude?` might return `18.365`, indicating that amplitude of spot 1 for spot detection 1 is 18.36 dBuV.

FETCh:EMC:SPOT<x>:SPDEtector<y>:DELTa? (Query Only)

Queries the Delta value of the specified spot with respect to specified spot detector in the results table.

<x> = the spot number

<y> = the spot detector number (either 1, 2, or 3)

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:SPDEtector<y>:DELTa?`

Arguments

None

Returns

<NRf>

Examples

`FETCh:EMC:SPOT2:SPDEtector1:DELTa?` might return `2.2578`, indicating that delta value of spot 2 for spot detection 1 is 2.25 dBuV.

FETCh:EMC:SPOT<x>:SPDEtector<y>:PASS? (Query Only)

Queries the status of the selected spot based on the specified spot detector in EMC view. The default status is THRE.

`<x>` = the spot number

`<y>` = the spot detector number (either 1, 2, or 3)

Conditions

Measurement view: EMC - EMI Display

Group

Fetch commands

Syntax

`FETCh:EMC:SPOT<x>:SPDEtector<y>:PASS?`

Arguments

None

Returns

<String> Either OLIM, OMAR or THRE

where

`OLIM` = Over Limit

`OMAR` = Over Margin

`THRE` = Threshold

Examples

`FETCh:EMC:SPOT1:SPDEtector2:PASS?` might return OMAR, indicating that the spot 1 of spot detector 2 is failing by crossing Margin.

FETCh:EVM[:MEASview<y>]:FERRor? (Query only)

Returns the frequency error in the `EVM` versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Fetch commands

Syntax

`FETCh:EVM[:MEASVIEW<y>]:FERRor?`

Arguments

None

Returns

`<freq_error>::<NRf>` is the frequency error in Hz.

Examples

`FETCh:EVM:MEASview2:FERRor?` might return -10.7E+3, indicating the frequency error is -10.7 kHz for measview2 of EVM.

FETCh:EVM[:MEASview<y>]:PEAK? (Query only)

Returns the peak value in the **EVM** versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Fetch commands

Syntax

`FETCh:EVM[:MEASview<y>]:PEAK?`

Related Commands

FETCh:EVM[:MEASVIEW<y>]:PINDex? (on page 1205)

Arguments

None

Returns

`<peak>::<NRf>` is the peak EVM value in percent (%).

Examples

`FETCh:EVM:MEASview2:PEAK?` might return 1.32, indicating the peak EVM value is 1.32% for measview2 of EVM.

FETCh:EVM[:MEASview<y>]:PINDex? (Query only)

Returns the time at the **EVM** peak.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Fetch commands

Syntax

`FETCh:EVM[:MEASview<y>]:PINDex?`

Related Commands

FETCh:EVM[:MEASview<y>]:PEAK? (on page 1205)

Arguments

None

Returns

`<peak_time>::<NRf>` is the time at the EVM peak in symbol number.

The unit can be changed by the `[SENSe]:DDEMod:TIMe:UNITs` command.

Examples

`FETCh:EVM:MEASview2:PINDex` might return 68.000, indicating that the EVM peak is at symbol #68 for measview2 of EVM.

FETCh:EVM[:MEASview<y>]:RMS? (Query only)

Returns the RMS (Root-Mean-Square) value in the **EVM** versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Fetch commands

Syntax

`FETCh:EVM[:MEASview<y>]:RMS?`

Arguments

None

Returns

`<rms>::<NRf>` is the RMS EVM value in percent (%).

Examples

`FETCh:EVM:MEASview2:RMS?` might return 0.582, indicating the RMS EVM value is 0.582% for the measview2 of EVM.

FETCh:EVM[:MEASview<y>]:TRACe? (Query only)

Returns the **EVM** versus Time trace data.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: EVM versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod EVM versus Time).

Group

Fetch commands

Syntax

`FETCh:EVM[:MEASview<y>]:TRACe?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the EVM value at the nth data point in percent (%), 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:EVM:MEASview2:TRACe?` might return #42036xxxx... (2036-byte data) for the EVM versus Time Measview 2.

FETCh:FDVTime[:MEASview<y>]:FERRor? (Query only)

Returns the frequency error in the Frequency deviation versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Fetch commands

Syntax

`FETCh:FDVTime:MEASview<y>:FERRor?`

Arguments

None

Returns

<freq_error>::<NRf> is the frequency error in Hz.

Examples

FETCH:FDVTime:MEASview2:FERROR? might return -10.7E+3, indicating the frequency error is -10.7 kHz.

FETCh:FDVTime[:MEASview<y>]:TRACe? (Query only)

Returns the Frequency deviation versus Time trace data.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Frequency deviation versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Frequency deviation versus Time).

Group

Fetch commands

Syntax

FETCh:FDVTime:MEASview<y>:TRACe?

Arguments

None

Returns

#<num_digit><num_byte><data(1)><data(2)>...<data(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the frequency deviation value at the n^{th} data point in percent (Hz), 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:FDVTime:MEASview2:TRACE? might return #3160xxxx... (160-byte data) for the Frequency deviation versus Time Measview 2.

FETCh:{FM|PM}:FERRor? (Query Only)

Returns the frequency error in the Frequency modulation or Phase modulation measurements.

Conditions

Measurement views: Frequency deviation versus Time

Group

Fetch commands

Syntax
`FETCh:{FM|PM}:FERRor?`

Arguments
None

Returns
`<freq_error>::<NRf>` is the frequency error in Hz.

Examples
`FETCH:{FM|PM}:FERROR?` might return -10.7E+3, indicating the frequency error is -10.7 kHz.

FETCh:FM:PHALf? (Query Only)
Returns the half peak-peak frequency deviation (Pk-Pk/2) in the FM measurement.

Conditions
Measurement views: FM

Group
Fetch commands

Syntax
`FETCh:FM:PHALf?`

Arguments
None

Returns
`<Pk-Pk/2>::<NRf>` is the half peak-peak frequency deviation in Hz.

Examples
`FETCH:FM:PHALF?` might return 628.9E+3, indicating the half peak-peak frequency deviation is 628.9 kHz.

FETCh:FM:PNEGative? (Query Only)
Returns the negative peak frequency deviation (–Pk) in the FM measurement.

Conditions
Measurement views: FM

Group
Fetch commands

Syntax
`FETCh:FM:PNEGative?`

Arguments
None

Returns

<-Pk>::<NRf> is the negative peak frequency deviation in Hz.

Examples

FETCH:FM:PNEGATIVE? might return –495.6E+3, indicating the negative peak frequency deviation is –495.6 kHz.

FETCh:FM:PPOSitive? (Query Only)

Returns the positive peak frequency deviation (+Pk) in the FM measurement.

Conditions

Measurement views: FM

Group

Fetch commands

Syntax

FETCh:FM:PPOSitive?

Arguments

None

Returns

<+Pk>::<NRf> is the positive peak frequency deviation in Hz.

Examples

FETCH:FM:PPOSITIVE? might return 763.2E+3, indicating the positive peak frequency deviation is 763.2 kHz.

