

100GBASE-KR4, 100GBASE-CR4, & CAUI-4

100G-TXE Compliance Solution for Real-Time Oscilloscopes

TekExpress® 100GBASE-KR4, 100GBASE-CR4, and CAUI-4 solution

The TekExpress 100G-TXE provides turnkey testing and debug solutions for IEEE 802.3bj (100GBASE-KR4/100GBASE-CR4) and IEEE 802.3bm (CAUI-4) electrical standards. These three electrical standards make-up the backbone of the current 100G Ethernet industry.

Key Features

- 100G-TXE offers streamlined and fully automated transmitter characterization of 802.3bj (100GBASE-KR4/100GBASE-CR4) electrical transmitter specifications and 802.3bm (CAUI) specifications
- Extends DPOJET for low level debug into 100GBASE-KR4/100GBASE-CR4 and CAUI-4 ¹.

Applications

- Electrical transmitter measurements
- Validation of 100GBASE-KR4/100GBASE-CR4 and CAUI-4

This application package is designed in conjunction with the performance levels offered by a 50 GHz, 70KXS instrument pair. The 100G-TXE loads the required Bessel Thomson roll-off filter which constrains the channel output to the specification mandated 33 GHz point. This is common across all IEEE 100G electrical specifications today. The unique lower noise levels of the ATI architecture serve key signal-to-noise and distortion ratio measurements which are attained with margin on the 70KXS systems. The 100G-TXE solution package is available on non-70KXS systems, such as 23 GHz and higher 70KDX and MSO instruments with the understanding that these are for debug only and not for specification level conformance validation.

IEEE 802.3bj (100GBASE-KR4) electrical real-time transmitter measurements fully automated

Mapping of TP0a 100GBASE-KR4 measurement

Parameter	Subclause reference	Value	Units
Signaling rate	93.8.1.2	25.78125±100 ppm	GBd
Differential peak-to-peak output voltage (max)			
Transmitter disabled	93.8.1.3	30	mV
Transmitter enabled	93.8.1.3	1200	mV
DC common-mode output voltage (max)	93.8.1.3	1.9	V
DC common-mode output voltage (min)	93.8.1.3	0	V
AC common-mode output voltage (RMS, max)	93.8.1.3	12	mV
Output waveform			
steady-state voltage v_f (max)	93.8.1.5.2	0.6	V
steady-state voltage v_f (min)	93.8.1.5.2	0.4	V
Linear fit pulse peak (min)	93.8.1.5.2	$0.71 \times v_f$	V
Normalized coefficient step size (min)	93.8.1.5.4	0.0083	-
Normalized coefficient step size (max)	93.8.1.5.4	0.05	-
Pre-cursor full-scale range (min)	93.8.1.5.5	1.54	-
Post-cursor full-scale range (min)	93.8.1.5.5	4	-
Coefficient initialization ratio			
$(c(0)+c(1)-c(-1))/(c(0)+c(1)+c(-1))$	93.8.1.5.3	1.29±10%	-

¹ CAUI-4 is also known as CAUI

Parameter	Subclause reference	Value	Units
$(c(0)-c(1)+c(-1))/(c(0)+c(1)+c(-1))$	93.8.1.5.3	$2.57 \pm 10\%$	-
Signal-to-noise and distortion ratio (min)	93.8.1.6	27	dB
Output jitter (max)			
Even-odd jitter	93.8.1.7	0.035	UI
Effective bounded uncorrelated jitter, peak-to-peak	93.8.1.7	0.1	UI
Effective total uncorrelated jitter, peak-to-peak	93.8.1.7	0.18	UI

Transmitter test fixture and test points

IEEE 802.3bj (100GBASE-CR4) electrical real-time transmitter measurements fully automated

Mapping of TP2 100GBASE-CR4 measurement

Parameter	Subclause reference	Value	Units
Differential peak-to-peak output voltage (max) with Tx disabled	92.8.3.1	35	mV
DC common-mode output voltage (max)	92.8.3.1	1.9	V
AC common-mode output voltage, v_{cmi} (max., RMS)	92.8.3.1	30	mV
Differential peak-to-peak voltage, v_{di} (max.)	92.8.3.1	1200	mV
Transmitter waveform			
Transmitter steady-state voltage, v_f (min)	92.8.3.5.2	0.34	V
Transmitter steady-state voltage, v_f (max)	92.8.3.5.2	0.6	V

