

500 MHz Passive Probes

P6139B and P5050B Datasheet

- Integrated oscilloscope and probe measurement systems feature intelligent communication that automatically scales and adjusts units on the oscilloscope display.

Applications

- Low power devices
- Service
- Manufacturing engineering
- Test research and development

The P6139B and P5050B probes are high bandwidth, high impedance 10X passive voltage probes with 10 M Ω input resistance. These probes feature a small probe head and sharp tip that makes it easier to probe dense circuitry. The P6139B and P5050B share similar electrical specifications but support Tektronix oscilloscopes with different compensation ranges. Visit the *Oscilloscope Probe & Accessory Selector Tool* located at www.tek.com/probes to ensure the correct probe is selected for your oscilloscope.

Key performance specifications

- 500 MHz probe bandwidth
- Large input impedance at the probe tip (10 M Ω , 8pF)
- 10X attenuation factor
- 300 v CAT II input voltage

Ease-of-use features

- Compact probe head for probing small geometry circuit elements
- Small probe body for enhanced visibility to the Device-Under-Test
- Replaceable probe tip cartridges
- Large accessory set for versatile connectivity

Connectivity

- P6139B and P5050B feature the TekProbe interface for direct BNC connection for oscilloscopes with 1 M Ω inputs.