FETCh:FM:PTPeak? (Query Only)

Returns the peak-peak frequency deviation (Pk-Pk) in the FM measurement.

Conditions

Measurement views: FM

Group

Fetch commands

Syntax

FETCh:FM:PTPeak?

Arguments

None

Returns

<Pk-Pk>::<NRf> is the peak-peak frequency deviation in Hz.

Examples

FETCH:FM:PTPEAK? might return 1.258E+6, indicating the peak-peak frequency deviation is 1.258 MHz.

FETCh:FM:RESult? (Query Only)

Returns the FM measurement results.

Conditions

Measurement views: FM

Group

Fetch commands

Syntax

`FETCh:FM:RESult?`

Arguments

None

Returns

`<+Pk>,<-Pk>,<RMS>,<Pk-Pk>,<Pk-Pk/2>`

Where

`<+Pk>::<NRf>` is the positive peak frequency deviation in Hz.

`<-Pk>::<NRf>` is the negative peak frequency deviation in Hz.

`<RMS>::<NRf>` is the RMS frequency deviation in Hz.

`<Pk-Pk>::<NRf>` is the peak-peak frequency deviation in Hz.

`<Pk-Pk/2>::<NRf>` is the half peak-peak frequency deviation in Hz.

Examples

`FETCH:FM:RESULT?` might return `763.2E+3,-494.6E+3,271.2E+3,1.258E+6,628.9E+3`.

FETCh:FM:RMS? (Query Only)

Returns the RMS frequency deviation in the FM measurement.

Conditions

Measurement views: FM

Group

Fetch commands

Syntax

`FETCh:FM:RMS?`

Arguments

None

Returns

`<RMS>::<NRf>` is the RMS frequency deviation in Hz.

Examples

FETCH:FM:RMS? might return 271.2E+3, indicating the RMS frequency deviation is 271.2 kHz.

FETCh:{FSETtling|PSETtling}:FTTime? (Query Only)

Returns the settling time from the trigger position in seconds. The settling time is measured from the trigger point (see :FETCh:FSETtling:TRIGger:TIME).

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

FETCh:{FSETtling|PSETtling}:FTTime?

Arguments

None

Returns

<value>::<NRf> is the settling time in seconds.

Examples

FETCH:FSETTLING:FTTIME? might return 44.8300E-6, indicating the settling time is 44.83 µs.

FETCh:{FSETtling|PSETtling}:MASK[:PASS]? (Query Only)

Returns whether the input signal passes the mask test.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

FETCh:{FSETtling|PSETtling}:MASK[:PASS]?

Arguments

None

Returns

0 is returned if the signal fails the mask test.

1 is returned if the signal passes the mask test.

Examples

FETCH:FSETTLING:MASK:PASS? might return 1, indicating the signal passed (did not exceed the mask limits).

FETCh:{FSETtling|PSETtling}:SETTled:FREQuency? (Query Only)

Returns the frequency at which the signal is considered settled.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

`FETCh:{FSETtling|PSETtling}:SETTled:FREQuency?`

Arguments

None

Returns

`<value>::<NRf>` is the frequency at which the signal is settled.

Examples

`FETCH:FSETTLING:SETTLED:FREQUENCY?` might return `2.44838E+9`, indicating the input signal frequency at the point where the signal is considered settled is 2.44838 GHz.

FETCh:{FSETtling|PSETtling}:SETTled[:PASS]? (Query Only)

Returns whether the input signal is settled with the tolerance range.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

`FETCh:{FSETtling|PSETtling}:SETTled[:PASS]?`

Arguments

None

Returns

`0` is returned if the signal is not settled within the tolerance range.

`1` is returned if the signal is settled within the tolerance range.

Examples

`FETCH:FSETTLING:SETTLED:PASS?` might return `1`, indicating the signal is settled within the tolerance range.

FETCh:{FSETtling|PSETtling}:SETTled:TIME? (Query Only)

Returns the settled time in seconds. The settled time is measured from the measurement start point.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

`FETCh:{FSETtling|PSETtling}:SETTled:TIME?`

Arguments

None

Returns

`<value>::<NRf>` is the settled time in seconds.

Examples

FETCH:FSETTLING:SETTLED:TIME? might return `299.830000E-6`, indicating the settled time is 299.83 µs.

FETCh:{FSETtling|PSETtling}:SLMSd[:PASS]? (Query Only)

Returns whether the input signal is settled within the specified tolerance and the signal is settled longer than the Minimum Settled Duration (`[SENSe]:{FSETtling|PSETtling}:SDURation:MINimum`).

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

`FETCh:{FSETtling|PSETtling}:SLMSd[:PASS]?`

Arguments

None

Returns

`0` is returned if the signal is not settled within the tolerance range and minimum settled duration.

`1` is returned if the signal is settled within the tolerance range and minimum settled duration.

Examples

`FETCH:FSETTLING:SLMSD:PASS?` might return 1, indicating the signal is settled within the tolerance range and the minimum settled duration.

FETCh:{FSETtling|PSETtling}:STARt:TIME? (Query Only)

Returns the start time for the measurement in seconds. The start time is measured from the start of the analysis period.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

`FETCh:{FSETtling|PSETtling}:STARt:TIME?`

Arguments

None

Returns

`<value>::<NRf>` is the time in seconds when the measurement started.

Examples

`FETCH:FSETTLING:START:TIME?` might return 251.4300E-6, indicating the measurement started 251.43 µs after the beginning of the analysis period.

FETCh:{FSETtling|PSETtling}:TIME? (Query Only)

Returns the settling time in seconds. The settling time is measured from the start time (see :FETCh:FSETtling:STARt:TIME).

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

`FETCh:{FSETtling|PSETtling}:TIME?`

Arguments

None

Returns

`<value>::<NRf>` is the settling time in seconds.

Examples

`FETCH:FSETTLING:TIME?` might return `48.4000E-6`, indicating the settling time is 48.4 µs.

FETCh:{FSETtling|PSETtling}:TRACe<x>:X? (Query Only)

Returns the Frequency or Phase values of the specified trace.

The parameter <x> = 1 and 2, representing Trace 1 and Trace 2, respectively.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

FETCh:{FSETtling|PSETtling}:TRACe<x>:X?

Arguments

None

Returns

#<num_digit><num_byte><y(1)><y(2)>...<y(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<y(n)> is the frequency (Hz) or phase (degrees) at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:FSETTLING:TRACE1:X? might return #574232xxxx... (74232-byte data) for the frequency values of Trace 1.

FETCh:{FSETtling|PSETtling}:TRACe<x>:XY? (Query Only)

Returns the time and frequency or phase value pairs of the specified trace. The parameter <x> = 1 and 2, representing Trace 1 and Trace 2, respectively.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

FETCh:{FSETtling|PSETtling}:TRACe<x>:XY?

Arguments

None

Returns

#<num_digit><num_byte><x(1)><y(1)><x(2)><y(2)>...<x(n)><y(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<x(n)><y(n)> is the time and frequency or phase value pair at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:FSETTLING:TRACE2:XY? might return #574232xxxx... (74232-byte data) for the time and frequency pairs of the Trace 2.