Parameter	Subclause reference	Value	Units
Linear fit pulse peak (min)	92.8.3.5.2	$0.45 \times v_f$	V
Transmitted waveform			
abs coefficient step size (min)	92.8.3.5.4	0.0083	-
abs coefficient step size (max)	92.8.3.5.2	0.05	-

Single-ended output voltage (min)	83E.3.1.2	-0.4	V
AC common-mode output voltage (max, RMS)	83E.3.1.2	17.5	mV
Differential peak-to-peak output voltage (max)			
Transmitter disabled	83E.3.1.2	35	mV
Transmitter enabled	83E.3.1.2	900	mV
Eye width (min)	83E.3.1.6	0.46	UI
Eye height A, differential (min)	83E.3.1.6	95	mV
Eye height B, differential (min)	83E.3.1.6	80	mV
Transition time (min, 20% to 80%)	83E.3.1.5	10	ps

Mapping of TP4 CAUI-4 measurement

Parameter	Subclause reference	Value	Units
Signaling rate per lane (range)	83E.3.1.1	25.78125 ± 100 ppm	GBd
AC common-mode output voltage (max, RMS)	83E.3.1.2	17.5	mV
Differential output voltage (max)	83E.3.1.2	900	mV
Eye width (min)	83E.3.2.1	0.57	UI
Eye height, differential (min)	83E.3.2.1	228	mV
Vertical eye closure (max)	83E.4.2.1	5.5	dB
Transition time (min, 20% to 80%)	83E.3.1.5	12	ps
DC common mode voltage (min) ²	83E.3.1.2	-350	mV
DC common mode voltage (max) ²	83E.3.1.2	2850	mV

Transmitter test fixture and test points

Host Control Board (HCB) and Module Control Board (MCB) are for test points TP1a and TP4 respectively.

Optional system probing setup

The bandwidth requirements of 100GBASE-KR4 are difficult to match with the browser or soldered down probes. However, for debug purposes, these 33 GHz and lower probes offer effective signal access on backplanes and chip-to-chip interconnects.

² DC common mode voltage is generated by the host. Specification includes effects of ground offset voltage.

Backplane and chip-to-chip interconnects can be a significant probing challenge.

Electrical system interconnect setup

Direct electrical connections through a precision fixture or 2.92 mm interconnects are the preferred method to access the backplane and cabled signals. The QSFP28 module interconnect point found on 100GBASE-CR4 and CAUI-4 designs are the most typical signal access points.

(Image for reference only - see description)
Model No. QSFP28-TPA100G-HCB-6P
Part No. 640-0822-000

This Adapter Kit contains:

- Qty. 1 - QSFP28 100Gbps Plug Adapter
 - 16 - High Performance Phase Aligned 6" Adapter Coaxial Cables w/ Female SMAs
 - 1 - 12 Position Low Speed Cable and Connector
- CD containing QSFP28 100Gbps User Manual
- Instrument Case

Refer to the Wilder Technologies www.wilder-tech.com/qsfp-28-kits.htm for details regarding the various methods of signal break-out.

100GBASE-KR4/100GBASE-CR4 measurement selection

The setup and test execution is simple with the 100G-TXE software. The oscilloscope acquisition and analysis are controlled through the 100G-TXE automation solution. The Graphical User Interface (GUI) provides an intuitive and easily repeatable workflow for setup and testing.

TekExpress® 100GBASE-KR4 measurement setup

Alternately, a similar set of measurements without the Standards pass or fail criteria and reporting tools can be found as extensions to the DPOJET product. These would serve the debug user, rather than the compliance user.

DPOJET Standard: 100GBASE-KR4 measurement setup

Design characterization is supported beyond 100GBASE-KR4/100GBASE-CR4/CAUI-4 compliance requirements for all measurements. The TekExpress 100G-TXE offers flexible control over test configurations such as analysis windows and other parameters. User-defined mode lets customers make changes to the test limits and perform marginal testing beyond compliance.

User-defined mode

In user-defined mode, users can configure Global parameters, test specific parameters, measurement repeat parameters, and notification parameters. This supports characterization measurements rather than developing custom lab setups, reducing testing time, and complexity.