FETCh:{FSETtling|PSETtling}:TRACe<x>[:Y]? (Query Only)

Returns the frequency or phase values of the specified trace.

The parameter <x> = 1 and 2, representing Trace 1 and Trace 2, respectively.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

```
FETCh:{FSETtling|PSETtling}:TRACe<x>[:Y]?
```

Arguments

None

Returns

`#<num_digit><num_byte><y(1)><y(2)>...<y(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<y(n)>` is the frequency or phase value at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:FSETTLING:TRACE1:Y?` might return `#575148xxxx...` (75148-byte data) for the frequency values of Trace 1.

FETCh:{FSETtling|PSETtling}:TRIGger:TIME? (Query Only)

Returns the time when the trigger occurred in seconds.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

```
FETCh:{FSETtling|PSETtling}:TRIGger:TIME?
```

Arguments

None

Returns

`<value>::<NRf>` is the time in seconds after the measurement start point when the trigger occurred.

Examples

`FETCH:FSETTLING:TRIGGER:TIME?` might return `2.255E-6`, indicating the time when the trigger occurred 255 µs after the start of the measurement.

FETCh:{FSETtling|PSETtling}:VALue? (Query Only)

Returns the settled value in Hz for Frequency Settling and in degrees for Phase Settling.

Conditions

Measurement views: Frequency and Phase Settling

Group

Fetch commands

Syntax

`FETCh:{FSETtling|PSETtling}:VALue?`

Arguments

None

Returns

`<value>::<NRf>` is the settling value in Hz for Frequency Settling and in degrees for Phase Settling.

Examples

`FETCH:FSETTLING:VALUE?` might return `2.44838155E+9`, indicating the settled frequency is 2.44838 GHz.

FETCh:FSETtling:ERRor? (Query Only)

Returns the settled error in Hz in Frequency Settling. Only for Frequency Settling Time measurement. In Frequency Settling:

- When Target Reference is set to Auto, Settled Error = 0.

Conditions

Measurement views: Frequency Settling

Group

Fetch commands

Syntax

`FETCh:FSETtling:ERRor?`

Arguments

None

Returns

`<value>::<NRf>` returns the settled error in Hz.

When Target Reference is set to Auto, Settled Error = 0.

When Target Reference is set to Meas Freq:

Settled Error = Settled Frequency – (Measurement Frequency + Offset)

Examples

`FETCH:FSETTLING:FTTIME?` might return `0`, indicating the Target Reference is set to Auto.

FETCh:FVTime[:MEASview<y>]? (Query Only)

Returns the Frequency versus Time trace data.

Conditions

Measurement views: Frequency versus Time

Group

Fetch commands

Syntax

`FETCh:FVTime[:MEASview<y>]?`

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the frequency in Hz at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:FVTIME:MEASview1?` might return `#3156xxxx...` (156-byte data) for the Frequency versus Time trace.

FETCh:FVTime[:MEASview<y>]:MAXimum? (Query Only)

Returns the maximum value in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Fetch commands

Syntax

`FETCh:FVTime[:MEASview<y>]:MAXimum?`

Related Commands

FETCh:FVTime[:MEASview<y>]:MAXLocation? (on page 1220)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<max>::<NRf> is the maximum frequency drift in Hz.

Examples

FETCH:FVTIME:MEASview1:MAXIMUM? might return 2.625E+6, indicating the maximum frequency drift is 2.625 MHz.

FETCh:FVTime[:MEASview<y>]:MAXLocation? (Query Only)

Returns the time at which the frequency drift is maximum.

Conditions

Measurement views: Frequency versus Time

Group

Fetch commands

Syntax

FETCh:FVTime[:MEASview<y>]:MAXLocation?

Related Commands

FETCh:FVTime[:MEASview<y>]:MAXimum? (on page 1219)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<max_time>::<NRf> is the time in seconds at which the frequency drift is maximum.

Examples

FETCH:FVTIME:MEASview1:MAXLOCATION? might return 25.03E-9, indicating the frequency drift is maximum at 25.03 ns.

FETCh:FVTime[:MEASview<y>]:MINimum? (Query Only)

Returns the minimum value in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Fetch commands

Syntax

FETCh:FVTime[:MEASview<y>]:MINimum?

Related Commands

FETCh:FVTime[:MEASview<y>]:MINLocation? (on page 1221)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<min>::<NRf> is the minimum frequency drift in Hz.

Examples

FETCH:FVTIME:MEASview1:MINIMUM? might return -6.618E+6, indicating the minimum frequency drift is -6.618 MHz.

FETCh:FVTime[:MEASview<y>]:MINLocation? (Query Only)

Returns the time at which the frequency drift is minimum.

Conditions

Measurement views: Frequency versus Time

Group

Fetch commands

Syntax

FETCh:FVTime[:MEASview<y>]:MINLocation?

Related Commands

FETCh:FVTime[:MEASview<y>]:MINimum? (on page 1220)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<min_time>::<NRf> is the time in seconds at which the frequency drift is minimum.

Examples

FETCH:FVTIME:MEASview1:MINLOCATION? might return 450.7E-9, indicating the frequency drift is minimum at 450.7 ns.

FETCh:FVTime[:MEASview<y>]:OGRAm? (Query only)

Returns trace data of a line in the ogram. The line is selected using the TRACe:FVTime[:MEASview<y>]:OGRAm:SELect:LINE command.

Conditions

Applicable measurement view must be active.

Group

Fetch commands

Syntax

`FETCh:FVTime[:MEASview<y>]:OGRAm?`

Arguments

<y> = 1 to 8 represents measurement index based on number of sources of connected instrument. where MEASview keyword is optional. By default y is 1.

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in <num_byte>.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the frequency at the n^{th} data point in Hz, represented as a 4-byte little-endian IEEE floating-point value.

Examples

`FETCh:FVTime:MEASview1:OGRAm?` might return #43204xxxx... (3204-byte data) for the line in the ogram.

FETCh:FVTime[:MEASview<y>]:RESult? (Query Only)

Returns the Frequency versus Time measurement results.

Conditions

Measurement views: Frequency versus Time

Group

Fetch commands

Syntax

`FETCh:FVTime[:MEASview<y>]:RESult?`

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<max>,<max_time>,<min>,<min_time>

Where

`<max>::<NRf>` is the maximum frequency drift in Hz.

`<max_time>::<NRf>` is the time in seconds at which the frequency drift is maximum.

`<min>::<NRf>` is the minimum frequency drift in Hz.

`<min_time>::<NRf>` is the time in seconds at which the frequency drift is minimum.

Examples

`FETCH:FVTIME:MEASview1:RESULT?` might return `2.625E+6,25.03E-9,-6.618E+6,450.7E-9`, indicating the maximum frequency drift is 2.625 MHz at 25.03 ns and the minimum frequency drift is -6.618 MHz at 450.7 ns.

FETCh:FVTime[:MEASview<y>]:TRACe:BITMap? (Query Only)

Returns trace waveform data of the bitmap trace in the Frequency versus Time measurement.

Conditions

Measurement views: Frequency versus Time

Group

Fetch commands

Syntax

`FETCh:FVTime[:MEASview<y>]:TRACe:BITMap?`

Arguments

None

The parameter <y> = 1 to 8 represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. By default y is 1.

Returns

A binary block of 32-bit floating point values (IEEE standard single precision floating point format). Each value ranges from 0 to 1.0, where 1.0 represents 100%.

Bitmaps have 201 rows. Data[0] is the first column in the first row, and the following data continues along that row before moving to the next.

Bitmap values are returned in the order of top left pixel first, then the rest of the top row, after that row by row.
In other words, the pixels in the bitmap are returned from left to right and top to bottom; one row at a time.

Examples

`FETCH:FVTIME:TRACE:BITMAP?` might return #6644004xxxx...

FETCh:IQVTime[:MEASview<y>]:I? (Query Only)

Returns the I versus Time trace data.

Conditions

Measurement views: RF I&Q versus Time

Group

Fetch commands

Syntax

`FETCh:IQVTime[:MEASview<y>]:I?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the I level in volts at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:IQVTIME:MEASview1:I? might return #3160xxxx... (160-byte data) for the I versus Time trace.

FETCh:IQVTime[:MEASview<y>]:MAXimum (Query Only)

Returns the maximum value in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Fetch commands

Syntax

FETCh:IQVTime[:MEASview<y>]:MAXimum

Related Commands

FETCh:IQVTime[:MEASview<y>]:MAXLocation (on page 1224)

Arguments

None

Returns

<max>::<NRf> is the maximum I or Q level in volts.

Use the TRACe:IQVTime[:MEASview<y>]:SELect:I or TRACe:IQVTime[:MEASview<y>]:SELect:Q command to select the trace.

Examples

FETCh:IQVTime:MEASview1:MAXimum? might return 1.214, indicating the maximum I or Q level is 1.214 V.

FETCh:IQVTime[:MEASview<y>]:MAXLocation (Query Only)

Returns the time at which the I or Q level is maximum.

Conditions

Measurement views: RF I&Q versus Time

Group

Fetch commands

Syntax

FETCh:IQVTime[:MEASview<y>]:MAXLocation

Related Commands

FETCh:IQVTime[:MEASview<y>]:MAXimum (on page 1224)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<max_time>::<NRf> is the time in seconds at which the I or Q level is maximum.

Examples

FETCh:IQVTime:MEASview1:MAXLocation might return 175.3E-9, indicating the I or Q level is maximum at 175.3 ns.

FETCh:IQVTime[:MEASview<y>]:MINimum (Query Only)

Returns the minimum value in the RF I&Q versus Time measurement.

Conditions

Measurement views: RF I&Q versus Time

Group

Fetch commands

Syntax

FETCh:IQVTime[:MEASview<y>]:MINimum

Related Commands

FETCh:IQVTime[:MEASview<y>]:MINLocation (on page 1225)

Arguments

<y> = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

<min>::<NRf> is the minimum I or Q level in volts.

Use the TRACe:IQVTime[:MEASview<y>]:SELect:I or TRACe:IQVTime[:MEASview<y>]:SELect:Q command to select the trace.

Examples

FETCh:IQVTime:MEASview1:MINimum? might return -370.5E-3, indicating the minimum I or Q level is -370.5 mV.

FETCh:IQVTime[:MEASview<y>]:MINLocation (Query Only)

Returns the time at which the I or Q level is minimum.

Conditions

Measurement views: RF I&Q versus Time

Group

Fetch commands

Syntax

`FETCh:IQVTime[:MEASview<y>]:MINLocation`

Related Commands

FETCh:IQVTime[:MEASview<y>]:MINimum (on page 1225)

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

`<min_time>::<NRf>` is the time in seconds at which the I or Q level is minimum.

Examples

`FETCh:IQVTime:MEASview1:MINLocation` might return `450.7E-9`, indicating the I or Q level is minimum at 450.7 ns.

FETCh:IQVTime[:MEASview<y>]:Q (Query Only)

Returns the Q versus Time trace data.

Conditions

Measurement views: RF I&Q versus Time

Group

Fetch commands

Syntax

`FETCh:IQVTime[:MEASview<y>]:Q`

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the Q level in volts at the nth data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:IQVTime:MEASview1:Q?` might return `#3160xxxx...` (160-byte data) for the Q versus Time trace.

FETCh:IQVTime[:MEASview<y>]:RESult (Query Only)

Returns the RF I&Q versus Time measurement results.

Conditions

Measurement views: RF I&Q versus Time

Group

Fetch commands

Syntax

`FETCh:IQVTime[:MEASview<y>]:RESult`

Arguments

`<y>` = 1 to 8; represents measurement index based on number of sources of connected instrument, where MEASview keyword is optional. Default value 1.

Returns

`<max>,<max_time>,<min>,<min_time>`

Where

`<max>::<NRf>` is the maximum I or Q level in volts.

`<max_time>::<NRf>` is the time in seconds at which the I or Q level is maximum.

`<min>::<NRf>` is the minimum I or Q level in volts.

`<min_time>::<NRf>` is the time in seconds at which the I or Q level is minimum.

Use the `TRACe:IQVTime[:MEASview<y>]:SELect:I` or `TRACe:IQVTime:MEASview<y>:SELect:Q` command to select the trace.

Examples

`FETCh:IQVTime:MEASview1:RESult?` might return `1.214,175.3E-9,-370.5E-3,450.7E-9`, indicating the maximum I or Q level is 1.214 V at 175.3 ns and the minimum I or Q level is -370.5 mV at 450.7 ns.

FETCh:LTE:ACLR:MHITs:COUNt? (Query Only)

Returns the number of rows in the results table of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Fetch commands

Syntax

`FETCh:LTE:ACLR:MHITs:COUNt?`

Returns

<NR1>

Examples

`FETCH:LTE:ACLR:MHITS:COUNT?` might return 7, indicating there are seven rows in the results table.

FETCh:LTE:ACLR:MHITs<x>:BANDwidth? (Query Only)

Returns the bandwidth value of the channel (row) of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

The parameter <x> is the row number in the LTE ACLR display results table.

Group

Fetch commands

Syntax

`FETCh:LTE:ACLR:MHITs<x>:BANDwidth?`

Returns

<NR3>

Examples

`FETCh:LTE:ACLR:MHITS1:BANDWIDTH?` might return 4.5150000000E+6, which indicates a bandwidth for Channel 1 of 4.515 MHz.

FETCh:LTE:ACLR:MHITs<x>:CHANnel:NAME? (Query Only)

Returns the channel name of the specified index in the results table of the LTE ACLR display. The minimum index will be 1 and the maximum index will be the count of the channels in the results table.

Conditions

Measurement view: LTE ACLR

The parameter <x> is a positive integer and represents the row number in the LTE ACLR display results table.

Group

Fetch commands

Syntax

`FETCh:LTE:ACLR:MHITs<x>:CHANnel:NAME?`

Returns

<string>

Examples

`FETCH:LTE:ACLR:MHITS2:CHANNEL:NAME?` might return `"B"`, which is the name of channel 2.

FETCh:LTE:ACLR:MHITs<x>:FREQuency:OFFSet? (Query Only)

Returns the frequency offset of the specified channel (row) of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

The parameter <x> is a positive integer and represents the row number in the LTE ACLR display results table.

Group

Fetch commands

Syntax

```
FETCh:LTE:ACLR:MHITs<x>:FREQuency:OFFSet?
```

Returns

<NR3>

Examples

`FETCh:LTE:ACLR:MHITS1:FREQUENCY:OFFSET?` might return `5.0000000000E+6` which indicates the frequency offset of Channel 1 is 5 MHz.

FETCh:LTE:ACLR:MHITs<x>:INTeg:LOWEr:ABSolute? (Query Only)

Returns the lower absolute value of the channel (row) of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

The parameter <x> is the row number in the LTE ACLR display results table.

Group

Fetch commands

Syntax

```
FETCh:LTE:ACLR:MHITs<x>:INTeg:LOWEr:ABSolute?
```

Returns

<NRf>

Examples

`FETCh:LTE:ACLR:MHITS1:INTEG:LOWER:ABSOLUTE?` might return `-53.3921980303`, which indicates the lower absolute value of Channel 1 is -53.3921980303 dBm.

NOTE: The actual units depends on the choice made from the units tab of the Analysis control panel.

FETCh:LTE:ACLR:MHITs<x>:INTeg:LOWEr:RELative? (Query Only)

Returns the lower relative value of the channel (row) of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

The parameter <x> is the row number in the LTE ACLR display results table.

Group

Fetch commands

Syntax

```
FETCh:LTE:ACLR:MHITs<x>:INTeg:LOWEr:RELative?
```

Returns

<NRf>

Examples

FETCh:LTE:ACLR:MHITS1:INTEG:LOWER:RELATIVE? might return –53.3921980303, which indicates lower relative value of Channel 1 is -53.3921980303 dB.

FETCh:LTE:ACLR:MHITs<x>:INTeg:UPPEr:ABSolute? (Query Only)

Returns the upper absolute value of the channel (row) of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

The parameter <x> is a positive integer and represents the row number in the LTE ACLR display results table.

Group

Fetch commands

Syntax

FETCh:LTE:ACLR:MHITs<x>:INTeg:UPPEr:ABSolute?

Returns

<NRf>

Examples

FETCH:LTE:ACLR:MHITS1:INTEG:UPPER:ABSOLUTE? might return –53.3921980303, which indicates upper absolute value of Channel 1 is -53.3921980303 dBm.

FETCh:LTE:ACLR:MHITs<x>:INTeg:UPPEr:RELative? (Query Only)

Returns the upper relative value of the channel (row) of the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

The parameter <x> is the row number in the LTE ACLR display results table.

Group

Fetch commands

Syntax

FETCh:LTE:ACLR:MHITs<x>:INTeg:UPPEr:RELative?

Returns

<NRf>

Examples

READ:LTE:ACLR:MHITS1:INTEG:UPPER:RELATIVE? might return –53.3921980303, which indicates upper relative value of Channel 1 is -53.3921980303 dB.

FETCh:LTE:ACLR:REFerence:POWer? (Query Only)

Returns the reference power level in the LTE ACLR measurement.

Conditions

Measurement view: LTE ACLR

Group

Fetch commands

Syntax

`FETCh:LTE:ACLR:REFerence:POWer?`

Returns

<NRf>

Examples

`FETCH:LTE:ACLR:REFERENCE:POWER?` might return `-16.92`, indicating that the reference power level is –16.92 dBm.

FETCh:LTE:ACLR:RESUlts:STATus? (Query Only)

Returns the pass or fail status of the LTE ACLR display measurement.

Conditions

Measurement view: LTE ACLR

Group

Fetch commands

Syntax

`FETCh:LTE:ACLR:RESUlts:STATus?`

Returns

`0`: means measurement status is FAIL.

`1`: means measurement status is PASS.

Examples

`FETCH:LTE:ACLR:RESULTS:STATUS?` might return `1`, indicating that the LTE ACLR measurement status is PASS.

FETCh:LTE:ACLR:SPECtrum:X? (Query Only)

Returns the frequencies of the spectrum trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Fetch commands

Syntax

`FETCh:LTE:ACLR:SPECtrum:X?`

Returns

#<num_digit><num_byte><x(1)><x(2)>...<x(n)>

Where,

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<x(n)> is the frequency (Hz) at the nth point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:LTE:ACLR:SPECTRUM:X? might return #516020xxxx... (16020-byte data) for the frequencies of the spectrum trace.

FETCh:LTE:ACLR:SPECtrum:XY? (Query Only)

Returns the frequency and amplitude pairs of the spectrum trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Fetch commands

Syntax

FETCh:LTE:ACLR:SPECtrum:XY?

Returns

#<num_digit><num_byte><x(1)><y(1)><x(2)><y(2)>...<x(n)><y(n)>

Where,

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<x(n)><y(n)> is the frequency (Hz) and amplitude (dBm) pair at the *nth* point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

FETCH:LTE:ACLR:SPECTRUM:XY? might return #516020xxxx... (16020-byte data) for the frequency and amplitude pairs of the spectrum trace.

FETCh:LTE:ACLR:SPECtrum:Y? (Query Only)

Returns the amplitude of the spectrum trace in the LTE ACLR display.

Conditions

Measurement view: LTE ACLR

Group

Fetch commands

Syntax

FETCh:LTE:ACLR:SPECtrum:Y?

Returns

`#<num_digit><num_byte><y(1)><y(2)>...<y(n)>`

Where,

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<y(n)>` is the amplitude (dB) at the *nth* point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:LTE:ACLR:SPECTRUM:Y?` might return `#516020xxxx...` (16020-byte data) for the amplitude of the spectrum trace.

FETCh:LTE:CHSPectrum:OBW? (Query Only)

Returns the Occupied Bandwidth (OBW) in Hz of the LTE Channel Spectrum measurement view.

Conditions

Measurement view: LTE Channel Spectrum

Group

Fetch commands

Syntax

`FETCh:LTE:CHSPectrum:OBW?`

Returns

<NR3>

Examples

`FETCH:LTE:CHSPECTRUM:OBW?` might return `1.0851851250E+6`, indicating the Occupied Bandwidth is 1.09 MHz.

FETCh:LTE:CHSPectrum:POWer:CHANnel? (Query Only)

Returns the Channel Power value in LTE Channel Spectrum display. The result will be in dBm (by default) or in the units chosen from the Units tab of the Analysis Control panel.

Conditions

Measurement view: LTE Channel Spectrum

Group

Fetch commands

Syntax

`FETCh:LTE:CHSPectrum:POWer:CHANnel?`

Returns

<NRf>

Examples

FETCH:LTE:CHSPECTRUM:POWER:CHANNEL? might return –14.9248560147, indicating that the Channel Power is -14.92 dBm.

FETCh:LTE:CHSPectrum:SPECtrum? (Query Only)

Returns spectrum trace data of the LTE Channel Spectrum measurement.

Conditions

Measurement view: LTE Channel Spectrum

Group

Fetch commands

Syntax

FETCh:LTE:CHSPectrum:SPECtrum?

Returns

#<num_digit><num_byte><data(1)><data(2)>...<data(n)>

Where

<num_digit> is the number of digits in <num_byte>.

<num_byte> is the number of bytes of data that follow.

<data(n)> is the amplitude in dBm at the n^{th} data point, 4-byte little endian floating point format specified in IEEE 488.2.

Examples

FETCH:LTE:CHSPECTRUM:SPECTRUM? might return #43204 xxxx... (3204-byte data) for the spectrum trace data of the LTE Channel Spectrum measurement.

FETCh:LTE:CONSte:CELL:ID? (Query Only)

Queries the Cell ID value LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Fetch commands

Syntax

FETCh:LTE:CONSte:CELL:ID?

Returns

<NR1>

Examples

FETCH:LTE:CONSTE:CELL:ID? might return 112, indicating CELLID measurement number is 112.

FETCh:LTE:CONSte:FREQuency:ERRor? (Query Only)

Queries Frequency Error value in Hz LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Fetch commands

Syntax

`FETCh:LTE:CONSte:FREQuency:ERRor?`

Returns

<NRf>

Examples

`FETCH:LTE:CONSTE:FREQUENCY:ERROR?` might return `-71.9780578613`, indicating frequency error value is -71.9780578613 Hz.

FETCh:LTE:CONSte:GROUp:ID? (Query Only)

Queries the Group ID value LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Fetch commands

Syntax

`FETCh:LTE:CONSte:GROUp:ID?`

Returns

<NR1>

Examples

`FETCH:LTE:CONSTE:GROUP:ID?` might return `160`, indicating Group ID measurement number is 160.

FETCh:LTE:CONSte:SECTor:ID? (Query Only)

Queries the Sector ID value for the LTE Constellation display.

Conditions

Measurement view: LTE Constellation

Group

Fetch commands

Syntax

`FETCh:LTE:CONSte:SECTor:ID?`

Returns

<NRf>

Examples

`FETCH:LTE:CONSTE:SECTOR:ID?` might return `2`, indicating the Sector ID value is 2.

FETCh:LTE:PVTime:OFFSlot:POWer? (Query Only)

Returns the TOff power measurement value in dBm/MHz for the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Fetch commands

Syntax

`FETCh:LTE:PVTime:OFFSlot:POWer?`

Returns

<NRf>

Examples

`FETCH:LTE:PVTIME:OFFSLOT:POWER?` might return `-76.11514587403`, indicating the offslot power is -76.11514 dBm/MHz.

FETCh:LTE:PVTime:RESUlts:STATus

Returns the pass or fail status for the LTE Power vs Time display.

Conditions

Measurement view: LTE Power vs Time

Group

Fetch commands

Syntax

`FETCh:LTE:PVTime:RESUlts:STATus`

Returns

`0`: means measurement status is FAIL.

`1`: means measurement status is PASS.

Examples

`FETCH:LTE:PVTIME:RESULTS:STATUS` might return `1`, indicating the measurement status is PASS.

FETCh:LTE:PVTime:TRACe:X? (Query Only)

Returns the horizontal values (time in seconds) for the LTE Power vs. Time trace.

Conditions

Measurement view: LTE Power vs Time

Group

Fetch commands

Syntax

`FETCh:LTE:PVTime:TRACe:X?`

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where,

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the data value at the *n*th point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:LTE:PVTIME:TRACE:X?` might return `#43204` (3204-byte data), which represents the time in seconds (horizontal values).

FETCh:LTE:PVTime:TRACe:XY? (Query Only)

Returns the horizontal value (time in seconds) and vertical value (power) for the LTE Power vs. Time trace.

Conditions

Measurement view: LTE Power vs Time

Group

Fetch commands

Syntax

`FETCh:LTE:PVTime:TRACe:XY?`

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where,

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the data value at the *n*th point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:LTE:PVTIME:TRACE:XY?` might return `#43204` (3204-byte data), which represents the horizontal value (time in seconds) and vertical value (power) pair at the *n*th data point.

FETCh:LTE:PVTime:TRACe:Y? (Query Only)

Returns the vertical values (power) for the LTE Power vs. Time trace.

Conditions

Measurement view: LTE Power vs Time

Group

Fetch commands

Syntax

```
FETCh:LTE:PVTime:TRACe:Y?
```

Returns

```
#<num_digit><num_byte><data(1)><data(2)>...<data(n)>
```

Where,

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the data value at the n^{th} point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCH:LTE:PVTIME:TRACE:Y?` might return `#43204` (3204-byte data), which represents the vertical values (power).

FETCh:MCPower:ADJacent:CHANnels? (Query Only)

Returns the power of adjacent channels in order of increasing frequency.

Conditions

Measurement views: MCPR

Group

Fetch commands

Syntax

```
FETCh:MCPower:ADJacent:CHANnels?
```

Arguments

None

Returns

```
<acpr_lower(n)>,...<acpr_lower(2)>,<acpr_lower(1)>,
<acpr_upper(1)>,<acpr_upper(2)>,...<acpr_upper(n)>
```

Where

`<acpr_lower(n)>` is the ACPR for the lower channel #n in dB.

`<acpr_upper(n)>` is the ACPR for the upper channel #n in dB.

To add a pair of upper and lower adjacent channels, use the `[SENSe]:MCPower: CHANnel:ADJacent:ADD` command.

Examples

`FETCH:MCPOWER:ADJACENT:CHANNELS?` might return `-4.420,-4.847,-4.316,-4.225`, indicating (ACPR for the lower channel 2) = -4.420 dB, (ACPR for the lower channel 1) = -4.847 dB, (ACPR for the upper channel 1) = -4.316 dB, and (ACPR for the upper channel 2) = -4.225 dB.

FETCh:MCPower:CHANnel:POWer? (Query Only)

Returns the reference power in the MCPR measurement.

Conditions

Measurement views: MCPR

Group

Fetch commands

Syntax

`FETCh:MCPower:CHANnel:POWer?`

Arguments

None

Returns

`<ref_power>:<NRf>` is the reference power in dBm.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

To select the power reference, use the `[SENSe]:MCPower:RCHannels?` commands.

Examples

`FETCH:MCPOWER:CHANNEL:POWER?` might return `4.227`, indicating that the reference power is 4.227 dBm.

FETCh:MCPower:MAIN:CHANnels? (Query Only)

Returns the power of main channels in order of increasing frequency.

Conditions

Measurement views: MCPR

Group

Fetch commands

Syntax

`FETCh:MCPower:MAIN:CHANnels?`

Arguments

None

Returns

`<power_main(1)>,<power_main(2)>,...<power_main(n)>`

Where

`<power_main(n)>` is the power of main channel #n in dBm.

The unit can be changed by the `[SENSe]:POWer:UNITs` command.

To specify the main channels, use the `[SENSe]:MCPower:CHANnel:MAIN` commands.

Examples

`FETCH:MCPOWER:MAIN:CHANNELS?` might return `-2.420,-2.847,-2.316,-2.225`, indicating (power of the main channel 1) = -2.420 dBm, (power of the main channel 2) = -2.847 dBm, (power of the main channel 3) = -2.316 dBm, and (power of the main channel 4) = -2.225 dBm.

FETCh:MCPower:SPECtrum? (Query Only)

Returns spectrum trace data of the MCPR measurement.

Conditions

Measurement views: MCPR

Group

Fetch commands

Syntax

`FETCh:MCPower:SPECtrum?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the amplitude in dBm at the nth data point,

4-byte little endian floating-point format specified in IEEE 488.2. The unit can be changed by the `[SENSe]:POWer:UNITs` command.

Examples

`FETCH:MCPOWER:SPECTRUM?` might return `#43204xxxx...` (3204-byte data) for the spectrum trace data of the MCPR measurement.

FETCh:MERRor[:MEASview<y>]:FERRor? (Query only)

Returns the frequency error in the Magnitude error versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Fetch commands

Syntax

`FETCh:MERRor[:MEASview<y>]:FERRor?`

Arguments

None

Returns

<freq_error>::<NRf> is the frequency error in Hz.

Examples

FETCh:MERRor:MEASview2:FERRor? might return -10.7E+3, indicating the frequency error is -10.7 kHz.

FETCh:MERRor[:MEASview<y>]:PEAK? (Query only)

Returns the peak value in the Magnitude error versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Fetch commands

Syntax

FETCh:MERRor[:MEASview<y>]:PEAK?

Related Commands

FETCh:MERRor[:MEASview<y>]:PINDex? (on page 1241)

Arguments

None

Returns

<peak>::<NRf> is the peak magnitude error value in percent (%).

Examples

FETCh:MERRor:MEASview2:PEAK? might return 1.57, indicating the peak magnitude error value is 1.57%.

FETCh:MERRor[:MEASview<y>]:PINDex? (Query only)

Returns the time at the magnitude error peak.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Fetch commands

Syntax

`FETCh:MERRor[:MEASview<y>]:PINDex?`

Related Commands

FETCh:MERRor[:MEASview<y>]:PEAK? (on page 1241)

Arguments

None

Returns

`<peak_time>::<NRf>` is the time at the magnitude error peak in symbol number.

The unit can be changed by the `[SENSe]:DDEMod:TIMe:UNITs` command.

Examples

`FETCh:MERRor:MEASview2:PINDex?` might return 68.000, indicating that the Magnitude error peak is at symbol #68.

FETCh:MERRor[:MEASview<y>]:RMS? (Query only)

Returns the RMS (Root-Mean-Square) value in the Magnitude error versus Time measurement.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Fetch commands

Syntax

`FETCh:MERRor[:MEASview<y>]:RMS?`

Arguments

None

Returns

`<rms>::<NRf>` is the RMS magnitude error in percent (%).

Examples

`FETCh:MERRor:MEASview2:RMS?` might return 0.382, indicating the RMS Magnitude error value is 0.382%.

FETCh:MERRor[:MEASview<y>]:TRACe? (Query only)

Returns the Magnitude error versus Time trace data.

The parameter <y> = 1 to number of instances of a measurement created or number of channels available in an instrument (Example: 1 to 8 channels for MSO58).

Conditions

Measurement views: Magnitude error versus Time

MEASview keyword is optional and applicable only for measurements that supports multi-instance creation of measurement (Example: GPDemod Magnitude error versus Time).

Group

Fetch commands

Syntax

`FETCh:MERRor[:MEASview<y>]:TRACe?`

Arguments

None

Returns

`#<num_digit><num_byte><data(1)><data(2)>...<data(n)>`

Where

`<num_digit>` is the number of digits in `<num_byte>`.

`<num_byte>` is the number of bytes of data that follow.

`<data(n)>` is the magnitude error in percent (%) at the n^{th} data point, 4-byte little endian floating-point format specified in IEEE 488.2.

Examples

`FETCh:MERRor:MEASview2:TRACe?` might return #42036xxxx... (2036-byte data) for the Magnitude error versus Time Measview 2.

FETCh:NOISe:GAIN:TRACe<x>:RESult? (Query Only)

This query returns the gain value in mdB of the specified trace in the Gain display.

Conditions

Measurement view: Gain

The parameter <x> = 1 to 3.

Group

Fetch commands

Syntax

`FETCh:NOISe:GAIN:TRACe<x>:RESult?`

Returns

The gain value in mdB of the specified trace.

Examples

`FETCH:NOISE:GAIN:TRACE1:RESULT?` might return `-88.7`, indicating that the gain is -88.7 mdB.

FETCh:NOISe:TABLe:VALue? (Query Only)

Returns Noise Table data. A total of 7 values per frequency (28 bytes per frequency) is returned. The number of frequencies returned depends on the settings.

Conditions

Measurement view: Noise Table

Group

Fetch commands

Syntax

`FETCh:NOISe:TABLe:VALue?`

Returns

Returns an array of floats (size of 4 bytes each) defined as:

- First frequency gain, noise figure, noise factor, y factor, noise temperature, power hot, power cold
- Second frequency gain, noise figure, noise factor, y factor, noise temperature, power hot, power cold

Examples

`FETCH:NOISE:TABLE:VALUE?` might return #3308, indicating that the

FETCh:NR:ACP:TAGGpower ? (Query Only)

Queries the Total Aggregate Power of the NR ACP display in the NR Summary View table.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:TAGGpower?`

Returns

<NRf>

Examples

`FETCH:NR:ACP:TAGGPOWER?` might return `-18.4524345398 dBm`, indicating the Total Aggregate Power.

FETCh:NR:ACP:NO:OF:NR:OFFsets? (Query Only)

Queries NR Offsets of the NR ACP display in the NR Summary View Table.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:NO:OF:NR:OFFsets?`

Returns

<NRf>

Examples

`FETCH:NR:ACP:NO:OF:NR:OFFSETS?` might return `6.0000000000`, indicating the maximum offset is 6.

FETCh:NR:ACP:ADJChannel<x>:INTBw? (Query Only)

Queries the bandwidth of the adjacent channel of the NR ACP in NR Summary View Table. <x> is the adjacent channel. Range is 1 to 6.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:ADJChannel<x>:INTBw?`

Returns

<NRf>

Examples

`FETCh:NR:ACP:ADJChannel2:INTBw?` might return `4.5150000000E+6 Hz`, indicating the bandwidth of adjacent channel 2.

FETCh:NR:ACP:ADJChannel<x>:UABS? (Query Only)

Queries the upper absolute value of the adjacent channel of the NR ACP in NR Summary View Table. <x> is the adjacent channel. Range is 1 to 6.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:ADJChannel<x>:UABS?`

Returns

<NRf>

Examples

`FETCh:NR:ACP:ADJChannel2:UABS?` might return `-46.5615577698 dB`, indicating the upper absolute value of adjacent channel 2.

FETCh:NR:ACP:ADJChannel<x>:UREL ? (Query Only)

Queries the upper relative value of the adjacent channel of the NR ACP in NR Summary View Table. <x> is the adjacent channel. Range is 1 to 6.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:ADJChannel<x>:UREL?`

Returns

<NRf>

Examples

`FETCh:NR:ACP:ADJChannel1:UREL?` might return `-47.5079994202 dB`, indicating the upper relative value of adjacent channel 1.

FETCh:NR:ACP:ADJChannel<x>:LABS? (Query Only)

Queries the lower absolute value of the adjacent channel of the NR ACP in NR Summary View Table. <x> is the adjacent channel. Range is 1 to 6.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:ADJChannel<x>:LABS?`

Returns

<NRf>

Examples

`FETCh:NR:ACP:ADJChannel1:LABS?` might return `-65.0139923096 dB`, indicating the lower absolute value of adjacent channel 1.

FETCh:NR:ACP:ADJChannel<x>:LREL ? (Query Only)

Queries the lower relative value of the adjacent channel of the NR ACP in NR Summary View Table. <x> is the adjacent channel. Range is 1 to 6.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:ADJChannel<x>:LREL?`

Returns

<NRf>

Examples

`FETCh:NR:ACP:ADJChannel2:LREL?` might return `-46.5615577698 dB`, indicating the lower relative value of adjacent channel 2.

FETCh:NR:ACP:ADJChannel<x>:FREQoffset ? (Query Only)

Queries the frequency offset of the adjacent channel of the NR ACP in the NR Summary View Table. <x> is the adjacent channel. Range is 1 to 6.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:ACP:ADJChannel<x>:FREQoffset?`

Returns

<NRf>

Examples

`FETCh:NR:ACP:ADJChannel2:FREQoffset?` might return `5.0000000000E+6 Hz`, indicating the frequency offset of adjacent channel 2.

FETCh:NR:CHP:CARRier<x>:ABSPower? (Query Only)

Queries the absolute power of each component carrier in the NR Channel Power in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:CHP:CARRier<x>:ABSPower?`

Returns

<NRf>

Examples

`FETCh:NR:CHP:CARRier6:ABSPower?` might return `-13.8919143677 dBm`, indicating the absolute power of component carrier 6.

FETCh:NR:CHP:CARRier<x>:RELPower? (Query Only)

Queries the relative power of each component carrier in the NR Channel Power in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:CHP:CARRier<x>:RELPower?`

Returns

<NRf>

Examples

`FETCh:NR:CHP:CARRier3:RELPower?` might return `0.0000`, indicating the relative power of component carrier 3.

FETCh:NR:CHP:TAGGpower? (Query Only)

Queries the total aggregate power of the NR Channel Power in the NR Summary View Table.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:CHP:TAGGpower?`

Returns

<NRf>

Examples

`FETCH:NR:CHP:TAGGPOWER?` might return `-13.8919143677 dBm`, indicating the total aggregate power.

FETCh:NR:EVM:ATSYmbol (Query Only)

Queries Symbol value for the selected trace in NR **EVM**.

Conditions

Measurement view: NR EVM measurement view

Group

Fetch commands

Syntax

`FETCh:NR:EVM:ATSYmbol`

Returns

<NRf>

Examples

FETCh:NR:EVM:ATSYmbol? might return 9.9988253091E-3% indicating Symbol value for the selected trace.

FETCh:NR:EVM:PEAK (Query Only)

Queries Peak value for the selected trace in NR **EVM**.

Conditions

Measurement view: NR EVM measurement view

Group

Fetch commands

Syntax

FETCh:NR:EVM:PEAK

Returns

<NRf>

Examples

FETCh:NR:EVM:PEAK? might return 9.9988253091E-3% indicating Peak value for the selected trace.

FETCh:NR:EVM:RMS (Query Only)

Queries RMS value for the selected trace in NR **EVM**.

Conditions

Measurement view: NR EVM measurement view

Group

Fetch commands

Syntax

FETCh:NR:EVM:RMS

Returns

<NRf>

Examples

FETCh:NR:EVM:RMS? might return 9.9988253091E-3% indicating RMS value for the selected trace.

FETCh:NR:LINK:DIREction? (Query Only)

Queries the link direction of the NR Constellation in NR Summary View Table.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:LINK:DIREction?`

Returns

<NRf>

Examples

`FETCH:NR:LINK:DIRECTION?` might return `DOWN`, indicating that the link direction is downlink.

FETCh:NR:MODAcc:CARRier<x>:CELL:ID? (Query Only)

Queries the Cell ID of the NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CELL:ID?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier5:CELL:ID?` might return `1`, indicating that the cell ID is 5.

FETCh:NR:MODAcc:CARRier<x>:OFFSet? (Query Only)

Queries the carrier offset of the NR Constellation in NR Summary View Table.

<x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:OFFSet?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier2:OFFSet?` might return `-184.740`, indicating the offset value for component carrier 2 is -184.740 MHz.

FETCh:NR:MODAcc:CARRier<x>:CREM? (Query Only)

Queries the Composite RMS **EVM** Mean Value of the NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CREM?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier2:CREM?` might return `255.7628555223E-3`, indicating that the component carrier 2 Composite RMS EVM Mean value is 0.256%.

FETCh:NR:MODAcc:CARRier<x>:CPEM? (Query Only)

Queries the Composite Peak **EVM** Maximum Value of NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CPEM?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier3:CPEM?` might return `672.3846774548E-3`, indicating the component carrier 3 Composite Peak EVM Maximum Value is 0.672%.

FETCh:NR:MODAcc:CARRier<x>:CPESLI? (Query Only)

Queries the Composite Peak Slot Index of NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CPESLI?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier1:CPESLI?` might return `0`, indicating the component carrier 1 Composite Peak **EVM** Slot Index is 0.

FETCh:NR:MODAcc:CARRier<x>:CPESYI? (Query Only)

Queries the Composite Peak Symbol Index of NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CPESYI?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier2:CPESYI` might return `13`, indicating component carrier 2 Composite Peak **EVM** Symbol Index is 13.

FETCh:NR:MODAcc:CARRier<x>:CPESCI? (Query Only)

Queries the Composite Peak **EVM** Subcarrier Index of NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CPESCI?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier3:CPESCI?` might return `113`, indicating the component carrier 3 Composite Peak EVM Subcarrier Index is 113.

FETCh:NR:MODAcc:CARRier<x>:CCFME? (Query Only)

Queries the Composite Carrier Frequency Mean Error of NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CCFME?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier1:CCFME?` might return `528.9274902344`, indicating the composite carrier 1 Frequency Mean Error is 528.9274902344 Hz.

FETCh:NR:MODAcc:CARRier<x>:CCIOOM? (Query Only)

Queries the Composite Carrier IQ Origin Offset Mean of NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax

`FETCh:NR:MODAcc:CARRier<x>:CCIOOM?`

Returns

<NRf>

Examples

`FETCh:NR:MODAcc:CARRier2:CCIOOM?` might return `-70.8180387744`, indicating composite carrier 2 IQ Origin Offset Mean is -70.8180387744 dBc.

FETCh:NR:MODAcc:CARRier<x>:CCIGIM? (Query Only)

Queries the Composite Carrier IQ Gain Imbalance Mean of NR Constellation in NR Summary View Table. <x> is the component carrier. Range is 1 to 8.

Conditions

Measurement view: NR Summary View Table

Group

Fetch commands

Syntax
